The last of the quartette is Puritan, designed by Mr. Edward Burgess, of Boston, and built in the latter city for a party of Eastern yachtsmen, Messrs. Forbes, Paine, Bryant and others. Her length on waterline is 80ft., over all 93ft., beam 22ft. 7in. and draft 8ft. 3in. Although a centerboard boat she has a lead keel of 25 tons, and to classify her according to the old definitions is impossible. Her proportions of length and beam are those of a sloop and she has a centerboard, but in all other respects she is more of a cutter, and in rig is almost entirely so. The type is a new one as yet and she will fit none of the old classes.

The previous meetings of these two boats had resulted favorably to the Boston yacht, but changes had been made in the rig of Priscilla, as noted last week, and her draft had been decreased some 4in. by the removal of heavy fittings and furniture.

From two, or perhaps three of these yachts, the opponent to Genesta must be chosen, as in no case would Bedouin be taken as a representative of the sloops; and the selection was to be made after a series of trial races as above stated, the Committee not being limited to the winner of the greatest number of the races, but at liberty to select the best boat in their judgment.

The first of the races was set for Thursday, Aug. 20, starting from Scotland Lightship, anchored S.E. by E. 9½ miles from Sandy Hook, the courses to be determined according to the weather. Thursday morning was clear with a very light N.W. wind and every prospect of a calm day.

Shortly after 8 A. M. the tug E. Luckenbach left Pier 3, East River, having on board Messrs. Tams, Stebbins, Montant and Schuyler, of the regatta committee, some yachtsmen for the various yachts, and the representatives of the New York and Boston papers. A stop was made at Staten Island and then the tug hurried down to the Hook, where Puritan, Priscilla, Bedouin and Gracie were all under way. On the way down the schooner America was passed, also the Fleetwing, Clio and Fortuna. The little cutter Maggie was making her way out, and the steam yachts Tillie, Polynia, Stranger, Corsair and Viola kept company with the Luckenbach. Below the Hospital Islands Stranger and Polynia had a brush for some minutes, but the former easily distanced the flagship. Arrow was under sail by the Hook, and Mischief lay at anchor with only steward and cook on board, all her crew being with Captain Clock on Priscilla. A second tug, the Anna J. Kipp, was waiting orders and soon took Puritan and Gracie in tow for the Lightship, while the Luckenbach passed a line to Bedouin, Priscilla working out under sail. Arrived at the start there was a flat calm on the water, the sky above was clear and blue, and the sun beat down, driving all into the shade of awnings and cabins. The old sea dogs predicted a breeze from the so'thard at the turn of the tide or 9 P. M., but at that time there was still no sign of any wind, and orders were reluctantly given to return to the Hook, meeting next day at the same time and place. At 3:30 the Luckenbach started up, reaching the city at 6 P. M., having towed Priscilla up to the Hook, while the Kipp towed up Gracie and Puritan to the same spot, and Bedouin caught a tow from another tug up to Clifton. In company with the yachts all day was the iron steamer Cygnus, with a large number of spectators at a dollar per head, all of whom were disappointed in their hopes of seeing a yacht race.

FRIDAY, AUG. 21.

Next day broke with a light wind from S. E. and a fog over the Bay, but by 8 A. M., when the Luckenbach left Pier 3, the weather was clear with a faint air from S. W. Stopping to pass a line to Bedouin she ran down, arriving at 10 o'clock at the Hook, where the others were already under sail. With a little more wind the four beat out to the Scotland, and the Luckenbach took up her place a few hundred yards east of the Lightship. The windward course was determined on, and a large board was displayed on the tug having on it in big black letters the course, which was south. Near by were

the schooners Fleetwing, Clio, Fortuna, and Tidal Wave, and the sloop Penguin. On Board of Priscilla was Mr. E. A. Willard in behalf of Puritan, while Mr. J. R. Busk was on the latter yacht with Messrs. Paine, Forbes, Burgess, Bryant and Fish. On Gracie, besides Mr. Earl, was Dr. Barron, owner of Athlon, and Captain Joe Ellsworth. Captain Gibson sailed Priscilla, and with him were Captain Than Clock of Mischief and his crew, his son Jesse Clock of the schooner Ruth, and Captain Half of Fanny. With Captain Crocker on Puritan was Captain Terry of the schooner Grayling. The Kipp started off with Mr. Olsen on board and a patent log towing, to run the twenty miles. On her deck was a raft of planks and timbers about 12ft. square, carrying a pole with a red flag. The water was perfectly smooth, and a moderate breeze blowing when the first whistle blew at 11:08, followed by a second at 11:13. Only two minutes were allowed to cross in, as there were so few boats, and they were so well manned. As the first five minutes passed Puritan came reaching along the line from east to west, carrying lower sail and jib header, and it seemed as though she would cross well ahead as she luffed over the line on gunfire, but meanwhile Priscilla had come steaming under the tug's bow, luffing up boldly with a rally on the main sheet, and shooting across close to the tug just as Puritan crossed by the Lightship. Still luffing around to the other tack Priscilla cleared the stern of the tug and was off with a splendid start, while Puritan, timed with her as they crossed, was still on the line, having to tack. Soon both were away, Priscilla to windward, keeping out to the east. Gracie and Bedouin crossed in Priscilla's wake, but both held on the port tack in toward the Jersey beach, the sloop having the advantage of the start. The times were:

Puritan	11 13 48	Gracie	11 14 06
Priscilla	11 13 48	Bedouin	11 14 40

The two big ones now held to the east out in open water while the smaller pair laid in for the beach, Bedouin to windward but Gracie ahead. The wind now came from S. E. and the tide was about at the lowest. Of the pair to the west Bedouin heeled no more than Gracie, as seen from directly astern, while to the east Priscilla was standing up even straighter than her opponent, showing a marked improvement over her previous form. At 11:29 Puritan tacked and three minutes later Priscilla followed, both now having the wind on the starboard side. Off Seabright was as pretty a duel as one would care to see, the cutter and sloop still holding their long reach in to the sands, but Bedouin surely passing the sloop and still holding her wind. At 11:41:30 Bedouin went about, this time on starboard tack, and Gracie at once followed. Puritan was now the leader, having well made up her loss at the start, and Bedouin had beaten her mate, but a further surprise was to come. The two divisions were now approaching on opposite tacks, Puritan, of course, well ahead, but it was soon seen that Priscilla had small chance of weathering Bedouin. Nearer and nearer they came, until at 11:45 Priscilla had to cast to starboard tack to avoid Bedouin. In spite of size and the unequal start, both largely favoring the big sloop, in less than three-quarters of an hour the smaller cutter had her under her lee and kept her there. In vain the sloop essayed to run away from her, the cutter held her for 15 minutes, when of her own accord she tacked and left her big adversary.

Meanwhile at 11:58 Puritan was again on starboard tack out to sea, while Gracie was well in the rear of all, and at 12:10 she lowered her topsail as the sea was rising a little. Four minutes later Priscilla followed suit and clewed down hers also. After several tacks at 12:20 Bedouin was nearest to the beach while the other three were well out. Puritan was gaining but Priscilla did a little better with no topsail, and Gracie was not holding the others. At 12:24 Priscilla's topmast came down and she went on better than before. At 12:39, Puritan lowered her topsail and a minute later Bedouin struck her topmast. The four were now nearly opposite Long Branch, Puritan ahead but out at sea, Bedouin next in shore, then Priscilla well out, and last, Gracie close to the beach, all on port tack. At 12:48 Puritan also housed her topmast, as the sea was increasing though the wind was still light. From here to the outer mark the sea became heavier, telling most on the two smaller boats. Bedouin was pitching at a great rate and going no faster for it, as Priscilla was now leaving her. At 1:15 all were standing off shore on starboard tack, Puritan gaining steadily on Priscilla both to windward and in the footing. Both were leaving the smaller boats, and of the latter two Gracie was falling astern of Bedouin. Puritan tried the port tack at 1:29, and at 1:45 Bedouin followed, soon after tacking again in Priscilla's wake.

At 2:19 Puritan made her last tack, and at 2:28 she turned the weather mark. Three minutes later she set her topsail, but it was 2:38 before she had her spinnaker set to port. Priscilla turned at 2:40:37 and had her topmast up at 2:44. Her compass was not in adjustment and mislead her as to the course, so she jibed her boom to port on rounding, but soon found that she could not carry it there. Lowering her spinnaker boom ahead of the mainsail, she jibed the latter to starboard again and set spinnaker at 2:56. The sail filled like a balloon as the stops broke and it flew up, lifting the boom as though it would carry boat and all aloft. At 2:52:15 Bedouin rounded and got her topmast up and sail set in better time than either of the big ones, but it was 13 minutes later before her spinnaker broke out. Priscilla sent a clubtopsail aloft at 3 P. M., but Puritan was content with her small one for some time longer. Gracie was last of all to turn, being timed at 3:13:30.

The boats soon ran into smooth water and were little bothered by the sea, while the flood tide helped them home. They were strung out in a procession and the difference was not easily seen, but the iron sloop and Gracie both gained on their rivals down wind. The breeze held steadily for all of them, and the run was quickly made. Puritan took in her spinnaker at 4:12 and Priscilla at 4:22. After finishing Puritan hoisted her spinnaker boom and let it fall, breaking the spar and tearing the sail. The times of finish at Scotland were:

Puritan	4 12 07	Bedouin	4 40 09
Priscilla	4 22 05	Gracie	4 56 39

The following summary shows the full times:

	Start.	Turn.	Finish.	Elapsed.	Corrected
Puritan	11 13 48	2 28 40	4 12 07	4 58 19	4 57 05
Priscilla	11 13 48	2 40 37	4 22 05	5 08 17	5 08 17
Bedouin	11 14 40	2 52 15	4 40 09	5 25 29	5 15 21
Gracie	11 14 06	3 13 10	4 56 39	5 42 33	5 32 58

Puritan beats Priscilla 11m. 12s., Bedouin 18.46, and Gracie 35.53. Priscilla beats Bedouin 7m. 34s., and Gracie 24.41; while Bedouin beats Gracie 17.07. Again comparing old and new the average of Puritan's and Priscilla's corrected time would be 5:02:42, and of Bedouin's and Gracie's 5:24:24, the difference being 21.42 between the large and small boats. It is also interesting to compare the times out and back.

	Beating.	Running.		Beating.	Running.
Puritan	3 14 12	1 44 07	Bedouin	3 37 25	1 47 54
Priscilla	3 26 49	1 41 28	Gracie	3 59 04	1 43 29

Puritan in a 20 mile beat to windward gains 12.37 on Priscilla, 23.13 on Bedouin and 44.52 on Gracie. Down wind Priscilla beats Puritan 2.39, and Gracie beats Bedouin 4.25.

The race was sailed in a true wind, equally fair to all and none gained any advantage from tides or currents. The breeze was light all day and the sea was only troublesome to the smaller boats for the last half of the beat out. Under these conditions Puritan showed a marked superiority over Priscilla to windward, but was not up to her free, while the same may be said of Bedouin and Gracie. Bedouin at one time, but half an hour after a bad start, had Priscilla at her mercy. After the race the Luckenbach towed Puritan up to Clifton while the others sailed home.

SATURDAY, AUG. 23.

Saturday morning was cloudy and sultry with little air, and did not promise well for a racing day. The Luckenbach was late in starting, having waited for a member of the Regatta Committee, and it was nearly 10 when she took Puritan and Priscilla in tow, the others having gone down with the Kipp. Both yachts made sail while towing, and at 10:30 the tug dropped them off the Romer, leaving them to make their way out in a light S. W. wind. Arrived at the Lightship the course decided upon was triangular, 13½ miles a side, the first leg being S. E. by E. half E., and the second S. W. by W., making the third parallel with the Jersey beach. The sea was very smooth outside, but became rougher as the yachts went out with an ugly roll; but with little effect on the big boats. Puritan had fitted a spare spinnaker and boom borrowed from Priscilla, and was carrying clubtopsail, as did the others, Gracie, Puritan and Priscilla sending up balloon jibtopsails in stops. Bedouin had her foresail down. All had spinnaker booms ready on starboard side. Some time was lost in waiting for the Kipp, in charge of both buoys to get a good start out, but at 12:20 the first whistle was blown, the wind then being of topsail strength from W. S. W. Close on the second whistle, 12:25, Puritan went over with Priscilla close astern and the others handicapped. The times were:

Puritan	12 25 45	Bedouin	12 27 03
Priscilla	12 26 27	Gracie	12 27 59

The leaders wisely held their spinnakers in stops, while Gracie broke out hers, but took it in at once. Bedouin, in hoisting found a turn in hers, so it came down and was reset, but though hauled far forward as possible it would not draw, and at 12:35, after losing ten minutes with it it was taken in. Meanwhile she had broke out a balloon jibtopsail, but Gracie had passed her to windward while she bothered with the spinnaker. Both Puritan and Priscilla were now under mainsail, clubtopsail, and balloon jib only, Puritan ⅛ mile ahead. At 12:38 Priscilla hauled up her foresail. Bedouin's balloon jib was not hanked to the stay and bellied away to leeward badly. At 12:50 the foresail went up on Puritan, Priscilla being very close to her, and at 1 P. M. both set their spinnakers, the black sloop making a rush for Puritan's weather, but failed to pass, the kites would not draw and both came in at 1:15. As the boats came for the mark where the tug with Polynia, Vision and Cygnus were awaiting them, a luffing match began, which resulted in Priscilla passing Puritan to leeward and taking the lead, after which both eased sheets for the mark. Priscilla rounded first, both she and Puritan carrying lower sails and clubtopsails, the former with jibtopsail aloft in stops. They luffed around and went off on port tack with Gracie next and Bedouin last, the latter with spinnaker set. The times were:

Priscilla	2 16 05	Gracie	2 29 47
Puritan	2 17 00	Bedouin	2 41 40

On the run of 13½ miles with a quartering wind, Priscilla had led Puritan by 55sec., while Gracie held 13m in 53sec. to the good over Bedouin. The wind was now very light from S. W., with a long roll to the sea. The Luckenbach stopped to pick up the mark and started after the racers. Puritan began to gain on Priscilla a little, and at 2:32 the latter tacked. Five minutes later Puritan tacked also, this time ahead of the iron boat. Priscilla carried a balloon jibtopsail, but Puritan did not set hers. The sailing was very slow for a long time. At 3:30 both were on port tack, Puritan to windward, shortly after which they broke tacks, Puritan holding off on starboard tack and Priscilla holding in to the beach. Meanwhile Bedouin had been hunting Gracie sharply and now held a good place to windward and ahead, having more than made up the 12min. lost in the run. At 4:30 Puritan was still ahead but far south, while Priscilla was in by the land, where she picked up a nice breeze. For a time it seemed that Boston would turn first, but the wind was very light about her, and Priscilla came down on starboard tack with more wind. At 5:10 Priscilla was standing for the mark from the north on starboard tack, while Puritan, to the east, had just gone on port tack, on which reach she could not hope to weather the mark. At 5:05 Bedouin had shaken clear of Gracie, going to windward of her, and both were coming for the buoy. At 5:30, when Priscilla neared the mark on starboard tack, Puritan tacked about one-eighth of a mile in her wake, the latter being much quicker about. The iron sloop rounded first, breaking out balloon jibtopsail, and after her came Puritan, her big balloon jibtopsail flying out like a bubble when it bursts. At 5:40 the Luckenbach, bound home, passed Bedouin, with Gracie one-quarter mile astern and to leeward, but just at this time the jenny yard on Bedouin's clubtopsail broke, and left the foot flying with the pieces attached. This was a great drawback in such a light air, and her rival soon drew up to her.

The times at the second mark were:

Priscilla	5 30 54	Bedouin	6 00 25
Puritan	5 29 49	Gracie	6 00 36

These times do not show the gain of Bedouin and Puritan in the weather work, but at the wind-jamming both showed a marked gain over the others until within a mile of the mark. The Luckenbach steamed away to catch the leaders, passing Puritan first and then Priscilla, both going very fast, considering the light wind and foul tide. Priscilla was steadily drawing away from Puritan, and when she neared the finish had a lead of over 5min. It was bright moonlight on the water, although the sun was still in the west, making a narrow golden border to a huge bank of dun-colored clouds that hung over distant New York, while over the scene the two red lights of Sandy Hook Lightship and Scotland's two white lights struggled to make themselves visible. Soon Puritan came in; then a long wait followed before Gracie was timed, while Bedouin was last of all. Taking the latter in tow, the tug started for home in a torrent of rain. It was after 9 o'clock and the rain had ceased when the tug reached Tompkinsville, and there, her spars towering in the moonlight, lay Genesta, just in from Boston. The times of the race were:

	Start.	Finish.	Elapsed.	Corrected.
Puritan	12 25 45	6 38 39	6 12 54	6 11 40
Priscilla	12 26 27	6 32 53	6 06 26	6 06 26
Bedouin	12 27 00	7 26 10	6 59 10	6 49 32
Gracie	12 27 00	7 12 34	6 45 34	6 35 59

Priscilla beats Puritan 5.14, Gracie 29.33, Bedouin 43.06. Gracie beats Bedouin 13.33. The average time of the two large boats is 6.09.03, compared with 5.02.42 on Friday, and of the smaller, 6.42.46 against 5.24.44. The difference this time is greater, being 33.43.

MONDAY, AUG. 24.

Monday's race was set for the New York Y. C. course, from Buoy 18 off Owl's Head, through the Narrows and down around buoys 10 and 8½, out past the Hook and around Sandy Hook Lightship, and back over the same course to Buoy 15 above the West Bank; a distance of 30 miles. The time allowed was 1.11 to Priscilla, 9.7 to Gracie and 9.10 to Bedouin. The weather and wind were both of the sort usually found over this course in the summer months, clear and warm with a S. W. wind and no beating to speak of. The Luckenbach left Pier 3 at 9 A. M., and steamed to Tompkinsville, where Genesta lay at anchor with the red and white burgee of the Royal Yacht Squadron aloft and the white ensign over her taffrail. Her crew were busy over the side scrubbing copper and putting her in order. Running alongside an invitation to come on board the tug was given to Sir Richard Sutton, but declined, and the Luckenbach hurried off to Buoy 18, anchoring a couple of hundred yards west of the buoy. Com. Oelrichs came out in his little gig to see the start but did not go out to the Lightship.

The four yachts were standing up and down the bay under a good breeze from over Staten Island, with Gaviota, Esteile, Nokomis, Fortuna, Atalanta, Tidal Wave, Viola, Polynia and other yachts near by. Puritan, Priscilla and Bedouin set club topsails, while Gracie had her jibtopsail in stops and a jibheader aloft. At 10:45 the first whistle blew, all being above the line, the tide setting them down strongly. At 10:50 came the start, Puritan crossing first to windward with Priscilla under her lee, while Gracie was in the wake of the Boston boat, and Bedouin, last over, followed Priscilla. Sheets were flattened as they beat out of the Narrows, Priscilla a little ahead, but Puritan to windward, Gracie housing her jibtopsail above the forts. Both she and Bedouin were on even terms in the footing, but Bedouin was to leeward. At 11:10 the leaders were about off Norton's Point abreast of each other, but an eighth of a mile apart, Puritan still to windward. Three-quarters of a mile astern were Gracie and Bedouin.

At 11:18 Bedouin set a small jibtopsail and at 11:20 the first tack in the race was made by Priscilla, standing over on port tack to the West Bank, across Puritan's wake. For a time it seemed as if an inbound steamer would bother her; but they cleared easily. At 11:23 Puritan followed Priscilla with a hitch to the west, and two minutes later Priscilla took the port tack again off Dix Island, Puritan also resuming her former course at 26:30. Priscilla gained a little on the leader by the tacks. At 11:29 Puritan broke out her jibtopsail, Priscilla following suit by one at 11:31, and Gracie two minutes later. Bedouin and Gracie were near the islands about abreast, and the former had edged up to windward until her side nearly touched the sloop and boathooks were used to push off. The wind was very light, and Bedouin lay under Gracie's sails completely becalmed. Suddenly Gracie caught a puff and walked away; but the cutter stood still for some time, almost motionless, her rival taking a good lead. At 11:50 Puritan had her spinnaker boom ready, and as she passed Buoy 10 started sheets, and at 12:03:30 broke out her spinnaker off Buoy 8½. Priscilla passed Buoy 10 at 12:01:33, breaking out a balloon jibtopsail above Buoy 8½, and her spinnaker at 12:06:30. The boats were timed at Buoy 10:

Puritan	12 00 11	Gracie	12 06 55
Priscilla	12 01 33	Bedouin	12 09 00

From the Hook to the Lightship was a reach, Puritan carrying forestaysail, balloon jibtopsail and clubtopsail, and Priscilla the same canvas. The latter seemed to gain a little on the reach, but it was very slight. All luffed around the Lightship and started back on the wind, the breeze being S.W. by S. The times were:

Puritan	12 51 50	Gracie	1 00 22
Priscilla	12 53 01	Bedouin	1 05 50

It was expected that Priscilla would gain considerably on the way out, but the times show a loss instead.

All were on port tack for home, Priscilla gaining a little, apparently, by lowering her balloon jibtopsail at 1:10, while Gracie was leaving Bedouin. When near the Hook a becket in the weather backstay fall carried away on Priscilla, the fall overhauling until the splice and becket jammed in the other block, letting her topmast go forward; but the stick held, though the accident cost her some time. At 1:30 Gracie shifted to working topsail, and at 1:45 Priscilla shifted her balloon staysail for a working one. It was just 1:50 when Puritan went on starboard tack at the point of the Hook, Priscilla following two minutes later. Puritan tacked again at 1:54 and Priscilla at 1:54:30. The times at Buoy 10 were:

Puritan	2 04 28	Gracie	2 15 30
Priscilla	2 06 10	Bedouin	2 21 00

When around the Buoy balloon jibtopsail came out quickly on both, Puritan still holding her lead, and making the Luckenbach run to be at the finish in good time, arriving at 2:40. Priscilla was seen to be gaining a little on her, but with no hopes of passing and at 2:43:05 the white sloop was timed, her rival being 48sec. later. The times at the finish were:

Puritan	2 43 05	Bedouin	3 05 33
Priscilla	2 43 48	Gracie	2 58 41

The full times of the race were:

	Start.	Lightship.	Finish.	Elapsed.	Corrected.
Puritan	10 50 28	12 51 50	2 43 05	3 52 37	51 26
Priscilla	10 50 30	12 53 01	2 43 48	3 53 18	3 53 18
Gracie	10 50 46	1 00 22	2 58 41	4 07 55	3 58 48
Bedouin	10 51 01	1 05 50	3 05 33	4 14 32	4 05 22

Puritan beats Priscilla 1.52, Gracie 7.22, and Bedouin 13.56. The elapsed time is with one exception the best made over the course, Montauk in 1882 doing it in 3:52:17, or 20 seconds faster than Puritan. The average of the corrected times of the large sloops is 4.02.05, and of the smaller 3.52.22, a gain of 7.43. On arriving at Tompkinsville a meeting was held on board the Luckenbach. No more trial races will be sailed but the committee will not make known the result of their selection until Sept. 1.

The results of the races have shown conclusively that as rigged at present Puritan is far better to windward than Priscilla, even in light weather, and but little slower when off the wind, while in heavy weather she is still better on all points and a more reliable boat to depend on. No doubt Priscilla may be much improved by changes in her rig but it is too late to do anything before the Cup races.

While winning one of the three trials and barely beaten in another, the difference in performance is entirely against her and in favor of Puritan. Compared with the older and smaller boats both of the new ones show a marked gain in speed as indicated by a comparison of the average times of each pair. The probabilities now are that Puritan will be selected to meet Genesta. The latter will have her topmast cut down 3ft. and her topsails altered to suit by Mr. Edward Lapthorne.

IREX.

In the race of the Royal Victoria Y. C. on Aug. 11, in a strong breeze, Irex parted her peak halliards, having to lower her mainsail, but was first in in spite of the mishap. We take the following account from the *Western Morning News*:

Match for yachts of any rig or tonnage belonging to any recognized yacht club; first prize £70, second £25. Starters:

Irex	Cutter	85 tons	J. Jamieson.
Marjorie	Cutter	68 tons	J. Coats.
Marguerite	Cutter	60 tons	Foster Connor.
Tara	Cutter	40 tons	F. Taylor.
Lorna	Yawl	85 tons	S. H. Morley.

Course—Twice around the long Victoria course. All had single reefs in mainsail and topmasts housed excepting the Lorna which had a jibheader set. The Marguerite, Tara and Irex were the first at the start with Lorna last. The Irex soon took the lead, however, and rounded the Nab Lightship first, with Lorna next, followed by Marguerite, Marjorie and Tara in the order given. On the reach to Spithead the peak halliards of Irex's mainsail carried away, and before she got her sail reset she was fourth vessel. From the Spit to the flagboat off Old Castle Point it was a turn to windward and the Irex, sailing very fast passed all except the Lorna, the timing at the end of the first round being:

Lorna	12 53 43	Marguerite	12 58 04
Irex	12 55 15	Tara	1 12 00
Marjorie	12 55 12		

No change took place until after rounding the Spit again, when the Irex headed Lorna, the first time they met, and was over 2min. ahead at Old Castle Point. Fast as she sailed, however, she could not save the time she had lost owing to her accident, and the finish was timed:

Irex	3 15 40	Marguerite	3 27 48
Lorna (£70)	3 18 12	Tara	3 48 24
Marjorie (£25)	3 19 41		

The Lorna thus took first and the Marjorie second prize.

A CRUISING SCHOONER FOR SHOAL WATERS.

ROBERT B. ROOSEVELT is building a yacht at his place on Long Island. The construction is in charge of William I. Dodge, the boat builder of Bayport, but she is under the immediate eye of the owner. The main idea is a combination of light draft with good weatherly qualities and safety in cruising, and to reach this, while she is heavily timbered she is made as flat as she can be without bringing her bilge below her keel when on the wind. She is to be schooner rigged, and is as small as a schooner can be built with any advantage. Mr. Roosevelt's directions are that nothing but the best of material shall be used, and every piece of defective or doubtful stuff is condemned under his personal supervision. As soon as her timbers, which are hackmatack, had dried out, they were thoroughly painted with fish oil. This was done with the hope of preserving them, as it had been found that vessels which were put immediately into the menhaden fertilizing business, where they were at once saturated with the oil, lasted double the time of others that had not been so employed. The cabin deck is to be of light tongued and grooved stuff, and is to be at once covered with canvas that there shall be no possibility of leaks. She will have four berths in the main saloon, a starboard stateroom, and on the opposite side in place of a port stateroom a comfortable cook's galley with abundance of air and headroom. Her dimensions are 40ft. keel, 43ft. length of waterline, 54ft. over all, 4ft. 4in. depth of hold, 16ft. 5in. extreme beam, 8ft. draft, and 6ft. headroom in the cabin. Her ballast is to be lead and moulded to fit in between the timbers. She is constructed with a view to cruising in southern waters, with better capacity for seagoing than might be got from his sharpie. If she is launched this fall he will take both vessels with him during the winter to Florida to test their comparative merits.

LARCHMONT Y. C., OYSTER BOAT RACES.

THE Larchmont Y. C. lately offered prizes for a race of oyster boats, of which there are a great many on the Sound and near by. Forty sailed on Saturday last over a course from Larchmont to and around the Red buoy at west end of Execution Reef, passing the same on the port hand; thence to and around the Black buoy off Matinnicock Point, passing the same on the port hand; thence to and around a stakeboat anchored south of Captain's Island, passing the same on the port hand; thence to the finishing line, which shall be between Execution Light and Sands Point buoy, about 19 nautical miles.

The sloops were limited to mainsails, jibs and working topsails, and the catboats to mainsails only. The boats were in two classes, cabin and open boats. When the whistle blew at 11 A. M. the fleet worked over the line in a way that would do credit to yachtsmen, and the race was closely sailed throughout, though the wind was light from S.W. Telephone was second boat in, but was ruled out as not being a working boat. The times were:

Lizzie D. Bell wins first, $75; J. H. Trusty, second, $35; Grace S. Mackey, third, $15. Jennie A. Willis wins first, $50, in the open class; Addie B., second, $35, and Agitator, third, $15. The judges were E. J. Greacen, J. T. Fisher and T. Bartow.

CAROLINA Y. C.

THE third championship race of the season of 1885 was sailed by the Carolina Y. C., of Wilmington, N. C., on Aug. 19, over their usual course, off the club house at Wrightsville Sound. The course was from a buoy off club house to Masonboro Inlet Buoy, rounding it to Hammock Buoy, leaving it to port, to London Channel Buoy, rounding it, to club house Buoy, leaving it on starboard, and repeat, making a distance of eight miles. The day opened finely, with a light breeze from the west, but when the tide turned it hauled round to the southeast. At 1:30 the first gun was fired and at 2 o'clock the starting gun followed, the yachts getting away in fine style, in a light southeaster, in the following order: Restless, Loulie, Frolic, Lillian, Florence, Rosa, Mist, Ripple, Vixen and Idler. The start was a fine one, making a hard fight up to the Masonboro Inlet Buoy. After rounding this buoy the relative positions of the boats commenced to change, and by the time they reached the Hammock Buoy the Idler had passed the Vixen and overhauled the Mist and Ripple, but through an error she was forced out of her buoy and had to make an extra tack. The run down to the London Channel Buoy, where the channel is very narrow, was a beautiful one and displayed fine seamanship, for which the members of this club are noted. By the time they rounded the club house buoy it became evident that the race for first place would be between the Idler and Ripple; but the breeze was too light for the Ripple, and in a short time the Idler had passed her, crossing the judges' line in 1.31.43 from her start, winning the race easily and handsomely, with the Ripple second, Rosa third and Vixen fourth.

This was one of the pleasantest and most beautiful races ever sailed

over this course and was much enjoyed by a large crowd of spectators. These boats were built by noted builders, such as P. McGlehan, who had five boats in this race, two of which took the first place, while the others followed with good records.

This is the Idler's first season and she has taken the champion flag in two races out of three. Commodore Jones, her owner, is very fond of her and thinks she has some fine qualities which she has not had an opportunity to display. The Carolina Y. C. is one of the oldest yacht clubs in this country and contains a large fleet of yachts none of which are over 20ft. in length, which is in conformity to an old law in this club passed thirty years ago. One of the best features of this club is, that its members sail their own yachts, thereby enjoying the manly and pleasant sport of yachting. This club claims, and upon the best of grounds, that it has as fast a fleet, if not the fastest, in this country of their size and that they carry more sail to the square inch for the winds they usually sail in than any other club. They have fine sailors and the manner in which they handle their little craft is sometimes wonderful. One more regatta early in September will close this season's races.

CORINTHIAN Y. C., THIRD CHAMPIONSHIP RACES.—The third championship regatta of Corinthian Y. C. was sailed at Marblehead, Aug. 22, 1885. The first class yachts started at 2:35 P. M. in the following order: Expert, Witch, Thelga, Ralph and Eugenia, and five minutes later the second class crossed the line as follows: Psyche, Unique, Dash, Wraith, Niobe, Delphine, Vera, Mona, Carmita. The yachts were timed from the gun. The wind was light at the start, but freshened some when the course was half sailed, and at the finish there was a fair breeze from the northwest.

FIRST CLASS—KEELS.

	Length.	Actual.	Corrected.
Witch, B. B. Crowninshield	22.10	2 16 56	1 42 22
Thelga, A. P. Thayer	22.01	Did not return.

HINDS'
BLACK-FLY
CREAM,
For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.
No Tar. No Stain.

GLENS FALLS, N.Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after the insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.
Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

F. A. ALLEN'S SPECIALTIES.
MONMOUTH, ILL.

ALLEN'S DUCK CALL—Improved, Nickel Plated; the most natural-toned, easiest-blowing, smallest and only Metal Duck Call ever invented and the only one that perfectly imitates the *wild* duck. Sent by mail on receipt of $1.

ALLEN'S BOW-FACING OARS—Can be attached to any boat in five minutes, shipped instantly in the roughest water; work much easier than the common oar. In duck shooting they are invaluable; you see the bird the instant it leaves the water. Sent by express on receipt of $8.

ALLEN'S SHELL SWAGE—Will reduce brass shells to their original size in one-half minute, making them as smooth and solid as when new. On ordering mention gauge wanted. Sent by express for $1; by mail $1.30.

ALLEN'S DECOY DUCK FRAME—Is a simple device for holding the dead duck in a natural position in the water. Price $4 per doz. SEND FOR CATALOGUE FREE.

PREJUDICE IS A THIEF,
And will rob you of many good things.

Our cigarettes are as fine as can be produced. They have lately been improved, are not hard nor dry. Will always smoke free and moist. Will not crumble in the pocket nor "catch you in the throat." If you are not opposed to a change and cannot obtain them of your dealer, send to the manufacturers for a sample.

Enclose Three Red Stamps. WM. S. KIMBALL & CO., Rochester, N.Y.

"Repellene,"
An infallible preventive of the attacks of Mosquitoes, Black Flies, Gnats and all other insects. Neat, clean and easily applied. Contains NO TAR, will not *stain* nor *injure* the skin, easily washed off, may be carried without danger of leaking or spilling. Price 25 cents per box. Agents—T. J. Conroy, 65 Fulton st., N.Y. Abbey & Imbrie, 18 Vesey st., N.Y.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has nad a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

THE DIAMOND BADGE

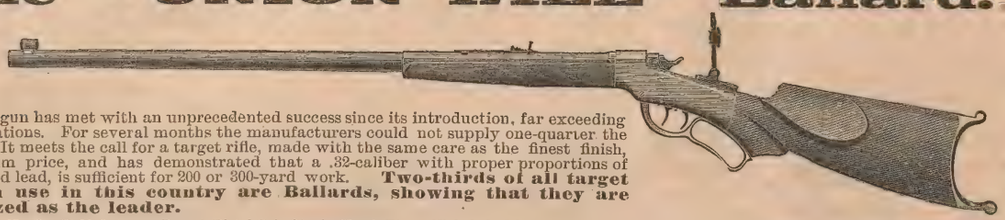
Of the Illinois State Sportsman's Association was won in 1884 and 1885

BY A

DALY GUN.

Charles Daly	Hammerless,	$125.00
"	Diamond Hammerless,	225.00
"	Hammer Gun,	$80 to 125.00
"	Diamond Hammer Gun,	200.00

DALY GUNS do the best work of any guns in the WORLD. After years of severe use they are as sound and tight as when first shot. They are equal to so-called London guns (made in Birmingham) of twice the cost.



For Sale by { F. P. TAYLOR, 70 Madison Street, Chicago,
W. R. SCHAEFER & SON, 61 Elm Street, Boston, } And all the leading Gun Dealers in the U. S.

Sole Agents, SCHOVERLING, DALY & GALES, 84 and 86 Chambers Street, New York.

ALSO HEADQUARTERS FOR

The Celebrated PIEPER Guns. HARRINGTON & RICHARDSON Hammerless Guns. The AMERICAN Single Breech-Loader. MARLIN & BALLARD Rifles—Don't forget the new Marlin combined tool for reloading magazine rifle cartridges. STANDARD REVOLVERS. Harrington & Richardson New Extracting Revolvers. AMERICAN ARMS CO. Extracting Revolvers. L. M. C. Breech-Loading Implements.

The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand. It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**

Prices: { No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches $37 50

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

GLOBE FLIGHTS

PERFECT TARGET.

The **Globe Flight** consists of a pasteboard disk, 5½ inches in diameter, the center cut out to admit a rubber balloon 2¼ inches in diameter, when inflated. Good until hit with shot. One pellet shot hitting the balloon, *Dead Bird!* No rubbish, no disputes. Preferable at all tournaments and matches. Full count. Handsome target, hard to hit unless you point your gun straight. Same surface always presented. Satisfactory shooting, fair and good practice. Case contains 500, weighs 50 lbs.; cheap to transport. $20 per 1,000; $2.50 per 1,000 back for pasteboards in good condition at either factory. Hand inflators, 50 cents each. Can be sent by mail. Send four cents to pay postage on sample flight.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

PARIS (Doubleshot ex Clio).

Black, with white points, 14 mos. old, over distemper, in perfect condition. 1st and special at Meriden, 1885; Com. at New Haven, 1885; 1st and cup at Providence, 1885. Price $50 cash. Address DR. O. F. COE, Pawtucket, R. I. aug27,1t

---

GLENCHO PUPPY FOR SALE CHEAP, 10 mos. old, litter brother of Kildare II. (A.K.R. 2436). T. D. HUSTED, 247 Broadway, New York. 1t

---

FOR SALE.—ITALIAN GREYHOUND PUPS from imported stock. HENRY C. BURDICK, 150 Bridge st., Springfield, Mass. mar19,tf

---

WM. GRAHAM, NEWTOWNBREDA, BELFAST, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third.

FOR SALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept22,tf

---

Prize and Pedigree English Mastiffs.

American gentlemen desirous of purchasing these noble dogs should communicate with JAMES HUTCHINGS, 25 Gandy street, Exeter, England, who has the largest kennel of mastiffs in the world.

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Field Trial Trainer, Templeville, Md.

BOOK YOUR DOGS FOR THIS SEASON'S training on woodcock, partridge and quail, commencing Aug. 1. Fifty dollars for the season. D. F. WILBUR, Myricks, Mass. jy9,tf

---

Rory O'More Kennels.

For Sale—Thoroughbred red Irish setter stock, full pedigreed. Address with stamp,
W. N. CALLENDER, Albany, N. Y.

FOR SALE.—HAVING RECENTLY ADDED several fine brood bitches to the Landseer Kennels of Scotch deerhounds and greyhounds reduced the price of puppies. Some choice greyhounds now ready to ship. DR. VAN HUMMELL, Denver, Col. apl16,tf

---

DOGS. DO YOU WANT TO BUY A FINE bred dog of any kind? If so write and name the kind you want. EDMUND MAURER, 464 North Ninth street, Philadelphia, Pa.

YOUR DOG'S PICTURE.

Life size crayons of dog heads or full figure accurately and artistically made from photograph by an experienced crayon artist. Prices reasonable; satisfaction guaranteed. M. LEWIS, care Forest and Stream.

FOR SALE.—THE MASTIFF DOG DE BUCH (A.K.R. 1502), 3 yrs. 4 mos. old, 1st, New York, 1883, of immense bone and substance, powerful, symmetrical and compact, of excellent temper. A valuable sire to mate with weedy bitches, always transmitting his great bone and substance. W. WADE, Hulton, Pa. jy30,5t

---

FOR SALE.—PURE LAVERACK PUPPIES, combining the blood of Pontiac ex Fairy II. Carlowitz ex Princess Nellie, Thunder ex Peeress, etc. HENRY STURTEVANT, Medina, N. Y. jy30,5t

---

FOR SALE.—AT A REASONABLE PRICE, A dark liver English setter bitch, 18 mos. old, staunch and thoroughly broken on quail and woodcock. Address P. O. Box 20, Middletown, Orange Co., N. Y. aug20,3t

---

FOR SALE.—A FIRST-CLASS FIELD DOG BEtween 3 and 4 yrs. old, black English setter; cannot be beaten on partridge, woodcock or quail. Don't retrieve except from water. Highest references in regard to him. J. S. BANCROFT, care of Forest and Stream. aug20,3t

---

FOR SALE.—MASTIFFS, POINTER PUPPIES, Prince Charles and Blenheim spaniels. C. H. MASON, 255 West Twenty-second st., New York. jy30,tf

---

BEAGLES.—FOUR CHOICE BEAGLE PUPS, two dogs, whelped July 7, out of my Bessie Jones, by my Joe. $8 each, or $15 a pair. C. F. KENT, Monticello, N. Y. aug27,tf

---

FOR SALE.—A HANDSOME, EXTREMELY well-bred black, white and tan English setter bitch, 10 mos. old, over distemper, healthy, well marked and formed; just right for this season's handling. Two crosses of Gladstone, and two of Leicester and Dart. Price $35. GEO. L. WILMS, 142 Monticello avenue, Jersey City. aug27,tf

---

FOR SALE. — POINTERS, THOROUGHLY broken; Lady Bang (A.K.R. 698), Nellie (A.K.R. 1789). Also pointer pups, by Donald II. ex Lady Bang, marked liver and white, age 9 wks. old. For price and particulars apply to CLIFTON KENNELS, 75 Clifton Place, Jersey City, N. J. aug27,4t

---

FOR SALE.—A THOROUGHBRED ENGLISH mastiff bitch, 2½ yrs. old, kind to children; a good watch dog. Address P. O. Box 1289, Montreal, Canada. aug27,3t

---

FOR SALE.—PURE-BRED LLEWELLIN BITCH, has been hunted. Price $25. GEO. SMITH, P. O. Box 261, Milford, N. Y. aug27,1t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 3, 1885.

VOL. XXV.—No. 6. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

A TERRITORIAL DOGBERRY.

A DETAILED consideration of the condition of affairs in the National Park may well enough be postponed until the assembling of the next Congress, but the very glaring instance of official maladministration noted in these columns last week demands present notice.

It will be remembered that at one time last year there appeared every probability that a bill placing the Yellowstone Park under jurisdiction of Wyoming Territory would become a law. In anticipation of this event the Legislature of Wyoming passed a bill providing for the election of two justices of the peace and of constables to carry out the law, and established certain penalties for specified offenses. As is well known, the Congressional bill failed to pass, and matters therefore remain as they were before it was introduced. Notwithstanding this fact, officials provided for by the Wyoming bill were elected and have been administering justice—of a certain kind—ever since. The headquarters of one of these justices is at the Mammoth Hot Springs, while the other holds his court in the Firehole Basin. It is with the latter that we have to do.

The Wyoming law provides that, in cases where fines are imposed, one-half the sum shall go to the informer and the other half to the Territorial treasury. The justice at the Firehole has in a number of cases imposed very heavy fines for trivial breaches of the regulations. These have been in a number of cases so disproportionate to the offenses committed, that he has laid himself open to grave suspicion. He fined a Bozeman banker $50 for the failure to extinguish a fire, though it was clearly demonstrated that the fire was built in a damp meadow near the water, that the grass, which was green, had been carefully tramped down about it, and that, when the parties moved camp the fire had all burned out, and only a few smouldering coals were still alive among the white ashes. These still gave forth a little smoke. It was further shown that the persons who left this fire in this state were old campers who understood all about fires and the danger which exists of their spreading. Evidently, in such a case, a word of warning, or at most a nominal fine would have had greater weight than that which was imposed; but in that case the informer's half of the fine would have been worth very little.

Other similar cases have occurred in which this justice has come down with twenty-ton force upon people whose intentions were of the very best.

In the case referred to last week, however, he caught a Tartar. We said the other day that we thought the press dispatches of the occurrence must have been sensational, but advices from a staff correspondent of the FOREST AND STREAM who is now in the Park, confirm the perfect propriety of Judge Payson's course. Judge Payson is a member of Congress from Illinois and one of the Committee on Public Lands. He was in the National Park on a camping trip, and on moving camp one day, the fire was extinguished, water being poured over it. Soon after leaving camp, however, a constable came up with the party, and arresting the judge took him before the justice, who, after hearing the evidence, fined him $60 and costs, the whole amounting to $72.80. It is stated by one who is in a position to be informed on the subject, that there could have been no fire on the ground abandoned by the party, and that it would have taken hard blowing among the ashes to find even a spark. The injustice of the procedure somewhat aroused Judge Payson's ire, and he protested very vigorously against the fine. The justice having this by time received a hint as to who the offender was, reduced the fine to $10 and costs. Judge Payson then proved to him that the costs could not legally be more than $4, and finally the justice is said to have cleared the court room of all but the defendent and to have asked his opinion as a lawyer as to whether he could lawfully remit all the costs. Altogether it was a very comic scene. We should scarcely expect to find among the mountains of Northern Wyoming a character from Shakespeare, but there, in the Firehole Basin, in this year of our Lord 1885, is Dogberry to the life.

It is a matter of common report in the Park that there is an understanding between the justice and the officials making the arrests, that the part of the fine which shall be paid to the informer is to be divided between them.

Quite apart from the abstract justice of these cases, and from the motives which may govern those interested in them, is the question of jurisdiction. The original act, setting aside the Yellowstone Park as a National pleasure ground, places it under the control of the Secretary of the Interior. This law has never been changed—although, as we have said, the bill placing it under the jurisdiction of Wyoming came very near passing last year—and the Park is still a National reservation. Until it is authorized to do so by Congress, Wyoming has no more right to direct the course of justice in the Yellowstone Park than has Rhode Island.

On the ground that any law is better than no law at all, it may be admitted that the justices in the Park have done some good. Indeed, we know they have. But one of them has also done a vast amount of harm. He has rendered the regulations odious to a number of people, and he has brought upon Wyoming justice, as interpreted by him, the hearty contempt of all who know about his acts.

Judge Metcalf, on the other hand, who holds court at the Mammoth Hot Springs, seems to be a sensible man, whose ideas as to the administration of his office are very just. The Dogberry of the Firehole has certainly succeeded in having himself written down an ass.

THE MENHADEN QUESTION.

FOR some years there have been all sorts of opinions printed in our columns concerning the effect of the capture of enormous quantities of the fish variously called menhaden, moss-bunker, bony fish, pogy, and other names. These opinions have been expressed by anglers and by the men in the employ of the great fish oil factories along the coast. Anglers are unanimous in claiming that the capture of these fish by the hundred millions interferes seriously with the supply of the food and game fish which feed principally upon the menhaden. They assert that the absence of their natural food accounts for the absence of the bluefish, weakfish, and striped bass, and that if the menhaden were undisturbed at the season when they spawn along our shores there would be a great increase in the number of the food fish which would come to prey upon them, but which at present seek better feeding grounds.

On the other hand the oil men, backed by Prof. G. Brown Goode, who has made a study of the menhaden and its habits, claim that their catch by the netters is only a fraction of the daily destruction among the countless swarms of the defenseless menhaden, which is preyed upon by its natural enemies. They affirm that these enemies which harrass the schools night and day, kill a hundred fold more than man can ever destroy by netting. They have denied that menhaden ever forms a part of the diet of the striped bass, or that the bluefish mainly subsist on them.

Those of our readers who are interested in this question will remember the various articles, *pro and con*, which we have occasionally published during the past four or five years, and no doubt many have formed opinions on the subject. We have been looking over the evidence in the hope of arriving at something like a fair estimate of the case and may soon have something to say on it. There are a variety of things to be taken into consideration in formulating an opinion upon any subject so complex as the influence of the abundance or scarcity of one species upon another species or group. The Congressional committee appointed to investigate questions connected with the fisheries, last year, found so many conflicting opinions among the fishermen that they were often in doubt on questions which seemed perfectly plain from *ex parte* statements. The same difficulties beset Prof. Baird in 1871-72, when he began his investigations on the subject of the decrease of our sea fishes. Anglers can readily appreciate this when they consider the great differences of opinion among some of our most expert anglers concerning the status of one of the black basses, therefore it is necessary to weigh the evidence in the menhaden question well before saying much on the subject.

OUR TRAJECTORY TEST.

THE preparations for the coming test of rifles as to trajectory lines are gradually completing, and with the plan adopted we hope to make them short, sharp and decisive. Every day shows that the plan of having such a trial will meet the wishes of a large number of hunters and others having arms of which they would gladly get exact data. Suggestions and hints have poured in upon us, but many of them being in the nature of repetition have not appeared in print. From present appearances we shall probably have a score of rifles to test. The list of weapons might be extended indefinitely, but much of the work would be valueless because of the same conditions of barrel and charge. If we fix with exactness the figures for certain typical forms of rifle we think we shall have done all that the problem demands and shall feel satisfied that the outlay has not been a vain one. There is yet time for further notes and comments for those wishing to make them and we should be glad to hear from our readers generally on the points to be covered by the trial.

THE CATFISH IN ENGLAND.—In another column we reprint from English papers some comments adverse to the introduction of the catfish into the waters of Albion. It does not appear, however, that any of the writers have had a personal introduction to the "catty," and they prejudge him only from the standpoint of conservatism and prejudice. The solitary member of the family found in Europe is the very uninteresting *Silurus glanis* of the Danube, not at all to be compared to any of our numerous species. We predict that when English anglers haul the festive "cat" from its lair, gaze on its expansively open countenance with its nine-inch smile, and its cheery "glug glug," as it expresses its delight at leaving the ooze for the upper air, their hearts will be won by the unassuming creature which tickles their palms with the spines of its dorsal and pectoral fins. They will hail with delight, too, the American fashion of stealing a fence rail to sit on, and to jab the aforesaid pectoral spines into, until, shouldering the filled rail with its struggling appendages, they march home in triumph, having not only a fine breakfast, but also wood enough to cook it. Their angling papers will teem with essays on the proper mode of skinning the "catties," and a new impulse will be given to the angling literature of Great Britian, now laden with accounts of chubs and dace.

AN ARTISTIC CONSIDERATION.—The London *Saturday Review* expresses the opinion that the America Cup is "one of the ugliest cups ever produced by an English silversmith, and that is saying a good deal." Well, that depends largely upon the point of view. Looked at across an ocean perhaps the cup is not so pretty; but seen closer it is by no means an ugly mug, and just now on this side of the water we have the advantage of the closer inspection.

A HALF-TAMED FOX is one of the attractions at Cornwall, an Orange county summer resort. If it ever becomes wholly tamed it ought to be taken to Newport for the gallant "huntsmen" to chase.

AT THE FORESTRY CONGRESS to be held in Boston Sept. 22-24, a number of papers on important and timely subjects will be read. The programme is printed on another page.

THE RANCOCAS GAME PRESERVE.

So many attempts to introduce foreign game birds into this country have proved failures, that it is a pleasure to chronicle the success of an undertaking of this sort. In another column is given an account of the game preserves of Mr. Pierre Lorillard's Rancocas farm at Jobstown, New Jersey, where a number of English pheasants and European partridges have been acclimatized, and where the adaptability of those birds to America has been demonstrated beyond question.

This experiment was made on a large scale. The conditions were carefully arranged, special cover being provided for the birds, and every precaution being made against the new enemies they would encounter in their new home. The story of the Rancocas preserve is worthy of careful perusal as a guide to other enterprises of like nature, which will be sure to follow. The Jobstown experiment is a notable one, and has much significance, for it is an indication of one of the channels in which the game-stocking efforts of individuals and clubs in this country are likely to be directed. Mr. Lorillard has shown the practicability of inclosing a plot of ground and supplying it with game. What he has done others can do and will do. The tendency of the times is in that direction. Clubs are annually formed for securing special territories and setting them apart for their own exclusive use. Wildfowl marshes, beaches and islands are in demand. Gunners are finding it not more expensive, but much more satisfactory, to pay rent and gamekeepers' salaries where some good is seen to come from it, than to put their money into railway expenses only to lose time in long journeys with no game to show after it. The public which disregards game laws is quick enough to cry out against the clubs which so set apart their grounds and do their own protecting, and we have heard from time to time a good deal of an outcry against so called game-ground monopolists; but there is likely to be nothing but praise and gratitude for such enterprises as that of Jobstown where new game is added to the native supply and overflows the bounds to stock all the country around.

The Rancocas game preserve is only the beginning of what will be done in game importation and preserving in this country in the next twenty-five years. There are scores of localities where lands now almost valueless may be secured for a song and converted into such preserves. This need not be left to individuals of large means; by clubbing together and dividing the expenses it is possible for the sportsmen of a town to maintain such a game park at very inconsiderable expense to each one.

A DEER HUNT IN EASTERN TEXAS.

THE first early frosts had fallen, and the deciduous trees had put on their gorgeous coloring which, mingled with the dark green of the pines, made a scene the most skillful artist has never been able to equal. Nature seemed wooing me to leave the monotonous routine of the school-room and wander at will amid autumnal glories. I can turn a deaf ear to the allurements of field and forest and stick to business during every other season of the year, but when the bracing airs of autumn begin to cool the summer heats, and an occasional withered leaf floats down from the parent bough and rustles under the foot, then I usually succumb, perforce, to the allurements. What I sometimes call gun fever gets complete possession of me. So when, on Thursday night, my friend W. proposed that himself, our friend C, and I should go over to Johnson's Bayou on Friday morning, after my school was over for the week, and camp over night and come home on Saturday evening, and gave such glowing accounts of the amount of deer and turkeys to be found there, I was enthusiastic over the prospect; and I fear that my mind during the next day was badly divided between the duties of the school-room and the anticipation of pleasure soon to be realized. Punctually at 4 o'clock on Friday afternoon W. and C. stopped at the door of the school house, each mounted, and W. leading my horse ready saddled, a pair of blankets tied behind the saddle, and my gun and "duffle" ready to my hand. I mounted and we were off.

Johnson's Bayou is a sluggish stream that comes down from the northwest, near the line between the States of Texas and Louisiana, and flows into Coddo Lake. We had between twelve and fifteen miles to ride to reach the point on the bayou where we intended to camp. Our direction was northeast, and for the first few miles our way led us by occasional plantations where the hands were picking cotton, but as we progressed the plantations became further apart and the country soon became almost an unbroken wilderness with only an occasional new clearing, and for the last five miles of the way we did not see a house.

We reached the desired location just as the sun was sinking out of sight. When within about a half mile of our camping place we saw four deer spring out of a laurel thicket about two hundred yards to our right, and dash over a little ridge and disappear. Night was too near at hand for us to think of following them that night, so we bid them good-bye until to-morrow, and kept on, although C.'s two hounds tugged manfully at their leading strings, and the men, figuratively, ditto.

We made our camp as quietly as possible under a spreading oak, cooked some squirrels we had shot along the road and made a pot of coffee, upon which and some bread we had brought from home we made a hearty supper. After which we fed our horses their corn, then built us a cheerful pine knot fire and gathered more knots to replenish with during the night, then spreading our blankets before the fire we lay down to sleep, some, and to lay awake and smoke, keep up the fire and make plans for the morrow, more. The night was clear and frosty. A past full moon arose about 10 o'clock, and all the after part of the night I could not sleep but remained awake to enjoy the beauties of the same. I finally arose and wrapping my blanket around me I wandered away from the light of the fire and sat down upon a log for more than an hour, enraptured by the beauties and impressions of the night. The frost and the moon's bright rays had turned every pendant dew drop into a sparkling diamond, and bright shafts of quivering light gleamed athwart long vistas of shadow as the moonbeams peeped through the dark tops of the somber pines, and all nature was hushed in perfect silence, there not being even a whisper of a breeze among the pines. I do not measure the enjoyments of the field, wood and stream by the amount of blood spilled, or the number of pounds of meat carried home. One such night in the woods is worth more to me than the finest bag of game that could possibly be procured.

About an hour before day we brewed another pot of coffee, after drinking which we shouldered our guns, and, leaving our dogs tied by the fire, each of us took a different direction to try our skill at still-hunting in the early morning. C.'s gun was a rifle and a shotgun combined, W. and I each carried a double-barreled shotgun. I enjoy still-hunting better than driving, and nearly always do my hunting for large game with a rifle; but as both of my companions preferred driving, I had brought a shotgun on this trip. I went east of our camp, through what was a swamp in wet weather, but was dry now, until I came to the bayou; then turned up stream along a little ridge which seemed to separate the swamp from the bayou, until I came to a higher ridge that came down from the upland and ended in a steep bluff about twenty feet high next the stream. This ridge was covered with scattering pines, interspersed with laurel thickets and occasional clumps of deciduous trees and bushes. Day was just breaking and the birds beginning to peep and chatter. Thinking this a good place to stop, I sat down at the root of a large pine and remained perfectly quiet, eyes and ears on the alert.

I sat there until broad daylight and was beginning to feel the effects of the frosty morning air and was thinking of moving my location, when from away down the bayou there came a startling roar which echoed and reëchoed upon the still morning air. I knew it to be the report of W.'s 10-bore shotgun, and as I knew from past experience that whenever his gun awakened the echoes there was apt to be some execution done, I was naturally anxious to know what he had found. But knowing that the report of his gun was quite likely to set something moving in my neighborhood, I sat still and waited. From my position I could command a view of both sides of the ridge, upon the point of which I sat, for two or three hundred yards back toward the upland. Soon after W.'s shot I saw the leaves move at the edge of a thicket off to my right and I became intensely interested. Soon a deer and then another stepped in sight and stood in bold relief against the green foliage behind them but about one hundred and fifty yards off. Like "Nessmuk" when he was in Southern Michigan, as he tells us, how I wished for a rifle. But all I could do was to sit still and wait. The deer soon moved off up the ridge, but at such a leisurely gait that I knew they had not seen me. Pretty soon they passed behind some bushes, and I seized the opportunity to leave my place. Taking the opposite side of the ridge from the one they were on, and which also left them to the windward of me, I crept rapidly toward the upland, hoping to be able to get ahead of them. Then followed more than an hour of creeping and waiting, I sometimes thinking I was in the right place and that the deer were going to feed up to me, when they would suddenly change their course and I would have to try again. But at last, as I was lying at full length in the grass, my gun pushed out in front of me, I had the satisfaction of seeing one of them, a fine yearling buck in fine condition, step out into plain view and not more than thirty-five yards distant. I lay as close to the ground as a squirrel to a limb, for fear he would see me, until, as he walked along, he passed behind a tree, and when he came in sight again, I was as motionless as before; but on my knees with gun to shoulder, and as soon as most of his body was in sight, I fired and he fell. The other deer, a doe, was still out of sight, and all that I saw of her was a fleeting shadow as she turned and dashed away. But I was well satisfied with my morning's hunt, and saw her take herself away to safety without regret.

Upon going back to camp, I found W. already there with a fine turkey gobbler. I took my horse and went after my deer, and when I returned C. had come in empty-handed, not having got a shot at anything.

After breakfast we prepared for the great hunt of the day which was to be a drive with the dogs. As I had already killed a deer I offered to take the dogs and make the first drive. W. and C. took stands between the upland and the bayou wherever they supposed the deer might pass, while I took the hounds back into the uplands, probably a mile from the bayou and then turned them loose. They were wild with excitement by this time, and away they went, dashing into every thicket, giving vent to their pent up feelings by quick gasps and keen sniffs at every bound. Soon Fan gave tongue to a few sharp excited cries and a moment after away they both went, making the woods ring with their music. Rouser's deep bass and Fan's finer key mingled in a duet that would have made stronger nerves than mine tingle with excitement. After making a few circles they started directly for the bayou, but W. and C. not knowing the stands and runways and having to trust to their judgment in selecting the same, did not get a shot, the deer taking a different course from the one they supposed they would. After the deer had crossed the bayou the horn was sounded and the dogs called back and I again took them to the uplands, but further up the stream than before, W. and C. selecting stands again. This time W., who, by the way, was apt to be our lucky hunter, killed a fine doe that ran past him; C. had a shot with his rifle barrel at long range later in the day, but without success. We made several more drives during the day, but the deer had become frightened and therefore wary and had left the neighborhood and we were obliged to try a new locality each time, and we also labored under a great disadvantage in not knowing the country and the stands, so we did not succeed in getting any more venison.

About the middle of the afternoon we started for home in order to reach there before night. Nothing could have enhanced the pleasure of the trip, as we had enjoyed more than the average degree of success, the weather had been fine, besides which the pleasure of such a hunt in the glorious autumn woods was in itself ample reward for the trip, at least to one of the party. LEW WILLOW.

TARANTULA HAWKS AND TARANTULA.

Editor Forest and Stream:

There is in Arizona and contiguous countries a species of wasp, known to the English-speaking people hereabouts as the tarantula hawk, and to the Spanish as *Caballo de diablo* (the devil's horse). There appears to be a variety of them, both as to size and color, some being not larger than an ordinary wasp, others again attaining a length of two and a half or three inches; some are extremely slender, others again are quite stout. In color they vary from an iridescent blue-black to a dark ochreish red. They receive the name of tarantula hawk from the tarantulas upon which they prey.

For the information of some of your readers it will not be amiss to here state that a tarantula is nothing more than a great hairy, poisonous spider, the bite of which is death unless precautionary measures be at once taken by the injured. An average sized tarantula will measure in spread of legs about five inches, and I have occasionally seen them measure seven inches when full stretched, hind and fore legs. There appear to be two kinds, the black and tawny-colored, the latter having claws on their toes while the former do not. The jaws of tarantulas are placed externally and measure from three-eighths to half an inch in length.

It is upon these spiders that tarantula hawks prey. But tarantulas do not die without a struggle, inasmuch as when attacked they will run, jump, throw themselves back and strike. In a battle for life, however, the tarantula is no match for his wily and light-winged adversary.

Till within the past two months I had believed that the tarantula hawk killed the tarantula for food; but now I think differently and venture the belief that the hawk but uses its victim to propagate its species. I was led to infer this by seeing a "hawk," a small red one, not larger than an ordinary-sized wasp, attack a tarantula, which, by its actions, evidenced mortal fear as it tried in vain to get away. The hawk darted over it several times without apparently touching it, but at last struck it as it went over and paralyzed it with the blow. Instantly the hawk turned and alighting on its now helpless victim's back, thrust his sting a half dozen or more times into the body back of the shoulders, then turning around it more than doubled its work at that part of the body where the shoulders join the neck. I stooped close over it to better see how it plied its trade. Having apparently accomplished its purpose it flew away. At first I thought the tarantula dead, but on its being moved with a stick it started to walk slowly away; but in trying to do so staggered and fell repeatedly. Not having time to give the thing further attention, I killed it and went my way, believing that instead of eating the tarantula, they plant their eggs in its body to hatch and feed on its life.

The tarantula makes its nest in a hole in the ground, but even here it is not safe, as its enemy follows it and does battle with it in its home. I once saw one enter a tarantula hole—the wasp was one of the slender variety—but almost as suddenly back out again. This it did for several times, then finding that it could not dislodge the occupant, it filled the hole up with small stones, many of them as large as the end of my little finger. In picking them up, it would roll them over till it found a suitable place to take hold with its mandibles, when it would pick it up, walk deliberately to the hole and drop it in. It continued doing this until the hole was full, when it flew away. HERBERT BROWN.

TUCSON, Ariz., June 19, 1885.

There is a large group of wasps which provide food for their young in the manner related by Mr. Brown of the Arizona species. In the case of the tarantula, it is evident that the eggs are deposited after the spider has been paralyzed, and that subsequently the latter recovers—in part, at least—from the effects of the poison, and carries the eggs and afterward the hatched grub about in its body. From the FOREST AND STREAM of Feb. 12, 1878, we reprint the following:

The habit of most hymenopterous insects (bees and wasps) of laying up food for their larvæ to feed on when hatched is of course known to all our readers, the case of the common honey bee being the most familiar example of this kind. Some insects of this order do not lay up this store of provisions, but the workers take the food into their stomachs, where it is prepared for the young and afterward fed to them. There is, however, a large group of these insects which do not themselves care for their young, but, having laid their eggs, prepare a quantity of food, stored up conveniently for the future grub, and then leave the egg to take care of itself. The common blue, or mud wasp, as any one may learn by an inspection of one of the nests so plentifully distributed on the inside boarding of hay lofts, garrets and other similar places, supplies its young with spiders; other genera draw their supplies from other sources.

All the wasps and hornets are ferocious and predatory in their habits, and most of them feed to a considerable extent on other insects. So much is this the case that in some parts of Europe butchers are glad to have them about their shops on account of the great number of flies which they devour, and a certain species in Mauritius which feeds wholly on cockroaches is on that account held in high esteem by the natives. Some of the social wasps, however, lay up honey, like the bees.

The wasps are divided into two groups, the social and the solitary. Of the former, the common brown wasp, the "white-tailed hornet" and "yellow jacket" are good examples, while the mud wasp may stand, as being so familiar to all, as a type of the latter. It is with the solitary wasp that we have to do at present. These insects are provided with a poison which stupefies or paralyzes the insects upon which they prey and which of course they secure by stinging them. The female blue wasp—for there are no workers (neuters) in this genus—having partially completed her nest of mud, deposits an egg, and in the same cell with it places a number of small spiders which it has stung and which, although paralyzed and quite incapable of motion, still retain life. The cell is then walled up and another one built adjoining it in which the same thing takes place; this is continued until several eggs have been deposited, when the last cell is finally walled up and the nest completed. A similar nest is constructed for each set of eggs which the female deposits. When the grub appears it feeds on the spiders prepared for it until ready to undergo its transformation, and, finally, when it becomes a perfect insect, gnaws its way out through the wall of clay.

Another large wasp, somewhat similar in general aspect to the blue wasp, but larger, is common in our latitude; but as it does not appear about the dwellings of man it is seldom

observed, except by those who are on the lookout for insects. It belongs to the genus *Sphex*, and its nests are placed in holes in the ground, which it excavates with much care and patience. It feeds its offspring on crickets, grasshoppers, etc., and an incident which once came under our observation well illustrates the power and perseverance of these little creatures. While walking one day in mid-summer along a well beaten path we noticed several small but deep holes, which we rightly attributed to these insects, and at length, just after passing one of these excavations, we came upon a large *Sphex* which was at that moment engaged in transporting its prey to its nest. But for the fact that the insect was directly in our path and we were looking for it we should have missed a very interesting scene. The burden with which our *Sphex* was struggling consisted of two of the large black and yellow-winged "grasshoppers," whose sharp and loud crepitations are so frequently heard during the scorching days of July and August. The two orthopters were firmly fastened together, one clasping the other by the back and each of them was half as long again as their captor. Poor *Sphex* was really in great trouble. She would seize her burden by the head, and by great exertion drag it along the smooth path for about six inches, when her strength would give out and she would fly off to a little distance and rest for a minute or two, walking briskly about in the sun the while, then she would return to the spot and renew her efforts. Had the journey been through the grass it seems as if it would have been impossible for the wasp to drag her load, but the path, worn smooth by constant travel, offered no impediment to her progress. The distance from the spot where she was working to the hole which she desired to reach was perhaps twenty feet, and though her advance was slow it was steady. At times she would fly off to quite a distance, fifty feet or more, but her absences were never long continued, and when we were obliged to leave her she had transported her burden to within three feet of the hole. We greatly regret that we were unable to witness the close of the scene and watch the method by which the "grasshoppers" were introduced into the holes, for they were certainly too large to enter it without being considerably reduced in size. Here then was a very considerable provision for the expected larvæ, and we thus see that even in our own latitude there are examples showing that different genera of solitary wasps feed their young on different insects. A European genus, *Ammophilus*, employs the larvæ of moths for this purpose, while *Chlorion* of Mauritius, as has been said, feeds its young on cockroaches.

It might be supposed that the wasps secure their prey by hawking about over the ground, trusting to chance to throw the insects they need in their way, but we have some evidence that these little creatures possess special senses which enable them to follow the objects of their search when not visible, perhaps somewhat as the hound follows the fox. In a recent number of *Nature* we find a letter from Mr. C. L. W. Merlin to Henry Cecil, Esq., narrating a curious occurrence to which the former was witness and from which we may quote, in closing, an extract or two. Mr. Merlin's account is as follows:

"I was sitting one summer's afternoon at an open window (my bed room) looking into the garden, when I was surprised to observe a large and rare species of spider run across the window-sill in a crouching attitude. It struck me the spider was evidently alarmed or it would not have so fearlessly approached me. It hastened to conceal itself under the projecting edge of the window-sill inside the room, and had hardly done so when a very fine large hunting wasp buzzed in at the open window and flew about the room, evidently in search of something. Finding nothing, the wasp returned to the open window and settled on the window-sill, running backward and forward as a dog does when looking or searching for a lost scent. It soon alighted on the track of the poor spider and in a moment it discovered its hiding-place, darted down on it, and no doubt inflicted a wound with its sting. The spider rushed off again and this time took refuge under the bed, trying to conceal itself under the framework, or planks which supported the mattress. The same scene occurred here; the wasp never appeared to follow the spider by sight, but ran backward and forward in large circles like a hound. The moment the trail of the spider was found the wasp followed all the turns it had made till it came on it again. The poor spider was chased from hiding place to hiding place—out of the bedroom, across a passage and into the middle of another large room, where it finally succumbed to the repeated stings inflicted by the wasp. Rolling itself up into a ball the wasp then took possession of its prey, and after ascertaining it could make no resistance, tucked it up under its very long hind legs just as hawks or eagles carry off their quarry, and was just flying off to its nest when I interposed and secured both for my collection. * * * I am certain the spider left no web behind it. I cannot be sure, however, that, as it had evidently been attacked by the wasp before entering my room, a small quantity of liquid may not have exuded from its wounds, which may have helped the wasp in tracking it. I have no doubt myself that insects have the sense of smell, and probably much more developed than our own. No one * * * who has sugared for moths, or seen the largest *Sphingidæ* hovering over the strongest scented flower at night, or employed a caged female moth as a lure to her male admirers can, I think, doubt this. If so let them put a saucerful of honey in a corner of a room opening into a garden, throw open the window and see how soon the bees, wasps, etc., will be attracted to the honey. There is a tradition in the East that one of the tests by which the Queen of Sheba tried to prove the wisdom of Solomon was placing on a table before him two bouquets, one of artificial and the other of natural flowers, and requiring him to say which were the real and which the artificial, without moving from his throne. Solomon ordered the windows to be thrown open and in flew the bees, etc., which went at once to the real flowers. Whether the senses of insects, birds and what we call the lower creation are similar to ours in every respect it is very difficult to say. No doubt a dog, if he could speak, would say a man had not the sense of smell, and would prove that his nose was worse than useless to him. An eagle or hawk would say that men and moles, etc., have only the rudiments of eyes, and so on. Man, with five very imperfectly developed senses (who can say that there are not twenty senses?), is the only animal that is dogmatical and denies all he cannot understand. The oracle of Delphi said, "Socrates was the wisest man in Greece, because he was the only man who knew he knew nothing."

A MALE RUFFED GROUSE is among the things wanted and advertised for in this week's issue. As the advertiser is experimenting with ruffed grouse in captivity, it is hoped that his search for a male may be successful.

ORIGIN OF AMERICAN DOGS.

THE impression that the domestic dog of the Old World has descended from wild species distinct from the wolf may be well founded, but in America the evidence tends to prove that the Eskimo and other domestic varieties of dogs were domesticated by the aborigines and used by them long anterior to the discovery of the continent by the Europeans, the varieties in question originating from the gray wolf or prairie wolf. First as to the Eskimo dog. From the following extract from Frobisher it appears evident that the Eskimo had the present breed of domestic dogs long anterior to the year 1577. Frobisher's account of the Eskimo themselves is, so far as we know, the first extant, and is full and characteristic. After describing the natives he goes on to say: "They frank or keepe certaine dogs not much vnlike wolues, which they yoke togither, as we do oxen and horses, to a sled or traile; and so carry their necessaries over the yce and snow from place to place: as the captive, whom we haue, made perfect signes. And when those dogs are not apt for the same vse: or when with hunger they are constrained for lack of other vituals, they eate them so that they are as needful for them in respect of their bignesse as our oxen are for vs."

Confirmatory of the theory of the pre-Columbian origin of the Indian dog may be cited the following extract from Hakluyt's voyages regarding the Indian dogs seen on Cape Breton Island, p. 1593: "Here divers of our men went on land upon the very cape, where, at their arivall they found the spittes of Oke of the savages which had roasted meate a little before. And as they viewed the countrey they sawe divers beastes, and foules, as blacke foxes, deere, otters, great foules with red legges, pengwyns, and certain others. Thereupon nine or tenne of his fellows running right vp over the bushes with great agilitie and swiftness came towards vs with white staues in their hands like halfe pikes, and their dogges of colour blacke not so bigge as a grayhounde followed them at the heeles; but wee retired vnto our boate without any hurt at all received." (The voyage of the ship called the Marigold of M. Hill of Redrise vnto Cape Breton and beyond to the latitude of 44 degrees and a half, 1593, written by Richard Fisher Master Hilles man of Redriffe. Hacluyt, III, 239).

It is probable this variety, the bones of which have been found by Dr. J. Wyman, in the shell heaps of Casco Bay, Maine.

"The presence of the bones of the dog might be accounted for on the score of its being a domesticated animal, but the fact that they were not only found mingled with those of the edible kinds, but like them were broken up, suggests the probability of their having been used as food. We have not seen it mentioned, however, by any of the earlier writers, that such was the case along the coast, though it appears to have been otherwise with regard to some of the interior tribes, as the Hurons. With them, game being scarce, 'venison was a luxury found only at feasts, and dog flesh was in high esteem.'"

It is possible that the Newfoundland dog was indigenous on that island, and also an offshoot of the gray wolf, allied to the Eskimo. In their "Newfoundland," Messrs Hatton and Harvey say that there are few fine specimens of the world-renowned Newfoundland dog to be met with now in the island from which it derived its name. "The origin of this fine breed is lost in obscurity. It is doubtful whether the aborigines possessed the dog at all; and it is highly improbable that the Newfoundland dog is indigenous. Some happy crossing of breeds may have produced it here. The old settlers say that the ancient genuine breed consisted of a dog about twenty-six inches high, with black ticked body, gray muzzle, and gray or white stockinged legs, with deer claws behind." "It is now generally admitted that there are two distinct types of the Newfoundland dog, one considerably larger than the other, and reckoned as the true breed; the other being named the Labrador, or St. John's, or lesser Newfoundland. The latter is chiefly found in Labrador, and specimens are also to be met with in Newfoundland."

Regarding the dogs of the Mexican Indians, Nadaillac says in his "Prehistoric America:" "The European dog, our faithful companion, also appears to have been a stranger to them. His place was very inadequately filled by the coyote, or prairie wolf, which they kept in captivity and had succeeded in taming to a certain extent."

In a recent visit to Mexico, not only along the railroads, but in the course of a stage ride of about 500 miles through provincial Mexico, from Saltillo to San Miguel, we were struck by the resemblance of the dogs to the coyote; there can be little doubt that they are the descendants of a race which sprang from the partly tamed coyote of the ancient Mexican Indians. At one village, Montezuma, we saw a hairless or Carib dog, as we supposed it to be; similar dogs are sometimes seen in the United States.

Finally, that the domestic dog and gray as well as the prairie wolf will hybridize has been well established. Dr. Coues has observed hybrids between the coyote and domestic dog on the Upper Missouri (see the *American Naturalist*, 1873, p. 385). To this we may add our own observations made at Fort Claggett, on the Upper Missouri, in June, 1877. We then were much struck by the wolf-like appearance of the dogs about an encampment of Crow Indians, as well as the fort; they were of the size and color of the coyote, but less hairy and with a less bushy tail. They were much like those lately observed in Mexico, and I have never seen such dogs elsewhere. Their color was a whitish tawny, like that of the Eskimo dog.

Confirmatory of these observations is the following note by J. L. Wortman in the report of the Geological Survey of Indiana for 1884: "During extended travel in Western United States, my experience has been the same as that recorded by Dr. Coues. It is by no means uncommon to find mongrel dogs among many of the Western Indian tribes, notably among Umatillas, Bannocks, Shoshones, Arapahoes, Crows, Sioux, which to one familar with the color, physiognomy and habits of the coyote, have every appearance of blood relationship, if not, in many cases, this animal itself in a state of semi-domestication. The free inter-breeding of these animals, with a perfectly fertile product, has been so often repeated to me by thoroughly reliable authorities, and whose opportunities for observation were ample, that I feel perfectly willing to accept Dr. Coues's statement."

To these statements may be added those of Mr. Milton P. Peirce, published in FOREST AND STREAM for June 25, 1885, as follows: "Hybrid wolves have always been very common along our Western frontiers. I have seen several of them, sired both by dogs and wolves, and all I have seen resembled wolves rather than dogs." It is to be hoped that our mammalogists may collect and examine this subject, particularly the skulls and skins of numerous specimens, both of dogs and wolves, and the hybrids between them. Further observations are also needed as to the fertility of the hybrids.—*A. S. Packard, in American Naturalist for September.*

SPARROW HAWK AND ENGLISH SPARROW.—Last Saturday I noticed a flock of English sparrows in the street before my house, engaged, as usual, in gorging themselves. Suddenly the flock seemed much alarmed, some cowered and others rose in haste as something shot down like a bullet and departed like a shadow, while one or two squeaks were all that told of another of bird-life's tragedies. The whole was so sudden, and my mind was so preoccupied that I scarcely thought of what had transpired within forty feet of me. I resumed my writing, but was soon disturbed by a repetition of the disturbance. Taking a position for observation, I noticed a bird hovering in the air, making circles above the spot on which I knew the sparrows were gathered; I saw him suddenly dart through the air, and again I heard the squeak of the sparrow. The hovering bird was a pigeon-hawk, called also the sparrow hawk. The next day I saw a repitition of the scene, and there were by actual count ten of the hawks circling above their quarry. The sparrows seemed not sufficiently alarmed to leave the dangerous ground, but returned immediately after seeing one of their number borne away by the hawk. I really believe there was not one of the ten circling hawks that did not carry off a sparrow in his talons. These hawks are about the size of the bluejay—have about the same spread of wing. They seem not at all afraid of man. The "pigeon hawk" and the "sparrow hawk" are two distinct birds, but both are true falcons, and as there seems to be at least a probability that the English sparrow is among us to stay, may there not be a great deal of legitimate sport gotten out of it by training sparrow hawks to catch it? Falcons were used long before any of the present generation's grandfathers were born. Why may not we use them to relieve us of a pest, and to contribute to our amusement at the same time?—AMATEUR.

Game Bag and Gun.

FOREIGN GAME BIRDS IN AMERICA.

NOTWITHSTANDING the spasmodic attempts that have been made, from time to time during the last century to naturalize foreign game in this country, we have had no reliable record until recently that a single variety had ever been acclimated or found to be self-supporting. We are now, however, told that the English partridges which Mr. Pierre Lorillard has introduced into his magnificent game preserves at Jobstown, N. J., have not only bred and increased but have scattered over the country for miles around. It is also found on inquiry that these birds have wintered well, and that the English pheasants with which the preserves are most liberally stocked have, after repeated failures, begun to accustom themselves to their new home in Jersey land.

It is now nearly a hundred years since the first attempt we know of was made to add to our admirable list of game birds the English pheasant and the English partridge. This was undertaken on a very large estate, strange to say, in almost the immediate vicinity of where Mr. Lorillard's preserves are located. The pioncer was Mr. Richard Bache, a wealthy English gentleman, who, by the way, was thoroughly Americanized by marrying Dr. Franklin's only daughter. Mr. Bache lived on the shores of the Delaware River, at a place in those days called Settle, near where the town of Beverly now is. He imported direct from England a number of pheasants and a large number of partridges, and being an accomplished sportsman watched the experiment with considerable interest. But although shelters were devised for the protection of the game and food was liberally distributed, the birds could not battle against our old-fashioned winters, and when the following spring came around there was not one left to tell the tale. Mr. Bache, therefore, had to content himself in the future with such sport as the quail afforded, and an occasional trip to "the Pines," which in those days swarmed with grouse.

In the beginning of this century a second attempt was made to secure a crop of pheasants. The place selected was the high ridge land bordered on one side by the Hackensack salt meadows and on the other by the Passaic River, opposite to Belleville, N. J. There a "park" had been fenced in by a rich land owner of the time, who stocked it with deer and English pheasants. We have been told that the birds were guarded with jealous care, protected from the guns of the enterprising sportsmen of the vicinity, and regularly fed, but that when the nesting season came, and it was thought everything was going well, the birds suddenly disappeared, probably being killed by ground vermin and by hawks or by disease.

Since then, in a number of instances, small lots of English birds have been imported and turned out. On the estate of William Upshire, in Accomac county, Va., the attempt was made, and on several of the estates along the James River, long before the war, but as far as we can ascertain every venture proved to be a failure.

Mr. Pierre Lorillard has been experimenting on a very large scale, and we believe that this is the first time that any attempt has been made to naturalize foreign game where a very heavy expenditure has been employed and the experiment, after repeated failures, carried on with an outlook of ultimate success. About thirteen years ago Mr. Lorillard purchased several farms in the northern part of Burlington county, N. J. It was the first step in creating the Rancocas Stud Farm which has since become world famous. From time to time he added to his possessions, until now he owns some sixteen hundred acres of as fine pasture land as there is in the country. In 1879 the three game preserves were made. These lie almost in the center of the estate and contain one hundred, forty and twenty-five acres respectively, the smaller ones being in reality "game harbors."

The one hundred acre tract, prior to its present use, was a roughtly cultivated farm with some low wet places. On it there was a piece of timber covering ten acres, and besides about twelve acres were grown up with scrub oaks, cedars, locusts and stunted brush. Mr. Lorillard inclosed this tract with a picket fence eight feet high, topped with wire netting and two strands of barbed wire. The fence was sunk two feet below the surface of the ground to prevent vermin from tunneling. It was finished in 1880. In the autumn of 1879 five hundred quail were put out, but as they did not have sufficient cover or protection all were soon killed. In 1880 a

game keeper was appointed and a house for his use was built inside the inclosure. An incubator on a very large scale, and all the artificial arrangements and appliances necessary for the purpose of raising and protecting the game were supplied. All the drains running through the preserve were cut to occasion the accumulation of moisture. A series of three ponds was artificially arranged, chiefly supplied with water pumped by a large windmill from a stream near by and also from an artesian well. About eighteen thousand young trees, locusts, etc., were set out to afford sufficient cover. A large house was built of wire netting walled with an inside netting of twine, the latter so arranged on the inside to be six inches from the wire, thus preventing injury to such birds as might fly against the sides and roof. This house was built especially for the English partridges. Inside there is a dense growth of shrubbery, while the building itself is situated in a labyrinth of vines, which were arranged and set out under Mr. Lorillard's personal direction. The first consignment of English partridges soon disappeared. They were most probably killed by vermin or hawks. At all events a raid was instituted against the pirates of the land and air, which having been vigorously kept up ever since, has resulted in the killing of about 500 cats, 80 minks, 150 weasels, 100 opossums and 500 hawks. Over 200 hawks were shot this spring. They are nailed to a tree near the entrance gate, entirely covering the trunk far up into the branches.

The first lot of English pheasants also proved a failure, as they, too, soon disappeared. One hundred pair of pinnated grouse (prairie chickens) were then obtained at a cost of $7 a pair, and these followed the partridges and pheasants; the countrymen who watched in wonder the establishing of the preserve, "Guess'd they took out fer th' Pines," which, by the way, is the orthodox Mecca in South Jersey for every restless creature of fur, feather or epidermis. As far as is known not one chicken was ever seen after it left the preserve. Several more consignments of quail consisting of lots from 250 to 1,000, have been liberated in the preserve, and these, and the subsequent lots of English pheasants and partridges, have thrived splendidly.

The method of rearing the pheasants as now pursued is to keep the old imported birds in coops. These coops are circular in shape and about nine feet in diameter. They are made of slats and roofed about four feet from the ground with canvas and twine netting. There are about thirty of these houses or coops in the preserve, and when occasion requires they can be moved. In each coop there are one cock and five hens. The eggs are taken away daily and set under Bantam hens and tame hen turkeys. The latter were tried as an experiment this season and thus far we are informed they have done very well. By some it was thought that their weight was so great that it would be sure death to every young pheasant chick stepped upon. But it has been observed that the turkey foster mothers move with such care that an accident from crushing has but rarely happened, and they have proved to be excellent and watchful parents.

During the hatching period the nests are placed in a dry locality, surrounded by picket coops, and thus are protected from ground vermin. When the young are hatched, pens are built in front of the coops to allow the young birds a little run without giving them the chance to stray away. In 1884, from eighty imported pheasants that were kept up, 1,400 eggs were obtained, of which 800 were hatched out. Many of these pheasants were turned out in the preserves, and at all times the birds can be seen scattered over the fields near the game inclosures.

The partridges were at first reared in a manner quite similar to that described; but as they have now become acclimated they take care of themselves, and coveys are often found miles away from the preserve.

While these birds have afforded some excellent sport to Mr. Lorillard and a few of his friends, care is taken to kill as few hen pheasants as possible. On this subject Mr. Ohl, manager of the Rancocas Kennels, talks enthusiastically, and having a penchant for the poetic, he is pretty sure to observe:

> "But when the hen, to thy discerning view,
> Her sable pinions spreads of duskier hue,
> The attendant keeper's prudent warning hear,
> And spare the offspring of the future year;
> Else should the fine, which custom laid of old,
> Avenge her slaughter by the forfeit gold."

In this way with poetic license Mr. Ohl conveys the idea that the shooter of a hen pheasant on the Rancocas Farm will be "fined" by Mr. Lorillard's directions. Indeed, it is said that the guilty party will never in a natural lifetime be again summoned to the chase at Jobstown.

While speaking of the pheasant, Mr. Ohl observes that "the fact of the female bird assuming the plumage of the male has not yet been noticed." In America as in England, both the pheasants and the partridges are both very susceptible to diseases, the nature of which in this country is as yet imperfectly understood. At times they are found to die off very suddenly, generally at that period when they are being denuded of their crest and tail feathers. Often their death occurs without any apparent preliminary sickness. Their feeding must be regular, and the character of the food nutritious, such as chopped hard-boiled hen's eggs, shredded beef, ants and ant eggs; pepper pods and other aromatic plants are likewise used in small quantities.

It takes all the time of Mr. Lorillard's three gamekeeepers to attend to the birds, especially in winter. Then houses and brush shelters are built on the edges of the covers, where the birds congregate and are fed daily. In the early spring strips of land are plowed for the purpose of turning up the worms and insects, and other patches of the preserve are cultivated; perhaps altogether twenty acres are planted with rye, wheat, buckwheat, millet and other cereals solely for the use of the game; berry bushes have also been set out in different localities.

The growth of the timber has been more rapid, and part of the cover is very dense, being grown up with wild grass, weeds and green briers. Through the thickest parts drives have been cut to afford easy shooting. During the early autumn the birds are scattered over the country for ten miles around, but the land owners through the Rancocas section have appreciated Mr. Lorillard's efforts, and support him by forbidding shooting in the vicinity. But for all that there is nothing to prevent "outside shooting," and it is said that when the season is at its height wagon loads of shooters from Mount Holly swoop down and string out along the east road and keep up "a regular Fourth of July."

It is when the snow flies that the best shooting is to be had at Mr. Lorillard's. The quail of the locality which in former years used to go to "The Pines," now draw to the dense cover of the preserves, so that during the winter months thousands of birds that would otherwise perish in the snows, starve to death, or be killed by vermin, hawks or "huddlers," find a haven of safety in the three inclosures.

During the winter of 1884 and 1885 other instalments of game than those varieties mentioned were turned out; these included wild turkeys, ruffed grouse, wild geese, wood ducks, English hares, German roe deer, and also ten head of common American deer. We are told that all are thriving and producing.

The three ponds are filled with carp and pickerel. They have been stocked with French mallards, which in the spring and autumn attract the passing flocks of wildfowl.

It was from personal observation and from agreeable chats with Mr. Lorillard, Mr. Ohl and the head gamekeeper at Jobstown that the foregoing story of the preserves was learned. In Mr. Lorillard's library he showed the game record for last season, which reads as follows: Quail, 916; English pheasants, 54; English partridges, 10; rabbits, 28; wild ducks, 21; English snipe, 1; total head, 1,030.

From the above it will be seen that the killing of the foreign game was very limited. Only a very few of Mr. Lorillard's friends enjoyed the sport, and then only a couple of hours at a time were devoted to shooting. The partridges were protected by Mr. Lorillard's orders, but on grand occasions each visitor was permitted to kill a brace of pheasants. Mr. Lorillard himself did not take the field until after the snows were on the ground. He then had the drives cleared with snow ploughs, and did the most of his shooting over the setter Grousedale.

That the Jobstown undertaking has been successful thus far there is not a shadow of a doubt, but it would not surprise us to hear at any time that his preserve had had a set back. In fact such mishaps enter into the calculations of all large game preserves. In Scotland the red grouse are at irregular periods attacked with disease, unknown almost, certainly incurable, and for many successive seasons the few survivors on the moors are necessarily protected with a view to replenishing the stock. At such time the shooting stops. In both Norfolk and Suffolk we have seen the pheasants die off by hundreds. Can it be that overstocking occasions these great mortalities? How often in the Southwest below the snow line have we noticed the quail in the greatest abundance one season, and then without apparent cause scarcely a bird would be found on the same range the next year. The attempt has been made unsuccessfully to introduce the Messina quail here, and equally unsuccessful have been the efforts to introduce the American quail into England. We spent some time on a very large estate in Norfolk which had been largely stocked with American quail, and saw them die one after another until none were left, though everything was done that ingenuity could devise or money secure to save the little Bob Whites. We have always had a desire to see the ruffed grouse introduced in the mountains of Wales and the forests of Devon, believing that the hardy bird would, in a trans-atlantic home, live long and prosper. We know that from our suggestion the experiment will be tried. Several years ago the ruffed grouse almost entirely disappeared from Northern New Jersey. The season before these birds had never been more abundant. From what we have seen we do not advocate the stocking of wild lands with unacclimated quail where already a good crop exists. That contagious diseases can be imported there is no doubt, that disease can be created especially by change of feed and temperature is more than probable. If the stocking of lands has to be resorted to, it should be conducted with discretion and not over done. At least these are our opinions given for what they are worth. X.

AUGUST, 1885.

ADIRONDACK DEER.

Editor Forest and Stream:

There is but little doubt your judgment in "Jack Bluff and Bluster" of Aug. 20 is derived from a very thorough acquaintance with the sentiments of Adirondack hotel keepers and guides on the subject of game legislation. It is to be supposed you are in possession of the observations of a great many individuals, whereas the individual, even while on the ground itself, has little beyond his own. So far as I remember, I have seen nothing in FOREST AND STREAM from the western part of the Adirondacks. I therefore take the liberty of contributing to the discussion my mite of observation taken with some care, and principally from the Cranberry Lake region since August 1. I am satisfied the hotel keepers and the guides regard their interests as one. They are specially concerned in whatever brings the tourist and sportsman to them, especially the sportsman. When he comes both sportsman and guide become guests of the hotel. They know that their occupations depend upon the preservation of the deer. Without deer guiding would soon become a lost art in that region, and the custom of the hotels would be a sickly affair if it depended on fishing alone. Without exception, so far as I could learn, both guide and hotel keeper were in hearty sympathy with the law in its effort to preserve the deer. The constables were alert, and I heard of no instance of deer hounding. Doubtless the law was violated and will be violated just as every law will, but there is a fine large opportunity there for any man who wants to stock up on deerhounds.

The closing sentence of your article intimates that an attack upon jack-shooting in the next Legislature is not an improbable thing. On this method of deer hunting I add a few observations. While the guides will miss the music and excitement of deer hounding, they know the extermination of the deer by that method is simply a question of time, and a very short time at that. For that reason they are perfectly satisfied to see it go. They feel they have everything to gain and nothing to lose by the enforcement of the law, since it will deter no sportsman from going to the woods. They are satisfied also that the deer will survive, and survive in great numbers, all the floating that can be done, first, because the deer themselves soon get to understand the game and cannot be taken by it. The old bucks are specially apt, and one flash of the jack is enough to bring a resounding blast, or series of blasts, that puts every deer within a half mile of the lake on his guard, and relieves the hunter of a wonderful tension of expectancy. His remarks on the buck, however, are usually earnest and terse, and are liable to be original. Second, because floating puts the killing of deer, to a very considerable extent, into the hands of the guide. There are men who know exactly when a guide is working up to his art, but the vast majority who go into the woods do not. To such a guide will give a deer or not pretty much as it pleases him. If floating is to be the only method of deer killing until snow comes, the guides are satisfied that three years' enforcement of the law will give the Adirondacks three deer for every one they have now.

There can be no doubt that a law prohibiting floating would result injuriously. Could it be enforced it would practically put an end to the business of the guide and also of the hotel keepers, since it would adjourn deer hunting until the coming of the snow. They will support and help execute the law as far as it has gone, but no further. If the number of deer cannot even be depleted, much less exterminated, by floating, they can see no good reason for its prohibition. The charge that many are shot to death that are never found has no foundation in fact. When it is possible to approach a deer at all with a jack it brings the hunter so close to it that his ball tells with fatal effect. I took some parties out myself and knew of many more, but I know of no instance in which the deer succeeded in getting out of the water. Some may get away, but I know of no method of hunting that enables the sportsman to bag all he kills. That fewer escape, thus to perish, from floating than from any other method is simply certain. I met one man who was opposed to floating and outspoken against it. He was a farmer and lived just as near the Adirondacks as any man can live and have a farm at all. I definitely ascertained that he was deeply interested in dogs and slaughter. The sympathy of such a fellow for a wounded deer is something rich in its way. In brief, the feeling is, "we have what we want and are content to let well enough alone." J. L. P.

SYRACUSE, N. Y.

DICK'S LAST WOODCOCK.

> "Le plus je connait les hommes,
> Le plus j'admire les chiens."

ONE afternoon late in August, 1879, my friend W., my mentor in field sports, and I started for a two days' woodcock hunt on the islands of the Upper Allegheny, as we had about exhausted such covers as lay conveniently within reach of home.

Our first objective point was the village of Puckram, let me call it, twelve miles distant, where we were to stay over night, and which was to be our base of operations. Behind our horse and buggy was W.'s saddle horse, which he intended riding in the field and from whose back he was in the habit of shooting the pirouetting woodcock.

We arrived at Puckram just as the sun was setting, and put up at the only hotel, one of those bucolic hostelries kept in the style, a couple of days' acquaintance with which completely reconciles the average guest to any sort of sublunary misfortune. After supper we sat upon the hotel porch, about which was collected the usual motley village crowd, with some additional ones attracted by the brace of newly arrived strangers. Of course our hunting trip was soon made the principal topic, and we received the usual amount of valuable information concerning the numbers and whereabouts of the game we were in quest of; the most of our friendly informants regarding woodcock and woodpecker as synonymous terms.

The conversation finally shifted to rattlesnakes. We knew there was a likelihood of our meeting these unwelcome reptiles on our trip. It was the season of the year when they betake themselves from their rocky fastnesses, seek the low grounds, and lie about prone and sluggish, and the islands we intended to hunt had a snaky reputation. Each of our *raconteurs* had his own stock of snake stories (generally personal experiences) which he retailed with gusto, and appropriately punctuated with copious expectoration of tobacco juice. As a consequence, my night's rest, such as the Procrustean bed I occupied permitted me, was disturbed by dreams in which the snake species played an important part, and the whistle of the woodcock and the "zip-zip" of the festive rattlesnake were confusedly intermingled.

In the morning we found it raw and foggy on getting up, but we buttoned up our coats and drove to the uppermost island. The weather came off clear and warm about 9 o'clock, and we had fair sport and reasonable luck during the day. Our dog was a setter belonging to my friend W. Dick was not of blue-blooded stock. He could boast no proud ancestral lineage. But sterling fidelity and thorough usefulness atoned for these genealogical deficiencies. He was staunch on point, persistent in pursuit, patient under reproof and infallible in retrieving.

> "Not all the blood of all the Howards"

which ever flowed in canine veins could have made him dearer to his master or the friends who hunted with him.

We returned to our headquarters at night without mishap. The next day we hunted the islands nearest the village. These were the dangerous ones. As my friend W. was mounted he was out of harm's way. For my part, my steps were cautiously taken when practicable, but when one had to plunge headlong through thick-growing nettles that reached to the middle, there was little chance for deliberation or care. And in the ardor of pursuit everything was forgotten but the bird which was marked down and momentarily expected to be flushed; but occasionally I would step upon a twig or branch of a more than usual yielding or wriggling nature under foot, when the fearful idea of snake would seize me and up would go my leg quickly with the peculiar movement of a raw recruit in the goose-foot drill or of a string-halted mule.

We had about finished our day's hunting. The birds had been fairly plenty; Dick had behaved in his handsomest manner, and we had scored less than our usual percentage of misses, when it was suggested we should wade up the river a distance and try, by way of conclusion, a bunch of willows at the mouth of the creek. Here we found several birds, and the last one which was shot at could not be found, either dead or alive, although we beat the ground thoroughly to get it up again. Finally, giving up the search, we started back. Dick accompanied us a short distance, when I noticed him stop in a reflective sort of way, and turning tail he galloped back to the cover just left. I called to him, but to no purpose. We kept on our way, coasting along the river's edge, sometimes crossing to the islands and back again. A half hour had elapsed and we had gone over a mile. Nothing had been seen of Dick. Fearful of some accident, we concluded to wait awhile for him. After some time of anxious watching and misgiving, far up the river we saw him coming, following exactly our wake; wading the stream when he could, swimming it when necessary, at other times making his way through a tangle of nettles and weeds, coming slowly but resolutely. We remained till he came up (his master somewhat out of patience with him), his last course being to swim from the point of an island to the shore where we stood. Then it was seen, to our great surprise and to Dick's everlasting glory, that he held in his mouth the woodcock we had sought so long for, which in reality had been killed and which Dick had remained behind to successfully find. We praised him heartily by voice and patted his head to his manifest pleasure and content, little thinking that this splendid achievement we were lauding was to be his last act of prowess.

In the middle of the afternoon we were on our way ho me

bag and baggage, our birds packed carefully away in the buggy, with our guns and traps and Dick following along after. We were in that serene mood which enwraps the mind at the close of a successful hunt; and we felt additionally rejoiced that we had safely run the gauntlet of the bugbear of our trip, rattlesnakes.

We were more than half way home. We had reached a point where the road wound along a steep, rocky, thickly-timbered side hill, when our horse suddenly shied to one side. A glance from the buggy showed a large black rattlesnake lying full length, his head and a part of his body concealed in the thick bushes at the side and the remainder of his length stretched across the road. I reached for my gun, put in a couple of cartridges and jumped out. I found I could get no sight of the snake's head; but concluding that blowing him in half would serve all practical purposes, I fired at the thick part of his body. Up to this time I had taken no thought of Dick. The moment I shot, with the retrieving instinct he dashed at once into the bushes. The snake, almost divided in two, still had strength to rear his horrible head, and before I could get Dick out by frantic calls, I saw the reptile strike quickly and Dick jerk back. The dog came running out, and approaching the thicket closer I discovered the snake still poised for another stroke, his wide ugly mouth agape, from which the fangs bristled, and his eyes blazing like two garnets with venomous malignancy. With the remaining cartridge I blew his head to atoms.

I looked Dick over but could find no wound; and I was hopeful he had escaped. We continued our way, but I watched him closely from the back of the buggy. Very soon I noticed his steps began to flag, and upon slowing up I thought I observed a swelling upon the side of his face. Sure enough, upon examination two drops of blood showed themselves upon the hair of his upper lip, and the flesh beneath was already highly inflamed and swollen. We took him at once and administered whisky, the only remedy at hand. We took him in the buggy and drove as fast as we could the remaining five miles. He cried out in an agonizing way at intervals, and looked up in our faces with mute appeals for help.

Alas for Dick! He had retrieved his last woodcock. He died in a half hour after we reached home. QUILP.

The misnaming of the woodcock "woodpecker" is quite prevalent. Our correspondent "Graeme" writes from Southwest Virginia: You know we have in this section a member of the "red-headed family." Don't they call it in the language of a people who never saw it *Campephilus principalus?* It is called to this day by our old-fashioned people "woodcock." To illustrate this prevalent name for Mr. Campephilus, as well as the ignorance of many who never shoot game birds, about the existence of the real woodcock right among them, I once asked an old gentleman if he had seen any woodcock on his farm that fall. He said, "Yes, but you don't eat them stinkin' critters, do ye?" Some time since on our streets sat a group. In it was our old village doctor, who in the past was a crack shot and a connoisseur of game birds. Also there was that man whom you often find—the man who has been everywhere, is personally acquainted with every distinguished man in the nation, and has played the epicure with kings. This character was Schneider, the Dutch village music teacher.

"You speak about the edible qualities of game birds, gentlemen," said the doctor; "in my opinion none of them are equal to the woodcock."

"Vell, dot's so," said Schneider, "dey are goot, but der darn tings need so much cookin'; but if you pair bile dem, to take der stink mit dem off, den roast dem mit onions und bepper, dey vill sort a do, put dem red-headed tings haf a peastly schmell."

The doctor left with the scornful remark: "Well, man, you don't know what you are talking about. You'd as well eat a polecat as one of those birds." GRAEME.

SOUTHWEST VIRGINIA.

GROUSE IN NEW ENGLAND.

SEPTEMBER first was the opening day of the grouse season in Massachusetts, Maine and New Hampshire. It was also the opening day for duck shooting in New England, but woodcock shooting in Massachusetts begins legally Aug. 1, while quail shooting in that State is prohibited till Oct. 15.

In Massachusetts prospects are good for the sportsmen. The same is true of the southern part of New Hampshire and Vermont. A taxidermist of long experience, also a close watcher of birds, remarked to the writer the other day that one would be surprised to know how thick the grouse are in many parts of this State. There is a good deal of game near home this fall for the Boston sportsmen, and they will improve the opportunity. There is a good deal of game in Massachusetts for those who know how to find it. But little illegal shooting has been done, at least few out-of-season birds have been seen in the Boston markets.

But in the North Woods, including nearly all of Maine and Northern New Hampshire, it is to be feared that grouse are far from plenty. The broods have not been seen as plentiful as usual, though the old birds appeared to have wintered well. A cold spring or late cold rains may have destroyed the eggs or the young birds. Sportsmen and guides have various theories. One is that the foxes and owls are unusually plenty. A collection of information from those in position to be well informed goes to establish the fact of a few birds, unless, as is suggested by one gentleman well posted, that the birds have not been seen as usual. His theory is as follows:

Such a crop of berries of all kinds was seldom known before in Maine and Northern New England. Thousands of bushels of blueberries will not be gathered at all, because there is neither use nor market for them. These berries have been thick in every direction. Every hillside and opening in the woods has abounded with them. "The woods are full of them." Other berries have also been remarkably plenty. This is very favorable to the grouse. It gives them an abundance of food, and it has enabled many a brood to feed all summer in a very small space without straying abroad and falling under human observation. The chances of the broods being seen have been lessened one to ten as compared with a dry season and a scarcity of berries, when they are obliged to roam around for food. This gentleman's idea is that the coming of frost and falling of the foliage—the ending of the berry season—should bring out a goodly number of partridges.

Another gentleman, a lover of the gun, also suggests the same theory, or rather thinks there may be more grouse than appearances indicate thus far. He says that his house, although located in a Maine village, is near a fine grove, which is in turn backed up by a wood lot. The gentleman's garden runs back to the very pines. Sweet corn, squashes, peas, etc., cover the ground from the very house to the woods. One stormy day a week or two ago he had occasion to raise a window in the second story looking over the garden. This end of the house is but little used. He leaned out of the window to adjust a blind and heard a peculiar clucking and then the warning cry of the old grouse to her young. When behold, there under the squash vines and corn stalks were more than half a dozen two-thirds grown partridges trying to keep out of the rain. Nobody had seen the flock before, nor have the birds since been seen, unless some of them fell to the gun on the morning of Sept. 1. The curious part of the story is that there are several good partridge dogs in the village and the gentleman himself owns a spaniel "crazy after grouse." These birds evidently had not been disturbed by the dogs.

The flocks which have been watched all summer by the boys to be shot the first day of the open season, are few and far between this year. The way the Maine boys do is somewhat cunning. They are learning to respect the law, believing it to be best for the birds, and hence themselves. But each boy is "mightily" afraid some other boy may know where that "big flock" is as well as he does. No boy will tell; but how does he know that some other boy, who "won't tell," may not know where his flock is, and get there first on the morning the season opens. There is some "creeping out as soon as the day begins to peep," with shotgun in hand. If a boy does meet another boy in quest of the same flock, why each expresses surprise that the other knew of it, and they laughingly go for the birds together. Alas! For improved firearms and a growing love of field sports, I fear the birds are doomed, though protection is doing much to save them a while longer. BOSTON.

TWO WEEKS IN MICHIGAN.

ON October 6, the Colonel, Major and self, accompanied by two dogs, boarded a train on the C. M. & St. Paul R. R., bound for the Northern Peninsula of Michigan for deer and an outing of two weeks. This trip had been under discussion for about three months prior to date of leaving, had been looked forward to with great expectations, and during all this time we were engaged in getting together our outfit. Both the Colonel and the Major had been in the habit of taking an outing every year or two; as for myself, my outings in the past twenty years had been confined to a day's trout fishing once or twice a year, and in winter a day's hunting when I could get away from business; and for the first ten years of the twenty I managed to kill a venison every winter. But the deer disappeared, and for many years I had killed neither deer nor trout. The Colonel and Major having plenty of spare time, indulged themselves in many a hunt and fish; as for myself, my time was all occupied, for the reason that when I was young not having capital to engage in any other line of business, like many others in similar circumstances, I studied medicine. The old passion for a rifle and the woods never died out within me, and every year through the summer I planned a trip away where I could wander through the woods and feel the same pleasure I used to when a boy, but when the time came to go business spoiled it all.

On the third day after leaving home we arrived at our place of destination, Crystal Falls, Mich., on the C. M. & St. Paul, M. & Northern and the C. & N. W. Railroads, over which we traveled. We found the trainmen very pleasant gentlemen, and had no trouble about our dogs. We expected to pay for our dogs, and gave the baggagemen what we saw fit to give, and they were perfectly satisfied. We did not take the dogs along to hound deer, and all the time we were in the woods the dogs were chained in camp, except that when one of us wounded a deer a dog was brought and placed on the trail; but we only secured one deer that had been wounded by the use of a dog—the country where we hunted was filled with swamps, and a dog could not follow the trail through the water. There was no hounding of deer by any one in that part of the State; the professional hunters and guides do not use dogs and will not allow others to.

We found that about every State in the Union was represented here by hunting parties, especially Illinois, Indiana and Ohio. Crystal Falls, the terminus of the C. & N. W. Railroad, is situated on what is known as the Menominee Iron Range. It is surrounded by iron mines, and is the base of supplies for the immense lumbering interests further north. One year ago the land on which the village stands was a part of the dense forest one sees west of the town. There is one long business street, and the place has a bright, brisk business look about it, and its buildings, especially the school house, shows that the people do not lack enterprise and the knowledge of what goes to make a place, if they do live in the woods. Here we were joined by Mr. Buck, an enthusiastic sportsman, and Mr. Carr, hunter and guide.

Our supplies purchased, we started for the Michigaumie River, eight miles east from the Falls, to be gone one week. We found deer and trout very plenty and did not have to live on canned goods, but had venison and trout from the first day. The hunting was the easiest I had ever found; it was all done "sitting on a log." Our tents were pitched at a place called "High Bank," on the river, and, browse having been picked for beds and pillows, we were ready for business.

The guide assigned each man to a certain place where he had found deer signs plenty, and the following was our regular daily programme: A small alarm clock awoke us at 4 o'clock in the morning, when we had coffee and a lunch, after which each man shouldered his gun and proceeded to his station, where he staid until about 8, watching the edge of the swamp for deer. The ground here had been burned over the fall or spring before and was covered, where the fire had run, with a growth of small, black cherry sprouts, from four inches to a foot in height. These tender sprouts seemed to be a great luxury, for the deer browsed them, the smaller and tender ones they cropped close to the ground; of the larger ones they took the branches only. Often the deer would lie down where they had stopped feeding in the night, and it was no uncommon thing just at daylight to see a deer get up within ten or fifteen rods of where one of us was sitting and go to browsing. About 8 A. M. we all met at camp and had breakfast. Dinner came about 1 P. M. The time from breakfast until 3 P. M. was spent by each as best pleased his fancy. There were plenty of trout in the river; and each one, too, had time to look for a better station if not satisfied with the ground he had been watching. Between 3 and 4 each man took his gun and went to his log. Dusk found us all in camp eating a hearty supper, with an appetite known only to those who have been in such situations After supper came a smoke, sitting around the camp-fire, and a discussion of the events of the day. We retired early and were lulled to sleep by the riffles in the river and the beavers slapping their tails on the water.

No deer were killed by our party with a headlight, but around the Falls every night large numbers of shooters were out with headlights; and here one of those sad accidents occurred that cannot be explained satisfactorily to any one who knows anything about hunting or has ordinary intelligence. Chas. Bertram, the oldest hunter and guide in this section of the State, was fatally shot by a friend, both hunting with headlights. How any man could mistake a large bullseye light for a deer's eyes is inexplicable. This man did, and with a 45-60 bullet in his gun he struck Bertram at about the junction of lower third with middle third of left arm, the ball lodging near the spine. A gentleman came out to our camp and I went in to see the wounded guide, but could do nothing for him. In going in to the Falls I had a ride of eight miles on a Michigan buckboard, over one of the worst roads I ever saw. The Michigan buckboard is no fairy. It is built to stay, and is calculated to carry from 1,500 to 2,000 pounds. The wheels look like those on a gun caisson, and the body is ten to twelve feet long. Just after getting off from the cars I saw one standing in the street and asked a citizen what that was. He said it was a buckboard. I did not believe it. I thought he took me for a "tenderfoot," and was starting in to have some fun with me.

Coming into Chrystal Falls after a week spent on the Michigaumie River, I felt as though a shave and shampoo would not only improve my personal appearance, but would also be conducive to my own comfort, so I walked up the long and only street in town to the top of the hill, leading my dog by the chain and carrying my rifle over my shoulder. I entered the shop, laid my rifle on the broad window sill, and chained the dog to a stove leg. The barber began his inevitable talk: "Have you heard about the battle?" "Battle?" "Yes." I stopped and stood like one petrified in the center of the room. Here I had been for nearly two weeks without seeing a newspaper or hearing any news. When I left home two great political parties were contending for supremacy in our country, and always having taken a great interest in politics, and reading two of the great dailies every day when at home, and knowing that there was bad blood that was liable to break out at any time and that acts of violence might be committed, I thought hostilities had actually commenced. This whole train of thought rushed over me in a second of time, and thinking of the hour the train left next day, I managed to stammer out the question, "Wh-what battle?" This answer came: "McAferty and Mitchell." With a feeling of intense relief I ejaculated "Oh" and dropped into the chair. He tried all the methods known to his profession to draw me into conversation, but I was dumb.

The rest of our company came in just before dark with the team, boat and camp equipage. The next morning we started for a point on the Paint River, about two miles above where the Hemlock empties into the Paint, and twenty miles from the Falls. Two ladies, Mrs. C. and Mrs. B., accompanied us from Chrystal Falls. They thoroughly enjoyed camping out, and were excellent cooks; our table had a cheerful appearance, and our venison and trout were done to a turn. We pitched our tents close by a deserted logging camp, and the week we spent here was one of the pleasantest ever enjoyed by any party of "campers out." Trout and venison plenty and warm, pleasant days. The hunting here was the same as on the Michigaumie. Morning and evening found each of us at the place assigned by the guide "sitting on a log." One afternoon while here I thought I would go down about two miles from camp to a place where Bertram had built a lookout, about fifteen feet from the ground, about four rods from a salt lick, which showed by fresh signs that the deer still visited it often. Just before reaching the place I saw in the soft mud in the road the track of a very large wolf. I thought no more about it then. Reaching my destination, I climbed up into the seat and commenced my watch. The wind was blowing almost a gale, and I swayed to and fro in my frail seat, with the dead pines falling all around and limbs flying through the air. I waited and watched in vain for a shot. I saw a large doe pass over a ridge about 150 rods from where I sat, but no deer put in an appearance at the lick. Just at dusk one of the largest horned owls I ever saw came and settled upon one of the supports to the seat I was sitting upon. I sat perfectly still. A tree about ten inches through separated us. I started to reach around behind and take hold of him. As I reached around behind he looked around the front of the tree right into my face. We looked at one another for a second or two, our faces not far apart, and not liking my looks, he beat a hasty retreat.

I descended to the ground, as it was now dark, and started for camp. When within about one and one-half miles from camp, crossing a densely wooded maple ridge, with my eyes on the ground trying to follow the dim trail that led to camp, I heard something start on my right and from the sound in the dry leaves it went off at an angle of forty-five degrees from the trail I was following. I thought nothing of it, more than that it might be a deer. I had killed and hung up a yearling buck within a few rods of the place the day before. I had gone but a few rods after first hearing the noise, when a howl came out from among those trees, such as I had heard many times before, but not quite so near, and this one coming so unexpected, it seemed to raise me about four feet from the ground, and when my moccasins struck the ground, the rifle that I was carrying on my shoulder was in my hands, however, drawn back and ready for action. About forty rods to my left came an answering howl and another forty or fifty rods ahead. The wolves followed me into camp and howled around the camp for an hour after I reached there. When a man has to walk a mile and a half over a dim trail, the wind blowing a gale, the small dead dry pines that the fire has killed falling all around him and across the trail and is surrounded by a pack of wolves, although he may know they are the biggest cowards in the world, he does not find them pleasant companions.

On our return to the Falls, when within about a mile of the village, I saw a deer jumping up a little rise, and as it stopped two large pine trees covered its body. I could only see its head as it turned to look at our party; by a well-directed shot I placed a 40-60 bullet in the lower part of its eye, the bullet coming out about two inches behind the ear on the opposite side. But when I came to see it and that it was a late fawn, only weighing about forty pounds dressed, I felt as one of your contributors did when he shot the doe, and then discovered she had two fawns suckling her. I felt as though I had "killed a baby," and I feel so yet.

The two weeks spent in Michigan will always remain as a

green spot in my memory, for never since I was a small boy have I passed such a length of time so pleasantly and happily as I did these—free from all care and business, and the worry one has in a professional life. H. A. C.

VIROQUA, Wis.

THE CHOICE OF GUNS.—III.

BETWEEN guns of the same make and grade, between guns made and bored by the same persons in the same way, differences in balance, beauty, durability and shooting powers are not uncommon. Sometimes a fine gun will be a poor performer, while on the other hand, plain cheap guns often shoot well. The best way is to have your gun made to order by a man whose reputation for honest work is established; or if you buy a ready-made gun select one of a known and reliable make. In either case you may reasonably expect to get a fairly good gun and your money's worth. You will hardly be disappointed if you buy a gun, without inspection or trial, of any of the makes which I shall recommend.

One of the first things to be considered in selecting a gun is safety. If the gun is unsafe you should not use it and thereby put your life and the lives of others in jeopardy.

The locks, hammers and plungers determine the safety of a hammer gun if the barrels are sound, the action strong and the breech substantial. The old-fashioned back-action locks are not now used upon any gun that is fit to be used. It is therefore hardly necessary to say that the gun should have bar locks. And these should be smooth and strong in their workings, with the notch in the tumbler deep enough and with sufficient trigger pull to hold the hammers safely at full cock and to prevent a slight touch of the trigger firing the gun. When the gun is at full cock, the weight suspended from the trigger necessary to throw the lock is the measure of the trigger pull. About four pounds is the average, but the finer and more nearly perfect the lock the lighter may the trigger pull be and remain safe. A light trigger pull on a low-priced gun is indicative of weakness of the lock, too light a trigger pull is dangerous on any gun. So that it is sufficiently heavy to be safe, you may have the trigger pull as light as you please, but you can only ascertain by trial and experience what trigger pull will best suit you.

For obvious reasons, both for safety and convenience, the locks should be rebounding; that is, when the hammer has delivered its stroke, it should rebound to half cock.

The mainspring should be sufficiently strong to always explode the primers, and yet not so unnecessarily and injuriously strong as to jerk the lock to pieces, or drive the points of the plungers through the heads of the primers. All the parts of the lock, mainsprings, sears, sear springs, pins and tumblers, should be evenly and smoothly made, well fitted and well polished; and all the operations of the locks should be uniform and smooth, without hitch or jerk.

The plungers, or firing pins, should have solid heads; should neatly fill the holes made for them through the breech; should be of the proper length, that is, long enough to deliver a sufficient blow to the primer, and yet not so long as to interfere with the opening or closing of the gun, and their operation should be smooth so as not to cause a premature explosion when the gun is being closed. They should have a positive motion; that is, the pushing aside of the lever to open the gun should withdraw the plungers so that their points do not project beyond the face of the breech, and they should be springless.

If the gun is hammerless and a barrel cocker, so that the strikers are beyond the control of the shooter, it must, to be as safe as it should be, not only have a device for bolting the triggers, but the accidental falling of the strikers must be impossible, or some means provided of arresting the strikers before they reach the firing pins or primers, in case they are accidentally thrown. And in my opinion, as a further provision for safety, the hammerless gun should have rebounding locks; and as these guns are now constructed, this implies that the firing pins should be separate from, and not extensions of the strikers.

The durability of the gun is an important consideration, and this depends—workmanship and material being good—upon the soundness of the principle of the action.

The points of locking should be placed as far as possible from the pivot or hinge upon which the barrels turn when the gun is opened for loading, for the longer the leverage the greater the strength.

The action should, for convenience, be self-closing; and, for service and durability, it should be so arranged that the locking bolts do not come in contact with the lugs and extended rib when the gun is being closed, but they should be held out of the way until the gun is closed. The arrangement should also be such that the breaking of the spring which throws the bolt home will not render the gun useless.

The gun should have an extended rib, the bearing or holding surface of which should be as square as possible, and this rib should not be so constructed as to operate like a wedge to spread the breech.

It should be provided with a hinge-check to catch the barrels when they are opened and take strain off of the hinge-joint upon which the barrels turn.

The breech-strap, or break-off or back-strap, as it is variously called, should be long and well secured by at least two screws, instead of one, as is usually the case, and the rear screw should extend entirely through the stock and fasten in the trigger guard.

The standing breech should be sufficiently heavy to stand all the strain to which it will be subjected; the locking bolts and lugs should be strong and well secured, and when the gun is closed the barrels and extended rib should fit the frame and breech perfectly.

Of course the barrels should be of good material and well finished, but the difficulty is that no one but an expert can assuredly tell whether the barrels are just what they seem. Careful examination will, however, in nearly every instance, discover some rough place, inside or out, some flaw, some unevenness or some slighting of the work somewhere, if the barrels are counterfeit. The perfect work necessary to so finish a pair of barrels that no defects are discoverable by even an inexperienced person will hardly be put upon a piece of metal known to be unfit for use.

If the barrels on a gun of, say fifty dollars or under, are marked "fine Damascus steel," as if a gun of such price is found described in a dealer's catalogue as having such barrels, you need not put yourself to the trouble of making an examination; the barrels are counterfeits and frauds, and a good plain twist is much better.

A good pair of barrels will be perfectly smooth inside and outside; they will present no elevations or depressions. The inside will be thoroughly polished, without flaw or defect, as you may see by examination before a strong and steady light. If they are not clean and well-finished, the light will disclose it.

The lugs, by which the barrels are held in place, should be brazed to the barrels firmly and solidly, so that it would be quite impossible to tear them away.

The chambers to receive the shells should be large enough to admit the shell readily and yet not large enough to allow the cartridge case to burst when the gun is fired. The chambers should be as smoothly finished and as highly polished as any other part of the barrels, and should be of the exact length required to receive the shell. The termination of the chamber should not be too abrupt or square-shouldered. If, with the head of an ordinary lead pencil inserted in the barrels, you find a resistance offered by the square termination of the chambers where the barrels proper begin, reject the gun. It is a good plan in having a gun built to order to have the mouth of the chamber polished instead of being left unpolished, as is usually done. See that the top and bottom ribs are evenly and smoothly laid on; that there are no crevices visible between the barrels and the ribs at the muzzle, or along the length of the ribs.

And for convenience to the eye in wing-shooting, I think the rib should be level or high, not depressed in the center.

The sight should be near the end of the barrels and neatly and smoothly made; the inferior quality of the gun is frequently most readily detected by an examination of such little things as the sight, the triggers, the trigger guard and the like.

The best gun barrels in common use are the twist, the laminated and the Damascus steel. On some of the finest English guns, barrels of Whitworth's fluid-compressed steel are used. These are by no means handsome, hardly presenting so neat an appearance as a good quality of stub-twist, but they are very strong and serviceable, and the most expensive barrels with which I have any acquaintance.

Of the three qualities used in this country the twist is cheapest, the laminated next, and the Damascus highest priced; but as between the very best laminated steel, and the Damascus there is not much difference in cost. The Damascus are more handsome than the laminated barrels, but my preference is for the latter, as I have found them more easily kept clean, bright and free from rust and spots, and I believe they are more serviceable than the Damascus. In selecting a low-priced gun I would always take one with twist barrels, for in such case I would expect a fairly good pair of barrels for my money; whereas, if I bought a gun of the fifty-dollar grade with Damascus barrels I would expect to be swindled.

The stock of the gun should be of walnut, thoroughly seasoned, finished in oil and without paint or varnish. The darker the wood and the finer the grain the more handsome and durable will be the stock. The finest stocks are taken from the root of the tree; the next quality from the body, where the limbs join, and so on, making the selections according to the grade of the gun, until even the sappy and porous parts of the tree are used on the lowest grade. But the stock of the plainest American gun is made from the heart of the American walnut tree, and if thoroughly seasoned and cut, as all gun stocks should be, so that the grain of the wood runs straight in the grip, it will be sufficiently durable. Nothing, however, adds more to the beauty of a gun than a dark, handsome, close-grained, well-finished and highly-polished stock, and no gun can be beautiful without it.

The metal mountings of the gun should be so well fitted to the stock that not a crevice is to be found. If the mountings do not fill the cuttings that have been made in the wood to receive them, it is either because the work has been slovenly done or because the wood was not thoroughly seasoned when worked into the stock. In neither case will the crevices ever get any smaller, and from whatever cause the fault arises, the gun should be rejected.

Examine the screws used to hold the parts of the gun together and see that they fit snugly, that they are down smoothly and evenly, and that the heads all point the same way. See that the pins of the lock do not project beyond the surface of the lock-plate; and whether the gun is high-priced or low-priced, whether it is engraved or unengraved, see that the mountings are neatly polished and fitted. As already intimated these little things are not essentials; but they often indicate the character of the work.

My preference is for low hammers; hammers which are entirely below the line of sight when at full cock. But the thumb piece of the hammer should be long enough to grasp well with the thumb. If it is so short as to be liable to slip from the thumb when the gun is hastily cocked, the gun is dangerous, and the old-fashioned high hammer is to be preferred.

I prefer the corrugated hard rubber or the horn heel-plate to the steel or iron one, as the latter is apt to become too smooth to rest well against the shoulder. On some of the finer grade guns a "tip and toe" only of metal is used, and the wood of the butt is checkered; on some no metal is used, but the wood is only checkered. A covering for the wood, whether of metal, horn or rubber is, I think, preferable, both for appearance and durability.

But before you buy a gun you must determine what gauge and weight it shall be; and here there is much room for difference of opinion, the preferences of sportsmen, as influenced by the purpose of the gun, range all the way from 20-bores to 10-bores, and even so high as 8-bores. But for game-bird shooting, I shall take it for granted you do not wish to use a gun that burns almost as much powder as a small cannon. Indeed, the tendency of modern times is toward the adoption of lighter and smaller-bore guns for field-shooting, the judgment of adepts in the art being that a 16-bore is large enough for quail, grouse and snipe shooting. There are arguments *pro* and *con* which will at once occur to you, and need not here be stated. For the average shot, I think the happy medium is reached in a light 12-bore. Such a gun is fair for the quail, woodcock or snipe, and fair for the sportsman; can be used for ducks and geese, and is altogether the best gun for general shooting. I do not advise the use of different guns for different game; you will be a better shot if you use the same gun for all purposes, and I am pretty sure the average shot cannot do better than use a good 12-bore of proper length and weight. My experience has been almost exclusively confined to 12 and 16 bores; but I have had some slight experience with 10-gauge guns. As between the 16-bore and the 10-bore for field and cover shooting, I would not hesitate to select the former. If destruction of game was the sole object of shooting, then a 10-bore or even a larger gun should be used; but the mere killing of birds is not sport. In the hands of a good shot a 16-bore is certainly sufficiently destructive on quail, snipe, woodcock and the like, and its use furnishes keener and more enjoyable sport because it requires better shooting. But for the reason that the 16-bore is hardly large enough for large water-fowl and other game that you may desire occasionally to shoot, I have advised the adoption of a 12-bore as "a general purpose gun." If you desire to possess one gun for quail shooting, and another for duck and goose shooting, you may get a 16-bore and a 10-bore, though I protest against the use of the latter for any purpose by sportsmen.

The weight of the gun must depend, not only upon its gauge and the manner in which it is bored, but still more upon its quality; if that be good, there is no necessity for a 16-bore weighing more than 6½ pounds; for a 12-bore weighing more than 7½ pounds, or for a 10-bore weighing more than 8½ pounds, nor do I think they need go to those weights.

In a late number of *Land and Water*, Purdey, the great London gunmaker, is quoted as saying he never advised having 12-bores with barrels shorter than 30 inches or of lighter weight than 6¾ pounds; that he "made 12-bores so light as 6¼ pounds, which shoot an ounce of shot very comfortably; but 12-gauges of this light weight are delicate weapons, and won't bear much rough usage, and so we don't recommend them. In order to reduce the weight we will, if asked, curtail the length of the barrels to 28 inches, but when so doing it is distinctly understood that our advice is to have a 12-bore made with 30-inch barrels, and of not less than 6¾ pounds weight, and if customers go away from these lines they do so at their own peril."

On the other hand several eminent London gunmakers turn out guns of 6 pounds weight and even under. Charles Lancaster makes a 12-bore so light as 6 pounds and 2 ounces and Thomas Turner goes below 6 pounds. And I have seen some handsome American-made 12-bore guns with 28-inch barrels and of about 6½ pounds weight. Indeed, Clark & Sneider and Lefever advise guns of this weight and length for quail shooting, and guarantee that such guns will give as good results in field and cover shooting as longer and heavier guns.

In making your selection you should carefully ascertain what weight of gun you can carry through a long and tiring day with ease and comfort to yourself, and can at the same time wield with dexterity and smartness. When this is done you can then better decide upon the bore. If you find 6½ pounds or under the weight you desire, my judgment is you should get a 16-bore, at any rate not larger than 14-bore, and even between 6½ and 7 pounds I am not yet convinced that a 14 or 16 bore would not be a better gun than any larger.

For a 14 or 16 gauge I think 28 inches long enough for the barrels. They are long enough to obtain the full force of any charge of powder you will desire to shoot out of such a gun, and every additional inch would be so much friction without any improvement of the shooting powers of the gun.

In order to get the full force of the maximum charges which can be used in 12-bores of 7 pounds weight and over, the barrels should be 30 inches long; longer barrels destroy the balance without improving the shooting of the gun. In 10-bores the barrels may go to 32 inches, but not longer, for the same reason. If too long the gun will be muzzle heavy.

AH-PE.

WHERE OUR QUAIL WENT TO.

NINE years ago I lived on a large open prairie. The nearest timber was five miles distant. The greater portion of the prairie was under cultivation and largely planted to corn. There were no board fences, and the hedges were mostly one to three years old and afforded but little cover to the game.

On our farm three large coveys of quail were hatched out, and we saw them frequently along in August and September. By keeping our ears open about dusk and dawn we located eighteen more coveys upon adjoining farms, and we laid our plans for some cracking sport as soon as the corn should be gathered.

A few days before we finished husking, I wrote my sporting friends, W. C. S. and R. P. M., of St. Louis, to come out the second week of November, and we would entertain them in the highest style, and give them exercise enough to make their blood spin for a month.

The first week in November we were treated to a long, cold, driving rain, followed by a freezing snow storm. About six inches of snow fell, but it remained on the ground only about three days. Then a beautiful haze settled over the landscape, the sun resembled a huge ball of red fire, and indian summer was on tap.

Billy and Dick arrived in due time and we set out for the fields where we had seen the quail most frequently. We ran three good dogs; it was a splendid day for hunting and we moved along lively; but after scouring the fields nearly three hours, all we could find was one little covey of seven quail. The boys were sadly disappointed, and were half inclined to think we had hoaxed them, while we were both puzzled and chagrined.

The next day we turned our attention to grouse, and, as we all made respectable bags, we felt better, and the boys returned to their homes in very good spirits.

What became of those quail was the enigma we desired to solve. We listened for their call morning and evening, but not a sound could we hear. A few days afterward I happened to be in town just as the Presbyterian minister—an enthusiastic sportsman—came in with a bag that made my eyes pop. "Had a splendid time this morning," said he. "Never saw so many quail in my life as I found this morning." "Where did you find them?" I asked. "On Mr. M—'s farm, among the hazel brush. Flushed about thirty coveys!" "Thunder and turf! Excuse me, but I—why—I—well, well, well!"

A great light had illuminated my brain. The next day I visited the aforesaid farm—which, by the way, lay about five miles from ours and adjoined the woods—and in two hours had bagged thirty-nine quail. That evening the following telegram startled Dick and Billy in their respective offices and sent them into their hunting suits in a jiffy: "Found the quail. Thousands. Come instantly." They arrived the following morning and remained two days. Dick bagged eighty-eight, and Billy two hundred and six. Two happier hunters never smiled.

Not until about the middle of the following May did we hear the call of Bob White on the prairies. In the following autumn there were five coveys on the farm, but with the first snow fall every one departed for the brush.

Since the hedges, orchards and maple groves have grown, however, many of the quail hatched on the prairie farms remain there all winter, and in consequence they are much less numerous in the brushy pastures adjoining the woods.

CHRISTIAN CO., Ill.

"QUAIL" AND "PARTRIDGE."

Editor Forest and Stream:

Your correspondent "S." is somewhat of a caviller. He asks if a Bob White does not more resemble a quail than a Bob White? By no means. He is as much like a Bob White as two black-eyed peas, and about as much like a quail as a navy bean. That is, if we know what a quail is, and we must confess that our knowledge of that somewhat mythical bird is mainly derived from scripture, where he is described as coming down upon the camp of the hosts of Israel in countless multitude; and the people of Israel killed them with sticks, and devoured them until they were completely surfeited; insomuch that the quail stuck out of their nostrils.

It is related by some authority, whom I cannot now call to mind, that even at the present day, immense flights of quail cross the Mediterrancan Sea, and alight upon its shores in an exhausted condition, so that they may be picked up by the hand. It is described as being a smaller bird than our Southern partridge, and much given to republican ways, discarding the ancient patriarchal form of government, which our bird clings to with such tenacity.

The remarks of "S." about the propensity of Southerners to miscall bass, trout, is true enough, but this is the result of ignorance, or a habit born in ignorance, rather than a willful purpose to go wrong. The fact is, we have no trout in this region, and it was a natural error to fall into, by those early settlers who, finding the black and striped bass closely resembling trout in general characteristics, and not being up in fish nomenclature, readily fell into the habit of calling them trout. Ask a Southern negro fisherman, or uneducated white if there are any bass in this neighborhood, he will tell you he never saw one, but that there are plenty of trout.

We will cheerfully give up your trout, Mr. "S.," but for mercy's sake let us have our partridge—the partridge of our daddies—the bird which is associated with our most agreeable boyhood reminiscences—which we bore home in triumph, as the result of our first exploit, albeit accidental, in shooting on the wing—and felt like a hero for a month after.

We have been raised to call this bird partridge, and our affections go out to him by that name. We have called him partridge for generations past, and we hold that reconstruction has not deprived us of this right; that it does not come within the scope and legal purview of the fifteenth or any other amendment to the constitution. We solemnly protest against being deprived of our partridge, and I shall propose to our friend "Wells" that we inaugurate anti-quail societies all over the South, in opposition to this tyranny.

So take your trout, Mr. "S.," but leave us in undisturbed possession of our dear little partridge, Bob White.

COAHOMA.

MEMPHIS, Tenn.

NEW HAMPSHIRE GROUSE.—Dunbarton, N. H., Aug. 25.—The prospect for grouse this season is very encouraging, the birds seem to have bred well and to be quite numerous. While working one of my young dogs on woodcock a few days since I started from twenty-five to thirty grouse. This was done in about an hour's tramp and within a quarter of a mile of my house. I think I could kill twenty birds in a day over either of my young dogs, but shall be satisfied with less than half that number, as I do not know what to do with a larger bag. We now have a law which prohibits shipping of game out of the State. I think it a good thing for the birds, although the market shooters were strongly opposed to it. I am anticipating good shooting over my young Llewellins. They have both improved very much since I adopted the method advised in "Training vs. Breaking," and bid fair to make the best dogs I ever had.—C. M. S.

RAIL AND REED BIRDS.—Philadelphia, Aug. 29.—A few railbirds have already appeared on our river shores, and quite a number of reedbirds have shown themselves. This is early, but the crop is ripening sooner this season, which can account for their coming. All reports from the shooting grounds indicate one of the best seasons for years, as it is noticeable that whenever the growth is good many birds are attracted. With the rail and reed birds comes the wild duck, which is as fond of the fattening seed as the former. Many heretofore high grounds where skiffs could not approach have overflowed since the tornado which visited our section, and pushers will now be able to get their boats to excellent places.—HOMO.

RAIL IN NEW JERSEY.—Perth Amboy, N. J., Aug. 31.—A bill fixing the opening of the rail-shooting season upon Aug. 25, was passed last winter by the New Jersey Legislature, but not receiving the Governor's signature within the required ten days it failed to become a law. Several sportsmen, however, in ignorance of that fact, availed themselves of the high tide of the 26th to push over the South River meadows at Washington, N. J., but with little success. The wild oats were quite green and the birds very scarce in consequence. Favorable tides should occur next week, by which time it is hoped that the oats will be ripe and fit for food.—J. L. K.

GARDNER, Mass., Aug. 28.—The Monomonock Sporting Club of this town go into camp next week on the shores of Monomonock Lake, which is in the town of Rindge, N. H., but near the Massachusetts State line. They remain in camp some time and take their families with them. The recently elected officers of the company are as follows: Aaron Greenwood, President; George F. Ellsworth, Vice-President; F. M. Greenwood, Secretary and Treasurer; G. F. Ellsworth, George Nichols and Ambrose Stevens, Executive Committee.

ST. LOUIS CONVENTION.—At a meeting at the Mercantile Club, Aug. 28, Capt. H. C. West reported that he had been in communication with 1,350 clubs who might send delegates to the convention of Sept. 29. It is expected that something like 2,000 visitors will be present on that occasion, and the 736 members of St. Louis gun clubs are called upon to subscribe funds for the expenses to be entailed. Help will also be asked from the various trades. The assistant secretary of the executive board is J. G. Schaaf, 417 North Seventh street.

WOODCOCK-SHOOTERS KILL GROUSE.—Wales, Mass., Aug. 29.—*Editor Forest and Stream:* Woodcock were plenty in this vicinity early in the season, but the wet weather scattered them, and not many have been shot. We look for some good sport with them when frost comes. Ruffed grouse were also plenty, but the woodcock hunters have killed a great many of them. Cannot something be done to stop this killing of birds out of season?—G.

DISAPPOINTMENT ENDED IN DISGUST.—Calvert, Tex.—A friend and myself concluded we would have a fine day on quail, he having just received a finely bred setter just from the breaker's hands. We made an early start and faithfully stuck to it until the declining sun warned us to retrace our steps homeward, but not a bevy or single quail did we find, although the ground looked fine for them. As we were within half a mile of town, utterly disgusted of course at our luck, we met an old fellow with a half cur dog and a musket and with seven quail hung to his belt. And when he began to brag of his cur dog as superior to our setter, we felt like shooting him and the dog both.—NORTH CAROLINIAN.

THE PRESIDENT AND THE HOUNDS.—The *World* last week reported the hounding of deer by President Cleveland's party in the Adirondacks. We have expressed the opinion that this report was unfounded. As the charge has been reiterated in the papers, it is to be hoped that Dr. Ward will now be heard from.

NORTH CAROLINA.—A correspondent suggests that Munroe, N. C., on the Carolina Central Railroad, is a good point for quail shooting. Information may be had of T. M. Brown, who keeps the hotel there.

MR. WILLIAM LYMAN, the inventor of the Lyman rifle sight, returned last Monday from Europe, where he reports the sight is winning favor among English sportsmen.

VENISON.—New York dealers are now selling venison which was killed last winter, and has been stored in the refrigerators.

Sea and River Fishing.

MURDER MOST FOUL.

AND yet it was of a fishy character, although we were after fowl. The days of the bay snipe are almost gone, never to be heard of again. The sweet terms of "dowitcher" and "krieker," "marlin" and "yellowleg," "oxeye" and "dowbird," are to be things of remembrance, to live possibly as long as some of the older generation, who, in the pleasure of memory and inspiration of hope, will still occasionally do as we did, get up at daylight in the lovely August morning, and sit all through the crawling hours under the broiling sun, with but a very occasional whistle of encouragement and a still more occasional shot. There were just enough of these to make it certain that if we left the stand a straggler would put in an appearance, so we deserted our bushy hiding place on purpose, and one of us would go away, leaving the other to guard, or both would take a stroll and would let our yacht captain act as temporary substitute. Thus we beguiled the innocent birds with a pretense of neglect and a very manifest evidence of desertion, and had deluded a few to their destruction, when our attention was attracted to one of the fishing steamers which are getting so numerous on our coast, and which had evidently struck a school of "bunkers," as it had stopped in its ominous career along shore. Curious at its being so close to the breakers, and desirous of seeing how the nets could be managed under such circumstances, we shouldered our guns, leaving the bay birds to the tender care of our captain, struck out across the wonderful collection of sand that we call "the beach," and which in its weakness defies the roaring ocean as the toughest rocks cannot do. A walk of a quarter of an hour to the busy if not pleasant hum of the active mosquito, who welcomed our appearance with pæans of rejoicing, brought us to the side of the "sounding sea," where we sat down in the soft sand to study the evil ways of the enemies of fish kind.

The steamer that had been first observed by us was an immense one, coming from Maine, according to rumor, and certainly large enough to have crossed the ocean. She had already sent out three boats before we had got within sight, one of these, a small Whitehall affair, held only one man, and he was close in shore between it and a school of menhaden. The ocean was in its very calmest of moods, there was scarcely any surf and we could have launched through it our smallest flat-bottomed yacht tender, and though we might have "tossed a biscuit," as the saying is, easily into the wherry of the nearest fisherman, he was safe and managed his boat without trouble. His duty was to gently drive the fish a little further from the shore that the nets could be run around them without risk. This he soon accomplished, and the two large whaleboats, each manned with six men, started on their career of capture. In ten minutes they had the school entirely surrounded. At first the fish were undisturbed; then aroused to their peril they made a wild rush to escape. There was a streak of foam in the water at the outer edge of the net, a few frantic struggles and that was all. The hundred thousand of individual entities of fish food were in the rapacious maw of the all-devouring net. Not far off was a smaller steamer, one that belonged to the factories in our bay, for they have lately come to the same deadly means of pursuing their business. Between them I noticed and pointed out to my companion another school of fish. These can be readily distinguished by the purple color in the water which is otherwise for the most part of a greenish hue, especially so near the shore. But hardly had I seen it before we perceived another set of boats putting out from the steamer prepared to pursue the same tactics and equipped in the same manner. These latter made a bungle of it, however. Their capture was even larger than that of the first set; but by some mismanagement they did not draw the pursing rope properly, and the purple line of prisoners drifted out of the net till they were spread a hundred yards from it. But this misfortune, while it injured the fish hunters, did not benefit the fish, who had been suffocated, and after lying a few minutes on the surface sank to the bottom or were carried away by the current. They are so exceedingly delicate that the least ill-treatment kill them. Thus were other hundreds of thousands of bait fishes destroyed or turned from their natural purpose of feeding others of their kind to making oil and debasing themselves into fertilizers.

Here were two vessels with all the immense advantages that steam gave them, for when the ocean is calm and there is no wind, is the best time for seeing and capturing their prey, like two enormous marine monsters prowling up and down our coast with maws of infinite capaciousness, taking the food of the bluefish by millions, and incidentally every other species that may be found with them, and converting the whole into a comparatively worthless article of commerce; and yet we are told that this does not diminish the supply and will not injure the fishing. If they do not utterly exhaust the schools of menhaden, and if they do not equally utterly destroy and starve to death the better varieties of food fishes, there is no arguing from cause to effect, no judging the future by the past. But hardly had we been seated there fifteen minutes when from the distance along the shore and beyond our ken appeared another monster like unto them attracted by the sight of the deadly work, and in another fifteen minutes a second from far out at sea. They reminded me of the vultures in the southern country that collect around the body of a dead or dying horse. They came from beyond human sight to the cruel feast. The destruction they wrought was complete; not a fish was left when they got through. A few schools had escaped them so far, but the calm weather was their opportunity, and they "scooped them" to the last individual. Is it any wonder that there has been no blue-fishing along our coast this summer, or in the bays of Long Island, Barnegat or Jamaica? This destructive industry has been prosecuted so vigorously that the waters in the neighborhood of Maine are exhausted; scarcely any menhaden can get into any of the coast line of bays, and factories have been established and steamers have been sent as far south as North Carolina, and it is said are to be employed in Florida. It almost makes a person an anti-monopolist when he thinks that in spite of this impending ruin hanging over the fisheries, the poor people of our bays who follow moderate fishing for a living cannot get the invasions and murderous operations of these foreign marauders stopped, and will not be able to do so till there is nothing left for them to catch. R. B. R.

MORE MENHADEN TESTIMONY.

Editor Forest and Stream:

It may be remembered that early in the season weakfish were quite plentiful all along the New Jersey coast from Barnegat to Cape May, and good catches of fairly-sized fish were daily reported. At these times the menhaden had not appeared close to the beach line and the few fishing "machines" that were in operation did not interfere with the entering of the weakfish into the inlets; but just as soon as the schools of mossbunkers show themselves inshore and the "scoopers" began to follow them, the former disappeared and line-fishing has been poor.

The question as to what shall be done with these menhaden boats, which are doubtless doing as great damage to the food-fish supply along the New Jersey coast, is yearly assuming greater importance, and it is truly a serious matter. Every bay fisherman that plies his vocation with hook and line, be he professional or amateur, is loudly complaining of what is certainly an outrage, which cannot be remedied save by the action of the United States Government, for the Attorney-General of New Jersey has decided that the law of last year has virtually no effect; the State has no jurisdiction over the waters of the Atlantic Ocean beyond low-water mark. Congress must be appealed to to prevent the outrage, and until that body legislates the menhaden fishermen can continue their work unmolested anywhere outside of the surf-line.

During the past week some of the Long Beach natives used a rifle on a menhaden fishing boat that came in close to the surf, which caused the crew to make a hasty retreat; but the real remedy is in the hands of Congress, and it behooves those interested, and their name is legion, to be ready for the question at its next session at Washington. HOMO.

PHILADELPHIA, Aug. 29.

The fishing steamer Annie H. Morris, now engaged in capturing menhaden off the coast near Egg Harbor Inlet, made a haul last week of 285,000 of these fish, which will be (or are already) sold for fertilizing purposes; and this is the record of only one of the extensive fleet of steamers engaged along our coast in this shameful devastation. As a proof that our sea food fish exist largely on menhaden it is enough to know that during the time these first-mentioned fish were being caught in such quantities, vast schools of bluefish, weakfish and bass were among the small fry, and anglers have reported the fishing to have been better last week than at any time before this season. The menhaden have been scarce this summer up to last week, and the large fish have been correspondingly fewer than ever before. The sudden appearance of menhaden in large quantities now is probably due to the younger fish leaving their breeding places in the rivers on their way to the sea, although their migration thither generally does not occur until early fall. From Block Island all along the New York and New Jersey coast to Cape May it is universally declared that the present has been the poorest fishing season ever known. Purse-seining has lessened the sport with rod and line, but the menhaden destroyers threaten us with a much graver result, which is the speedy and thorough extinction of our food fish in these latitudes. New Jersey representatives in the United States Senate and in the House should be awakened to the necessity for prompt and decisive action in the next session of Congress against menhaden destruction. This wanton fish piracy must be put down before another season, and such laws should be made as will allow of no technical evasion. To do this it will be necessary to entirely prohibit the capturing of menhaden for the making of oil or guano. It has been suggested that menhaden netting be restricted to a distance from shore of at least eight miles. Such a law would be worse than useless, as its provision of distance would furnish a point difficult of proof and simple to evade. What is wanted is a law of absolute prohibition. It will be said that this law would destroy an industry and throw men out of employment. Of course it would. But menhaden netting has destroyed the employment of many hundreds of coast fishermen who catch food fish for a living. These men are worth only their little vessels and their outfit, and with no other industry that they can follow but fishing, actual want is a result no great way distant for them. The men on the menhaden steamers are poorly paid, are young men for the most part, who could and would find other employment fully as remunerative, and are certainly less numerous than the coast fishermen. Last year there were 59 steamers, averaging about ten men to a crew, of which number more than half were boys. There are surely more than 600 coast fishermen with families on our shores dependent upon the legitimate capture of food fish for the living which the menhaden destroyers deny them; and there are certainly treble that number of handlers and dealers in fish who depend largely for their profits upon our coast food fish. As to the menhaden industry itself, according to a report made last January at a meeting of the U. S. Menhaden Oil and Guano Association, "as a whole it is not a paying business on account of low prices of oil and guano, and high cost of men and material." And this report was made after the season of 1884, when 858,592,691 menhaden were taken!

The newspapers of New Jersey, and especially those of the shore counties, should agitate the question of menhaden poaching until the true state of matters is brought home to the people and our representatives in Congress with a force and certaintity that will brook no delay in carrying out speedy and effective measures for the total extinction of this suicidal fish destruction. The menhaden pirates must go.—*Railway (N. J.) Advocate, Aug.* 26.

The New York *Commercial Advertiser* reports: United States Fish Commissioner Eugene Blackford said this morning: "Fish have been much more plentiful the last few days. Bluefish have been caught very freely all the week and are wholesaling to the large hotels at eight cents a pound. Pompano and Spanish mackerel are also plenty and cheap." "Do you think that the catching of the menhaden in the waters around New York will have a disastrous effect on the catching of bluefish?" "I don't believe it will have any influence at all. I have made the laws of the supply of fish a study, and am sure that no man can tell anything about the reasons for their being plentiful or scarce. A careful comparison of fish in our waters for the last ten years shows that the causes of the scarcity of salt-water fish are beyond the agency of man, and most certainly cannot be affected by menhaden fishing. About one hundred years ago all the bluefish suddenly disappeared from our coast. At that time there were no menhaden steamers, and the catch of that fish for bait was very limited. This goes to show that fish come and go, whatever men may do." Mr. A. C. Hoff, a fish dealer, differed with Mr. Blackford. "Every man caught catching menhaden," said Mr. Hoff, "should be shot or hanged. They put out their nets for menhaden and catch numbers of small, immature bluefish. These they bring in and injure the market for good bluefish by selling them. The catching of so many menhaden in the waters of our shores is, in my opinion, killing our bluefishing. If the menhaden are destroyed it will certainly rob the bluefish of one kind of food and will compel them to go to places where they can find menhaden. This will make bluefish higher, just as it does Spanish mackerel, which used to be caught off Long Island until they were driven away by such practices."

A RESTIGOUCHE SALMON SCORE.

Editor Forest and Stream:

Salmon angling on the Restigouche this season has been good. I hand you my score, one rod, which speaks for itself. Arrived on my angling waters June 15, being one-half on the Quebec side of the river at the Indian House section. In consequence of logs running there was no angling until 18th.

	Lbs.
June 18—26, 36, 21, 25, 35, 25, 32	170
June 19—22, 23, 26, 26, 21, 21	149
June 20—21, 20, 21, 22, 31	115
June 22—21, 24	45
June 23—25, 26 27, 28, 19	125
June 24—18, 20, 21, 21, 23, 21	124
June 25—12, 23, 24, 24, 27	110
June 26—20, 24	44
June 27—25, 23, 21, 23	92
	967
June 28—Much rain, causing an extraordinary freshet, rivers rising 5 feet, and no angling until 4th.	
July 4—21, 22, 12	56
July 6—22, 20, 22, 19, 15, 14, 20, 22, 24, 20	210
July 7—10, 23, 22, 16, 12, 24, 24	136
July 8—20, 24, 26, 27, 28, 15	146
July 9—27, 24, 13, 12	76
July 10—12, 16, 21, 22, 25, 10, 26, 25	157
July 11—28, 21, 22, 10, 13	94
85 salmon in 16 days, averaging 22 pounds.	1,845
July 13—Gave up the water to other parties, occasionally angling on water where salmon rarely frequent, and increasing the score during 8 days thus: 24, 25, 23, 22, 24, 24, 13, 11, 13, 25, 15, 12, 14	245
Total, 98 salmon	2,093

An Old Hand.

OPTICS AND ANGLING.

FROM time to time various articles have appeared in the columns of this paper in which different authors have discussed how leaders, flies, etc., appear to a fish and how a fish sees, that is, how external objects appear to them. Many statements made in these articles were clearly wrong, and the mistakes seem to have arisen from ignorance of the fundamental laws of optics. For instance, one writer expresses much surprise to find that he can look up vertically and see out of a mass of water as if it were a piece of glass. He expected it would reflect like a mirror. Yet he knows he can look horizontally through a piece of glass or a mass of water inclosed in glass, also that he can look vertically upward through a piece of glass, then why not upward in like manner through a mass of water inclosed in glass, or water alone. But should he look at the inner top surface, or in fact, any inner surface of a transparent liquid, provided these surfaces are smooth and transparent at a right angle, at less than a certain angle, which for water is about 40°, they would appear like mirrros, for the light cannot penetrate, but is totally reflected. Therefore, it has been thought that a critical discussion of these points would be of interest to anglers, and enable them, perhaps, to correct some of their old notions, as well as gain some new ones. It will not be necessary to begin with a full discussion of the principles of optics, of the laws of light and the sensation of seeing, for that would be entirely too long and wearisome to the ordinary reader, as well as trite to those versed in the subject.

It will be sufficient to say that light is a vibration of the particles of matter, that we get light in two ways, first from a luminous body which emits it, and second from an illuminated body which reflects that already received from some luminous source. The sun is our great luminary and his reflected light enables us to see external objects. Sunlight is white and this is composed of innumerable shades of color. Hence a substance that reflects all the light it receives appears white; one that reflects only the red rays, red, etc. A black object reflects none at all.

Rays of light pass through a transparent homogeneous medium in straight lines. A ray passing from one medium of this kind into another of a different density is bent at point of contract and the angle thus made varies with the difference of the densities. If the reader will look at Fig. 2 for example he will see the ray coming from the man's hat is bent when it strikes the water and reaches the fish at the bottom of the pond. When the ray strikes a denser medium than the one just left, it is bent as in the figure, had it struck a rarer instead of a denser medium it would have been bent in the opposite direction. Thus theoretically the man ought to be able to see the fish the same as the fish sees him. This for example explains why a stick appears broken when thrust into water. A ray of light striking the inner or outer surface of water at an angle less than forty degrees to the horizontal line is wholly rejected and none enters or passes out. From these principles we can now understand the following diagram.

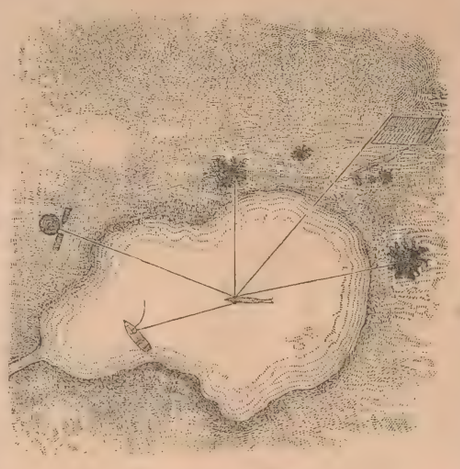

Fig. 1.

In Fig. 1 we see the map of a lake with a boat upon it and a man fishing, on the shore a house, windmill, tree, etc.

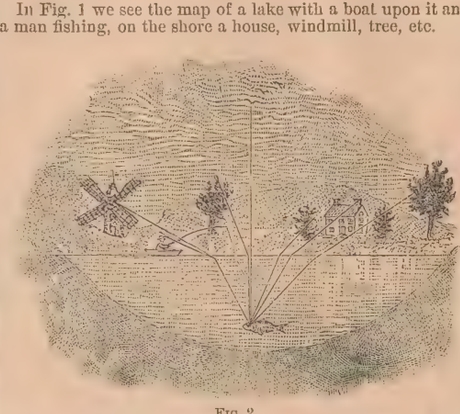

Fig. 2.

Fig. 2 shows a vertical section of the same. The point where the lines converge is the position of a fish at the bottom of the pond. We see the rays of light bent as they enter the water. But the fish of course sees them in the continuation of the straight line that enters his eye. He cannot know the ray is bent. Thus, for instance, instead of seeing the man where he really is, he sees him where he (the man) would be if the line from the man's head were bent up until it made a straight line with its continuation from the surface of the water to the fish's eye. Hence external objects are lifted up and projected upon the bottom of an inverted cone, the apex of which is at the fish's eye. Beyond this cone the objects on the bottom of the pond and in the water are reflected in the inner surface of the water as in a mirror. But there is no exact line between the two classes of objects. The images overlap, and as external things are viewed at a greater and greater angle they become more and more indistinct and distorted until they cease and the bottom alone is reflected, while on the other hand, as the fish looks more and more directly overhead, external objects become plainer, and when he finally looks directly up, he looks out of the water as if it were all air and sees the bird overhead the same as we and in his proper place.

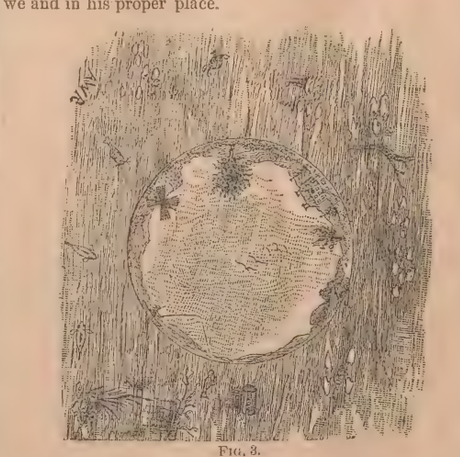

Fig. 3.

If now the reader will hold this paper horizontally overhead and about three inches from his eye, and will look at the spot in the center of the circle in Fig. 3, he will gain an approximate idea of how this pond, landscape, etc., would appear to the fish. The objects around the circle show other fish, pads, things on the bottom, etc. The overlapping of the two sets of images has not been shown, as it could not be in a diagram without a loss of clearness and a tendency to confusion.

One point more. These conditions described exist as such only when the surface of the water is calm. When broken by waves the two sets of images are being continually mingled. It is very much as if one stood before an open window surveying a landscape, while one in the room above was pouring down a shower of broken mirrors in front of the window. It can be easily understood that the landscape, the reflection of the room behind, flashes of light and all objects would be a confused mass of images, indiscriminately mixed and changing. Something very similar to this would be the case with the fish looking up at the surface broken by waves.

From recent experiments undertaken by French savans in the lake of Geneva, it was found by the aid of photography that in that lake at a depth of over 160 meters (over 500 feet), when it was a clear day above, there was as much light as in a clear night without moon. The amount which penetrates, of course, varies with the clearness of the water. From this it would be safe to say that in our clear streams and lakes, up to 25 feet in depth, the water is as full of light and as easily seen in, as a foggy day outside. Anglers do not realize how clearly and well fish see in their proper element. When the water is very clear there is no reason why a fish should not see a fly or bait nearly as well as an angler, and at a great distance.

From this we can easily see how important it is to fish with fine neat tackle. A fish can see all the tackle and its arrangements as well in the water as the angler in the air. Leaders therefore should be as fine as consistent with safety. The color is not of so much importance. If you are going to cast in open water hold the gut against the sky and pick out the tint least visible; if on a tree-shaded stream a dark tint is best. A very dark tint in open water is bad. In bait-fishing white transparent gut is best.

Also fish see far less of the colors of flies than anglers think, and, for that matter, of natural insects also. For instance, hold one of your flies against a dull sky and look at it from below. The lower part is poorly illuminated and reflects little light, consequently there is very little color seen. A white fly is best seen, for it reflects all the light it receives. The shape appears very distinctly, and if the wings are of a transparent feather then a color is visible, but often quite a different one in the transmitted light from what is seen by reflected light. The hackle gives generally quite a good deal of color, and is of more importance in the make-up of a fly than it is generally credited with.

As a matter of fact, flies are generally gotten up on a totally wrong principle. They are tied with reference as to how they appear to us on our tables, without any reference as to how they may appear under altered conditions to the fish. That we have good ones is due to the fact that out of a thousand ties some hits must be made. Two flies that look alike on the table, when held against the sky might appear quite different, and yet this is the way a fish sees them. The wings of one might be transparent, which would not be noticed on the table; but when held against the sky this would show a color (and possibly quite a different tint from what it has upon the table), while the wing of the other is opaque and the whole fly looks almost black. Then, again, if the fly is sunk below the surface it would appear to the fish as it does ordinarily to us.

These points have been commented on because they are too generally neglected.

It has been recently stated that fish are near-sighted. This seems unreasonable. A near-sighted fish would be as badly off as a near-sighted man and worse, for the fish could not obtain glasses. It is argued from the density of the medium and the convexity of the fishes' eyes. The density of the medium, water, has nothing to do with it. Rays of light move in straight lines and act alike in mediums of every density provided they are homogeneous, which we know water to be. Thus objects are seen in all mediums alike, provided they are equally transparent, without regard to density.

Moreover it must be proved that the image produced by the crystalline lens of the eye does not fall upon the retina at its proper focal distance. The convexity of the lens amounts to nothing if only the retina is at the right distance. In respect to looking at objects out of the water while he is in it, myopia might possibly be of benefit to a fish; but it would be enormously disadvantageous to him in respect to his immediate relations and interests and faculties are generally developed for such purposes. Percyval.

TROUTING LONG AGO.

WE have been kindly permitted to look over the record of a famous sportsman who fished Long Island waters many years ago, but only began to keep a record of his fishing in 1823. It was the journal of Gen. Henry Floyd-Jones, father of the present well-known gentlemen who live on the old estates, on the south side, and who inherit the love of angling that their father and his brother Thomas Floyd-Jones left them. Massapequa Lake then, as now, was famous for its trout, and all the streams were well stocked. The record says:

"A morning's sport on June 28, 1823, yielded three dozen fine trout from Stump Pond, Suffolk county. March 24, 1824, Capt. John Livingston, John Kartright and H. Floyd-Jones, killed eighty trout, remarkable fine ones. That year took four fine trout in Jackson's Pond, Jerusalem. June, 1825, Thomas Floyd-Jones and H. Floyd-Jones fished with success in Stump Pond, find you can fish there best with ground bait."

In 1826 the brothers "took thirty fish at Stump Pond, fish in these waters not fine. Followed Mill's Pond below where the fish have access to salt water through Smithtown River, they are large and fine flavor, the fish in all these waters are lively and make fine sport. * * * Feb. 29, 1828, the earliest fishing in these waters, we killed twenty-six trout, but they were poor. Feb. 26, 1829, still cold in the pond; caught 40 fish weighing 36 pounds at Sam Carman's. March 4, 1831, at Sam Carman's Pond, caught 19 trout, weight 17¾ pounds. T. Floyd-Jones, two trout, one 1 pound 10 ounces, the other 1 pound 11 ounces; Mr. Hamblin one, 2 pounds 2 ounces. Henry Wyckoff killed a trout weighing 2½ pounds."

"Feb. 29, 1832, Dr. Kartright and H. Floyd-Jones killed 24 trout in Stump Pond, largest 1 pound 14 ounces." On March 15, 1832, the same persons "at Snediker's, in the creek near Islip, killed 14 fish weighing 18 pounds." On April 2, same year, "clear and windy, six rods from flume at Homan's Pond, Middle Island, Thomas Floyd-Jones and Dr. Kartright killed in one hour 15 trout weighing 22¼ pounds, the largest of these fish weighed 2¾ pounds,* this is as fine sport as ever had on Long Island.

On the 18th of February, 1833, they took 18 trout at Islip, the largest weighing 1 pound, and next morning captured 82 fish in three hours, three of them weighing a pound each. April 5, 1835, the same gentlemen killed 50 fine fish at Stump Pond, and the journal says: "About this time an Englishman killed 100 trout, a good fisherman but not an honorable

*Mount made a painting of this fish, which is now in the possession of Mr. William Floyd-Jones at Massapequa.

sportsman; he pickled the fish and sent them to town." Two gentlemen, March 12, 1838, "took 28 trout in the creek at Islip, one fish weighing 2 pounds and one weighing 1¾ pounds." Messrs. H. and T. Floyd-Jones "fished a short distance from them, only took one that weighed 3 pounds 2 ounces.

The first record of fly-fishing appears in the journal under date of July 20, 1838, as follows: "Edward Floyd Jones killed with fly 24 trout near the reeds in T. Floyd Jones's creek." March 17, 1839, "Returned from Albany to fish in Islip; no fish. I will state what Mr. William Townsend told me, and it can be relied on, that he caught in Buckram Pond, belonging to Thomas Cox, one trout weighing 5 pounds. Capt. Nathaniel Smith took one east of Patchogue, Swan [?] Creek, which weighed 7¾ pounds. Mr. Smith is a gentleman that can be relied upon. William Buckner, of New York, killed a trout in Stump Pond, in 1816, that weighed 4 pounds 6 ounces, and in 1833 Mr. Kneeland took a trout in Islip Creek weighing 3 pounds 6 ounces; at the same time he took four fish that weighed 11 pounds. A trout was caught with a spear in the Forge River, Moriches, in 1838, weighing 4½ pounds. Samuel Carman, now living, caught with a net, in 1828, a fish in his mill flume that was called by some a trout, but must have been a salmon, weighing 14 pounds. This fish may have been lost from some fishing smack on its way to New York or strayed from the Kennebeck of his own free will. William Onderdonk says his brother, Andrew, caught a trout at Hempstead Harbor, lower pond, that weighed 4 pounds. Mr. Seaton took, in Sam Carman's pond, a trout whose weight was 3 pounds 2 ounces. Mr. Perris took a trout in Carman's River whose weight was 4 pounds 4 ounces; the place is called Perris Hole. Andrew Glover took a trout in Carman's River whose weight was 4 pounds 2 ounces, in 1822. In 1819 Mr. Seaton took one weighing 3 pounds 14 ounces."

"In 1800, an English lady, Mrs. Crow, took a trout that weighed 4 pounds 6 ounces. This lady had the pleasure of taking the largest trout ever taken out of these waters. March 17, 1839, T. F.-J. and H. F.-J. took in Islip River seven fish, one of them, caught by H. Floyd-Jones, the largest trout I have ever taken, although I have fished these waters for 40 years; it weighed 2½ pounds. August, 1839, took 22 very fine fish in my creek with fly. Aug. 26, 1839, took 40 trout with fly in my creek. * * * In 1832, Mr. Hamlin took 24 trout in Carman's Creek weighing 38 pounds, one of three pounds 3 ounces, the largest he ever caught; 3 of them weighed 3 pounds each. In 1842, Charles Clinton took in Massapequa Lake, old brick house stream, at once fishing with minnows, 1 trout 2¼ pounds, and in all 17 fish weighing 18¾ pounds. Aug. 20, 1842, took 14 fish with fly in my creek, 3 of them where I could see the stars shining."

"In November, 1842, was taken in Moriches Bay in a gill-net, by John Raynor and Isaac Bishop, 4 salmon weighing 7 or 8 pounds; this is worthy of remark, as salmon have never been taken before in South Bay. 1843, H. Floyd-Jones and brother, at Fire Place, took 6 fish weighing 11 pounds 2 ounces, and on the 21st of April, I and E. Floyd-Jones took 12 fish in Massapequa Lake which weighed 20 pounds, one of 2¾ pounds and 2 fish of 2 pounds each."

"1850, went to Sam Carman's but did not wet my line; not many fish taken. Fine fishing this spring in my creek. Of those taken in Massapequa Lake, 1 weighed 2 pounds, 1 3¾, by T. F.-J. * * * Good fishing this year in the lake. 1850, 14 trout with fly in my creek."

REFLECTIONS ON THE CATFISH.

THIS is the way the London *Saturday Review* lifts up its hands in horror at the catfish: "Our institutions are indeed being Americanized. In some respects *Britannia capta* has even outrun her conqueror, and it is possible, though we hope improbable, that the land of the New York *Herald* may have to complain of the Anglicizing of her newspapers. But from one American institution our country is free—long may it be untouched by the invaders! It seems almost incredible that any one should wish to introduce the accursed catfish to our native shores. Yet we read, with horror, that 'a consignment of catfish has been received by the National Fishculture Association from the Fish Commission of the United States.' Is America to be allowed to export the paupers and criminals of her brooks and rivers into our innocent waters? If mere sport is the object of the National Fishculture Association, perhaps they intend to set a dogfish at the catfish, and enjoy the brutal pleasures of the one-sided conflict. The Council, according to the *Field*, 'will not introduce these or any strange fish into English waters without full knowledge and consideration.' This sounds too much like Mr. Gladstone's reserves about the House of Lords. The Council will think twice, or even thrice, before introducing catfish. Perish the thought! One might as well say that cholera, or pellagra, or the plague, or the Colorado beetle, or the man-eating tiger will not be introduced 'without full knowledge and consideration.'

"In the first place almost all of these acclimatizations are errors. People in charge of our rivers should be like hostesses who 'don't introduce.' Where trout exist you can do nothing but harm by bringing in *parvenus*. Some lunatics brought in pike in certain Scotch waters. The consequence is that trout are like the Palæolithic peoples after an irruption of men in the Bronze Age—that is to say all but exterminated. Even grayling should be left where they are natives. They have come into the Clyde, where they are despised and detested, more or less by the Caledonians, who indeed despite their hospitality, rarely receive such strangers gladly. And grayling, the ladies of the waters, are not to be compared to the hideous, voracious, plebeian, un-English catfish, whose very name condemns it. Even birds, beasts and insects comparatively harmless at home—sparrows, rabbits, and so forth—do inestimable mischief when planted in America, Australia or New Zealand. The catfish, the white catfish, is deperately ugly, 'a garbage-eating, bottom-feeder, ill-looking, of no consideration in the matter of sport, and not worthy of introducing where it would eat up the food of our own fishes,' and probably eat up our own fishes as well. From a passing notice in 'Huckleberry Finn,' we guess that the catfish may grow to about the size of a man of middle height. If this be so even bathing would be unsafe in rivers infested by catfish. From Mr. Frank Stockton's account in 'Rudder Grange,' of the capture of a catfish, we infer that the incident resembles the catching of a tartar. Of course, if the brute does not rise to fly, it will cause less annoyance to anglers of the right sort; but over here it might change its habits and acquire a passion for black gnats or March browns. As to its edible qualities, the catfish is said to resemble the eel, and that is saying enough. We have a sufficiency of eels, and need not reinforce our 'food stuffs' with catfish. 'At present they are curiosities on view;' we wish that they could be exhibited stuffed. Perhaps a pair of catfish may escape from South Kensington through the waters with floating electric lights, may reach the Serpentine, may invade the river, may push their way into the Kennett, the Wandle, and so forth, and finally the kitten fish of the species may even get into the Tweed, and the melancholy mewing of the catfish will be heard where the swan on sweet St. Mary's Loch pitches into the angler. There is, were it wanted, another proof of the folly of those acclimatizations. Because Wordsworth put a property swan on St. Mary's, impracticable real swans have been introduced, and, like the catfish, they are distinguished nuisances."

Punch breaks out in rhyme as follows:

Oh, do not bring the catfish here;
The catfish is a name of fear,
Oh, spare each stream and spring.
The Kennet swift, the Wandle clear,
The lake, the loch, the broad, the mere,
From that detested thing!

The catfish is a hideous beast,
A bottom-feeder that doth feast
Upon unholy bait;
He's no addition to your meal,
He's rather richer than the eel,
And ranker than the skate!

His face is broad, and flat and glum;
He's like some monstrous miller's thumb;
He's bearded like the pard.
Beholding him, the grayling flee,
The trout take refuge in the sea,
The gudgeons go on guard!

He grows into a startling size;
The British matron 'twould surprise,
And raise her burning blush.
To see white catfish, large as man,
Through what the bards call "waters wan"
Come with an ugly rush!

They say the catfish climbs the trees,
And robs the roosts, and, down the breeze,
Prolongs his catterwaul.
Ah, leave him in his Western flood,
Where Mississippi churns the mud;
Don't bring him here at all!

The American regard for the "catty," often affectionately called bullhead, has been sung in prose by the Chicago *News* in this wise: The original bullhead is essentially a game fish, and it takes a native Missourian to cope with him successfully. Other men may catch him, but none as dextrously and swiftly as a Missourian. Six other men, with bamboo poles, silver plated reels, and fly-hooks, may beat a Missouri bayou from 6 A. M. to 6 P. M. and not get a nibble; then a long-haired, flat-footed, lop-eared Missourian will happen along with a bob line, pin hook and an old-fashioned angleworm, and in less than half an hour will haul out a string of bullheads, each bullhead with horns on him like a series of Christmas-tree cornucopiæ, and a voice like one of the chorus singers in a Wagner opera. We wish our fish commission would invent some means of preserving in the imported bullheads those characteristics which distinguish the original species. The kind now spawned in Illinois waters are a degenerate race, and their flesh is as watery, insipid, and tasteless as their habits are effete. The Missouri bullhead, however—the good old originals caught up around St. Joe, or in Callaway county, or down in the old French district near Ste. Genevieve—has a flavor that is as rich and ripe as the grand old soil in which it buries itself when the cottonwood sheds her foliage and the storm-king comes riding o'er wold and weir.

FLY-FISHING FOR BASS.

Editor Forest and Stream:

Nearly every married man thinks his wife, his dog and his razor are the best, and it is a fortunate dispensation of Providence that men do so think, or they might run away with the other man's wife, or steal his dog, or go to the barber's to be shaved, none of which ever occurs.

So, too, the fly-caster thinks that some particular fly is the *ne plus ultra*, the indispensable to his success, without which dry land would be equally prolific when he wants fish for breakfast.

Like all converts, whether it be to religion, or rearing of chickens, or any craze, the enthusiasm of the early fly-caster knows no limits until his book is filled with a variety of styles, hues and size, that combined resemble a boquet of freshly-gathered flowers, enchanting to behold, but withering with time and disappearing with experience.

To assert that a certain kind of fly for certain kind of fish will be effective in all waters, is simple nonsense.

The statement a few years since of Dr. Estes in the FOREST AND STREAM, I think that what is known with him as the "Lake Pepin" fly—a pure yellow—was very successful, induced some of our dealers to order a supply, and your orrespondent fell in line at once.

A thorough test proved that it was "N. G." in this section, and that fly to-day is part of my boquet and of no other use, and other cases might be cited.

I am thoroughly satisfied that bass in different sections and in different water of same section, differ in their habits, as men born and reared in Massachusetts, or in New York or Indiana, for instance, although of the same race, differ more or less in their language and in many other ways.

The fly craze struck me only a few years since, but in that short time I have had it bad, and bought and bought, and given away and destroyed (in fact can hardly resist even now "just to try" some new fangled whim), until I have come to the conclusion that not to exceed six or seven varieties of fly are all that any black bass fisherman needs or can successfully use.

Be that as it may elsewhere, such has been my experience in Central New York. I am also inclined to think that the first fly that has been successful with the beginner, "his first love," so to speak, is very likely to continue his favorite, and will always be found in his book, ready for use, when flirting with others fails to fill the vacuum.

A knowledge of the habits of bass, their daily change of feeding ground, the condition of the waters, the temperature of the weather, the sunshine and the shadow, not forgetting your tackle, are of greater importance than variety of flies.

SYRACUSE.

"CAMP FLOTSAM."—Battersea, Ont.—I am close to the time of breaking camp. Once more Truthful James and I will return, "followed by glory like a shadow." The Canadian forests are daily adding new hues to their foliage, and the lake shores are resplendent in scarlet and gold, while all nature says stay. But our outing has died with the summer days, and though we suffer the same fate we go.—WAWAYANDA.

SHRIMP AS BAIT FOR BLACK BASS.—New York, Aug. 30.—Can you inform me if shrimp are a good bait for black bass, and whether bass will bite on shrimp if dead? Also whether shrimp come put up for keeping some time? After my experience last month fishing in Sullivan county, N. Y., I learned that nothing was to be despised as a bait. I was fishing in a boat during a thunder storm, and had taken several bass, but no large ones, and had used up everything in the shape of bait I had when I chanced to think of a large bull-frog I caught that morning and had put in my fish-box in the boat in a tomato can; no sooner thought of than done. I hooked the "bull," who was about four or five inches high through the lips, and cast him on the waters, expecting that if any returns were received they would be satisfactory. It had not been in the water more than two minutes before a strike was felt that meant business, and upon striking with my rod found he was fast. The bass immediately struck out for the deep water, taking out about thirty yards of line before he could be snubbed, which made him so mad that he jumped up out of the water about five feet. He then made two circles round my boat, each one smaller than the other, making four jumps. After about fifteen minutes I laid him flapping in the net in the bottom of my boat, satisfied that a three-pounder was as gamy as a larger fish.—C. E. B. [Shrimp are good bait for black bass and are best dead as they show better. They may be put up in salt. We see large Southern prawns at Mr. Blackford's in Fulton Market, which are put up in some preserving fluid. These should be good.]

THE HERRINGS DESERT IRELAND.—The most capricious of all crops has this year proved unpropitious to Ireland. The herrings have left Dublin Bay, or rather, they have not come into it. The accustomed shoals have lost their geographical bearings. The Gulf Stream is possibly to blame. The herrings were generally constant to the bay, and year after year came and were caught with dispatch, regularity and profit. Other shoal fish showed a tendency to be erratic. The sardines were as capricious as ever they could be. You never knew where to find them. They abandoned the Breton coast, where the fishermen had for many years largely welcomed them, and turned up without rhyme or reason along the seashore by Rochelle, the inhabitants being quite unprepared for their reception, much of this "silver of the sea" being hopelessly lost. On another occasion they disappear altogether, and for the following year pilchards and sprats were largely tinned and consumed at breakfast under a flattering misnomer. But herrings seem, on the whole, to be a faithful fish, and in the average of years come and are caught with praiseworthy punctuality. This season they have altered their route, omitting Ireland from their programme. The Isle of Man and the southwest coast of Scotland are in favor, and at the present moment Dublin is actually supplied with herrings shipped over from the opposite coast.—*Pall Mall Gazette, Aug.* 11.

TORCH AND SPEAR.—Bainbridge, Ga., Aug 23.—A few days ago J. S. Wigham at night paddled into Still Spring, emptying into Spring Creek, a stream abounding in every species of fresh-water fish. A blazing torch he carried disclosed hundreds of rock bass playing in the limpid depths of the spring. Seizing his gig and placing his torch where it would enable him to see his attractive prey, after many hours of solid fun he captured twenty enormous fish, weighing in the aggregate five hundred pounds. Coming to the city, he reported his find to our lovers of piscatorial venture, and a party of four was quickly organized, armed and equipped. They reached this spriug, twenty-two miles distant, at 8 o'clock, finding twenty-five other gentlemen on the ground. A seine was stretched across the spring run, and five boats sped out to the work of death. Until midnight the exciting sport went on. Result: Judge O'Neal killed five; Chas. Eggerton, five; Rube Cloud, six; Tom Mock, four; H. Olivant, two. The largest weighed fifty and the smallest twenty-four pounds. The next day Judge O'Neal killed a splendid buck. Turkey and deer are quite plentiful in our forests at present.—O. G. GUSLEY.

TROUT IN THE SIERRA NEVEDA.—In a long article on the ascent of Mount Whitney, in the San Francisco *Bulletin*, Mr. Thomas Magee says that the Whitney region is perhaps the very finest fishing region in the Sierra Nevada. They are not only numerous but "magnificent" in their coloring. Mr. Magee claims that they were never made to be eaten. We wish that he would send us a few pounds of them, in season of course, not necessarily for publication, but as an evidence of good faith, especially some of those he speaks of "in the Kern River and Kern Lake, large trout weighing one pound and a half to four pounds." If these are carefully packed in ice and sent in a refrigerator car, express paid, we will cheerfully give him our unpurchasable opinion on the question of their having been made to be eaten. By the way, we have a paper on angling in the Mt. Whitney country, and will publish it in an early number.

THE USE OF THE THROWING-STICK BY ESQUIMAUX.

[Read before the American Fisheries Society by Prof. O. T. Mason.]

EVERYTHING that exists should have a reason for its existence; so I must tell you why I am before you to-day. Prof. Goode, the Assistant Director of this Museum, came up on my balcony the other day and asked me if I would not read a short paper to you on some one of my studies connected with fishing among the savage people of the world. So it is at Prof. Goode's request that I am here this afternoon to say a few words about the use of the instrument known as the throwing-stick by the Esquimau in fishing.

In the east north range of the National Museum you will see many specimens of modern appartus for capturing fish, and probably in the next case you will see the savage apparatus for the same purpose; and you will be astonished over and over again at the similarity between the modern and savage forms.

Scarcely a week passes in which some Patent Office Examiner does not come to the Museum to examine the collections to see whether that for which a patent has been claimed is not merely a duplicate of something invented years and years ago. Patents have been claimed for things used in the days of Abraham, Isaac and Jacob.

One of the most interesting implements invented by savages is the little wooden instrument which I am now going to show and explain to you.

In Southwestern Greenland, the eastern part of Labrador,

mouth of McKenzie River, Pt. Barrow, Bristol Bay, Norton Sound and Kodiak Island this instrument is in use. From Sitka to Columbia River grow the great cedar trees, out of which these immense dugout canoes are made, in which the navigator carries a long spear twelve or fifteen feet in length, and on the end of that a harpoon used for whales.

The Esquimau almost lives in his kyak or skin boat and is so securely fastened in that any accident to the boat is certain death to him. Were he to use his spear alone in making a lunge he would overturn his boat and expose himsel to great danger. So he is compelled to make use of some means which will both answer the purpose of giving the required force to his spear, and avoid the danger incurred without its use. He cannot use the bow in giving the required force to the spear, necessary in harpooning the seal. It is very difficult to use either a bow or firearm in a boat. So he is driven to the use of this invention, happily hitting upon the device of the throwing-stick.

The principle upon which the instrument is used is this: The fisher takes the throwing stick in his right hand usually, with the spear firmly pressed down in the groove of the stick with the fingers. He then brings it up, throwing it a little back over the right shoulder. There is a little hook, generally of ivory, at the upper end of the groove of the stick in which the spear rests, which fits in a notch made in the end of the spear. After getting the weapon in position, without moving his body, he gives a swift and abrupt motion forward, the spear darting from the throwing-stick with great rapidity, the fingers having been raised to allow its passage.

An interesting fact has grown out of the study of the throwing-stick, namely, that it is in use in only three different regions of the world. In Australia in a very simple form, with a hole for the fore finger; in South America and among the Esquimaux of North America; in those three localities alone is it used.

I shall give you a brief description of some individual specimens, and let you look at the others when I am through talking. We will commence with this one from Greenland (showing specimen). There is a groove for the spear, notches on opposite sides for thumb and forefinger, a small hole midway in the groove near the notches for a peg which is inserted in the shaft of the spear. Instead of a hook at the opposite end there is an oblique hole in the ivory into which another peg near the end of the spear fits. The next is from Cumberland Gulf (showing specimen). Very clumsy and roughly made, a groove for the spear, a hole for the forefinger, a notch for the thumb, also three notches on opposite side for the fingers. A goose-spear is also used with this one, which when thrown at the goose just as likely hits the gander. Ungava Bay (showing specimen). Shaped very much like a fiddle-head, a hole for the forefinger. The bend is a great advantage to the hunter, as it increases the facility of launching the weapon, and a spear when used with this will go a great distance. Mouth of McKenzie River (showing specimen). Most primitive of all the collection; a very rude furrow for the spear, a hole for the forefinger.

The Anderson River is the dividing line between the eastern and western Esquimaux. From that line going westward and then southward the throwing-stick improves very rapidly. The form begins to greatly resemble the razor strop handle, with hook or peg at the end of the groove for catching the notch in the end of the spear, groove, hole for the forefinger, notch for the thumb, and in some instances ivory pegs are inserted, thus making spaces for the fingers, affording a better grasp.

In Alaska great headlands project out into the water, thus creating barriers among the people and causing sharp dividing lines and differences in the forms and degree of elaboration of the throwing-stick. After passing the Island of Nunivak, the finger hole disappears, and is not again seen until we come to Kodiak Island toward the east. From one of the Aleutian Islands we have a left-handed throwing-stick with hole for the forefinger, and another left-handed specimen from Nunivak, razor strop handle, no hole for forefinger, thumb notch and pegs on opposite side making finger spaces.

I will not try to tell you how far back in the past this invention must have been made. References are made in old classical literature to one or two forms of contrivances for giving additional force to weapons used in throwing or darting, and I think probably this device is the descendant or offspring of something of that kind for giving additional momentum, rather than a transformation of the bow.

By using the throwing-stick with the spear the force is given to that weapon which the bow gives the arrow, or the sling to the missile thrown. So that this little instrument lends its aid in the three regions mentioned, supplying a great need, probably to be met by no other means.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Sept. 29, 30 and Oct. 1, 2.—Third Annual Dog Show of the Southern Ohio Fair Association. H. Anderson, Secretary, Dayton, O.

Sept. 29, 30 and Oct. 1.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

Oct. 6, 7, 8 and 9.—Second Annual Dog Show of the Philadelphia Kennel Club, in conjunction with the Pennsylvania State Agricultural Society. E. Comfort, Secretary, Philadelphia, Pa.

Oct. 6, 7, 8 and 9.—Fourth Annual Dog Show of the Danbury Agricultural Society. S. E. Hawley, Secretary, Danbury, Conn.

Oct. 7, 8 and 9.—Dog Show of the York County Agricultural Society. Entries close Sept. 28. A. C. Krueger, Superintendent, Wrightsville, Pa.

Oct. 8 and 9.—Second Annual Dog Show of the Stafford Agricultural Society. R. S. Hicks, Secretary, Stafford Springs, Conn.

FIELD TRIALS.

Nov. 9.—Second Annual Field Trials of the Fisher's Island Club, for members only. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 9.—First Annual Trials of the Western Field Trials Association, at Abilene, Kan. Entries close Oct. 15. A. A. Whipple, Secretary, Kansas City, Mo.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

November.—Fourth Annual Trials of the Robins Island Club, Robins Island, L. I., for members only. Wm. H. Force, Secretary.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2588.**

PHILADELPHIA KENNEL CLUB.—Philadelphia, Aug. 28, 1885.—*Editor Forest and Stream:* Mr. Geo. Esherick has been elected treasurer of the Philadelphia Kennel Club in place of Mr. L. Shuster, Jr., resigned.—E. COMFORT, Secretary.

WESTERN FIELD TRIALS ASSOCIATION.

Editor Forest and Stream:

We telegraphed you yesterday that Col. W. E. Hughes, of Dallas, Texas; E. C. Sterling, St. Louis, Mo., and D. C. Bergundthal, of Indianapolis, Ind., had been appointed judges for this association's trials to be run at Abilene, Kan., the week beginning Nov. 9, 1885, which we now confirm.

The prospects are very flattering for a successful meeting. The membership list is being lengthened daily, and we hope to see the association placed upon a firm basis for coming years. Let all of those interested send in their names.

Thank your paper for the kind notices received.

A. A. WHIPPLE, Secretary and Treasurer.

KANSAS CITY, Mo., Aug. 26.

STANDARD REVISION.

Editor Forest and Stream:

Can any of the gentlemen lately appointed to revise the standard of the English greyhound kindly inform the writer how long this breed of dog has been bred in Great Britain and how long since the race has been at all prominent here, and if it is possible that the dog has been used in America for coursing to such an extent as to warrant any change in construction of his physical makeup?

Will one of the committee on harriers state how many purely bred dogs of this strain he has seen in the United States? I refer to the pure English harrier, not the mongrel foxhound and beagle cross commonly termed harrier here. Further, will any sportsman in the United States not on such committee answer the same question?

Can any of the gentlemen on any of the terrier standard changing committees inform the readers of FOREST AND STREAM why it is that as these breeds have all originated in Great Britain and attained their high standard of excellence, we should not accept the present points for judging laid down?

BOND.

SHOW DISTEMPER.

Editor Forest and Stream:

In your issue of Aug. 27 Mr. J. M. Fronefield, Jr., denies that Glench Elcho had distemper at the Philadelphia show last May, and hastens to contradict me, for fear that my charge will be the means of keeping exhibitors away from the coming Philadelphia show. I am sorry I did not mark the Irish setter that did have distemper, in the catalogue. And I don't think that Mr. Fronefield will deny that there was an Irish setter in the puppy class down with distemper during the last three days of the show. I am sorry that my article appeared in *A. K. R.* as it was not sent for publication, and I so requested, for I would be one of the last ones to do or say ought that would injure the Philadelphia show. I am under obligations to the management of the late show for favors shown me while there. But I think it the duty of the veterinarian to have removed at once any subjects of distemper. I was appealed to by the owner of this Irish setter to enter a protest against his remaining, as he, the owner of the dog, had requested the privilege of removing him and had been refused to do so. The dog was benched the third or fourth dog north of my Flora H. I may be wrong as to name, but in subject I am correct. Was it not Gerald? If this article meets the eye of the owner of the dog that was afflicted with distemper and that made the request to me I ask him to corroborate my statement. I don't suppose there ever was a dog show without its after results of distemper, and I don't doubt for one moment that those in charge of the Philadelphia show were any more negligent than the management of other dog shows. In conclusion I wish to say I don't court any paper controversy on the subject, but will ask Mr. Fronefield to say am I right or wrong in saying there was a red Irish setter down with distemper? I say there was such a subject, if I am wrong as to name of dog.

J. R. HOUSEL.

WATSONTOWN, Pa., Aug. 28.

WITH ST. BERNARDS AT THE HOSPICE.

HAVING returned from a delightful visit to the Hospice but a week before the Crystal Palace show, I naturally often compared, in my own mind, the St. Bernards as they are in their old mountain home, with the St. Bernards as they appeared before me in the show ring. The few thoughts suggested to me by the comparison may not be out of place in your columns. I do not give them with the view, on my part, of introducing debatable matter, neither do I give them in a dogmatic manner, but simply as the thoughts pressed on me by the coincidences of seeing the best specimens of the St. Bernard at home and abroad, practically, at the same time. First of all let me say a word about The Hospice du Grand St. Bernard and the Holy Fathers there. Though fatiguing early in the season, it is nevertheless best to make the visit before the snows melt. You see everything as it usually is. The idea given by a visit—say in August—is not more correct than would that be to a traveler from the Alps of the Trossachs seen in the depth of winter and covered with snow. Leaving the mules about half a mile from the Cantine de Proz, after a long tramp, we were greeted on arrival, good humoredly, by the dogs. I need not describe The Hospice; many of your readers know it as well as I do. Suffice it to say we were received most kindly by the monks. The wants of the inner man—and outer man, too, for we were wet through—were even luxuriously attended to; after which we were invited to have a look at the dogs. Thus, with agreeable conversation and information readily given, the evening was passed. It was very cold, and it was hard to realize it was midsummer; but after a warm at the fire, a good night's rest closed the day.

The five o'clock bell for mass woke everybody. I will not attempt to describe the scene. Readers can imagine the snow-clad Alps with the morning sun shining in full splendor. After mass and breakfast the dogs were let out for our gratification, and off they went over the snow in the most business-like manner, as if on errands of mercy bent, appearing quite disappointed when they found the monks were not following, and that their day's work was not to begin just yet. There is a tradition and religious halo surrounding these dogs; but I know there is also a certain amount of incredulity with many people who do not hesitate to brand the religious part of it as superstition, and the traditions as false; but that the Holy Fathers do a good work, and that their dogs help in it, there can be no question. I have heard people say—"What! fifteen monks and seven or eight dogs living at the highest permanently inhabited spot in Europe doing good! What is their sphere of usefulness?" It is not my object to write what can be read in the guide books, but the Pass of the Great St. Bernard is historical as the highway into Italy. Travellers who can afford it, can now rush by railway along the Gotthard route—but for poor travellers this pass is still the best way. They cannot afford guides, and those of us who, with guides, know what a false step may do, can easily understand how many slip—to be found no more alive—or to be rescued.

Who rescues? or if the poor traveler perishes, who finds his body? and in a reverent way carries it and takes care of it until—the chance of identification gone—the melting of the snow in the valleys allows decent sepulture. The rescued, of course, go about their business; those found too late to rescue during this past winter numbers thirty-seven, men and women. At my request one of the fathers took us to the morgue, where, true enough, I counted that number. The quantities of human bones found from time to time tell the tale of those lost—that are never found again, dead or alive. One St. Bernard dog—not belonging, however, to the Hospice du Grand St. Bernard—had, I was informed more than once, saved this winter, somewhere in the Rhone Glacier district, seventeen travelers. I have said this much to show there is enough evidence, well authenticated, to justify me in saying there is a religious halo still round the St. Bernard dog; it is not superstition; the traditions of him are not false, and he comes to us with a prestige. However, if any man desires further proof, let him spend a winter at the Hospice. If he survives it, let him write his experiences in the *Live Stock Journal*.

Somehow or other there is an idea that the monks have no good dogs, as we should call them. I use the word "good" in the way an English breeder and exhibitor would use it. This was an error. I was agreeably surprised. I think I may safely say there is no one kennel in England that can turn out seven or eight full-grown dogs to match this number at The Hospice. They are so full of quality—and no other word conveys the meaning. It seems to me the life they lead, the work they do, the intelligence they are constantly called upon to exercise, give them an expression which is very, very rare in England. Is this far fetched when we consider the one dog bred, born, reared and trained at The Hospice, and the other too often bred among dog shows, taken to this show and that during puppyhood, and in after years, should he survive, alternating between forcing foods, dog shows, eczema and physic? I was more than ever forcibly struck with the fact that a St. Bernard is not a dog to be kept shut up in a kennel, and it reminded me of one of my own dogs which I usually take in my rambles; he was twice the dog for intelligence after an excursion among the Welsh mountains and Snowdon, and now knows as well as I do when we are off, and selects his railway carriage with as much judgment as any other gentleman. But this by the way.

Their pups are born and partly reared in the valley, and come up to their future home in the warmer weather, and so gradually get acclimatized for the winter. The monks keep the best. The greater proportion of those they sell, they told me, go to Russia. Perhaps some of your readers can inform us whether they are there kept and bred pure, and, if so, what a Russian St. Bernard is like, or whether they cross them? I am inclined to think the latter.

As everybody knows, the short-coated is what the monks like best on account of the work the dogs have to do, though—probably owing to the climate, their short coat is longer than our short coat—not so mastiff-like. They do not condemn the long-coated; they had one in their kennel, but more for fancy than anything else. Many were nicely marked, as we should call them. One of the most valuable was brindle. I soon saw their opinion of him when I asked if they would sell him; another was all white, except a patch, on ear, I think. There was a good deal of white. All had single or double dew claws; and I was answered by the monks, when asking their opinion of a dog without dew claws, "not good." They appear to place equal value on single as on double dew claws, and I often received the reply "not the true race" when I elsewhere asked an opinion as to no dew claws. They attach an importance to the carriage of the tail, but they have the same difficulty with the ears that we have. The dogs at The Hospice are not so large as some of our largest, though, omitting these, up to our average—but their bitches are fully up to ours. I saw one bitch, I think quite as big as any bitch in England. Judging from the quality of their dogs and the size and quality of their bitches, I should say they are cultivating their breed, and the next time I go I shall expect to see larger dogs. With all their exercise and isolation they sometimes lose a valuable dog. I received a letter from The Hospice only yesterday saying a dog was dying which I had hoped soon to have seen in my kennels. From what they told me their dogs are longer coming to maturity, their growth not stopping so soon as ours by several months. This is probably owing to their pups being less forced than ours are.

There is an expression, character, and nobility of head among the dogs not easily forgotten; and as you come away you feel inclined, involuntarily, to raise your hat to the old Patricians among them; and as for the Holy Fathers—well, you feel a regret at leaving—a regret that time should so fast have flown. You come away with an affection for them, and reverence for their abode.

I saw a few good dogs elsewhere in Switzerland—names are invidious—but the position of one gentleman in the St. Bernard world, as the re-founder of the race, to whom we are all indebted, almost demands I should mention by name. I refer to Mr. Heinrich Schumacher. He is as courteous as ever, and a long life of St. Bernard breeding has not damped his enthusiasm.

Now, after all this, what about St. Bernards in England? I contend we must either adopt the historic, traditional—and religious if you like—St. Bernard with all his prestige, and having adopted him, breed up to the same points as are considered to be correct by the best breeders in his native land. Or alter the points as you like—breed to the altered points—but call him the English St. Bernard. We must adopt him in his entirety, or let ours be a rival. No doubt much of the interest and popularity attaching to the dog in this country exists on account of his connection with the Hospice and the noble work he has done for centuries; in fact, his nobility and prestige. The St. Bernard minus this, would, notwithstanding his magnificent proportions, not be the dog he now is. I say stick to the old type. Let them be as big as possible, but we must not sacrifice quality for size. On the grounds I have given, dew claws are, to say the least of it, very important. In color we need not be frightened at white; there is no doubt that too much white is better than too little. I think we ought to encourage more than we do, the smooth-coated. The rough are equally pure, but inasmuch as the smooth-coated are the favorites at the Hospice, to maintain the complete unity of type between the dogs at The Hospice and ours in England, we hear of every pup of a litter being "enormous," "sure prize-taker," etc.; as if every dog, any more than every child, is born to fame; and a very brisk trade is therefore done anywhere within the reach of the Great St. Bernard or a snow-capped mountain, in pups. Many come through England on their way to America I was told.

I now revert to dew-claws, because I know many who, if they have read so far, will have said: "Why! the old Barry had none." It sounds a weak case to say he had, but that they were cut off by the artist who stuffed him. Such, however was the fact. I know I am on debatable ground, so quote *verbatim* from a letter received a few days since: "*Barry, qui se trouve au Musée de Berne, n'a point de 'dew-claws,' mais je suppose que l'artiste qui la dépouillé, ne connaissait pas l'importance de 'double claws,' et qu'il les a coupées par l'ignorance. Les Conventuales qui ont amene Barry vivant. A* 1815 *de l'Hospice jusqu'à Berne m'ont assuré en* 1866 *qu'il avait 'double claws,' et le Prieur, le Clavendier, et tout ces messieurs, m'ont rassuré en* 1866, 1868, *et* 1869, *qu'ils n'elevent point, de chiens qui n'ont pas 'double claws.'*"

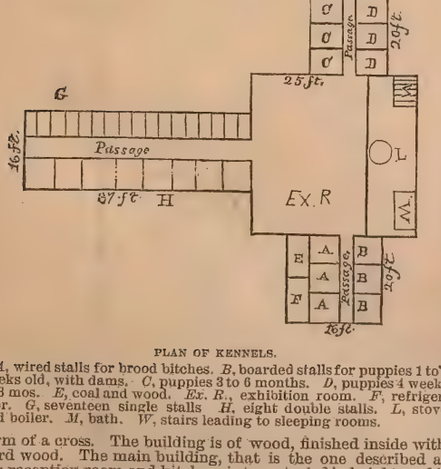
I have not given the name of my informant out of courtesy, as it was a private letter; but I may say he is known personally to some St. Bernard men, and by name and reputation to all. Be this as it may, there is no question Schumacher's Barry had single dew claws, and there is no doubt whatever that no breeder of any standing would now breed from a dog deficient in these, and from the latter I have quoted this was the case twenty years since. If any of your readers are at Berne, and have an hour or two to spare at the station, I should advise them to walk to the museum and see the old Barry, and then take a cab and drive over to Hollingen and see Schumacher's Barry—that is, all that remains of them.

There are epochs in the histories of nations and individuals, and there are epochs in the history of the St. Bernard dog. The snowstorm of 1812 was an epoch; the revival of the breed by Schumacher was an epoch; the introduction into England was an epoch; the Crystal Palace show of 1885 was an epoch, by virtue of the sale of Plinlimmon for something like 800 gs., for, after all, it was not a fancy price, simply market price, plus enterprise. English St. Bernard breeders must now halt and take stock; our American cousins are in earnest. When will be the next

epoch? What event will mark it? Fewer bad dogs must be bred; or if bred, not reared. This will, however, work its own reform, for no doubt bad dogs get every day worth less money and good ones worth more. We may also, I think, train our St. Bernards better, develop their intelligence. We have succeeded in developing his body for the bench show, let us develop his brain. While the interest abates not on the continent and America, and England is central, in these days of international exhibitions, why should we not, say in the year 1887, have a grand international show of St. Bernards in London?—*H. I. Betterton, in Live Stock Journal.*

THE RANCOCAS KENNELS.

THE distinguished position which Mr. Pierre Lorillard has achieved in the sporting world through the medium of his world-famous racing stable, located on his Rancocas Farm, at Jobstown, N. J., portends to be further augmented by his entry into the canine world. For many years Mr. Lorillard has been an ardent sportsman and a great lover of well-bred and well-trained sporting dogs. On becoming a purchaser of his magnificent estate in Burlington county he at once set about making a game preserve, of which a description is given on another page. From having a few brace of well-trained native setters, he is now the owner of one of the best kennels of blue bloods in this country. In December of last year Mr. Lorillard determined to go extensively into the breeding of first-class English setters, which he hoped in time would not only make their mark on the bench, but at the field trials in this country and in England. Expense was not to be considered in the attempt to accomplish this end, and he began looking forward to the time when he should, by a system of crossing the Llewellin and Laverack strains, produce a race of dogs which should be known as the "Rancocas breed."



He had been accustomed to shoot with a friend, Mr. Percy C. Ohl, of Plainfield, N. J., who had for many years been a breeder of native setters and who is a thorough sportsman in every respect. He sent for Mr. Ohl, told him that he contemplated the foundation of a sporting dog kennel; discussed the subject with him and asked Mr. Ohl to become its manager. Mr. Ohl at once entered into the project, and armed with a letter of *carte blanche* to draw on Mr. Lorillard for whatever money he needed for the securing of the foundation stock, he started on his purchasing pilgrimage. Leaving this city in January of this year, he visited New Orleans, Memphis, St. Louis, Chicago and Canada, and the principal dog centers in the East. His trip lasted until April, and when he returned home he had purchased at a cost approximating to $15,000 the following well-known setters:

Dashing Monarch (Llewellin's Dash—Countess Moll).
Storm Petrel (Don Juan—Petrel III.).
El Mahdi (Don Juan—Petrel II.).
Hamlet (Don Juan—Fairy Lass).
Hotspur (Don Juan—Fairy Lass).
Sudan (Druid—Ruby).
Grouse Dale (Grouse—Daisy Dale). For field work only.
Petrel II. (Pride of the Border—Petrel).
Blue Belle (Rattler—Daisy).
Vannette (Count Dick—Petrel).
Lavelette (Druid—Princess Draco).
Dame Petrel (Don Juan—Petrel III.).
Glenada (Glenrock—Blue Belle).
Glenlass (Glenrock—Blue Belle).
Dame Buck (Buckellew—Madame Llewellin).
Lotta (Don Juan—Fairy Lass).
Countess Mollie (Count Noble—Spark).
Coomassie (Thunder—Peeress).
Nancy Rake (Leicester—Petrel).

He also purchased the pointer Shot (Sensation—H. W. Livingston's Rose). Besides the above when we visited the kennels in June, there were eight fine puppies by Gladstone out of Lavelette, and five by Dashing Monarch out of Vannette. Blue Belle was in whelp to Dashing Monarch and Petrel II. to Count Noble.

We have just learned from Mr. Ohl who writes that "the kennel since then has been visited by malignant distemper, which broke out very suddenly, and had not the sanitary arrangements been complete our loss would have been very great. Mr. Harry Ohl, who is the veterinarian, is deserving of the highest praise for his wonderfully successful treatment of the disease, especially in the cure of chorea and paralysis. I never saw distemper in such a horrible form before. In seventy-two hours after it was noticed hardly an animal in the kennel, old or young, but what was affected, while every variety of its freaks was shown and with some new additions. But as we did not lose a dog that was over a few months old we think the success in battling with the disease was never equaled anywhere." Judging from the above account the Rancocas Kennel is to be congratulated in weathering the storm so bravely.

It was not until after the dogs had been brought home and given comfortable quarters in the barn which adjoins Mr. Ohl's comfortable home on the Rancocas Farm, that the plans for erecting a suitable kennel building were agreed upon; and it was not until the middle of June that the stock was introduced into their new and handsome home. All things considered, the kennel building is the most elaborate and well-appointed building of its kind in this country. The accompanying diagram shows that in shape it has somewhat the

PLAN OF KENNELS.

A, wired stalls for brood bitches. *B*, boarded stalls for puppies 1 to 4 weeks old, with dams. *C*, puppies 3 to 6 months. *D*, puppies 4 weeks to 3 mos. *E*, coal and wood. *Ex. R.*, exhibition room. *F*, refrigerator. *G*, seventeen single stalls *H*, eight double stalls. *L*, stove and boiler. *M*, bath. *W*, stairs leading to sleeping rooms.

form of a cross. The building is of wood, finished inside with hard wood. The main building, that is the one described as the reception room and kitchen, is two-storied in height, and it and the three wings are covered with peaked slate roofs. The roof of the main building is surmounted with cupola and flagstaff. All the compartments in this model kennel are well ventilated and lighted, and all the corners of the rooms are rounded so as to not break the circulation. The building is upon a mound five feet in height, and especial care has been given to have the drainage as perfect as possible. The floors are of cement, traversed with patent drains. The second story of the building is partitioned into sleeping rooms, store room and a room for bitches in season.

There are three spacious yards, one to each department. They are surrounded with picket and wire fences sunk two feet under the ground and are nine feet above it. The yard belonging to the department where the working dogs are kept is an acre in size. The other two yards are of about a quarter of an acre. All the yards are provided with "shades" or barracks with straw-thatched roofs. The one in the large yard contains a wide shallow trough in which the dogs' feet are washed after they have been worked. The working dogs have free access to their department, where a fresh supply of water is always on hand. The refrigerator, marked F in the diagram, is about ten feet long, and in it a large supply of food and milk is always kept.

In front of the kennel is the exercising field, a beautiful clover-covered pasture 187 acres in extent. Through it, and about 150 yards from the kennels, a pretty brook flows, and a portion of it has been dammed into a bathing place for the dogs, where in warm weather they are taken every day.

The cost of the kennel building, which was planned by Mr. Ohl and erected by Mr. Lorillard's resident workmen, carpenters, etc., was about $5,000. It is situated about a quarter of a mile from the largest of the three preserves. Not only is the Rancocas Farm a great harbor for game, but the surrounding country is well stocked with quail, English pheasants and English partridges, thus affording every opportunity to work the dogs in close proximity to their home. Altogether the establishment of Mr. Lorillard's Rancocas Kennels will for some time to come be watched with interest by the sporting-dog lovers of this country. It has entered the lists under unexceptionable conditions, and if the adage is correct that "money makes the mare go," Mr. Lorillard's venture should have a "boom" that will give it a satisfactory record in no time. X.

THE AMERICAN KENNEL CLUB.—"Down charge!" Wade, I am afraid you flushed that last bird and did not drop him. Let us look over the ground before going further or we may draw it blank. You ask for mutiny. Did you ever know of a deserter to have the courage to join in a mutiny? A deserter generally runs away and is lost to "sight and memory dear," and small loss to any one; but a mutineer stays and "kicks," and if he can gather around him a sufficient number of the same mind they overpower the captain and bring him to terms. There are mutineers enough in the A. K. C. to run the ship in good shape, good navigators and able seamen, if they will only stick to the ship and pull together; but if a few desert the balance of the crew will soon be in irons, and then, being short-handed, the ship will become unmanageable and get wrecked and all on board lost. Do we want to wreck the ship or bring her safely into a friendly port? I also had a dream. I dreamed that I was present at a meeting of the A. K. C., held in October, 1885, and that the crew mutinied in the most approved dime novel style, overpowered the present navigator, threw him overboard, and then everything went lovely and they married and settled down and lived happily until the end of their lives. I woke up and wondered why your last letter stirred me up so.—G. EDW. OSBORN (Birmingham, Conn., Aug. 29).

A KITTEN'S FOSTER MOTHER.—Major Fritz Sturm, the genial proprietor of the restaurant opposite the City Hall, has a liver and white pointer Nellie, of which he thinks a great deal. Nellie is about to propagate her species, and the supply of natural food which nature has provided for the coming bow-wows has somewhat troubled Nellie, as it seemed to be ahead of time. Yesterday Nellie came into the restaurant tenderly carrying a little kitten which she had picked up in the street. The kitten was almost dead, having evidently met with rough handling, and had very little nourishment. Nellie carried the kitten upstairs and proceeded to nurse it. The kitten and its stepmother are both doing remarkably well, the kitten looking as sleek and fat as it would if it had remained in the care of its natural mother. Nellie evinces a strong attachment for her protégé, and guards it tenderly and will allow no one to touch it. The Major this morning called in a *Press* reporter to see the freak. Nellie was lying under the dining-room table and on one of her dugs hung a wee little kitten looking contented and happy. The two formed an interesting spectacle. Whether Nellie will abdicate as stepmother when she assumes the title of mother will be an interesting question for the little waif.—*Paterson Press.*

SHE KEPT HIM.—An old woman, clad in heavy, warm, short skirts, with high, thick-soled boots, and wearing a turban on her head was landed the other day at Castle Garden along with a large number of German, Irish, English, and other immigrants. Her quaint costume attracted a great deal of attention. In her arms she carried a big shaggy dog with a sharp muzzle, and the two seemed to be very much attached to each other. The woman's name was Margareta Tallisdotter, and she had come from almost the extreme north of Norway, and was on her way to join her son, who had settled on a farm in Dakota. Her entire concern seemed to be centered in the dog, and she begged Superintendent Jackson not to take it away from her, as the animal had lived with the family for ten years. Mr. Jackson told her she could keep her pet, but she must not let it bite any one.

THE CLEVELAND BENCH SHOW ASSOCIATION.—Cleveland, O., Aug. 29.—*Editor Forest and Stream:* In reply to the communication of Mr. H. W. Child, in this week's issue of the FOREST AND STREAM, wherein the statement is made by him that I am not eligible to serve upon the committee to which the Miro protest has been referred, for the reason that the club which I represent has not paid the $10 assessment made at Boston, allow me to say that upon my return home from the West, Aug. 25, finding a notice from Treasurer Comfort that the assessment was due, I at once sent the amount to him, and hold express company's receipt for same. If there is any blame it should rest upon me personally, not the Cleveland Bench Show Association, which I represent.—C. M. MUNHALL.

THE PHILADELPHIA FALL DOG SHOW.—The list of judges for the coming Philadelphia Dog Show so far as appointed are as follows: Mastiffs, St. Bernards and Newfoundlands, Mr. Edward Dudley, Camden, N. J.; English, Irish and Gordon setters, Mr. C. S. Westcott, Philadelphia, Pa.; pointers, Mr. B. F. Seitner, Dayton, O.; collies, Mr. A. S. Apgar, New York; spaniels, Mr. J. H. Winslow, Philadelphia; bulldogs, all terriers, toys and miscellaneous, Mr. James Mortimer, Babylon, L. I.; foxhounds, Messrs. Mark Pennell and Howard Lewis.

SPANIEL STOLEN.—A liver colored spaniel bitch puppy, six weeks old, with tail cut short, was stolen from Bergen Point, N. J., last Friday. The thief also took a skiff-built boat, light blue with cedar trimmings, with Olivette in gilt letters on each side of bow. Stern seat fitted with socket for revolving chair; two sets of fittings for adjustable rowlocks. A liberal reward will be paid for information that will lead to conviction of thief. Address A. C. Wilmerding, 84 Broadway, New York.

THE BLACK AND TAN SETTER STANDARD COMMITTEE.—Birmingham, Conn., Aug. 29.—*Editor Forest and Stream:* Mr. Charles S. Fitch, of Fort Washington, N. Y., and Mr. Lowell T. Field, of Boston, Mass., have been appointed to fill the vacancies in the standard committee on black and tan setters. The other member is Dr. H. Clay Glover.—G. EDWARD OSBORN, Sec'y A. K. C.

REV. HENRY WARD BEECHER maintains eight dogs on his Peekskill farm.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed,
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Flora. By Jacob Meyer, Newark, N. J., for tawny rough-coated St. Bernard bitch, whelped June 12, 1884, by Carlo (A.K.R. 39) out of imported Beatrice.

Elwood, Wellwood, Charles I., William I., Entell, Nellie, Sarah and Amelia By Jacob Meyer, Newark, N. J., for St. Bernards, two yellow and white and three yellow dogs and three yellow and white bitches, whelped Aug. 19, 1885, by Rene (A.K.R. 410) out of Flora (Carlo—Beatrice).

Weconisco and Mahautonga. By F. W. Seiler, Harrisburg, Pa., for black, white and tan and lemon belton English setter dogs, whelped May 9, by Count Noble out of his Kate Gladstone (Gladstone—Sue).

Ned Gladstone, Sion Gladstone, Dan Gladstone, Sam Gladstone, Princess Gladstone and Pearl Gladstone. By W. R. Traver, Washington, D. C., for one lemon belton, one black and white, and two black white and tan English setter dogs and two black, white and tan bitches, whelped June 19, 1885, by champion Gladstone out of Princess Pearl (Druid—Princess Draco).

New Brighton Kennels. By T. G. Davey, London, Ont., for his kennel of English setters.

NAMES CHANGED.

☞ *See instructions at head of this column.*

Uno II. to Ino. Liver and white ticked pointer dog (A.K.R. 2549), owned by Chas. R. Squire, Troy, N. Y.

BRED.

Addie S. Red Irish setter bitch (A.K.R. 2392), owned by James W. Pagan, Newport, Ky., July 16, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. C. R., Buffalo.—1. A beagle bitch not being in whelp has milk in her teats. I take it out three times a day and she seems relieved. I do not know if I am doing the right thing or not. 2. She is also too heavy. What can I do to reduce her weight? Ans. 1. Leave her alone, and unless she is with pup the milk will dry up. You keep the glands in activity by handling them. 2. Do not feed so much and give cathartics until the bowels are free. Buckthorn, castor oil or compound cathartic pills.

J. K. O., Dwight, Ill.—My pointer puppy, a year old, has a habit of shaking his head, which clips small pieces out of the edges of his ears. I have cauterized the sore places with nitrate of silver, also tried salves, etc., but cannot get them well. I cannot see any trouble in the ear nor soreness. Ans. You had better clip the hair from the edges of the ears back for a half inch and use balsam of Peru oint-

ment twice daily on the sores. We suspect canker. Get the following: Of bromo chloral and laudanum one drachm each, water six drachms. Drop in ear night and morning.

SNEIDER, Boston, Mass.—Newfoundland dog 5 years of age, is troubled with mange, which shows itself on his limbs and breast, the latter being quite bare. He is also troubled with what appears to be ulcers in the ear, as they are at times very offensive. His diet is Indian meal mush and cooked meat mixed, cold and fed twice a day. Appetite very good and most of the day passed out of doors. Ans. Give your dog 3 drops of Fowler's solution of arsenic in his food 3 times a day. Increase the dose by one drop a day up to 10 drops and then decrease a drop a day down to 3 drops and continue treatment for three weeks. If after this time the disease has not disappared, stop medicine for one week and then commence again in the same way. Get the following ointment for local application: Of the oxide of zinc and ammoniated mercury, each 2 drams. Of lard 2 ounces. Mix. Use as salve twice daily after sponging the surface with warm water and castile soap and drying.

A. D. W., Warren, Pa.—I am much obliged for your kind reply to my letter giving symptoms of my dog and asking advice. I am afraid I omitted one important item bearing upon the trouble. The hair around the two spots affected (outside of haunch and side of hind leg below) is of a reddish color which does not wash out, and which I am afraid indicates what is known as "red mange." The larger spot is quite bare of hair, being about two inches in diameter; there is little or no eruption now, the scabs having sloughed off. I have been using Baker's Mange Cure, and have been administering for a week or more quinine and Fowler's solution If it is mange I cannot understand what to attribute it to. The dog is underfed rather than the reverse, is spare in flesh, and lives off mush with a little admixture of meat principally. His present trouble does not affect his spirits or ambition to work. He does not appear to be restless, and seldom bites or scratches the affected parts. Ans. You had better try the balsam of Peru ointment to heal the large sore. Keep on with the quinine and arsenic and feed a little scraped raw meat each day mixed with the other food. He needs now a somewhat richer diet. Keep his bowels in order with buckthorn.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

Oct. 20.—First Georgia State Fair Tournament, under auspices of the National Gun Association, Judge M. R. Freeman, Manager, Macon, Ga. Beginning Oct. 20.

RANGE AND GALLERY.

CREEDMOOR, Aug. 29.—The scores at Creedmoor were very fair to-day. It was the last day before the fall meeting for contestants to try their skill in the matches for the prizes in the champion marksman's class, and the *Army and Navy Journal* prizes, offered by Col. William C. Church. There were more marksmen on the field than on any previous day. In the target to the extreme left were veteran shots of the New York Rifle Club who had visited the range to make a trial record. All their shots were made in a standing position. J. N. Todd, who won the Wimbledon cup in the 1,000yds. match last year, made the best score—48 out of a possible 50. The other shooters were Adjutant Duane, Nicholas O'Donnell, T. P. White, Major George Shorkey, M. Herrington, and T. H. Holton. Their scores averaged about 46. Other members of the club had already made their records, and the trial will continue till teams are selected to contest in the matches during the fall meeting. There will be two teams from Boston, two from Springfield, Mass., one from Bridgeport, and one from Philadelphia to shoot against. The champion marksman's class match is open to all members of the National Guard of the State who have previously qualified at 100 and 300yds. To day's shooting in this match was better than in either of the four previous trials. The best scores were:

	200yds.	500yds.	Total.
H J Rice, 23d Regiment	21	25	46
J F Klein,* 17t Separate Company	22	24	46

FITCHBURG, Mass., Aug. 26.—At the recent picnic of the Washington Guards, Co. D, 6th Regimen', M. V. M., the Major T. H. Shea medal was contested for by four of the companies in the batrahon of the 6th Regiment with which Major Shea is connected. The companies contesting and the result of the contest out of a possible 35 to each man was as follows:

Co. B, of Fitchburg.		Co. K. of Leominster.	
Fletcher	2054422—19	Spill	3543343—24
Buxton	3310234—19	Mooney	2333323—19
Babbitt	4304102—17	Perkins	4330323—18
Cook	2404024—16	Leavitt	2420330—14
Forristall	4202430—15—86	Swift	0002203— 7—82
Co. E, of Ashburnham.		Co. D, of Fitchburg.	
Young	3333332—20	Monahan	3302044—16
Willard	3322034—18	Cronin	3030042—12
Lindell	0442322—17	Turpin	3022200— 9
Whitney	4223032—16	Rourke	0400320— 9
Fian	0024000— 6—77	Shea	0030020— 5—51

JAMESTOWN, N. J., Aug. 29.—Score of our club in telegraph rifle match with Gardner, Mass., 20 yds., off-hand, Creedmoor target, ten men:

Perry	4434455554—43	De Lisle	5444444444—41
Dowier	4545444453—43	Burns	3514515444—42
Fenner	4444444545—41	Jones	4344434444—38
Ayres	4455545545—45	Ahlstrom	3444445544—41
Moore	4545454443—42	Curtiss	4330514454—36—411

Gardner score, 438.—R. H. BURNS.

SUMMIT, Aug. 24. *Editor Forest and Stream:* In reading rifle notes in last number of FOREST AND STREAM I saw our match, Summit vs. Springfield. You printed my name wrong. It says Paddy Ryan where it should have been Timothy James Ryan or T. J. Ryan.

ST. LOUIS, Aug. 27.—St. Louis Long-Range Rifle Association weekly practice shoot at the Jefferson barracks range. The shooting was at 500yds. In the individual contest for the weekly medal Lieut. A. L. Smith was the victor. Capt. Swigert is wearer of the leather medal. Three points for each military marksman allowed on open sight, Springfield rifles, shooting at 400yds., Creedmoor rules:

Citizen Team.		Military Team.

A TYROLESE RIFLE MEETING.—The great festival of the second meeting of the Austrian Rifle Association took place yesterday at Innsbruck. The Emperor, who arrived on Saturday from Gastein, held a review of the garrison, and a great reception of the Tyrolese authorities and nobles. Innsbruck is very embarrassed by the large number of guests, who exceed the total population. The number of the former is estimated at more than 2,000, of which Switzerland alone has sent more than 500 riflemen by express train through the Arlberg. On Saturday, in all three directions, long trains of thirty carriages and more brought a thousand fresh guests from all parts of Austria, Hungary and Germany. Never before have so many Tyrolese riflemen been gathered together in one place. Very striking they looked in their mediæval picturesque dress. Tall strong men, with their rifles on their shoulders, they came on in military order, with their bands playing and the flags waving which had often guided them to the bloody battlefield for the country—a real people in arms. There is among the Tyrolese a much greater variety of costumes than is generally known, and most are extremely picturesque. One mountaineer wore white stockings, black leather breeches, and the girdle of olden times. The jacket, waistcoat and hat vary in color with the different valleys. Some men wore black jackets with red waistcoats and silver buttons, and black hats with white cocks' feathers. Others were in scarlet and crimson jackets, with green under vests and immense yellow hats with green bands and feathers. The procession to the shooting ground was a great success. The procession lasted nearly two hours. Showers of flowers overwhelmed the Swiss and German guests. The Tyrolese, who exceeded all the others in number, the whole body of riflemen being estimated at more than 12,000, were, however, the heroes of the day. The variety of colors was very striking. A remarkable feature of the procession was the triumphal car containing the silver shield which the Tyrol received from the Austrian army at the five hundredth anniversary of its union with Austria, under the house of Habsburg. Two tall warriors and a protecting nymph of beauty guarded the shield. In the procession there were no fewer than 84 bands of music. —*London Standard, Aug.* 10.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NEW ENGLAND TRAP SHOOT.

EXETER, Aug. 29.—The New England Trap Shooters' Association have just closed their annual two days' tournament on the grounds of the Exeter Sportsmen's Club. The scores were follows:

Preliminary sweepstake No. 1, 5 clay-pigeons, 5 traps. 18yds. rise—Eager 3, Perry 4, Dickey 5, Williams 4, Beaudry 4, Cooper 5, Gerrish 3.

Preliminary sweepstake No. 2, 7 clay pigeons, 5 traps—Eager 3, Davis 5, Dickey 7, Cooper 5, Perry 6, Williams 4, Buffinton 5, Webber 4, Beaudry 6, Hayes 5, Gerrish 7, Dean 3, Gray 4, Tinker 3.

First regular event, 7 clay-pigeons—Dickey 6, Eager 5, Gerrish 6, Perry 6, Williams 5, Webber 5, Beaudry 7, Buffinton 5, Tinker 5, Snow 5, Dean 3, Gray 5, Cooper 7, Davis 5, Stark 6, Jenkins 6, Folsom 3. The day. The variety of colors was very striking. A remarkable feature

Second event, 7 clay-pigeons—Dickey 5, Gerrish 5, Perry 5, Eager 5, Cooper 7, Beaudry 6, Stark 6, Jenkins 1, Williams 7, Davis 6, Webber 6, Rowell 6, Tinker 7, Gray 6, Snow 1, Buffinton 5, Dean 1.

Third event, five pairs clay-pigeons—Eager 7, Gerrish 1, Cooper 8, Beaudry 4, Rowell 8, Tinker 9, Perry 2, Webber 6, Davis 6, Jenkins 4, Stark 8, Dickey 8, Williams 7, Snow 7, Buffinton 9, Gray 3.

Fourth event, two-men match, seven clay-pigeons—Eager 7, Stark 7, Gerrish 6, Cooper 6, Dickey 5, Perry 5. Buffinton 6, Beaudry 4, Davis 4, Webber 3, Gray 4, Tinker 4, Jenkins 0, Rowell 5.

Fifth event, seven clay-pigeons—Eager 5, Dickey 6, Perry 5, Gerrish 5, Stark 6, Webber 5, Rowell 5, Cooper 6, Beaudry 5, Tinker 5, Dean 1, Jenkins 4, Davis 2, Buffinton 7.

Sixth event, individual badge match, fifteen clay-pigeons—Stark 14, Eager 13, Perry 10, Gerrish 12, Dickey 12, Cooper 11, Beaudry 10, Tinker 12, Buffinton 14, Hays 12, Rowell 11, Gray 8, Jenkins 3, Webber 7, Davis 4, Snow 10. Stark beat Buffinton in the tie.

Seventh event, ten clay-pigeons—Eager 9, Gerrish 7, Dickey 6, Stark 9, Perry 9, Cooper 8, Buffinton 9, Rowell 7, Jenkins 6, Tinker 8.

Eighth event, 5 pairs clay-pigeons—Gerrish 5, Perry 8, Jenkins 5, Eager 9, Dickey 6, Rowell 6, Stark 8, Buffinton 7, Cooper 4, Snow 4, Folsom 5,

Ninth event, 7 clay-pigeons—Eager 5, Gerrish 4, Perry 6, Williams 5, Cooper 6, Dickey 7, Beaudry 7, Stark 7, Webber 6, Davis 4, Buffinton 5, Snow 5, Rowell 5, Leavitt 2.

Tenth event, 10 clay-pigeons—Gerrish 8, Eager 8, Stark 10, Perry 7, Cooper 9, Dickey 9, Buffinton 7.

Eleventh event, 7 clay-pigeons—Eager 6, Gerrish 4, Perry 4, Webber 6, Beaudry 5, Davis 5, Rowell 6. Buffinton 3, Stark 5, Dickey 5, Cooper 6.

Twelfth event, 7 clay-pigeons—Eager 5, Dickey 7, Gerrish 6, Rowell 4, Stark 7, Cooper 6, Perry 5, Beaudry 4, Webber 6, Buffinton 2, Snow 6, Davis 7.

Miss and out at 18yds.—Stark 7, Cooper 7, stakes divided. This match closed the first day.

SECOND DAY.

Preliminary match, 5 clay-pigeons—Stark 5, Eager 4, Gerrish 1, Dickey 5, Perry 4, Cooper 3, Williams 2, Buffinton 4, Webber 3, Dean 4, Francis 2, Davis 5, Beaudry 5, Faulkner 4, Gilman 4, Knowles 4, Lovejoy 4, Rowell 3.

First regular event, 7 clay-pigeons—Dickey 6, Perry 4, Eager 7, Gerrish 3, Cooper 7, Faulkner 2, Gilman 4, Dean 0, Lovejoy 4, Buffinton 7, Webber 5, Stark 6, Davis 7, Knowles 2, Rowell 6, Beaudry 4, Williams 6, Francis 5.

Second event, 7 clay-pigeons—Dickey 6, Eager 7, Beaudry 4, Faulkner 7, Lovejoy 5, Gilman 6, Webber 7, Francis 6, Stark 6, Dean 2, Buffinton 5, Perry 4, Rowell 5, Gerrish 7, Davis 6, Williams 4, Knowles 2, Cooper 7.

Third event, 5 pairs clay-pigeons—Gerrish 6, Eager 5, Dickey 6, Cooper 6, Lovejoy 8, Faulkner 8, Perry 6, Stark 9, Buffinton 7, Rowell 6, Knowles 8, Francis 4, Beaudry 2, Davis 7.

Fourth event, 10 clay pigeons—Eager 7. Gerrish 7, Dickey 9, Faulkner 10, Buffinton 8, Gilman 8, Cooper 2. Perry 9, Knowles 1, Stark 10, Rowell 9, Webber 9, Lovejoy 8, Davis 9, Beaudry 2, Francis 8.

Fifth event, 7 clay-pigeons, 2-men team match—Eager 5, Stark 7. Gerrish 5, Cooper 6, Dickey 6, Perry 6, Faulkner 7, Lovejoy 4, Davis 5, Webber 6, Buffinton 5, Rowell 3.

Sixth event, team badge match, 10 clay-pigeons.—Massachusetts Rifle Association team—Rowell 7, Lovejoy 7, Knowles 6, Faulkner 8, Dickey 9; total 37.

Worcester Team—Eager 10, Davis 9, Gilman 9, Webber 8, Perry 8, total 41.

Exeter Team—Gerrish 7, Tilton 7, Stark 10, Williams 9, Cooper 6; total 37.

Seventh event, 7 clay pigeons—Dickey 6, Perry 7, Gerrish 6, Davis 2, Eager 5, Gilman 5, Faulkner 7, Stark 6, Rowell 5, Cooper 7, Webber 5, Buffinton 2, Francis 4, Lovejoy 6, Beaudry 2, Dean 4.

Eighth event, 5 pairs clay-pigeons—Eager 8, Perry 9, Dickey 8, Gerrish 10, Faulkner 3, Cooper 3, Buffinton 8, Stark 9, Lovejoy 8, Knowles 8, Williams 8, Francis 8, Davis 9, Webber 8.

Ninth event, 7 clay-pigeons—Gerrish 1, Dickey 4, Eager 6, Stark 4, Perry 7, Gilman 6, Cooper 5, Buffinton 7, Faulkner 5, Lovejoy 4, Webber 6, Knowles 3, Beaudry 6, Dean 4, Williams 6, Davis 6, Francis 6,

Tenth event, 10 clay-pigeons—Gerrish 2, Dickey 9, Perry 8, Cooper 4, Gilman 8, Eager 10, Davis 2, Faulkner 8, Dean 5, Webber 9, Buffinton 8, Williams 7, Francis 3, Stark 9, Lovejoy 8, Knowles 7, Beaudry 8.

Eleventh event, 7 clay-pigeons—Dickey 3, Gerrish 7, Buffinton 6, Cooper 6, Perry 4, Eager 6, Williams 2, Gilman 5, Webber 6, Davis 6, Faulkner 6, Beaudry 3, Knowles 1.

Twelfth event, 7 clay-pigeons—Dickey 6, Gerrish 6, Perry 4, Eager 6, Webber 6, Cooper 4, Buffinton 7. Davis 7, Faulkner 5, Knowles 4.

The above closed the regular programme, but later the following matches were made:

First, miss and out at clay-pigeons—Dickey, Cooper and Gilman, 7 each, divided stakes.

Second sweepstakes, 3 clay-pigeons—Dickey and Beaudry winners.

Third sweepstakes, miss and out—Gilman, Cooper and Knowles winners.

Fourth sweepstakes, miss and out—Dickey won.

There were also during the two days 24 sweepstakes shot from side traps, exhibiting various targets, which were donated by their manufacturers.

At the annual business meeting the N. E. Trap Shooters' Association, in conformity with the annual programme, elected officers for the ensuing year as follows: President, C. H. Gerrish, of Exeter, N. H.; Secretary, David Kirkwood, of Boston; Treasurer, A. W. Eager of Marlboro; Vice-Presidents, T. S. Hall of Fall River, and E. W. Tinker of Providence, R I. Directors—C. B. Sanborn, Malden, A. Houghton, Worcester; Col. E. C. Farrington, Portland, Me.; E. A. Folsom, Windsor, Ct.; O. R. Dickey, Boston. The feasibility of adopting the rules of the National Gun Association was discussed, but was decided in the negative, the Association being of the opinion that 12-gauge guns were not entitled to any allowance in distance from the trap. The forthcoming season promises to be very successful, all the clubs belonging to the Association manifesting the greatest enthusiasm.

FALL RIVER, Mass., Aug. 25.—The third match of the series between the New Bedford and Fall River Gun Clubs was shot here to-day in a hard rainstorm, and resulted in a third victory for the Fall Rivers by the following score, 25 clay-pigeons each, 18yds. rise:

Fall River.	
E W Buffinton	1110111111111111111111011—21
T S Hall	1010111101111111111101101—20
W J Braley	1010101111111111110011111—20
J T Hall	0111101010110101111110110—17—80
New Bedford.	
Butts	1001111101111111111110011—20
Allen	1111101111101111111011010—20
Plummer	1110110111001111101011010—18
Stone	0100000101011111000111011—13—71

The individual prize match, same conditions, was won by Mr. Buffinton for the first time by the following score:

Buffinton	1111111101111111111111111—24
Braley	1111001011111111101101111—19
Plummer	0111101111110101011001110—17
Butts	0111100011101111001111101—17
Hall	1101110111001110101011010—16
Allen	1111110110100101100000111—15
Stone	1100101000110110010011110—12

The prize will become the property of the one winning it the most times in six matches, and has now been won once each by Braley, Butts and Buffinton.—T. S H.

WINCHENDON, Mass., Aug. 27.—Members of the Winchendon Gun Club were out to the range yesterday trying their hand at breaking clay-pigeons with the result as follows:

J Sutherland, Jr	0111111011—9	A H Felch	0110001011—5
F F Hapgood	1101101011—7	L F Earle	0001000101—3
L J Knight	1011100110—6	H H Russell	0110000000—2
P S Davis	0110110001—5		

This closes the season's shooting. The averages of the members are as follows: Sutherland 7 17-18, Dr. Henry 6 11-17, Hapgood 6 11-18, Davis 6 5-18, Russell 4 9-11, Martin 5 7-15, Felch 5 1-13, Earle 3 3-7, Monn 3 3-5, Ball 4 2-3, Brown 4½, Knight 3 1-5, Taggart 3½. Sutherland is the only one that has, in the regular shoot, scored 10 straight; Davis and Henry have each scored 10 straight in a score of 20, Sutherland and Henry have each made a score of 17 in a possible 20, and Hapgood has made a clean score on three pairs, 1315 pigeons have been broken since the score began April 22.

ALLENTOWN, N. Y., Aug. 20.—Regular monthly shoot of the East Hill Gun Club, 20 singles and 5 pairs clay-pigeons, 5 traps, singles 18yds., doubles 15yds.:

L D Strayer	1011001110101111001	00 11 10 11 11—20

A FIFTY-POUND WATERMELON was the prize won by W. H. Horner, for best score in the match between the North St. Louis and Indian Lake gun clubs, at Baden, Mo., last week. It was the annual August match between the two clubs, losers to pay for the day's entertainment of the club members, ladies and friends. Teams of 11 at 30 blackbirds, 18yds., screened traps: North St. Louis—C. James 21, Chas. H. Peck, Jr. 23, J. H. Cogswell 25. Wm. Kulage 23, J. Young 21, W. H. Horner 28, W. H. Rudolph 18, A. Kulage 26, R. B. Stewart 21, W. Haney 17, Louis Spellorink 18, total, 238. Indian Lake—S. H. Bridges 26, F. Hinze 22, J. Metcalf 20, L. Baugh 24, T. H. White 17, T. J. Daniels 21, C. T. Jones 18, Mike Walsh 25, Jack Malone 25, R. Rce 23, V. B. Cash 19, total, 240.

FIRST GERMAN GUN CLUB OF NEW YORK.—Aug. 27.—Quarterly pigeon shoot at Schwalenberg's Working People's Recreation Grounds, Long Island City. The wind was from the wrong side and very strong, which told very perceptibly on our score; 10 birds each: Erkenberg 4, Geerliz 6, Nowak 8, Meyer 4, Rubeno 4, Zahn 5, Goetz 7, Pfaender 9, Behrens 5, Hudson 6, Neusch 6. Schwalenberg 5, Bockelman 5. Pfaff 5, Carvin 5, Maisch 7, Jenner 7, Grau 4. Pfaender was allowed second prize, having taken the last club medal. Schwalenberg and Nowak competed for the medal, 3 birds each. Schwalenberg 3, Nowak 2. Birds were sprung from 5 traps.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now.—F. C. BISHOP, Secretary, Box 1292, Cincinnati, O. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

CANOEISTS *are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc, of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

Sept. 5—Buffalo C. C. Races.
Sept. 5—Bayonne C. C., Annual Regatta, Newark Bay.
Sept. 19—N. Y. C. C. Regatta, off New Brighton.
Sept. 26—Jersey City Y. C., Canoe Race.
Sept. 26—K. C. C. Open Regatta, 155th street, North River.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present names to the the executive committee. Money should be sent by *registered letter* or money order.

NEWBURGH CANOE AND BOATING ASSOCIATION.—Newburgh, Aug. 31.—*Editor Forest and Stream:* In canoeing department of FOREST AND STREAM, Aug. 20, in report of races at the A. C. A. meet, I see you have Mr. Edgar recorded as a member of the Dock Rat C. C. As this is an error that is likely to mislead canoeists I would like you to correct it. There is no such club as the Dock Rat C. C. The organization of which Mr. Edgar is a member is known as the Newburgh Canoe and Boating Association.—NATE S. SMITH, Captain N. C. and B. A.

THE CRUISE OF THE ATALANTIS.—Mr. S. R. Stoddard resumed his long cruise this month, starting from Bar Harbor, Me., in company with Mr. R. B. Burchard and on Aug. 30 they reached St. Johns, Newfoundland, whence they will return by steamer.

BAYONNE C. C.—This club will hold their annual regatta at Bayonne on Sept. 5, at 3 P. M. Prizes will be offered for a sailing race, paddling race for 28in. boats and over, tandem race for same, and an upset race. The races are open to all.

FROM PORT JERVIS TO PASSAIC BY WATER.

THE following cruise of 223 miles on the Delaware River and Delaware and Raritan Canal was lately completed by my son and myself. I send you our log, hoping it may interest other canoeists:

We started Wednesday Aug 5, via Erie Railway on the morning milk train, as the United States Express Company would not risk the boats on the express train owing to excess of baggage bound for Port Jervis on the Delaware River. We were in great luck as an empty car was put at our disposal, and with an empty box to sit on and the doors on each side of the car wide open we thoroughly enjoyed the landscape. The train stopped every few miles, where we held receptions to crowds of country people who came into the car and admired our canoes and asked innumerable questions, all of which we cheerfully answered. The train hands proposed that we should charge an admittance fee, but as we were not in the show business we declined. About 10 miles from Port Jervis we passed through a terrific thunder shower and were afraid we should be obliged to start in a storm, which, of course, would have put a damper upon our pleasure trip. The sun came out as we steamed into the depot at the Port, the hands on the clock stood at 3:45 P. M.

The United States Express Company took our canoes to the river, and we were accompanied by at least two hundred of the good inhabitants of the town, including the newspaper reporter, all without exception ventured to give us good advice, saying that the "Fresh" (meaning freshet) on the river would be too much for our frail-looking boats, as the storm of two days before had raised the river at least twelve feet higher than usual.

Having launched our canoes, we started for Trenton, N. J., amid the cheers of the crowd; distance to above place one hundred and twenty-one miles. At 5:10 we passed our first rapids, or rifts, as they are called on the river, and a few minutes later the monument on the left hand shore where the three States join, New York, Pennsylvania and New Jersey. We could not land, as we wished to make Dingman's Ferry before camping. We passed Milford, Pa., about 6:30, and landed to telegraph our safe arrival thus far, and we think surprised the population by our appearance in Knickerbockers. The scenery is grand, mountains on both sides of the river almost to the very edge. We stopped to camp about two miles above the ferry at 8 o'clock, but we found it an error in getting to camp so late, as we had to work hard to get things straight before it was dark. We ate a cold supper, turned in and slept well considering it was the first night out.

Thursday, up at 4:30; weather clear, wind southwest; made fire and cooked our breakfast, consisting of coffee, eggs, milk, ham and bread. Packed canoes and got off at 6:30. Passed several rifts on our run to Wellpack Bend, which place we passed at 11 A. M. Saw a raft, the first we have seen under way, and spoke it; four men aboard; had a chat with them, when the captain said: "Seeing you on the river in them boats reminds me of a letter I received last year from a man in New Jersey, who wanted to get some 'pints' on the river." As the writer of this letter was one of our party, we asked him if his name was Mr. ——, of Milford, Pa. He said yes, and then we shook hands. After expressing our astonishment at the strangeness of the meeting, we gave a parting salute by shaking our flag, and paddled on. At the bend saw encampment of artists; they had been on the river seven weeks. They asked us to land and take something, but we wished to make Portland below the Water Gap, so declined their polite offer with thanks. We arrived at the Water Gap at 1 o'clock, landed to see the place, and were off again at 3:30. Camped below Portland at 6 o'clock; found it much better than we did the night before, when we had to turn in with a cold supper.

Friday.—Up at 4:45, weather cloudy, wind southeast; am afraid we are in for a storm; after getting breakfast were off at 6:30, reaching Belvidere, N. J., at 8:30, where we went up to town for supplies and to get our mail. We were told that Foul Rock Rift was just below the city and that we had better take out the boats out and carry two miles round. As we insisted on taking the rift, we were told to take the Jersey side, started again as it was beginning to rain, passed Foul Rock Rift, the longest, the roughest and one of the most dangerous on the river, by taking the advice given. We were both landed on rocks above the rift, but by careful work we succeeded in getting off without serious injury or upsetting, and then getting into the raft channel on the Pennsylvania side, which we found was the roughest water, but plenty of it, we managed to get through with only a severe ducking. We beached the boats and sponged them out and found we had received no injury from the rocks and waves. Getting under way again we passed several short rifts and spoke a raft with two men on who told us they were going to stop for dinner a short distance below. Left the raft, and as it began to rain very hard we concluded to break the rule we had hitherto observed, not to take a meal inside of a house, and take dinner at the inn, will not call it a hotel. We had a fair dinner and company consisting of a drover, butcher and our two raft acquaintances. The rain continuing we amused ourselves with enjoying the stories of the raftsmen and others for three hours when we concluded to take to water, rain or not, and having given the hostler a *pour boire* for taking care of our boats, were off for Phillipsburg, N. J., where our friends of the raft said we would find a good place to put up at, as the rain looked as if it would continue all day and night.

On arriving at Easton, Pa., we asked a fisher-boy if there was a boat house where we could store our canoes; he said, "Yes, turn up the canal;" so we went for the boat house and in turning up the canal found a dam fifteen feet high between us and the place we wished to land, and no road or means to get up. We put about and went for the boy, but he had disappeared; we were inclined to think there would be an obituary notice in the Easton papers if we could turn our paddles upon him. We now concluded to try Phillipsburg, and accordingly paddled across. By good luck we found a road leading down to the water, by which we could take our canoes up into the town; so we got ashore and made our way into the town, and to the hotel recommended by our raft friend. We found a fanning mill where we stowed the craft, the proprietor helping us up with them. Taking necessary dry clothing from our stores, we made our way to the hotel, where we found we had escaped narrowly from being arrested, as we had gone to town arrayed in a rubber hat, coat, no stockings nor shoes; the people took us for escaped lunatics from the Trenton asylum. Convincing the authorities that we were only insane canoeists, we changed our clothes, ate a good hot supper as only a canoeist can, and filling our pipes we heard to our astonishment that at the place we camped the first night two bears had been killed this last spring. Of course this led to bear stories, and our host, Mr. Davis, of the Lee House, took the lead; not far behind him was our friend of the raft, who came by rail to sell his raft of hemlock logs.

Saturday.—Clear; wind southwest. Our raft friend stayed over one train in order to help us down to the river. Got off at 8 o'clock, our host and family standing on the bridge to see us off. Took dam, just below the town, about five feet high; came through with little damage, but plenty of water taken in. Several rifts to-day; river broad and shallow; got upon rocks, but no serious damage. Passed another dam, not quite as high as the first. Large head in Lehigh Canal. Sandstone quarries with wire cables to take stone over the river to the railway. Lime kilns. Scenery tame compared to that above the Water Gap, but still fine. Camped at town opposite Lambertville, N. J., at 5 o'clock. Went up town to get supplies, etc. Were told of a dangerous rift, called Wells Falls Rift, just below the town, and were warned that we could not run it; would surely be swamped or dashed to pieces on the rocks. We met a fisherman who had rafted, and who kindly sketched the commencement of the raft channel for us.

Sunday.—Got under way about 7 o'clock, and when nearing the rift thought it best to land and take a look at it. We found no possible way of getting over except by running the rift, took to canoes again, ran the channel, took a great deal of water and broke rudders of both boats by the force of the waves, rift about one mile and a half long, landed, hunted out tool box, repaired damage, and were off again for Trenton, which place we reached at noon.

After resting at Trenton until Tuesday we got under way at 11 o'clock A. M., in the feeder of the Delaware and Raritan Canal, passed under the road bridges, but were obliged to show the pass Mr. Neilson, of New Brunswick, N. J., had kindly furnished us with at the railway bridge, the bridge was opened, we passed through with flying colors, got to first canal lock at about 4:30, lock was empty, the men in charge made no trouble but filled it and we passed in and through with great comfort, camped at 6:30. Dog barked furiously and were obliged to call on the farmer who tied the beast up, and after smoking a pipe with our landlord we turned in, much to the amusement of the above mentioned lord of the manor and dog, who was very curious to see how we would fix ourselves for the night.

Wednesday.—Started at 6:30 after partaking of breakfast; as we neared first lock of the day we were joined by a tandem canoe from Washington, N. J., bound to Newark, N. J., then by canal back to Washington, N. J. Kept company with them for several miles when they left us. Stopped for dinner just outside of New Brunswick; arrived at last-named place at 2:30, put the canoes up at a boat house, and went to the City Hotel, the mosquitoes being too much for us in camp.

Thursday.—Took tide down the Raritan River twelve miles to the Bay and Perth Amboy, passed through several thunder showers during the run. Stayed at Amboy some time for dinner, but did not land. Sea coming in very strongly from the lower New York Bay; made Boynton Beach, a day picnic place with dancing platform, but no place to lodge parties over night. Sea very high and thunder shower coming up; hailed a man who proved to be the proprietor of the rowboats, asked him if he could accommodate us for the night. He replied that we could have a mattress on the floor and that we had better tie our canoes to the ring around the stakes and come ashore, which we did, when he told us he had thought we would have been swamped coming through the heavy sea before we hailed and got to leeward of the dock. All the evening it rained, with severe lightning flashes and thunder claps. During one flash we happened to look toward the canoes and found one gone. We took to rowboat and lantern, and found our sight had not failed us even if the painter had, as one canoe was off to parts unknown. After hunting for nearly an hour in the rain we gave it up for the night, hoping that in the morning we would find it high and dry. Turned in at 11 o'clock wet to the skin, but slept comfortably and got up at 4 o'clock.

Friday morning took rowboat and went after the lost canoe. We found it one mile and a half down the shore, high and not exactly dry, eight or nine feet above the level of the water on the edge of the meadows, as if placed there by hand, and unharmed. We towed back the boat to the beach, and after sponging them out we got under way at 8 oclock and with sails spread for the first time during the cruise. With a southwest wind and our large lateens we made good time through Arthur Kill, or the Sound, as the natives call it, to Newark Bay and the Passaic River, holding our own with the large oyster sloops bound the same way. The pleasure of skimming along under sail is only equaled by the excitement of running a rapid rift. At the Passaic River we met the bay and wind against us. Taking in our sails we paddled to Newark, put our boats in Bowers's boat house, and went to the Park House for the night, as the worst torments of night would have assailed us if we attempted to camp, the live stock of the Jersey swamps being unbearable.

Saturday.—Started up the Passaic River with the tide in our favor, but the wind against us, and arrived at Dundee Lake, a short distance from Paterson, N. J., at noon. A few minutes later we were hailed by the steam launch Winona, and, accompanied by her, made our way to the boat house of the H. M. A. Association.

Having enjoyed this our first cruise, we are now looking forward to a longer one next season, and so infatuated are we with our experience and pleasures of canoe life that we have applied for admission to the A. C. A.

We have a map of the above trip, incomplete, but a great deal better than none at all; and it is at the service of any canoeist who wishes to take the same trip. Only one word of caution—see that there is plenty of water in the river before starting.

MAHOGANY DECK.

CHICAGO C. C. ANNUAL REGATTA.

THE second annual regatta of the Chicago C. C. was held on Aug. 15 off the Tippy-Canoe club house, at the foot of Thirty-ninth street. At 3 P. M., the hour for starting, a large number of spectators had gathered on the shore and adjacent breakwaters, and a stiff breeze from the N.E. was kicking up considerable sea.

The first event, a sailing race for Classes A and B, brought out seven entries. Class A: Zeal, M. W. Dunham; Kit, Jr., A. W. Kitchin; Phantom, J. B. Keogh. Class B: Lotus, N. B. Cook; Psyche, H. B. Cook; Eugenie, N. H. Cook; Cyclone, D. H. Crane. The course for Class A was a triangular one. From the starting point to a buoy three-fourths of a mile dead to windward; thence S.E with the wind on the beam to a second buoy off Forty-second street, and thence home, the whole distance being about two miles. Class B sailed the same course, except that the second buoy was placed off Forty-sixth street, thus lengthening the course to three miles.

The signal was given at 3:31 and the canoes got away well together in the following order, Psyche, Lotus, Eugenie, Phantom, Cyclone, Zeal, Kit, Jr. The Psyche began at once to draw away from the others, with Lotus close at her heels, when the latter's deck steering gear gave way where it could not be reached for repairs, and made it impossible for her crew to sail from the deck. She kept on under shortened sail, but had to give up the struggle for first place. At the windward buoy Psyche had spun out a good lead, Phantom had taken third place, and Kit, Jr., had fallen behind and dropped out of the race. The others preserved the same relative positions as at starting, but were well strung out along the course. With started sheets good time was made on the second stretch, and as the second Class A buoy was neared Phantom jibed around it and was well on her way to the finish, when Zeal, her only remaining competitor, was ready to turn. She jibed in like manner, but as the crew overlooked the ballast which had been piled up to windward on the last stretch, he soon found himself astride the keel. After a few moments of anxiety on the part of the spectators, the capsized navigator was taken on board a sailboat and his craft towed to the finish. Phantom had already crossed the line, 34m. 3s. after starting. In Class B Psyche won easily in 42m. 17s., Eugenie took second place in 47m. 34s. and was followed by Lotus in 49m. 39s., Cyclone did not finish. The silver cups which were given as first prizes in both classes go to Phantom and Psyche and the second prize in Class B, a silk flag, goes to Eugenie.

When Class II. paddling was called the sea had gone down somewhat but the water was still too lumpy for fast time. The course in this, as in the two succeeding races, was laid off along the shore, the distance being one mile with a turn. The entries were: Triton, G. Hessert; Sliver, R. P. McCune; Whirligig, A. W. Kitchin; Zeal, W. M. Dunham; Jet, W. A. Phillips; Phantom, J. B. Keogh; Brute, F. R. Seelye; Belle T., P. F. Munger. Jet and Whirligig soon forged ahead of the others, both working hard for the lead, but while turning, with Whirligig a length in advance, a swell capsized and set her adrift. From that moment Whirligig had the race well in hand and finished in 11m. 48⅘s., Zeal coming in second. In the race for Classes III. and IV. Ray, A. W. Kitchin, and Psyche, H. B. Cook, were the only starters but it proved the most spirited contest of the afternoon. In spite of repeated efforts on the part of each to shake off his rival, they traveled nip and tuck almost to the half-mile flags, where Psyche forged ahead and started for home with a lead of about four lengths. An eighth mile further on they were once more on even terms, and after another stubborn contest almost to the finish Ray won by two lengths in 12m. 12⅘s. The prizes in this and the preceding event were gold medals for first and silk flags for second.

The tandem race brought out four crews: Whirligig, Kitchin and Dunham; Psyche, Keogh and Cook; Triton, Sherman and Hessert; La Gitana, Crane and McCune. Psyche drew away from the start, turned well in advance, and won easily in 11.7, Triton second, La Gitana third and Whirligig last. The prizes were silver medals for first, silk flags for second, and a "booby prize" of leather medals for the last crew.

The upset race, while last on the programme, seemed to be the drawing card, especially among the uninitiated. The distance was 200yds. and the contestants five in number: Zeal, Dunham; The Balls, Kitchin; Phantom, Keogh; Lorelei, Hessert, and Belle T., Munger. The upsetting at the signal was easy enough, but getting in again in the rough sea was a different matter. The Balls finally came in first, closely followed by Lorelei. The prizes were a silver medal for first man, sponge and bailer for second.

When the extreme youth of the C. C. C. is taken into consideration, as well as the extent of country over which its members are scattered, great credit is due to it for the pluck and enthusiasm which contributed so largely to the success of the regatta.

The winners of first prizes are all subject to challenge, and must win them three times before entering upon perpetual ownership. This fact will insure their going in every case to the most deserving, and will tend to keep enthusiasm at its present high pitch.

CANOE MEASUREMENT, GEAR, ETC.

I AM very glad to see that so much attention is at length being given to the important subjects of canoe measurement and classification, and especially so as I see that at length the smaller and lighter classes of craft, those claims I have long advocated, are in a fair way to receive recognition and encouragement.

I know very well that time allowance is a bore; but without time allowance it would be difficult to give a chance to all sorts and sizes of canoes, even by a large and undesirable addition to the number of classes.

The sail area scheme, whether based on sail area alone or on a combination of sail area with length, seems to be the easiest method of attaining this result. I must, however, object to Mr. Tredwen's proposed measurement of sail areas by $\frac{\text{Head} + \text{Foot}}{2} \times \frac{\text{Luff} + \text{Leach.}}{2}$ or even to the more customary half-product of diagonals, as both these would put a premium on a square shaped sail, with very long battens, and the back nearly perpendicular. Actual sail area could be obtained from the sail plan with very little difficulty. It would probably be desirable to make some allowance for keel canoes when sailing against centerboards. The centerboard is probably the most troublesome part of a canoe, and many are unwilling to fit them to canoes, finding a keel far superior for sea and beach work, and cheaper both in first cost and afterward. One great advantage of sail area measurement is that it would give a chance to canoes of easier and, if one may use the term, more natural lines than those of most of the R. C. C. craft. In the latter, extreme fulness, squareness and bluffness of both middle body and ends, have been produced by the desire or, from a racing point of view, the necessity of being able to carry large sails. The consequence is that they are laborsome in rough water, and, what with their form, weight and flat decks, are making quite heavy weather of it when a canoe of old-fashioned simplicity is just beginning to enjoy herself. Perhaps "Nautilus" will tell us whether he is as happy in a seaway with No. 9 or 10, or whatever her number is, as he was in many a stiff breeze at Spithead in 1872 or so with No. 3.

Another point. While desiring to see union among canoeists, I should be only too glad to see the R. C. C. take the place of an association, as Mr. Tredwen suggests, or act in such a way as would render an association superfluous.

But to do this it must obviously enlarge its racing rules as to admit every type of canoe recognized by the other clubs. I should, therefore, suggest that a certain number of races should be open to all canoes within the dimensions of any canoe club, with time allowance for sail area and for centerboards. Also that the depth of keel allowed should be made at 2¼in., so as to accord with that of the Clyde C. C., unless, indeed, both clubs would agree to allow 3in., which I should much prefer.

As to the vexed question how to obtain lightness with sufficient strength, my prescription would be: Do not exceed the dimensions of 15ft. by 2ft. 7in., with a depth of 12in. or 13in. to gunwale, using the remainder of the depth of 16in. allowed by the rule in rounding off deck. This, with ¾in. planking, clinker built, and bent timbers (far stronger than the small crossgrained cut timbers of most Thames canoes) will give a canoe capable of sailing in the 200 pound class with half a hundredweight of ballast on board, and carrying some 70ft. of sail.

Such a canoe, in the opinion of one who has tried both, will be more useful, handier, cheaper, and a far pleasanter craft to sail than the first class boats, and will carry an abundant cruising outfit with ease.

I will conclude by reminding the numerous canoeists who live where elaborate mechanism and complicated brasswork are inaccessible, that nearly all the fittings of this nature can be replaced by simple home-made contrivances, without loss of efficiency, and perhaps even with advantage. For example: Steering and pivot bar may be made of hardwood; leading blocks at foot of mast—use wooden cheek blocks with brass sheaves (better); snap-hooks and shackles—use toggles instead (better); cleats—home-made wooden ones are as good as any; blocks—easily made by any carpenter, amateur or other; and the sheaves, being used for window blinds, are kept at most ironmongers. Where boxwood is wanting, ash is nearly or quite as good; rudder bands—use strips of sheet brass, with a bit of stair rod for pins; deadeyes on bamboos—a varnished seizing of twine is every bit as good and lighter.

As I was badly bothered at the outset of canoeing by difficulty in getting these things, I expect the above suggestions to be useful to those in a similar plight. They certainly would have been so to me nine years ago, and that they may prove so to others is the wish of the former master and owner of the good ship—*Pelican, in London Field.*

YELLOWSTONE TO THE GULF.—Omaha, Aug. 25.—*Editor Forest and Stream:* Mr. W. S. Hammond, in his long canoe cruise from Louiston, Montana, to the Gulf of Mexico, lay over in this city last Sunday. He started from his home in Massachusetts on the 18th of April for Louiston by rail, in Chicago purchased his canoe and sent it on by express, following soon after and arriving in Louiston in the latter part of June. He launched out upon his long voyage on the 4th day of July, and has come down the river by easy stages, although helped by a strong current. The longest distance covered in one day was 110 miles, making a very handsome run. He reports having a jolly time, with few accidents and fair weather, along with numerous adventures, which helped to break any monotony. In describing his passage of the Yellowstone rapids he says: "Sunday morning I left Stillwater, and after passing through the rapids and leaving in the rear the man stationed there to gather up my 'mangled remains,' I landed at Billings, having been six hours on the way from Stillwater." In describing the scenery of the trip he is quite enthusiastic, as well as with the rapid traveling. His canoe, the Eda, is a Racine; length 15ft., width 34in., depth amidships 11in., 20in. at bow and 18in. at stern. Mr. Hammond expects to reach New Orleans Nov. 1, making a cruise of over 4,500 miles, the longest, if finished, ever made by a man in a canoe.—W. K. S.

PHOTOGRAPHS OF THE MEET.—Those desiring photos of the A. C. A. meet of 1885, can obtain them from Mr. R. W. Anderson, 22 Anne street, Toronto, Can. His list includes: 1. General view of the Camp. 2. Group of Members. 3. Squaw Point. 4. Review, Sailing Fleet. 5. Sailing Race, Class B. 6. Upset Race. 7. Newburgh Camp. 8. Pittsburgh Camp. 9. Knickerbocker Camp.

OAHU.—Dr. and Mrs. Parmele, canoe Oahu, of the Hartford C. C., have been cruising for two months on Long Island Sound. Last week they reached City Island, whence they ran down by rail to New York, spending Sunday with Com. Munroe, and returning on Monday for a cruise back to Saybrook and Hartford.

KNICKERBOCKER C. C. REGATTA.—The fall regatta of the Knickerbocker C. C. will be held on Sept. 26 at the club house off 155th street North River. The programme will include a sailing race, paddling race, tandem and upset race, open to all canoeists.

FOUND AT CAMP GRINDSTONE.—Dr. Neidé writes that two large photos, one of a house and one of the interior of some public building, were found at the camp and an owner is wanted.

Yachting.

FIXTURES.

Sept. 5—Hull Y. C., Champion Race.
Sept. 5—Larchmont Y. C., Fall Pennant Regatta.
Sept. 7, 9, 11—America Cup Races.
Sept. 9—Beverly Y. C., Nahant, Fall Regatta.
Sept. 12—Quincy Y. C., Third Championship Race.
Sept. 12—Boston Y. C., Fourth Club Race.
Sept. 12—Corinthian Y. C., Fall Matches.
Sept. 14—Newark Y. C., Open Regatta.
Sept. 15—N. Y. Y. C., Bennett and Douglas Cups.
Sept. 17—N. Y. Y. C., Brenton's Cup Race.
Sept. 19—Beverly Y. C., Nahant.
Sept. 19—Hull Y. C., Champion Race.
Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 22—N. Y. Y. C., Cape May Cup Race.
Sept. 28—Pentucket Y. C., Championship Regatta.
Sept. 28—Newark Y. C., Open Sweepstakes, Newark Bay.
Sept. 30—Knickerbocker Y. C., Fall Regatta.

THE PREVIOUS RACES FOR THE AMERICA CUP.

THE history of the races for the America Cup, dating back as it does for thirty-five years, almost to the birth of American yachting, is familiar to all Americans who take an interest in international sport afloat or ashore, but on the eve of the sixth contest, to be sailed next Monday, a short summary of the previous races will not be out of place. The America Cup, commonly but incorrectly known as the Queen's Cup, is properly the Royal Yacht Squadron Cup of 1851, open to yachts of all nations and won by the America, a keel schooner of 170 tons, from a fleet of fifteen English schooners and cutters, all keel boats of from 47 to 200 tons. The course, around the Isle of Wight, a distance of sixty miles, was sailed in about 10⅔ hours, in a light and variable wind, the America beating the Aurora, 47 tons, by 18min.

The next race was on Aug. 8, 1870, when the Cambria, an English keel schooner, sailed one race over the New York course against a fleet of twenty schooners, keel and centerboard, the little centerboard Maggie winning by 27m. 12s. elapsed and 39m. 12s. corrected time. This race was between an English keel schooner of the type then in vogue and American schooners, both keel and centerboards, resulting in a victory for the latter, as Cambria was eighth in order at the finish.

Again in the following year the owner of the Cambria returned in a new schooner, the Livonia, and sailed five races in October, three with the Columbia, a centerboard schooner, of which he won one, and two with the Sappho, a keel boat, in which the latter won. The boats in these races were of similar types with those of the preceding year.

The next contestant came from a new quarter. In 1876, the centerboard schooner Countess of Dufferin challenged for the Cup in the name of the Royal Canadian Y. C., of Toronto, Can., and sailed two races at New York with the schooner Madeleine, in both of which she was badly beaten. As both boats were of the American type, the race possessed little value from a technical standpoint.

The same may be said of the races of 1881, when a centerboard sloop of the sloop of American type, was built in Canada and towed on her bilge through the Erie Canal to New York, where she was twice decisively beaten by the Mischief, also a centerboard sloop.

This makes a total score of five separate contests, all won by the American yachts, and eleven races, in all of which but one America has been victorious.

Three of the four yachts which at various times have essayed to carry back the Cup were built specially for that purpose, while on the other side the American champion has in every case been picked from the existing fleet, and has been a faithful representative of her class. In the coming races, for the first time an American yacht will sail that has been built specially for the purpose and which, as we have shown elsewhere, resembles no previous efforts of American designers. Whether or not she be successful, few will deny, however, that she is a better boat than her predecessors and that she marks a decided advance in yacht designing.

THE ISSUES IN THE COMING RACES.

A TRIAL of skill between two great nations, whether it takes the form of horse racing, rowing, yacht racing, rifle shooting, or even the lower grades of sport found on the cinder track and in the prize ring, must always excite a deep interest on both sides, even when the question involved is merely national supremacy and no idea or principle involved. This is largely the case in horse racing, running and walking, where the methods are very similar; but there is another class of contests where the interest is trebled by the fact that a principle is at stake. This has frequently been the case in rowing, where the stroke, the methods of training and the boats of both sides were totally different, and it has still more frequently been the case in international yachting. Of the five contests for the America Cup, three have far surpassed the other two in interest, from the fact that a question of principle was involved. In the first race in 1851 the issue was between the old and new, between the bluff-bowed hookers with their bellying windbags of sails, on the one hand, and the clean-lined, sharp bowed clipper with flat sails and snug rig that had crossed the Western ocean from New York town. Again, twenty years later, came two similar contests, on the one hand the deep-keel schooners of English build and rig and on the other the shoal, wide centerboard yachts of the New York Y. C. Deep or shoal, moderate or great beam, keel or centerboard, Lapthorne's hemp or Sawyer's cotton, were the issues that made these naval battles so famous. After these followed two series of races, between schooners in 1876 and sloops in 1881, neither of which created much excitement, partly, no doubt, because the challengers were Canadians and so Americans, but mainly because the boats were identical in type with their opponents, all being of American model, rig and build.

At the date of the latter of these races another contest came off in American waters the like of which has never been seen since America sailed at Cowes—a race of little boats and with none of the importance that attends as a matter of course to a contest between large and stately schooners, but which attracted the attention of every American yachtsman from the magnitude of the questions at issue. At no time in all international yachting had the points in dispute been so many and so different. Almost every detail of yacht design and construction was embodied in a directly opposite form in Madge and her adversaries, and in no single point did they resemble each other. Great or little displacement, high or low ballast, lead or gravel, keel or centerboard, 8ft. or 4ft. draft, 7ft. or 14ft. beam, deadrise or flat floor, through the water or over the water, jib and staysail or single jib, a topmast as long as the short lower mast and that could be quickly housed, or a lofty stick with a little pole fixed on top; a mainsail loose on the foot or laced to the boom; half a dozen jibs of various sizes set flying, or one big jib on its stay to be "bobbed" if absolutely necessary; sails of heavy hemp held flat with runners on backstays, or of light cotton on swaggering spars; all of these points were staked on the result of the seven races, of which Madge won six.

The interest in these races was intensified by the fact that they came at a time when a bitter and stubbornly-fought controversy had been carried on for four years over the points mentioned above; by which time the yachting world of America, after ignoring as long as possible and then recognizing only with ridicule and contempt, the claims of the British cutter, was at last prepared to weigh them carefully and fairly, and accept or reject them on their merits. The wonderful performances of Madge astonished all, convinced many, and brought home even to the most conservative sloop men the conviction that their favorite boats were not quite all they so long imagined them to be, and that there might exist facts in yacht architecture as well as in practical sailing that their philosophy had not yet dreamed of.

Since 1881 the contest has gone on steadily, less bitterly and acrimoniously than at first, but no less earnestly, the victories one and all being in favor of the side that the FOREST AND STREAM has so long championed. The single jib has virtually disappeared from our yachts, lead ballast and low ballast are sought for by all to the greatest extent allowed by local requirements, depth stops only at the same limit, beam has been chopped off with no unsparing hand, the stubby fixed topmast now proclaims at once that under it is a working sloop and not a yacht, the reform in sail making, rigging in all minor details and in practical sailorizing is no less marked. Cutters, even of the extreme type, are too common with us to-day to excite any remark, the full cutter rig is seen on all models of single stick boats quite as frequently as the old original sloop rig, while every yacht of any pretension has appropriated some of its leading features until it has become impossible any longer to class a boat by a look at the rig. Whether or no the cutters outsail the sloops on all occasions has less to do with the dispute than it would at first seem since nearly all the elements of the cutter are practically accepted in the modern sloop.

No issue any longer exists on the question of keel or centerboard, but it has settled down to a consideration of adaptability, and the argument on both sides may be briefly summed up in a form that will permit any one to decide for himself. The main point, ability to windward, has been settled by a complete collapse of the once general belief that a keel boat would not point or stay and was slower in every way than a centerboard. The performance of all types of cutters has demonstrated most convincingly their weatherly qualities, and it is to windward that their victories are mainly won. The old ideas of depth and resistance that so long furnished arguments against the keel, have also been banished from the minds of all intelligent yachtsmen, and it is fully understood there is no natural law by which the deep boat must be slower than the shoal. The superiority of the keel in deep water is generally conceded now, and depth is beginning to be rated at its proper value as the prime factor of safety, insuring against a capsize and also giving that ability to windward that makes it unnecessary to seek a harbor every time it blows. Structurally the keel is far superior to the centerboard, the keel boat being stronger than one that is cut in two in the spot where strength is most requisite, while the room inside is vastly greater in the former. On the one side then are all the advantages that a sailor would prize, a good sea boat, strong, roomy and with little or no possibility of capsizing; lasting longer and less liable to leakage, and above all, weatherly to the highest degree. On the other side is the fact that for some waters a shoal draft boat is absolutely necessary, consequently the centerboard must take the place of the keel.

Which a man shall chose in any given case is not a matter of principle, but simply of expediency, to be decided according to his requirements. The question has gradually settled into this shape: the keel boat is equal to the centerboard craft in all requisite qualities, and superior in some essential ones, but in some waters its use is impossible, in which case the other offers a convenient makeshift. These facts have been proven in the last few years and no international race can alter them.

While so many points have been conceded by adopting them bodily in the sloop and the points at issue have gradually disappeared from the controversy, both sides have looked forward to a grand battle between the American sloop and British cutter as a fitting termination of the dispute; and while an international race would in any case be an event of some moment, the importance of the present one has been much increased by the feeling that it would be the greatest battle yet fought between the two opposing types. There is absolutely nothing to prohibit us from building an English cutter to meet the yacht from across the sea, except the feeling that it would be a surrender of the stand we have so long taken and a very hollow victory should the Cup be retained by such means, and this feeling has been strongly shown in the correspondence of last winter over the building of a large yacht. At the time the challenge was first forwarded the most successful yacht of the season, the successful opponent of our best sloops was Bedouin, an English cutter in design, model and build, though constructed in this country, and from her successful record it was felt by many that she would be more certain of defeating the coming cutter than any sloop we could muster; but in spite of this, though discussed, the idea of putting her to defend the Cup was at once dismissed as impossible.

None but the most conservative sloop advocate, blinded by misdirected patriotism, expected that we should go back to the antecutter days and build a big Vision, Fanny or Arrow, with cobblestone ballast and brick sloop rig, to meet Genesta, but all expected that the new boat would be an exponent of American ideas and the practice of to-day, an enlarged or improved Mischief or Gracie, an American centerboard sloop. Such a yacht has been built—a centerboard sloop of distinctively American model, an embodiment of modern ideas, and a marked improvement on the sloops of ten or even five years since. In rig the new boat is also a sloop, and though with many details borrowed directly from the cutter, she is in every sense a representative American sloop. This boat has been sailed and tested in a most thorough manner with other boats, but for good and sufficient reasons she has not been selected. The choice is based on no sentimental ideas or unsubstantial theories, but on the hard and irresistible logic of facts and figures; the chosen defender of the Cup has beaten the American sloop, and proved herself faster, abler and better fitted, in the opinion of the entire American yachting world, of meeting Genesta next Monday.

Let us look at this new yacht selected solely on her merits to represent American ideas and progress, the evolution of fifty years' experiment with the centerboard sloop. Of course she is a centerboard craft, otherwise she would not have been chosen; but her claims to affinity with American models begin and end with the possession of a cloven foot. Her beam is too great for a modern cutter, but in that respect she represents a stage in the evolution of the latter dating back to America's time, before the Thames rule had exerted any great pressure on beam, and when cutters were wide as sloops. A single look at the hull when hauled out will convince any one that she has no affinity to the American centerboard model, and as for American keel sloops, there have never been enough of them to constitute any decided type. Looking at Priscilla on the dock alone is enough to convince one of the justness of her claims as a typical American boat; but the longer one looks at Puritan the more difficult it is to trace relationship to anything but the modern cutter. The superficial details are all present, the plumb stem, rounded forefoot and decided rocker, the raking sternpost and long counter, but beyond these, and far more conclusive, is the keel of lead, 26 tons in a piece 15in. wide on the bottom, 22in. on top, and 18in. deep. Not only is the weight there, but there is a substantial depth of keel proper, shaping fairly into the form of the hull. It is easy enough to say that the bow is taken from Ellsworth or the quarter from Steers, or that there is a look of Una about the bottom; but in spite of such idle comments Puritan is a copy of no previous boat and of no man's models. Her rig is purely cutter, except that the mainsail is laced to the boom and that her bowsprit is fixed. What, then, does Puritan represent in the coming contest? Certainly not American sloops nor American ideas, nor is she in any way an embodiment of any of the principles we have so long contended for, but that at last have disappeared, no one quite knows when, where or how. What she does embody is Yankee gumption and enterprise and a disposition to seize every new idea, to weigh and test them, and, if possible, to improve upon them, that is, fortunately, more truly American than the Chinese method of condemning on sight all innovations, that did for so long characterize our yachtsmen. Her designer has been brought up in a new school, untrammeled by the dogmas and traditions that weigh so heavily on all once under their influence, and he has started out boldly on a course of his own, thus far, it must be confessed, with good results.

It is most curious now to look at the strange way in which events have shaped themselves. The long looked for contest between the typical sloop and cutter seems destined not to come off and the issue to which the main interest in the race was due has entirely disappeared on the eve of the battle. Another and most unexpected feature has, however, been added, the centerboard sloop has succumbed to a new type, the centerboard cutter, and now another new issue arises that was not dreamed of at the beginning. For forty years over three-fourths of the entire yachting tonnage of the world has been under the domination of a rule that, urged on by competition and the impulse of racing, has each year exerted a greater influence in two directions. Under its constantly increasing pressure beam has decreased and depth increased. Fifteen years ago a halt was called and progress seemed barred by impossibility of carrying sail with less beam under the old system of ballasting, but the obstacle was soon overcome by a method of construction which permitted an indefinitely great weight of lead to be hung under the boat, and again the narrowing process went on with renewed vigor. Again a halting place has been reached in Irex and Genesta with 70 tons of lead under them, and the smaller boats with still greater weights in proportion, and it is admitted that a limit has been reached beyond which further progress is not practicable under the present system of building and rigging.

Opinions are greatly divided as to the value of the great influence the Thames rule has exerted on yachting. Whether it is responsible, as some assert, for all the evils against which the British yachtsman raises his voice periodically in a good old-fashioned British growl, or whether, on the other hand, it is the safeguard that has prevented them from running to the opposite extreme fostered by a length rule, and kept them from building Mohawks and Sophias in the hunt after speed. It has certainly exercised a most powerful influence on design, and has limited the designer to a single type of boat, preventing experiment or improvement in any but one direction. Under its pressure the problem before him has not been to produce the shape of all others best adapted to the requirements of yachting, but rather it has substituted the problem in engineering of hanging securely on a form whose invariable proportions it lays down itself, the greatest possible weight of lead. Whatever might be said against it, however, it must always be remembered that the boats built under the Thames rule in its various forms have, above all others, excelled in the essential points of safety from capsizing, wea herliness and good sea-going qualities, coupled with great speed. For some years past there has been a decided opposition to the rule, an attempt to pacify which has been made by an alteration in the details in 1884 and last year by the adoption of an alternative rule based on length and sail area, which may be used at will; but it has been evident for some time that the extreme limit of depth and lead had been reached, and the issue must some day be fought between extreme and moderate beam, say 5½ to 6 beams on the one hand and 3½ to 4 on the other. Such a contest was not possible in British waters, as no wide boat could race under the present rule, and there seems no immediate prospect of it here, as the battles between the ordinary sloops and cutters have involved so many other features besides that of relative beam that a comparison has been difficult.

Suddenly and most unexpectedly, however, the contest of next week has lost its intended character and assumed a novel form. It is no longer a battle between the distinct and well-marked national types known as sloop and cutter; but the battle of beam, instead of being fought abroad, is to be decided here. What is really on trial is the Thames or Yacht Racing Association rule that, embodied in Genesta with her narrow beam, will contend on the neutral ground of length and sail area rule with a boat of similar length and rig but with unrestricted beam. The question of keel or centerboard enters but little into the contest, but has been fully settled by previous races, and had Puritan a deeper keel instead of her board, the result, in all probability, would be little affected. The main point at issue is beam, and in this the two boats have a certain interest as direct opponents of the value of beam in naval design, while we have a secondary interest from the fact that the wide boat is the product of an American designer; beyond these we have no direct concern, but can only stand aside and see fair play. If Puritan wins it is a victory for what? For great beam and shoal draft, for ballast high up, for a flat floor with no keel, for a tall mast in the eyes and a single jib; in short, for an American sloop? By no means. It is simply a victory for a wide cutter with deep hull and lead keel, over a narrower cutter which compensates for her diminished beam by a deeper keel and more lead. In either case, the principles for which the FOREST AND STREAM so long contended are victorious, though the battle has been decided differently but no less conclusively than we anticipated. The vital issue was disposed of when Puritan defeated Priscilla, and was acknowledged by the press, the yachting public and the authorized custodians of the Cup as superior to the big sloop; for the rest we are content to await the results of next week's racing.

We have always advocated the narrow and deep boats in place of the wide and shoal, the craft that was absolutely non-capsizable against the flat and dangerous trap, and we have upheld the claims of the former as safe, able and fast sea boats as against boats whose only recommendation was speed in moderate weather, but the present contest is not between such extreme types.

Genesta is indeed a thorough cutter, but her opponent is of a form that is practically safe and uncapsizable, and what she has done thus far warrants the belief that she will prove an excellent boat in any weather, though we believe inferior to her narrow and deeper rival when once off soundings. Until she has disproved it thoroughly we shall still continue our belief in the deep and narrow cutter rather than in the wider and modified type which Puritan represents; but granted the value of the principles for which we have so long battled and which the trial races have fully sustained, if any further proof was needed, the considerations of a little more or less beam or the choice between a keel and a centerboard are of comparatively small importance and may safely be left to the individual judgment of each man who builds a yacht, with little fear that he will do anything worse than build a slow boat.

HULL Y. C., LADIES' DAY.

ON Wednesday of last week the Hull Y. C. sailed a race in which the crew of each yacht was partly composed of ladies, the allowance being 6 in first class, 5 in second and 3 in the others. With a reefing breeze over a 9 mile course in rough water the crews were well dampened before the race was over, but all enjoyed the sail. The times were:

SECOND CLASS CENTERBOARDS.

	Length.	Corrected.
Atalanta, J. R. Thomas	28.04	1 20 00
SECOND CLASS KEELS.		
Banneret, J. F. Brown	25.02	1 03 38
THIRD CLASS CENTERBOARDS.		
Queen Mab	22.06	0 39 10
THIRD CLASS KEELS.		
Kitty, E. H. Tarbell	23.09	0 39 31
Thelga, A. P. Thayer	23 07	0 40 48
FOURTH CLASS.		
Niobe, Sayles & Chadwick	20.06	0 49 35
Thrasher, G. G. Garraway	20.02	0 53 39
Tartar, F. L. Dunne	19.11	0 53 46
Gisela, H. A. Born	20.11	0 55 22
Joker, George Coffin	20.08	0 55 04

Jewell, W. E. Sheriff	19.09	0 57 49
FIFTH CLASS.		
Em Ell Eye, P. M. Bond	19.08	0 53 11
Wildfire, H. A. Keith	18.01	0 55 19
Myrtle, R. C. Poor	19.06	0 57 48
Susie, D. Follett	19.00	1 00 58
SIXTH CLASS.		
Mirage, L. M. Clark	17.10	1 03 33

Prizes were given to the members of the winning crews. The judges of the regatta of Aug. 15, Messrs. Chas. V. Whitten, chairman; Peleg Aborn, C. F. Harrington, H. P. Stanwood, B. W. Rowell, F. C Brewer, Walter Starbuck, O. A. Ruggles, L. M. Bouvé, have decided the protests and awarded the prizes as follows: First class, centerboards, first prize, $50, sloop Magic, E. C. Neal, of Lynn; first class, keels, first prize, $50, sloop Hera, Geo. R. Howe, of Hull. Second class, centerboards, first prize, $40, sloop Eva, Daniel Sargent, of Boston; second prize, $20, sloop Atalanta, Isaac R. Thomas, of Hull; keels, first prize, $40, sloop Banneret, J. F. Brown, of Hull; second prize, $20, sloop Carmen, B. L. M. Tower, of Hull. Third class, centerboards, first prize, $35, sloop Queen Mab, Burwell & Litchfield, of Hull; second prize, $20, sloop Expert, Lawrence Whitcomb, of Marblehead; third prize, $15, sloop Seabird, C. L. Joy, of Hull; fourth prize, $ 0, sloop Alda, W. H. Wilkinson, 2d, of Hull; keels, first prize, $35, sloop Kitty, E. H. Tarbell, of Hull; second prize, $20, cutter Thelga, A. P. Thayer, of Hull; third prize, $15, sloop Witch, B. B. Crowninshield, of Marblehead; fourth prize, $10, sloop Shanraer, Geo C. Broome, of Hull. Fourth class, first prize, $30, cat Em-Ell-Eye, P. M. Bond, of Hull; second prize, $20, cat Nettle, W. M. Maybury, of Quincy; third prize, $15, cat Tartar, F. L. Dunne, of Hull; fourth prize, $10, cat Niobe, Sayles and Chadwick, of Hull. Fifth class, first prize, $30, Wildfire, H. A. Keith, of Hull; second prize, $20, Hornet, Harding and Merrill, of Hull; third prize, $15, Flora Lee, D. H. Lincoln, of South Boston; fourth prize, $10, Kismet, A. P. Thayer, of Hull; fifth prize, $5, Jessie, W. B. Smith, of South Boston.

BEVERLY Y. C.

105TH REGATTA, THIRD CHAMPIONSHIP.—SWAMPSCOTT, AUG. 29.

COURSE for first class: Leaving Spindle Rock on port, stakeboat off S. W. breaker, Grave's whistling buoy and Egg Rock on starboard, and return, 18¾ miles.

Course for second and third classes: Leaving stakeboats off Little Nahant and 1½ miles E. by S. of Egg Rock on port and return, 6 miles. Judges: B. W. Crowninshield, W. Lloyd Jeffries. Judges' boat, D.

In the second class only Witch and Spider appeared; Witch wisely decided she could do better with light sails against larger boats, than with working sails against catboats, and so went with first class at the minimum length. This left Spider a walkover, but a joint race was arranged between her and the third class boats, and all started together.

The preparatory gun was fired exactly at 12, a fresh N. W. wind then blowing, and the first class gun was fired at 12:05 Witch was first over the line but was slow with her spinnaker, then Eugenia with everything drawing, and Expert close on her heels, and Atalanta with a huge spinnaker just behind; Expert came next, going very fast and breaking out her light duck very handsomely on the line, while Bessie brought up the rear, being very slow in setting a wretched little old-fashioned spinnaker.

Considerable interest was felt in Bessie, this being her first race since she was changed from a schooner to a sloop.

On the one-quarter mile run to the Spindle, Witch held the lead, pretty well pressed by Expert, while Bessie was abreast and to windward of Atalanta, and Gem, after getting by Atlanta, had fallen back again, and Eugenia was on Bessie's weather quarter.

N.W. winds here are puffy and vary three points in direction, and just as the boats were at the Spindle a westerly puff suddenly jibed Bessie's and Gem's mainsails, and things were lively for a minute. It looked as if Bessie and Eugenia would be driven ashore. Bessie scraped by, however, but Eugenia was to windward of the rocks and had to go about and follow the others, losing some two or three minutes.

From the Spindle to the stakeboat all spinnakers came in except Bessie's. Witch held the lead, but Atalanta was picking up and Bessie was doing well.

At the stakeboat they got a calm, and shortly a light easterly breeze sprung up giving them a quartering wind across to the Graves. Witch led till half way over, when Atalanta got by and steadily increased her lead. Expert was hunting Witch pretty hard, with Bessie close astern, and Gem, who had lost the upper half of her topmast, was left far in the rear before she got her topsails set on the stump. Eugenia did not round Graves Buoy.

The stretch from Graves home was intended to have been to windward, but the shift in the wind, which by this time was pretty fresh S. E. sent them to Egg Rock dead before it, and they carried spinnaker over the home line. Result as follows:

	Length.	Actual.	Corrected.
Atalanta, sloop, J. R. Thomas	29.01½	2 54 28	2 44 19
Bessie, sloop, Chas. P. Curtis	27.01	2 58 12	2 45 05
Witch, sloop, B. B. Crowninshield	23.06	2 58 46	2 40 05
Expert, sloop, L. Whitcomb	24.10	3 00 36	2 43 59
Gem, sloop, H. W. Savage	26.09	3 31 28	3 17 36
Eugenia, cat, J. S. Palmer	28.03	withdrew.	

Expert protested Atalanta for carrying one person more than rules allow. It appeared that her owner had taken some ladies aboard, thinking they would not count; she was ruled out, thus giving pennant to Bessie, who ties Expert and Atalanta. First prize goes to Atalanta, second to Expert.

The start for second and third classes was fired at 12:10. Psyche was on the line at the instant, then Spider, Wraith and Mirage. All went off on starboard tack with sheets a trifle lifted. They rounded the first boat close together, and as wind was now almost entirely gone, they slowly drifted down the Nahant shore before the wind all in bunch.

Half way to second boat they got the wind E.S.E and had a beat for the rest of the way. Spider stood out to sea on a long reach on starboard tack going to leeward off Egg Rock, while the others took several short tacks inshore and finally passed the rock to windward, Mirage a trifle ahead, the others close together, and all three crossed Spider's bow.

The run in was dead before the wind with booms to port, Mirage just ahead of Psyche who had Wraith lapping her starboard quarter. At the Spindle Mirage and Wraith jibed, and the latter shot abreast of Psyche, and the two boats came for the line exactly even, but as Wraith had the inside end of the line and Psyche was not pointed as exactly at it as her competitor, Wraith's mast got over ¾ of a second ahead. Mirage takes third class prize and the joint prize. Psyche second prize on allowance. Spider had a walk over in her class:

	Length.	Actual.	Corrected.
Mirage, cat, L. M. Clark	19.01	1 22 17	1 10 43
Wraith, cat, J. B. Paine	19.05	1 23 06	1 11 38
Psyche, cat, H. M. & P. S. Sears	19.04	1 23 06¾	1 11 32¾
Spider, cat, Walter Abbott	20.00	1 27 58	1 17 01

ONE HUNDRED AND FIFTH RACE, SWAMPSCOTT, AUG. 29. SAIL OFF FOR FIRST CLASS PENNANT.

After the championship race was over, it was decided to sail off the tie in first class at once, course being round Graves Buoy and return, 12 miles. Bessie did not start, and Atalanta and Expert were sent off at 3:56. Atalanta beat Expert badly in the dead beat out, rounding buoy 12½ minutes ahead. Spinnakers were then set and they came home flying dead before it and running exactly alike, Atalanta crossing at 6:53:00, Expert, 7:05:30. Judge, W. Lloyd Jeffries; judges' boat, D.

ONE HUNDRED AND FOURTH REGATTA, FIRST OPEN, MONUMENT BEACH, AUG. 29.

Wind light N. E., increasing at finish; a purely local wind which did not extend down the bay, so that several boats from a distance were becalmed and unable to get up in time.

Judges, F. Elliot Cabot, Richard Codman, A. S. Hardy. Judges' yacht, Maude, B. Y. C.

Course for first and second classes, round Scragg Neck Buoy, Bird Island Buoy and return, 11 miles. For other classes, leaving Black Buoy No. 3 on starboard, Dry Ledge Buoy No. 12, Abial's Ledge Buoy and Black Buoy No. 3 on port and return, 7½ miles.

The start was delayed 25 minutes waiting for boats to get up, finally the preparatory gun was fired at 1:25, and first class gun five minutes later. Whisper was first over the line, closely followed by Almyra, then Prize, Mattie, Bubble, Alice and P. D. Q. Myth, Surprise, Quisset, Myrtle, Elite and Sirius started late and were all a little handicapped; Quisset is the boat entered in 97th race as Hard Luck, and P. D. Q. is the Jumbo. Myth had a large piece added to head of sail, increasing the leach 8ft. In the run down Mattie took a good lead and dropped the others. Then came Myth, Surprise, Alice and Quisset in a bunch, Myth's big sail keeping her a trifle ahead, the balance well astern, and this position was held through the reach to Scragg Neck. From here up it was a dead beat; Mattie with a lead of 12 minutes went over to the north shore and was out of it; Myth, Surprise, Alice and Quisset went over toward the Marion shore and did much better; Alice and Surprise dropping the other two, while Myrtle, going well on toward Marion, was becoming dangerous; and Mary, not in the race, who had stood clear in to Marion shore came out ahead of the fleet, Surprise finished first, 2 minutes ahead of Alice, and 7 ahead of Myrtle.

In second class Good Luck had it all her own way and Nellie W. was an easy second. In the third class the race was very close and exciting. Scud was becalmed and unable to get up on time, and Dolly was unlucky enough to have the ways break under her when cleaning bottom for the race, and was unable to get off in time, but Fanny, Mertie, Eleanor and the new Petrel were on hand. Eleanor went off with the lead, Mertie close behind her, then Clara, Mystery, Fanny, all in a bunch, and Petrel bringing up the rear. Running down to Dry Ledge Fanny took the lead, Petrel second, Eleanor third, but Petrel gained nothing on Fanny. Reaching over to Abial's Ledge,

NEW YORK YACHT CLUB COURSE.

A—Start.
B—Finish.
C—Sandy Hook Lightship.
G—Seawanhaka Y. C.
D—Scotland Lightship.
K—Robbins' Reef Light.
M—Fort Wadsworth.
L—Fort Lafayette.

however, she gained and had to give way for Fanny in turning buoy. Beating home the boats stuck to the Wing's Neck shore, and alternately crossed each other's bows, but finally Fanny got a lead and the prize seemed to be hers. She stood out too far, however, into the tide, and Petrel, working the Tobey Island shore, slipped over just inside her allowance. Summary as follows:

	Length.	Actual.	Corrected.
FIRST CLASS.			
Surprise, B. Y. C., J. M. Codman	27.03	2 59 50	2 49 18
Alice, Galveston, Sam'l Allyne	28.03	3 01 31	2 52 01
Myrtle, Mon. Beach, W. Phinney	27.03	3 06 23	2 55 51
Quisset, Wood's Holl, R. B. Hiller	29.06	3 10 07	3 01 52
Sirius, Onset Bay, M. N. Bray	27.07	3 10 44	3 00 28
Almyra, Mon. Beach, J. Phinney	29.00	3 11 51	3 03 07
Prize, Quisset, J. F. Perry	28.00	3 20 00	3 10 15
Mattie, B. Y. C., Vice-Com. Stockton	28.10	3 21 18	3 12 19
Myth, B. Y. C., Thos. Parsons	27.04	3 21 30	3 10 58
Bubble, Osterville, Dan'l Crosby	27.03	3 27 11	3 16 39
Elite, Fairhaven, R. W. Pearse	28.11	3 27 43	3 18 59
P. D. Q., Wareham, J. M. Washburn	29.10	3 42 00	3 33 59
Whisper, B. Y. C., S. M. Weld	28.00	Becalmed and withd'w	
SECOND CLASS.			
Good Luck, Dighton, A. M. Phillips	29.09	3 05 10	2 51 46
Nellie W., Wareham, J. Monaghan	29.11	3 11 42	2 58 37
Onset Belle, Onset Bay, N. R. Besse	27.00	3 18 25	3 07 36
Cadmus, Mon. Beach, H. E. Perry	26.04	3 20 51	3 09 13
Rival, Cataumet, S. R. Ditmars	24.02½	3 21 30	3 07 28
Fannus, Mon. Beach, E. H. Tobey	26.06½	3 28 35	3 12 13
Fannie, Mon. Beach, S. P. Hill	25.00	3 24 53	3 11 48
Thekla, Osterville, W. Crosby	26.02	3 26 10	3 14 39

Lestris, B. Y. C., Joshua Crane	24.02	3 32 45	3 18 43
Gleam, Mon. Beach, E. H. Stevens	25.01	3 36 14	3 23 09
Lady of the Lake, Matta., F. Boromay	24 02	Becalmed, withdrew.	
Wake, Cataumet, Frank Lincoln	24.01	Becalmed, withdrew.	
THIRD CLASS.			
Fanny, B. Y. C., F. W. Sargent	23.10	2 20 28	2 10 29
Petrel, B. Y. C., G. H. Richards	20.07	2 22 47	2 09 39
Eleanor, B. Y. C., R. Codman	23.08½	2 27 30	2 17 31
Mertie, Wood's Hol, A. F. Crowell	23.06½	2 31 40	2 21 28
Annie, Mon. Beach, David Ellis	21.00	2 32 23	2 19 46
Mystery, B.Y.C., Vice-Com. Stockton	21.11	2 32 59	2 21 22
Clara B., B. Y. C., R. Bangs	20 05	2 37 32	2 24 24
Secret, B. Y. C., S. M. Weld	22.09	2 58 04	2 47 10
FOURTH CLASS.			
Island Belle, Bird Island, H. Ware	18.06	2 47 09	2 32 43
Wideawake, B. Y. C., F. Tudor, Jr.	16.02½	3 16 21	2 58 37
Dodo, Cataumet, C. A. Clark	12.05	Withdrew.	

Surprise, Good Luck, Petrel and Island Belle take first prizes, Alice, Nellie W., Fanny and Wideawake second prize, and Myrtle third prize.

THE ARRANGEMENTS FOR THE RACES.

THE Committee have sent the following letters, announcing their choice of Puritan as the American champion:

SECRETARY'S OFFICE,
NEW YORK YACHT CLUB,
New York, Aug. 30, 1885.

Dear Sir—I am instructed by the committee in charge to inform you that the sloop yacht Puritan has been chosen to meet Genesta in the forthcoming races for the possession of the America's Cup. Very truly yours, CHARLES A. MINTON, Sec'y of Committee.

To Sir RICHARD SUTTON, Bart., Yacht Genesta.

Dear Sir—I take great pleasure in notifying you that the sloop yacht Puritan has been selected by the Committee in charge to meet the Genesta in the forthcoming races for the America's Cup. Yours, respectfully, CHARLES A. MINTON, Sec'y of Committee.

To J. MALCOM FORBES, Esq., representing owners of the Puritan.

Puritan was at Poillon's for three days last week, repairing some damage to her rail received while on the screw dock, and also having some small alterations made. Part of her iron work has been replaced by heavier, and she will have a new suit of blocks. Both she and Genesta will haul out this week to clean bottom. Genesta has had her topmast reduced 2½ft., and Mr. Lapthorne has been busy with the alterations in her sails. The following request has been made by the Committee to the pilots of all vessels accompanying the race:

The great interest shown by the public in the coming contests for the possession of the America Cup makes it certain that a large number of yachts, steamers and other vessels will accompany the races.

The Committee of the New York Y. C. in charge therefore earnestly request the captains of all vessels to keep well to leeward of the contesting yachts and to be scrupulously careful not to interfere with them in any way.

They call special attention to the fact that the quarter wash from steamers, however small it may be, even at a considerable distance, is very annoying and more detrimental to racing craft than is generally realized.

The Committee feel confident that in calling attention to these points and in making this appeal they may count on the assistance of those to whom it is addressed, and will have secured the object in view—a fair field and no favor for either boat.

CHAS. A. MINTON,
Secretary American Cup Committee.

The N. Y. Y. C. fleet will rendezvous in the Horseshoe on Sept. 6 to witness the race on Monday. The first race, Monday, Sept. 7, will be 20 miles to windward or leeward, starting from Scotland Lightship. The second race, Wednesday, Sept. 9, will be over the New York Y. C. course, a map of which we give herewith. If neither yacht wins both of the races, a third race will be sailed on Friday, Sept. 11, over a triangular course from Scotland Lightship. If the Cup races are decided by either yacht winning the first two events, the race of Friday will be for the Bennett and Douglas Cups, over the same triangular course from Scotland Lightship, starting at 11 A. M. The race will be with time allowance but no time limit, and will be governed by the following regulations:

Yachts while sailing the race must carry their private signals at the main peak, and also numbers securely sewed on each side of the mainsail, at the intersection of imaginary lines drawn from the throat to third reef cringle and from the peak to the third reef tack cringle—or, in the absence of a third reef, to the second reef cringles. These numbers will be provided on application to the steward at the club house, and it is requested that they be returned to the same place, by mail or otherwise, immediately after the race.

The signals for starting will be given from the committee's steamer as follows, viz.:

Preparatory signal—One long blast of the steam whistle, and at the same time the United States ensign will be lowered from the bow staff and a blue Peter set in its place.

The start—Ten minutes later there will be a second blast of the whistle, the blue Peter will be lowered and the yacht club signal set in its place, when the time of each yacht will be taken as it crosses the line. Five minutes later there will be a third blast of the whistle, and this time will be recorded as the time of any yacht starting in the race thereafter.

Note—That before any signal is given the United States ensign will be flying at the bow staff—during the preparatory period a blue Peter, and after the starting whistle the yacht club signal.

If practicable, a short blast of the steamer's whistle will be given when each yacht crosses the starting line.

If the Bennett and Douglas cups are thus sailed for on Sept. 11 instead of Sept. 16, the Brenton's Reef Cup will be sailed on Sept. 14, and the Cape May Cup on Sept. 18; otherwise the original dates, Sept. 15, 17 and 22, will be adhered to. The course for the Brenton's Reef Challenge Cup is from Sandy Hook Lightship to and around Brenton's Reef Lightship and return, going outside of Long Island. The start will be made at 4 P. M. The course for the Cape May Challenge Cup is from Sandy Hook Lightship to and around Five Fathom Lightship off Cape May, and return to Sandy Hook Lightship. Both will be sailed without rig or time allowance.

HOW TO SEE THE RACES.

NEARLY all of the yacht clubs about New York, as well as others at a distance, have chartered steamers for the use of their members, besides which many private parties have secured tugs and launches. The Seawanhaka C. Y. C. have secured a steamer for members and also a few guests, and the following notice has been sent to all members:

The steamer William Fletcher has been engaged by the club for the America Cup races. Members' tickets will be issued without charge upon application to the secretary. These tickets are strictly non-transferable, and will be valid for the series of races. Guests' tickets will be issued to members upon payment of $2 each. These tickets will be available for any one day's race. A luncheon will be provided on the steamer, for which a charge will be made. First Race.—Monday, Sept. 7. Twenty miles to windward and return, outside of Sandy Hook. The steamer will leave the Barge Office pier punctually at 8 A. M., calling at Tompkinsville, Staten Island, at 8:30 A. M. Second Race.—Wednesday, Sept. 9. Over the New York Y. C. course. The steamer will leave the same places at 8:30 and 9 A. M. respectively. Third Race.—Friday, Sept. 11. If this race becomes necessary by the terms of the match, it will be over a triangular course outside of Sandy Hook, and the steamer will leave the same places at 8 and 8:30 A. M. respectively. Each day on returning the steamer will stop at the same places. Members are requested to send in their applications as soon as possible, as only a limited number can be accomodated.—L. F. D' OREMIEULX, Secretary S. C. Y. C.

A number of excursion steamers will also accompany the races. On each day the Sirius will leave Twenty-third street, North River, at 8:30 A. M., and Pier 1, N. R., at 9 A. M., while the Cygnus will leave the Bridge Dock, Brooklyn, at 8:30, and Pier 1, N. R., at 9. The tickets will be $1.50. The Grand Republic, Columbia, Thos. F. Morgan and J. B. Schuyler will also carry passengers. Their times and places of landing will be given in the daily papers.

GREENWICH Y. C. ANNUAL REGATTA, AUG. 26.

GREENWICH, Conn., the home port of the Greenwich Y. C., was treated to an old-fashionad water frolic on Wednesday of last week, chiefly through the exertions of Com. Arthur E. Rendle, of the Greenwich Y. C., of which he is one of the founders. Though only organized this season, the club has grown rapidly, and is now in a flourishing condition. The main event on the programme was a yacht race, but this was supplemented with many others, from rowing races down to a chase of a greased pig, prizes being offered for all of them. The yachts were in five classes: sloops, cutters and yawls of 30 to 45ft., ditto under 30ft., open jib and mainsail boats of 20 to 26ft., catboats of 18 to 23ft., and catboats under 18ft. The courses were, for first class from club house to Centre Island Buoy, thence to Mafinnicook Buoy and return, 17 miles; while the other classes sailed from the club house to Mahmicook Buoy, thence to Captain's Island Buoy and home, 15 miles. The entries in first class were Schemer, Polly, Happy Thought and Anita; second class, Vixen and Stranger (New Haven) and Iolanthe; third class, Adele and Alice; fourth class, Orienta, Brahmin, Sophie, Wanda and Zelda. The catboat Jennie also entered for the Russell prize for best elapsed time. Besides the regular prizes of money a silver punch bowl was offered by Messrs. Matthews & Devine, of the Indian Harbor Hotel, for the first boat in Class I., and two prizes by Mr. W. W. Russell for the best elapsed time in each class, the prizes being each a set of colors.

The day was quite cold, with a strong N.W. wind, but a large number of spectators were present on the hotel piazzas and about the grounds, while quite a party followed the race in the schooner Madeline. The first event was a capsize on the part of the catboat Mannie, but no harm was done. The start for all classes was made at 12:02, all going over with reefs in. The order was: Schemer, Wanda, Polly, Happy Thought, Alice, Iolanthe, Vixen, Stranger, Anita, Zelda, Brahmin, Orienta, Sophie, Adele and Jennie. The wind was strong and sandbags were trimmed to windward in spite of two and even three reefs. Schemer led easily in her class, winning the punch bowl and colors. The times were:

	Start.	Finish.	Elapsed.	Corrected
CLASS I.—CABIN SLOOPS, 30FT. AND UNDER 45.				
Schemer	12 04 03	3 01 00	2 56 57	2 56 57
Polly	12 06 30	3 22 32	3 16 02	3 15 37
Happy Thought	12 07 30	3 26 26	3 18 56	3 16 06
Anita	12 11 00	Not timed.		
CLASS II.—CABIN SLOOPS, LESS THAN 30FT.				
Iolanthe	12 07 31	Not timed.		
Stranger	12 10 30	3 03 00	2 52 30	2 51 33
Vixen	12 10 30	3 14 09	3 03 39	3 01 32
CLASS III.—OPEN JIB AND MAINSAIL, 20FT. AND UNDER 25.				
Adele	12 12 00	3 03 30	2 48 28	2 50 47
Alice	12 08 00	3 15 22	3 07 22	3 02 32
CLASS IV.—OPEN MAINSAIL YACHTS, 18FT. AND UNDER 23.				
Orienta	12 12 00	3 11 29	2 59 29	2 59 29
Brahmin	12 12 00	3 26 18	3 14 23	3 11 44
Sophie	12 12 00	3 05 30	2 51 20	2 50 46
Zelda	12 12 00	3 10 41	2 58 41	2 55 06
Wanda	12 04 04	3 35 54	3 32 50	3 29 15

Adele and Stranger each win $40, and Sophie $30, subject to protest by Zelda. The Russell prize in class 2 was awarded to Jennie by mistake, afterward being given to Stranger as first boat in her class.

Following the yacht race were rowing matches, climbing the greased pole, a pig chase, etc. In the evening a ball was given at the Indian Harbor Hotel, at which a large number of yachtsmen and their friends were present. The day was a great success from first to last, and the gentlemen in charge deserve much credit for the manner in which all was arranged.

BUFFALO C. C. RACES, AUG. 29.

THE second of the series of races of the B. C. C. was sailed Aug. 29 over the same course as the first, between 4 and 5 miles. There were several surprises in store for the participants. As the later arrivals saw the Otter with a lateen dandy rigged as a topsail, then sundry bundles were unrolled and the Elf came out with a jib and lateen mainsail of 30ft, as a dandy, the Helene spread a new suit of standing lugs, while Nellie was content with the addition of a jib. The wind was very light from N.E., and as the word was given the four contestants, with E. P. Hussey in his tandem canoe Louisa as tender, started on the starboard tack and made out into the current. A long leg of about one and a half miles found the canoes pretty well bunched, with Nellie leading, Otter close to her and Helene and Elf somewhat in the rear. Nellie and Otter came about at the same time, Otter getting away quicker and obtaining a short lead, which was, however, soon lost, owing to the superior footing of the Nellie.

On the port tack when well toward Strawberry Island the wind shifted into the north and a heavy squall came up the river. Seeing it coming, Otter let go his dandy, the others luffed as it struck them. The wind being directly against the current raised a sea which the Elf, with only an inch keel, was unable to make headway against, and he was soon hopelessly to leeward. The Otter, finding his topsail filling aback, luffed and took it in, losing considerable ground in doing so.

Nellie and Helene had a long lead and were making a hot race for first place. They both made an error in tacking, however, and Nellie

missing stays on account of the current, was carried against a pile, and the Helene had to tack again to avoid the obstruction, when the Otter came in on the starboard tack and rounded into the dock a winner by two minutes.

The canoes finished in the following order: Otter, Williams Lansing; Helene, H. L. Campbell; Nellie, F. E. Wood; Elf, C. L. French. The Louisa beat the winner in by ten minutes. The run home before the wind showed that had the wind been free the racers would probably have come in very differently, as Elf got home first and Helene and Otter last.

The race to be sailed Sept. 5 will be over a longer course, some seven miles, and it is planned to have a paddling race after the sailing race is finished, as Kingston of Buffalo, who has built some canoes for the club, offers a paddle as a prize.

SOUTH BOSTON Y. C. FOURTH CHAMPIONSHIP, AUG. 29.

THE fourth of a series of five races for championship prizes was sailed on Saturday last over the South Boston Y. C. courses. The wind was light from the east at the start at 4 P. M., but dying out later on. There were 13 entries in the five classes. The times were:

SPECIAL CLASS.

	Length.	Actual.	Corrected.
Nimbus, Bernard Jenny	34 05	1 51 40	1 35 01
Violet, H. J. McKee	34.06	2 01 45	1 44 59

Nydia, James Galvin	23.05	1 18 40	58 20
Diana, Henry Burgess	24.06	1 20 20	1 00 45

Thrasher sailed on the course but her time was not taken, as she had not entered regularly. The judges were Thomas Christian, William Morris, J. C. Merry, C. McKinna and James Bertram.

A BIT OF ANCIENT HISTORY.—Appropos of the impending race between the Puritan and the Genesta, a correspondent, who belongs as he says, to the aquatic or finny tribe, writes us as follows with some reserves as to the accuracy of details: "When the America beat the British fleet, some of us more practical sailors and shipowners tried to get something more than a play race out of it, and we challenged in *Bell's Life in London* (copied into the American papers of that day—see Goffe's history of the America and other racing yachts) the British shipowners or builders to race a clipper ship of (I think) 1,000 tons, tea loaded, for a prize of £10,000, from China to Cowes. The challenge was made by a club formed for the purpose. I won't tell you how small it was, nor how little constitution or few by-laws it had. It was, I think, called the New England Ship Owners' Club, and the challenge was signed by Daniel C. Bacon, President of the club. It was never accepted nor much noticed in England. They were too much demoralized by the America's victory to risk another defeat. We had all our plans laid to build a clipper ship to combine speed and commercial capacity, and to put Capt. Phil. Dumaresque, the prince of the clipper captains in command. Dumaresque afterward, in the California excitement, commanded the clipper ship Surprise, of 1,500 tons, built for him by Daniel C. Bacon and others, and in a race with the famous clipper Staghound from Boston to San Francisco, beat her in the shortest passage ever made between the Atlantic and Pacific ports. The Surprise was built at Samuel Hall's shipyard, East Boston, and the Staghound by Donald Mackay. Both ships were wonderful combinations of speed and carrying capacity, and their race was better worth recording than any little yacht race ever made, as they were full of cargo at about $40 per ton, and were kept at racing speed day and night for the ninety days or so which I think they took, or one of them did.—*New York Evening Post.*

THE DOLPHIN.—Considerable excitement was caused on the Thames yesterday afternoon by the arrival at Millwall of an exceedingly small boat, manned by one man, which, after a perilous voyage, had safely performed the journey from Stockholm to London. The little craft, which is named the Dolphin, is only 18ft. in length and not more than 4ft. breadth of beam. It has an improvised forecastle and half cabin, and draws only thirty-six inches. Its adventurous commandant is Captain Christien Svensden, a native of Stockholm, who left that port last Thursday week with the avowed intention of making the journey to Hull. He rigged a small sail, and for some time cruised around the Norwegian coast. Encountering some bad weather, he was driven considerably out of his course, and subsequently decided to make for London. On the fourth day after he started a sudden squall nearly capsized his little craft in the German Ocean. Captain Svensden was hailed by several passing vessels, the crews of some of them endeavoring to dissuade him from his enterprise, especially as there were signs of impending stormy weather. Nothing daunted, however, he continued his voyage, and arrived in London, as stated, yesterday afternoon. Captain Svensden ran short of provisions while during his journey but succeeded in obtaining supplies from the steamship Kingston, bound for Hamburg. The adventurous Norwegian appears to have suffered more from want of sleep than exposure to the weather, as he had to keep a careful look-out at night, and in the daytime he was principally occupied in managing his boat. Captain Svensden had a hearty reception at Millwall, the crew of a Norwegian vessel in the docks being particularly enthusiastic in their welcome. After laying in London for a short time Captain Svensden intends attempting the journey back in his little craft.—*London Times, August 13.*

A SWEEPSTAKES RACE AT LARCHMONT.—A sweepstakes for open boats was lately arranged to be sailed at Larchmont, shifting ballast to be allowed, the entrance fee being $100, and the course 15 or 20 miles to windward or leeward and return. Three yacht owners deposited their entrance fees with Mr. John Sawyer, the holder. These were Messrs. W. Murray who entered the jib and mainsail boat Mimic, 22ft. 5½in. long; H. L. Van Wyck, Ananda, a lapstreak boat 27ft. 1in. long, built by E. A. Willis last winter; and Capt. Ira Smith with Susie S., 27ft. 4in. long. The course decided on was from Pagoda Point to Throgg's Point buoy and return, 18 miles; the wind being southwest, making a beat out and a run home. All started very evenly at 1:41 P. M. on Saturday last, Ananda being first over and Susie S. second, the latter going to windward and after a few tacks leading. Near Hart's Island Ananda took first place, holding it for a time, while Mimic worked past Susie S. to second place. The wind was light, coming in flaws and patches and favoring the boats in turn. Near the outer mark a little breeze sprang up, taking Susie S. around at 4:26:35, jibing as she rounded. Ananda followed at 4:28:22, and Mimic at 4:31:58. Each started overboard 10 sandbags on turning and sheets were slacked for a run home, Susie S. gaining all the way. The other two sailed very closely in company, Mimic passing Ananda near Hart's Island and coming in ahead of her. The times were;

	Start.	Finish.	Elapsed.	Corrected.
Susie S.	1 41 33	5 57 31	4 15 52	4 15 39
Mimic	1 41 14	6 19 29	4 37 36	4 37 36
Ananda	1 41 53	6 21 03	4 39 49	4 39 08

The judges were Com. Monroe, L. Y. C.; Messrs. Chas. A. Stevenson and Alexander Brewster.

KNICKERBOCKER Y. C., FALL REGATTA.—The annual fall regatta of the Knickerbocker Y. C. will take place Wednesday, Sept. 30 and promises to be one of the most successful given by the club. The course will be from the club anchorage at Port Morris to and around Gangway buoy and return. All types of boats will be entered in this, from the deep cutter to the lightest draft skimming-dish. The cutter Surf will be a starter in the first class and will compete with such light draft boats as the Peerless, Mystery, Undine, Sara and Hurry, and the moderate drafts Flash, Annie E., Culprit, Fay and Defiance. The next class of cabin sloops is about equally divided between keels and centerboards. In the class for large open sloops the new 27ft. yacht Ananda will meet the Lizzie R. These yachts are from the hands of the same builder. The Lizzie R. is the old type of boat, while the Ananda embodies all the new ideas. Several new yachts are entered in the other classes and will endeavor to wrest the honors from the old prize winners. The iron steamboat Cygnus has been chartered by the club to convey the guests over the course and will leave 130th street, Harlem Bridge, at 9:30 A. M. and East 120th street at 10 A. M.

A FATAL COLLISION.—On Aug. 22 the schooner yacht Kalafish 36 tons, was lying at anchor in Oban Bay, off the coast of Scotland, with her owner, Mr. William Crossman, his wife and a friend, Mr. Cecil Beresford, on board, all asleep below. The steamer Albicone, bound from Glasgow to Gottenberg, suddenly came round a point of land at full speed and struck the yacht fairly amidships, cutting her in two and sinking her instantly. Only the captain and mate were saved by the steamer, the others being carried down in the wreck. Mr. Crossman was an old yachtsman, cruising every year, and was bound on a cruise around the coast.

LAGODA.—Messrs. Herreshoff have lately delivered this yacht to her owner, Mr. George Gordon King, of Newport.

QUINCY Y. C. REGATTA, AUG. 29.—A lack of wind on Saturday last spoiled the race of the Quincy Y. C., as only 6 out of 17 starters finished within the time limit of 3½ hours. The course for first class was 9 miles, second 7½, and third 6 miles. None of the first class finished, and only two of the second. The full times were:

FIRST CLASS.

	Length.	Actual.	Corrected.
Amy, E. W. Baxter	21.06	Not taken.	
Erin, John Cavanagh	27 02	Not taken.	
Queen Mab, E. L. Burwell	32.08	Not taken.	
SECOND CLASS.			
Tartar, F. L. Dunne	20.00	2 21 10	2 52 22
Wildfire, H. A. Keith	18.01	3 24 33	2 53 29
Nereid, C. F. Colby	20.07	Not taken.	
Niobe, J. E. Sayles	20.06	Not taken.	
Cristine, Geo. Russell	19 00	Not taken.	
Cosy, Bumpus & Crane	20 05	Not taken.	
Pet, J. W. McFarland	20.01	Not taken.	
Spray, H. A. Faxon	19.04	Not taken.	
Whiff, E. W. Newcomb		Not taken.	
Hornet, A. B. Merrill	19.00	Not taken.	
THIRD CLASS.			
Elfin, J. F. Tully	16.08	3 22 40	2 56 18
Elsie, C. F. Hardwick	19.09	3 28 15	3 01 59
Guenn, W. L. Dearborn	17.11	3 27 57	3 02 56
Undine, H. French	17.03	3 30 00	3 04 17

Tartar was ruled out for fouling a buoy and Wildfire takes first prize, $5. Elfin and Elsie win in third class.

THE REPRESENTATIVE AMERICAN SLOOP.—*Editor Forest and Stream:* I would like, through your columns, to express an opinion in regard to the contestants for the America's Cup. I think it would have been more fitting for the committee having the matter in hand to have selected as a contestant for honors in the trial races a full-blooded American sloop, without making a concession at the start, which I claim the Puritan to be. Her rig, her stern, her low weight are all a concession to the Englishman. It seems to me that such a sloop as the Montauk, Grayling or Halcyon would make, with a mainsail and jib, a more fitting representative of American ideas. I do not believe in meeting the Englishman with anything that has any English in it, and do not believe in shining with a borrowed light, which a defeat of Genesta by Puritan would virtually be. If we have to concede anything to the English, let us do it after a square battle. The race at Newport for the Goelet Cup stands as a concession to the Englishmen through the performances of the Fortuna and Bedouin. The former English in beam, rig, stern and low weight; the latter undoubtedly English, this race being a practical test of the American and English type of schooners. Such a rig as cutter rig for racing was not thought of in this country until Madge defeated the three boats pitted against her, Shadow being the only one to stand any show (she being a full-blooded American sloop). We say that the big jib would be unhandy in a boat the size of Puritan. That is what the cutter men told us long ago. What we would not acknowledge in words we are forced to acknowledge in deeds by the rig of Puritan.—LOYALTY.

YONKERS Y. C. CRUISE.—The annual cruise of the Yonkers Y. C. has been in the direction of the Shrewsbury this year, where six yachts anchored off Red Bank on Tuesday of last week. They were: Inez, Commodore A. J. Prime; Spray, Mr. W. McVicar; Racket, Mr. Newton Quick; Fanny, Mr. Underhill; Crawford, Mr. C. E. Day; Abby Jane, Mr. J. Garrison. On Wednesday a sweepstakes race over a 12-mile course was won by the Crawford. On Thursday all the Class B boats sailed for a cup presented by Commodore Prime and Mr. Underhill. The course was on the Shrewsbury River 15 miles, sailed in a good breeze from the northwest. The times were:

	Start.	Finish.	Time.
Crawford	11 08 15	12 54 08	1 45 53
Fanny	11 09 30	1 05 23	1 55 53
Racket	11 08 40	1 06 25	1 57 45
Spray	11 08 25	1 07 12	1 58 47

The yachts all sailed for Keyport on Friday, and on Saturday lay to at Sewaren, where the yachtsmen were handsomely entertained by Commodore Warren of the Columbia Y. C. The fleet reached home on Sunday, except the Spray, which continued her cruise up the Sound.

WEST LYNN Y. C. THIRD CHAMPIONSHIP, AUG. 29.—The third championship races of the West Lynn Y. C. were sailed on Aug. 29, over a five-mile course, off the club house, the times being:

SECOND CLASS.

	Length.	Actual.	Corrected.
Alice, L. P. Lynch	17.02	1 01 47	0 35 57
Inez, Goodrich Bros.	18 09	1 02 06	0 38 02
Marguerite, N. Sawyer	18.06	1 03 09	0 38 42
Ethel, O. Healey	19.04	1 10 15	0 46 36
THIRD CLASS.			
A. B. C., S. Mansfield	14.06	0 47 30	0 23 17
Imp, J. Renton	13.02	0 55 53	0 30 04

In the second class Alice, Inez and Marguerite have each won a leg, while A. B. C., Annie and Imp are even in the third; so that the next race, on Sept. 12, is looked forward to with some interest to settle the superiority.

WHAT THEY SAY ABOUT IT IN BOSTON.—The Boston *Advertiser* relieves itself over the selection of Puritan in the following outburst: "It is with a calm sense of having known from the first that it must be so, that the news of the final victory of the yacht Puritan over her New York rival is received here. The superiority of the white sloop, built on a home model at a local shipyard, has been fully demonstrated in the several tests to which her qualities have been subjected, and the very closeness of the rivalry makes the joy of success more keen. It also adds another cause for gratification in the assurance which it gives that a boat can be built elsewhere in America which shall be almost as fast as the product of Boston's skill."

EASTERN Y. C. CRUISE.—The fleet of the Eastern Y. C. met at New Bedford on Aug. 29 and a meeting was held on board Fortuna, the flagship. On Monday at 10 A. M. the yachts started in a light wind for Newport, arriving at 5 P. M. They will continue the cruise to New York. The fleet numbers the following yachts: Huron, Wm. Gray, Jr.; Stranger, Geo. H. Warren; Vindex, A. W. Blake; Fortuna, Commodore H. S. Hovey; Foam, F. Gordon Dexter; Magic, F. Dexter; Mohican, H. D. Burnham; Phantom, E. F. Thayer; Rebecca, G. P. Upham; Tempest, Henry F. Whittier; Thetis, Henry Bryant; Tioga, Hugh Cockran; Dreadnaught, A. W. Nickerson; Imperia, J. L. Stackpole, and Addie and Silvie, C. N. Whitten.

JERSEY CITY Y. C., LADIES' DAY, AUG. 27.—On Thursday last the yachtsmen of the Jersey City Y. C. gave an entertainment in honor of their lady friends, the fleet starting out at noon, each yacht with a party of ladies on board, and sailing down as far as Southwest Spit. After their return a dinner was served in front of the club house, after which in the evening a display of fireworks furnished further amusement. The day ended up with a ball in the club house. In October another ladies' sail will take place, a regular pennant race being sailed.

TESTS OF ANCHORS.—The British Admiralty have ordered a series of tests of anchors to be made at Portsmouth, as many new varieties have been introduced since the last tests were made. The trials will be very thorough, the first tests being to drop the anchors at low tide into the mud and pull on them from a lighter, after which they will be tested off Spithead.

SAN FRANCISCO.—Casco is laid up for the season in Oakland Creek, and Frolic is also moored near by. Both have had sails unbent, and are out of commission. The schooner Aggie was lately offered for sale at auction, but would not bring the owner's price. Yachting is very dull on the Pacific coast, the interest in it being at a low ebb.

TORONTO Y. C.—Three yachts entered on Aug. 22 for the cup offered by Com. McGaw; Daisy, C. W. Postlethwaite; Iris, G. R. Reid; and Mischief, F. Parkinson. The course was from off the club house around the spar buoy off Gibraltar Point. The yachts were started at 3 P. M. The times were: Iris, 2.03.30; Daisy, 2.32.00; Mischief, 2.05.10. Iris wins be 6sec. corrected time.

PORTCHESTER RACES.—On Aug. 27, a regatta was sailed off Portchester on the Sound, the course around Hog Island Buoy. Venture won in first class with Grace Tinque second; Frank D. Moulton first and Village Belle second in the second class; Mamie N. and Florence T. in third, and Sophie K. and Fannie M. in fourth class.

ILEEN.—This cutter is now ready for sea, her alterations being completed. Her bowsprit is 6ft. longer, topmast 5ft. longer, and her boom has been shortened. The mast has also been shifted 2½ft. further aft. She will be in New York for the Cup races.

TORONTO Y. C., RACE TO NIAGARA.—The race from Toronto to Niagara, on Aug. 29, was won by Oriole, with Aileen second and Verve third, the latter winning second prize on time.

A RACE ON THE SOUND.—The open boats Carrie R. and Katie P., sailed a 17-mile race off Larchmont on Saturday, Katie P. winning in 3.34.55 corrected time, beating Carrie R. 43s.

PHOTOGRAPHS OF PURITAN.—Mr. David M. Little, 160 Congress street, Boston, Mass., has taken some excellent photos of Puritan and also of the schooner Fortuna, under full sail.

BURGLARS AFLOAT.—On Aug. 27, a number of yachts lying off Babylon, L. I., were broken into and robbed. The thieves have not been discovered.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. P. M.—A letter for you at this office.

HAGUE, Warren county, N. Y.—Kindly advise me of the address of any private fish hatchery in this region of Northern New York or in Vermont? Ans. Address James Annin, Jr., Caledonia, N. Y.

JAY-BEBE.—Does the ruffed grouse drum in September or October or both? An old hunter and naturalist here makes a statement regarding their habit, and I should like further opinions. Ans. Yes, the ruffed grouse drums in every month of the year.

AMATEUR, Somerset, Pa.—Will you tell me the technical name of the red-winged blackbird. When I was a boy I called them "swamp blackbirds." A friend has told me that they are really the reedbird or bobolink. Ans. The red-winged or marsh blackbird (*Agelæus phœniceus*) is distinct from the bobolink (*Dolichonyx oryzivorus*).

C. E. W., Cobourg, Ont.—Will you kindly tell me if there is any preparation that will keep trout or bass fresh for any length of time, if there is where can I get it? Ans. A very fair thing for this purpose was made some time ago called "rex magnus," but we believe the company are not making it now. Use coffee after cleaning.

DUPLEX.—Can you tell me what kind of fishing, other than trout, I will find at Edmond's Ponds (Cascadeville P. O.) Keene Township, Essex county, N. Y., or at Lake Placid in the adjoining Township of N. Elba, same county? 2. Are there bass in these lakes? If so, are they the large or small-mouthed variety? 3. What game, if any, can be found in the above vicinity next month? Ans. 1. Lake trout, not plenty, chubs and dace. 2. There are no bass there; if there were they would be small-mouthed, as there is no other species in the Adirondacks. 3. Deer, bear and ruffed grouse (partridge).

E. L. F.—1. Where does the tree grow from which bethabara wood is made, also the botanical name of the tree? 2. How does snakewood rank as a material for fly-rods? I have a fly-rod of snakewood which is a very good one in every way, but would like to know the general opinion as to snakewood for rods. 3. What is the botanical name of snakewood? Ans. 1. Bethabara is a South American wood said to come from British Guiana; we do not know its botanical name, those who import it are shy of giving information. 2. Snakewood comes from the same place. It is heavy, otherwise it is a splendid wood for rods. As little is known of it as of bethabara.

R., Wilkesbarre, Pa.—1. Will you please let me know the pedigree of imported Keno, an English beagle imported by D. O'Shea, or if you do not know the pedigree could you not tell me a way to find it? 2. How old should a beagle be before he is used to hunt rabbits? Would four or five months be too young? 3. Does the man who enters one or more dogs in the *American Kennel Register* get a copy for that month gratis? 4. Could you tell me extended pedigree of Racket (Rally—Louise). Ans. 1. Write to D. O'Shea, London, Ont. 2. Yes, except for very moderate use. 3. No. 4. Rally is by imported Sam and out of imported Dolly. We do not know the sire of Louise, she is out of Gen. Rowett's Rosey, sister to Rally.

THE FORESTRY CONGRESS.

THE American Forestry Congress issues the following address in preparation for the annual meeting at Boston on September 22, 23, and 24:

We earnestly appeal to all patriotic citizens to join us in the endeavor to arouse public sentiment to the necessity of reform in the utilization of our timber supply and the treatment of our forest lands.

We are actuated by the following considerations:

1. The general and local climatological influence of forest area, though not yet clearly defined and numerically demonstrated, is beyond doubt established by historical and experimental evidence.

The effect of wholesale clearing of forest-clad hills and mountains on the amount and distribution of meteoric precipitations, though not the only cause of waning or irregular water supply, is undoubtedly the principal one, and admits of no doubt.

3. The immediate benefit to agricultural interests derived from properly distributed forest areas is understood by every intelligent farmer.

4. The natural source of a yearly product of $700,000,000—which the forests at present represent—deserves of careful husbanding with a view to its continuity, and calls for due consideration of its interests by legislators as well as by the people at large. Without joining in the cries of alarmists, we have good reasons and sufficient data to assert that the present policy, if continued, must seriously affect this factor of national wealth at no distant time.

5. The excuse of the first settlers in regardlessly removing the forest has no more existence. Wastefulness in the methods of lumbering, as in the reckless destruction by fires—the loss from this cause amounting to more than 10,000,000 acres, or value of $25,000,000 in one year—with regard to forest products and forest lands, has become criminal in view of the far-reaching influences which the forests exert.

To effect a reform in this line of economics, in which task we most heartily invite you to co-operate with us, we advocate the following action:

1. To bring the facts which form the basis of the foregoing considerations before the public in an unequivocal manner.

2. To encourage further research and instruction in forestry matters by the establishment of experiment stations, the introduction of lectures or courses on forestry in schools and colleges, the assiduous employment of the press in disseminating correct practical information.

3. To promote and assist the formation of local associations for the purpose of furthering the true interests of forestry in every State, teaching and encouraging a systematic use of her forests and imbuing her citizens with a recognition of their importance.

4. To urge the Legislatures of the different States to enact and enable the enforcement of effective laws for the prevention of fires.

5. To urge the National Government to the establishment of a sound policy as to its own forest lands, treating the 85,000,000 acres of public forest property as a valuable national treasure, instead of allowing its waste by depredators and fires.

6. To harmonize the interests of the lumberman and the forester and devise for the lumbering interest such protection as is *not given at the cost of the forest.*

7. To create popular sentiment against waste and a love and incentive for arboriculture by the institution of arbor days, by favors to tree planters in the form of premiums, bounties, or exemption from taxes.

What has been done so far to advance the interest of our cause, in many cases traceable directly or indirectly to the influence and work of this Congress, can be shortly recited, as follows:

1. Forestry associations have been formed in Minnesota, Ohio, Canada, Manitoba, Colorado, New York; while horticultural and agricultural societies have been led to give a prominent place in their discussion to the subject of forestry.

2. Forestry Commissions or Commissioners, either to inquire into the needs of or to manage the forest domain of their States, have been appointed in Vermont, New Hampshire, New York, Pennsylvania, Ohio, Colorado, California.

3. Arbor-days have been instituted in fifteen States of the Union and in the Canadas. Under this incentive in Nebraska, where this observance originated, more than 5,000,000 trees were planted the past year.

4. The effective fire-legislation now prevailing in Canada was enacted directly upon the specific recommendations of this Congress.

5. The Congress of the United States, largely through the influence of our efforts, has under serious consideration most

important legislation with reference to the forests of our national domain.

6. The Forestry Bureau, as a branch of the Agricultural Department at Washington, has collected valuable material in furtherance of the knowledge of our forest condition, in addition to Prof. C. S. Sargent's invaluable work of the census of 1880.

7. While the publications of a "Journal of Forestry," "Forestry Bulletins," "Forestry Manuals," "Forestry Reports," have tried to furnish the needed special information, the press throughout the country, in all its branches, has done good work in creating a wide-spread interest and a growing readiness for action.

Yet, while the need of a change of policy is admitted, the means of accomplishing that change are still inadequate. Specific aims and methods yet remain undetermined. Here is a great problem of national economy worthy the thought and active aid of the best men of the nation! Here is a duty for every thinking and well-meaning citizen, to help preserve and hand over to our children, in full productive power, one of our richest natural resources—nay, the most potent factor of national prosperity! Here is the opportunity to exercise that duty, in joining those who have begun to open the road to reform! Change of public sentiment is needed, and such a change can only be effected by the united effort of the best elements. We need the strongest utterances of the most influential men; we desire the co-operation of every good citizen in the unselfish work which we have undertaken.

The discussions will be conducted as far as possible under the following heads:

(*A.*) Importance of Forests in Climatic and Hydraulic respects, and in regard to other Industries.

(*B.*) Duties and Rights of the State to protect her Forest Resources.

(*C.*) Forest Fires; Causes; Laws and Methods for their Restriction.

(*D.*) Education and Research in Forestry Matters; Arbor Days; Schools; Lectures; Exhibits; Experiment Stations; Press; Associations.

(*E.*) Practical Forestry—Prospects, Methods, Profits, etc.

The following papers have at the present time been promised:

The Needs of a National Forest Policy, by the Hon. Warner Miller, Chairman U. S. Senate Committee on Agriculture and Forestry.

Growth of Forestry in Nebraska and the West, by the Hon. J. Sterling Morton, ex-Governor of Nebraska.

Profits of Forest Culture, by the Hon. H. R. Low, Chairman, New York Senate Committee on Forestry.

Forest Economy in Canada, by the Hon. H. G. Joly, Quebec.

Walnut Culture in Northern Latitudes, by the Hon. H. G. Joly, Quebec.

State of Forest Legislation in the United States, by N. H. Eggleston, Washington, D. C.

Trees as Educators, by Prof. Edward North, Hamilton College, N. Y.

Relation of Forests to Floods, by Thomas P. Roberts, Pittsburgh, Pa.

Relation of the Charcoal Interests to the Maintenance of Forests, by John Birkinbine, Philadelphia.

Lumbering Interests, their Dependence on Systematic Forestry, by John E. Hobbs, North Berwick, Me.

Forestry of the Lower Southern States and their Probable Resources, by Dr. Charles Mohr, Mobile, Ala.

What are the Requisites of an effective Fire Legislation? by S. W. Powell, Brooklyn, L. I.

What have the different States Done in Regard to their Forest? by John Hicks, Roslyn, L. I.

The Work of Experiment Stations, by Ad. Leue, Cincinnati, O.

Profits of Forest Culture, by Ben. Perley Poor, Massachusetts.

Arbor Day Celebrations in Schools, by John B. Peasley, Ph.D., Cincinnati, O.

Seacoast Planting; Its Importance, Practicability, Methods, by W. C. Strong, Newton Highlands, Mass.

August Planting of Evergreens, by W. C. Strong, Newton Highlands, Mass.

The Osier Willow and Red Cedar, by Edm. Hersey, Hingham, Mass.

Spark Arresters for Locomotives, by J. N. Lauder, Boston, Mass.

Lumberman's Waste as a Fertilizer, B. E. Fernow, New York.

POT LUCK FROM EXCHANGES.

A Lake Keuka trout was sold at Penn Yan recently, the weight of which was thirteen pounds. Soon after it was left at the market it was opened, and a quantity of gravel stones were taken from its stomach. They had been forced through its mouth, and added a pound and a half to the weight of the fish.

It is said by old prospectors that there is not a mountain peak in Colorado on the tip-top of which there is not a tin can. Tourist and mountain climbers have a habit of taking up with them a tin can, to be left at the summit for the disposition on slips of paper of the names of all who ascend the mountain after them.

A few of the brethren at an Old Orchard camp meeting thought a blue flannel shirt on a minister smacked of impiety, according to a correspondent of the *Morning Star*. But some of the best preachers at the meeting bag lots of ducks and snipe for their dinner and are mighty fishers of the cunner and rock cod between sermons. The *Star* correspondent pertinently remarks that starched clothing and starched manners are not necessary to the enjoyment of religion. The clergyman who seemed to be enjoying his religion most of any the writer has seen this summer, stood on a wharf in Boothbay Harbor, in his shirt sleeves and an old hat, led the "Rah-rah-rahs" as the steamer left the landing, and yelled "blow yer old whistle" to the Captain in high glee—and the Captain blew.—*Lewiston (Me.) Journal.*

"If the original forest of the States of Indiana and Ohio were standing to-day," says a lumber buyer, "their valuation would be many times greater than are the farms which they are sacrificed to improve. In making their farms the settlers in those States destroyed millions and millions of dollars' worth of black walnut. Miles and miles of fence are laid with black-walnut rails. One old farmer says that only thirty years ago he began making his farm, and that he had worked eight years in clearing it of the walnut timber, eighty acres of which he burned up. After thirty years of cultivation the farm is worth $8,000. If it had its walnut timber back it would be worth more than $100,000. This farmer is only one among thousands who for years girdled, cut and burned the great forest they found occupying the land."—*Ferry County Democrat.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

ABBEY & IMBRIE,

18 Vesey Street (Fourth door from Astor House), New York City.

JAS. F. MARSTERS,

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia;* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

PIEPER

Nos. 586, 588, 589 and DIANA.

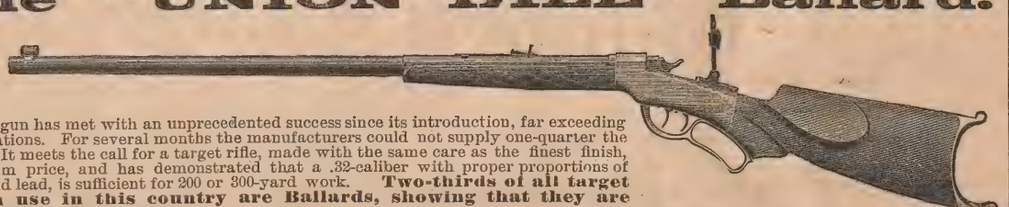
There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

IF YOUR DEALER HAS NONE, DON'T BUY TILL YOU INSPECT THE PIEPER. SEND FOR PIEPER CATALOGUE TO

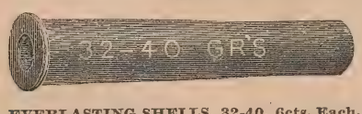


SCHOVERLING, DALY & GALES, Sole Agents.

Wholesale Dealers in Guns and Gun Goods.

84 & 86 CHAMBERS ST., NEW YORK.

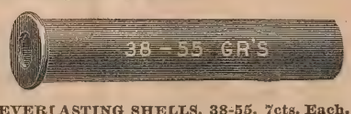
The NEW MARLIN .32 and .38 Rifles, 7½lbs., kill twice as far as any other of same calibers. The DALY HAMMERLESS captured the Illinois Diamond Badge again this year.



The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand. It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**

Prices: { No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches $37 50
No. 9.—Same, but with Single Trigger 33 00



Can be furnished with Vernier's Mid-Range and Wind Gauge Front Sights for $6.50 extra.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

F. A. ALLEN'S SPECIALTIES.

MONMOUTH, ILL.

ALLEN'S DUCK CALL—Improved, Nickel Plated; the most natural-toned, easiest-blowing, smallest and only Metal Duck Call ever invented and the only one that perfectly imitates the *wild* duck. Sent by mail on receipt of $1.

ALLEN'S BOW-FACING OARS—Can be attached to any boat in five minutes, shipped instantly in the roughest water; work much easier than the common oar. In duck shooting they are invaluable; you see the bird the instant it leaves the water. Sent by express on receipt of $8.

ALLEN'S SHELL SWAGE—Will reduce brass shells to their original size in one-half minute, making them as smooth and solid as when new. On ordering mention gauge wanted. Sent by express for $1; by mail $1.30.

ALLEN'S DECOY DUCK FRAME—Is a simple device for holding the dead duck in a natural position in the water. Price $4 per doz. **SEND FOR CATALOGUE FREE.**

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

CANOE

AND

BOAT

AND

BUILDING

FOR

AMATEURS.

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy, and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his purpose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires, following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

For Sale—Three fine black spaniel bitch puppies, 7 wks. old; also one 7 mos. old, from above stock. Please note that these are the same pedigree as my champion Helen (A.K.R. 654), winner of the following prizes this year: 1st and three specials, Boston; 1st and Cocker Club special, New York; 1st, Cincinnati; champion and special, Philadelphia. For full pedigree and price address W. O. PARTRIDGE, P. O. Box 5,135, Boston, Mass. sept3,2t

Good Field Dog Cheap.

For Sale—Black and white setter dog, 2 yrs. old, broken and has fine nose, and is staunch on woodcock, quail and ruffed grouse, is speedy and a stayer, does not retrieve but will point his dead bird staunch; is easily managed in the field. Address W. H. PIERCE, Peekskill, N. Y. sept3,1t

GREYHOUNDS FOR SALE.

The English greyhound bitch Lang Syne, by Warpath out of Palm Bloom, litter sister to Princess Dagmar, winner of the Waterloo Cup, 1882; imported from Belfast, Ireland, March 30, 1885, and sold for no fault, simply for the reason that I have no place to keep her. Also two bitch puppies, out of Lang Syne by Parker's Cashier. JAS. W. TRAFTON, 177 State street, Boston, Mass. sept3,1t

FOR SALE.—ITALIAN GREYHOUND PUPS from imported stock. HENRY C. BURDICK, 150 Bridge st., Springfield, Mass. mar19,tf

WM. GRAHAM, NEWTOWNBREDA, BELFAST, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen firsts, nine special, three second and one third. At New York, 1884, seven firsts, six specials and one third.

FOR SALE, A NUMBER OF WELL BRED AND well broken pointers and setters, also dogs boarded and broken, satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. Sept22,tf

Prize and Pedigree English Mastiffs.

American gentlemen desirous of purchasing these noble dogs should communicate with JAMES HUTCHINGS, 25 Gandy street, Exeter, England, who has the largest kennel of mastiffs in the world.

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Field Trial Trainer, Templeville, Md.

BOOK YOUR DOGS FOR THIS SEASON'S training on woodcock, partridge and quail, commencing Aug. 1. Fifty dollars for the season. D. F. WILBUR, Myricks, Mass. jy9,tf

Rory O'More Kennels.

For Sale—Thoroughbred red Irish setter stock, full pedigreed. Address with stamp,
W. N. CALLENDER, Albany, N. Y.

FOR SALE.—HAVING RECENTLY ADDED several fine brood bitches to the Landseer Kennels of Scotch deerhounds and greyhounds reduced the price of puppies. Some choice greyhounds now ready to ship. DR. VAN HUMMELL, Denver, Col. apl16,tf

DOGS. DO YOU WANT TO BUY A FINE bred dog of any kind? If so write and name the kind you want. EDMUND MAURER, 164 North Ninth street, Philadelphia, Pa.

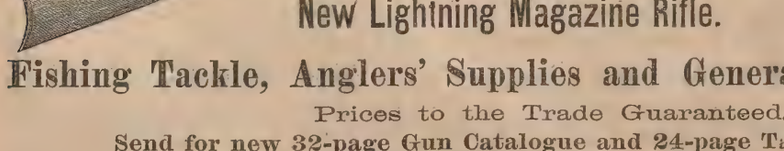
FOR SALE.—AT A REASONABLE PRICE, A dark liver English setter bitch, 18 mos. old, staunch and thoroughly broken on quail and woodcock. Address P. O. Box 20, Middletown, Orange Co., N. Y. aug20,3t

FOR SALE.—A FIRST-CLASS FIELD DOG BEtween 3 and 4 yrs. old, black English setter; cannot be beaten on partridge, woodcock or quail. Don't retrieve except from water. Highest references in regard to him. J. S. BANCROFT, care of Forest and Stream. aug20,3t

FOR SALE.—A HANDSOME, EXTREMELY well-bred black, white and tan English setter bitch, 10 mos. old, over distemper, healthy, well marked and formed; just right for this season's handling. Two crosses of Gladstone, and two of Leicester and Dart. Price $35. GEO. L. WILMS, 142 Monticello avenue, Jersey City. aug27,tf

FOR SALE. — POINTERS, THOROUGHLY broken: Lady Bang (A.K.R. 698), Nellie (A.K.R. 1789). Also pointer pups, by Donald II. ex Lady Bang, marked liver and white, age 9 wks. old. For price and particulars apply to CLIFTON KENNELS, 75 Clifton Place, Jersey City, N. J. aug27,4t

FOR SALE.—A THOROUGHBRED ENGLISH mastiff bitch, 2½ yrs. old, kind to children; a good watch dog. Address P. O. Box 1289, Montreal, Canada. aug27,3t



BIRD DOGS.—FOR SALE, A FEW YOUNG bird dogs. Address W. A. SUTHERLAND, Cabin Hill, Del. Co., N. Y. sept3,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 10, 1885.

VOL. XXV.—No. 7. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

PORT TACK GIVES WAY.

ALL yachtsmen and lovers of sport will regret that a fine race, as that of Tuesday promised to be, was spoiled, and especially by such an occurrence as an open violation of the plainest and most important rule of the road, that port tack gives way. Of course in the spirited competition of such races as the present each side will work for all it can gain, and the matches will probably be decided largely by close sailing and bold handling, but the occurrence on Tuesday is much to be regretted in every way. Allowing even for the excitement of the moment, increased by the knowledge that they were pitted against a keen and shrewd adversary, the course of the Puritan looks like an attempt to bluff their opponent and force him from a position which belonged to him by every rule of yacht-racing and maritime law. The spectators were unanimous in placing the entire blame on the Boston boat, as from most of the surrounding craft it seemed impossible that she could safely pass between the Lightship and Genesta, and that if nothing worse happened, the latter must be forced off her rightful course. The well-known character of the gentlemen on the Puritan precludes the suspicion that they would countenance willingly any semblance of jockeying, and they have made all the amends in their power for the unfortunate affair; so we can only conclude that some one made a very serious error in judgment, an error that nearly cost them their beautiful boat instead of a torn mainsail. The affair may have one good result in enforcing a more careful observance of the rules of the road on the part of some yachtsmen, and in such a case it will not be thrown away.

The fair and manly conduct of the owner of the Genesta will win many friends for him and his boat here, and remove the unfavorable and erroneous impression that has prevailed with some, who have been misled by the prejudiced reports of the daily press. The worst that can be said of the gentlemen interested in the Genesta is that since they have been in this country they have minded their own business. In trying to obtain the most favorable terms for their boat, as in the matter of time allowance and courses, they have accepted the decisions of the Committee on all points without protest or comment. In declining to sail in scrub races they have done nothing unsportsmanlike; and in all cases visitors have been treated courteously and politely. But, nevertheless, with a certain portion of the press it has been the correct thing to visit on them the sins of a former challenger for the Cup, and to place every little incident in the worst possible light. They come to us ostensibly as visitors and guests engaged in a friendly contest, and the action of Sir Richard Sutton and his friends in the matter of Tuesday's race shows that they are fully entitled to every consideration due to gentlemen and thorough sportsmen.

THE RIFLE TRIALS.

THE trajectory test which we have undertaken in the interest of the rifle shooting fraternity still calls for comment and suggestion from many of our readers, while on our part the preparations are pressing forward to have it take up a corner of the Creedmoor range when the coming fall meeting shall have concluded. So far we have been most ably seconded and earnestly supported by all whom we have had occasion to enlist in the work or to invite to co-operate with us. Some of the makers have written announcing their hearty indorsement of the scheme and expressing the hope that there would be a thorough test, of which they were perfectly willing to abide the result. "May I be there to see it" has more than once been said by those who have written or spoken of the trial. It is not unlikely now that it may lead in the not distant future to such changes in the charges of our field rifles as will insure much flatter lines of fire than those now in use. Without rushing to the English armories for models, we think that there is room for improvement in this respect in our own workshops and that our rifles, first in so many respects, may lead the world in this point also.

Some of our contemporaries are working in the same direction as we in this matter, and in the last number of *The Rifle*, of Boston, is to be found a most interesting report of very similar trials. They are not so extended as we should have preferred; but they are found in a reliable quarter, and help on the problem in which all are so much concerned.

THE MENHADEN QUESTION.

OUR remarks on this subject last week have brought us several comments on the relation of fish food and food fish. There is little that is new, however, and the letters are mainly mere opinions with no great amount of experience or observation to back them. The question is: Does the capture of the menhaden by the hundreds of millions for the purpose of making oil, interfere with the supply of game and table fishes upon our coast? Anglers and coast fishermen not engaged in the oil business say that it does, and that the bluefish and other species do not come in near shore because their natural food is captured or driven off. On the other hand English scientists, speaking of the herring, which there serves the purpose of fish food, say that the efforts of man in killing herring are feeble compared to the destruction of these fish by gulls, seals, sharks and other animals that prey upon them. A similar view is held in this country by such high authority as Prof. G. Brown Goode and by Mr. E. G. Blackford, if we are to credit a newspaper interview with the latter.

We believe it to be a fact that nothing that man can do to the immense shoals of menhaden will equal their natural destruction from their aquatic enemies, which prey upon them night and day and perhaps follow them summer and winter. The menhaden have withstood these enemies for centuries, a proof of which is their presence in such numbers to-day; but man has stepped in and disturbed the balance of life, and his efforts, added to those of the enemies referred to, have operated disastrously upon what were supposed to be the inexhaustible schools of the ocean. Forty years ago no one would have believed that the buffalo, which roamed our prairies in herds of millions, would to-day be reduced to a few hundred individuals, and in a few years more are to be numbered with the extinct animals of America. The menhaden spawn in our bays and sounds—we have good evidence of this—and are harassed from the time of their coming until winter drives them hence. They are a timid fish, and if not caught are scared off. This is a fact well known to all who know anything of their habits, and since steam vessels have been employed in their capture the fish have frequently deserted parts of the coast for a whole season.

The enormous captures of menhaden for oil by steam vessels with huge purse nets which surround whole schools and frequently capture the last fish, has almost destroyed the fishing for valuable food fish on our coast from Maine to North Carolina. The coast fisheries of New Jersey formerly gave occupation to hundreds of men who lived entirely from them and supplied the markets with good and cheap fish. Now the Northern markets get their main supply of bluefish, weakfish and other kinds from the South. The angler also came in for a large share of sport. The famous fishing grounds of which Norris, Scott and others wrote a dozen years ago, are nearly barren. In our last issue, a correspondent, "R. B. R.," told how he saw the menhaden destroyed along the south shore of Long Island, and this is an every-day occurrence.

Mr. Clapham, in another column, makes a very sensible suggestion, that menhaden should not be allowed to be caught within a mile of the coast, by purse nets we presume, but we would increase this to three or even five miles. Then the timid fish would have a chance to breed and fill our bays and harbors with their young, which would attract the larger fish and benefit others besides the oil makers. In the end, it seems to us that the oil men would benefit by this, as the object of their pursuit would be more plentiful, and outside the limit they would find as many as they get now. It would only temporarily injure their business while benefiting the whole community.

PANTHERS AND DEER.

IT has been estimated that one hundred panthers were killed in the Adirondack region between the years 1860 and 1882. In 1871 a law was enacted offering a bounty of $20 on each panther killed, and the number of bounties paid by the comptroller between that date and 1882 was forty-six. There is, of course, no way of taking a census of the panthers now in the North Woods, but it appears to be conceded by those who are most familiar with the subject, that the number is increasing. The bounty of $20 is not a sufficient inducement to the hunters to capture this animal. Panther hunting is laborious and attended with much hardship. It is practiced in winter, and the hunter who follows the panther's trail must give up several days and often weeks to the pursuit, carrying his provisions, camping wherever night overtakes him. The reward is not sufficient to induce many Adirondack hunters to endure such fatigues, and hence, the panthers not being hunted are annually becoming more numerous, and the destruction of deer by them is much greater than formerly.

The panther subsists chiefly upon venison. It is a still-hunter, and keeps up the pursuit week in and week out through the entire season. The people who have had the best opportunities to study the panther's habits estimate that each one of these animals kills a deer every week or every ten days. (See Dr. C. H. Merriam's "Vertebrates of the Adirondack Region.") That is, from thirty-five to fifty deer are destroyed annually by each panther. The death of a panther means the saving of just so many deer. The bounty of $20 for a panther is a reward for the preservation of from thirty-five to fifty deer. The compensation is certainly small enough. If the bounty were increased to $50 that would still be a ridiculously small price to pay for the deer. It would, however, be sufficient to stimulate Adirondack hunters to the pursuit of the panther. At the next session of the Legislature the law should be changed. To stickle on the price paid for panther scalps is poor economy. The State can better afford to pay $50 for a dead panther than to furnish venison to feed the live panther.

THE CONNECTICUT GROUSE SNARERS.—The Connecticut game law forbids the snaring of ruffed grouse, and also prohibits the exportation of game from the State. The law is well understood, but it is systematically broken on a large scale. In the neighborhood of Stafford, Conn., miles of partridge "hedges" have been constructed, and the snarers having made every provision for a big haul are now patiently awaiting the opening of the season. When October comes the grouse will be snared, taken to Stafford, there sold or delivered to the express or railroad agents, shipped to the New York steamboats and sold to the stewards, ostensibly to be served aboard the boats while in Connecticut waters, but really to be brought to the New York markets. It is a nicely framed scheme, and now that we have explained just how it is to be worked we hope that some one will be found in Connecticut public-spirited enough to see to it that it does not work so nicely after all.

DIAMONDS AND DOGS.—It used to be the fashion for actors and actresses, who wanted themselves advertised, to manage to have their diamonds stolen, but now they buy and lose expensive dogs. "Fritz" was one of the first to take up the new advertising scheme. His first venture having succeeded so well, he subsequently bought the great St. Bernard dog Rector, and the newspapers had hardly finished talking about it before they reported the dog's death. Rector was strangled to death last Friday night.

HUNTING IN THE HIMALAYAS.

Lights and Shadows of an Indian Forester's Life. V.*

IN my last budget to the FOREST AND STREAM from this region, I made a passing reference to the Indian mahout's estimate of the intelligence of his charge, of which he is at the same time both servant and master; and now as I sit at the door of my tent, my eye rests occasionally on a scene in which my elephant appears the very type of a "bloated aristocrat." The mahout has always an assistant, whose duty it is to bring the water, cut and help load the fodder, bake the bread for the elephant and assist in washing him. It is this latter operation the two are now engaged in, and if ever eye and attitude betokened at the same time calm enjoyment, and the pleasant consciousness that it had pleased God to call him to that condition of life in which he was, provided with two more or less intelligent beings to cater for his necessities and comfort, my elephant's eye and attitude certainly bespeak it, as he lies on his side with outstretched legs, while the subordinate empties mussick† after mussick of ice cold water over him, and the mahout himself goes over the whole surface with a scrubbing brush, talking to the elephant as he does so, asking him if he were ever as well served before, and calmly upbraiding him for the ungrateful return he frequently makes for the zealous and conscientious services rendered him. The elephant listens, flaps his upper ear lazily, and winks slyly, showing that he evidently understands the general drift of the discourse; but he makes no retort. At length the mahout tells him that his skin has been thoroughly cleaned on that side, and suggests a turn over. The elephant lies still and flaps his ear. "What's the matter?" asks the mahout. "Why don't you turn over?" Again the elephant flaps his ear. The mahout lifts the ponderous lobe, sees a little dirt and scurf in one of the folds, and attacks it with his brush, calling for another mussick of water, muttering as he works away that he never saw so particular an elephant in all his experience. "There! will that satisfy you?" he says at length. "Will you turn over now and let us finish the other side, or do you want to keep us here all day, and give us no time to bake your bread before dark?" The elephant gives a little grunt, comes to a sitting posture, and then rolls quietly over on the other side, and the washing is brought to a close. This finished he is led off to his fig tree, to which he is securely hobbled, and then he begins on his fodder. The flies annoy him, but his tail and ears are kept in constant motion, and every now and then the trunk sweeps over parts not accessible by those two organs. The edge of his appetite taken off, and the flies being still troublesome, he casts his eye upward, selects a suitable shoot about six feet long, pulls it down, and setting one foot upon the crown or terminal tuft of leaves, he curls his trunk round it close to the crown, and drawing the stick through, strips it of all its side leaves. He has now a suitable whisk, and taking it at the butt end with the lips of his trunk he proceeds to whisk himself systematically, sometimes holding it poised, and coming down suddenly on a fly whenever and wherever it alights. This is not instinct, it is a clear instance, not merely of adoption, but of adaptation of means to an end and is consequently an evidence of reason.

Although low in degree, I hold that the elephant is unquestionably gifted with reasoning powers which would admit of considerable development if the beasts could only be bred in captivity. I have seen a young elephant born in captivity, and the tricks which he had been taught when a mere calf under two hundred pounds' weight were really marvellous; but he was in the hands of the priests, and I am afraid his moral culture was receiving but little attention. His animal spirits were exuberant, and his playfulness equal to that of a puppy dog's, without the tendency to rend and tear.

With such very rare exceptions, all our elephants are captured full-grown with the aid of tame elephants, which enter heartily into the spirit of the thing, and this fact renders still more remarkable their intelligent comprehension of what is required of them.

In their wild state they move in large herds; there are several of them in these forests, and every measure of forest conservancy appears to attract their attention. I do not doubt for a moment that they hold councils and exchange their views on the subject. At the other end of my division is a considerable young sal forest, which I placed under fire conservancy last year, cutting fire lines through the whole area at a mile apart. These Sewaliks are covered with an enormous *débris* of drift gravel and boulders, and appear to be the old sea bottom through which the Himalayas thrust their towering peaks in the long ago; and to prevent travelers wandering off the designated roads and dropping the coals from their hookas in the forest, I used the boulders to inclose two of the fire lines for roadways through the forest, building a dry wale on either side about three feet high. The herd of elephants roaming over this region came and investigated the obstacle, and having satisfied themselves that it could be touched with impunity, set to work removing the stones and made a considerable breach in the walls.

In their wild state the elephants are very harmless and free from any further disposition to mischief than an occasional raid upon a field of sugar cane; but far from being phlegmatic, as their ponderous form might lead one to suppose them; they are in a high degree nervous and excitable. Some of them are endowed with fearless courage, and regardless of a tiger's claws will seize and dash him to their feet, then kneel on him, either crushing the life out of him or transfixing him with their tusks. Others again are arrant cowards, and will rush roaring from the attack of a wounded buffalo, or even a suckling pig. But bold or timid, they become excited beyond all self control in the presence of snarling or yelling carnivora. A friend of mine, Capt. H.—long since passed over to the great majority—described to me a terrible scene to which he was witness some years ago in Assam. The wife of his dog keeper was at the stream washing one of his young dogs, which yelled and whined during the operation, and while thus engaged his mahout came down to the stream with the elephant to water him. The elephant was very nervous and excitable, and the mahout called out to the woman to leave the dog and run or the elephant would kill her. The woman, still holding the dog, looked up and laughed, and the next moment the ponderous beast rushed on her, seized her by one leg, and planting one foot with crushing weight on her chest, literally tore her in two.

In the independent native states criminals are commonly chained to the elephant's legs, and the beast, excited by the unwonted load, turns and pounds the victim to a jelly. Some of these native chiefs, too, keep distinctly vicious elephants, which delight in cruelty, and criminals or others, who have rendered themselves obnoxious to the ruler, are handed over to the tender mercies of the "rogue" to make sport with. Sometimes one of these vicious brutes breaks loose and runs amuck, killing every man he can lay hold of, and can only be stayed in his course by a more powerful elephant, or a couple of trusty beasts coming to the rescue, beating him to his knees, and holding him down while the chains are put on him.

The jungles too have their "rogues," of which terrible tales are told by the villagers far and wide. The "rogue" is a solitary elephant, and is commonly supposed to have been chief of the herd and to have lost his supremacy when advancing years brought decaying vigor. This is probably sometimes the case, and the vanquished leader, rendered sullen by defeat, betakes himself to a life of solitude; but all solitary elephants are not "rogues." I have frequently met solitary elephants, which moved out of my way or eyed me with indifference. But the "rogue" elephant soon makes his presence felt. He appears to be irresistibly impelled to acts of cruelty, and might be supposed to be mad but for the cunning he displays. I am inclined to believe that the rogue elephant is somewhat akin to the "dangerous lunatic," and that on the first display of the symptoms the herd unites and drives him out. I remember one which some few years ago infested another section of the Sewaliks, through which the government highway ran, and which used to lie in hiding for solitary travelers on whom he would pounce, sometimes trampling them to jelly, at others seizing and carrying them in his trunk to a forked tree, the two branches of which were nearly parallel, and not more than a foot apart at six feet above the junction. Wedging his victims into this fork with a force that rendered extrication hopeless, he would leave them there. At night, too, he would sometimes go for a hut, batter it down, and trampling the ruins under foot, display an almost fiendish delight when he found he had secured the inmates. On one occasion a man escaped from the hut, but the elephant marked him down in a sugar-cane field, laid the whole crop level with the ground, and at length found that man in a canal ditch, dragged him out and trampled him to death. His ravages created such a panic that the whole district was deserted, until at length with the aid of a large troop of tame elephants he was driven into a pit and despatched. In cruelty of disposition he was absolutely human

But a rogue elephant is no more typical of the species than the dangerous lunatic is typical of humanity. No animal is more readily domesticated than the elephant, no other animal displays a readier disposition than he to render himself useful to his conqueror, and no other animal nearly approximates him in intelligent conception of what is required of him. Talk about man having descended from the simians—the elephant is as superior to the simians in brain power as man is superior to him. In common with the simians, too, he has some anatomical relations to man not existing in other animals; he goes down forward on his knees like a man, instead of backward on his hocks like other beasts. The female, too, has the mammæ on the breast instead of on the abdomen, and the brain is proportionately larger than in any other animal. "I could never," said a humorous friend of mine, one day, in argument with a rabid Darwinian, "I could never believe that man descended from the monkeys, but that a man might descend from an elephant I could easily believe." "Absurd," said the other angrily. "look at the dissimilarity of structure—nature never advances *per saltem* —by a leap." "Oh, yes, but there are exceptions to every rule," said the wag, "in the case I am thinking of a man did actually descend from an elephant *per saltem* by a cross with a tiger."

I have frequently when traveling through the jungles come to a dense impassable belt of young timber, which the elephant in his wild state would make a detour to avoid, but the elephant in his wild state presumably thinks less of the value of time than a man who is four miles from home and already late for breakfast; and the man claiming the mastery the elephant is instructed to clear a way through. "Lugget," says the mahout. The elephant emits a groan in a tone of remonstrance, implying, as clearly as may be, that the order is impracticable. "Lugget!" screams the mahout in determined tones. Another groan of angry remonstrance from the elephant, and an attempt to back out. "Lugget," persists the mahout, driving his iron prod down into the raw long ago established at the back of the beast's head, as the best channel of conveying orders to his comprehension, and the elephant yielding the point, lays hold of the young stems right and left and bends them to the ground; perhaps they are too tough to break, the elephant bends them before him in the direction he is moving, and takes good care that they do not fly up against him as the pressure is removed. On such flexible stems he plants his feet firmly down, and walking along them, never lifts his forefoot until the hindfoot is ready to take its place. Perhaps there is a lateral branch overhead, high enough for him to pass under, but not high enough to clear the howdah. If it is a small branch it is broken down cheerfully at the word of command, but if a large branch taking his whole strength, he will frequently remonstrate and seek to give it up after the first attempt, but finding no escape, he will try to raise the snoot of his trunk to the branch, coil his trunk tightly round, and then bringing his whole strength to bear, will generally succeed in breaking it down if it is not more than about ten inches diameter of hard wood. On coming to a bridge he has never crossed before, he cannot be driven to advance a step beyond what he has proved. If he comes to an unsound part he relies on proving it with his trunk and one foot, while the other three feet are safely planted. But he is terribly puzzled by a bridge of boats, which at the outset he mistrusts very much. I have ridden an elephant half way across such a bridge much against her own will and judgment, but at that stage her heart misgave her, and dropping cautiously on the bridge she once more worked her way backward, not rashly like a frightened horse, but cautiously as if in the conviction that her life depended on coolness and self-possession. She has now a more correct appreciation of the sustaining power of a bridge of boats and frequently crosses them, even with less precaution than she adopts for an ordinary bridge. She has learned that a bridge of boats is not to be tested by the experience derived from other structures.

In this part of India elephants are employed by Europeans only for hunting, for their suitability to jungle travel, and sometimes as beasts of burthen for the commissariat department; but in Burmah our department is using them for stacking large timber in the depots, a work in which they render useful and intelligent service. Two of them will lift a log to its place on the stack, and if the ends are not square one of them will place his forehead against the protruding end and push it into place.

It is not a little remarkable that an animal so readily domesticated refuses to breed under domestication, but this is unhappily the case. Whether they abstain on principle, preferring race extinction to the perpetuation of race servitude; or whether it is due to shyness or delicacy, or to a settled melancholy which reacts on their secretions, it is impossible to decide, but the hard fact remains that elephants never breed in confinement. Elephants once domesticated have experimentally been let loose in large forest inclosures and recaptured with their calves, but practically the attempt to breed them in confinement is an utter failure. As a consequence the supply of fresh captives decreases with the demand and the race is fast tending to extinction in India. Their general price is from $200 to $500 of your money, but as they become scarcer prices will probably range so high that they will pass almost exclusively into the hands of native rajahs who regard them as indispensable to the maintenance of their dignity. Elephants are long lived, there are several vigorous animals known to have been thirty to forty years in domestication, and the general opinion is that they are about as long lived as humanity, sometimes attaining to a hundred years. Happily they are no longer slaughtered for their ivory; the laws of British India render it penal to kill any but a rogue elephant; and for some years past none have been captured in the Sewaliks. The herds are neither numerous nor large, and it has been determined to leave them alone a few years before making another raid on them.

INCOMING AUTUMN AT CENTRAL PARK.

THE large and valuable group of palms belonging to the establishment, kept closely in care during the summer at Mt. St. Vincent, is in fine condition out of doors, where it will remain for some weeks longer. This collection includes specimens of somewhat rare varieties, as the *Samia horrida* and the *Cycas circinalis*, which is one of the kinds of sago palm, and less common than the *Cycas recolutio*.

In addition here at present as prominent specimens are the *Salvia splendens*, with scarlet plume, the *Eyrthrina christigalli* or coral plant, the *Lobelia cardenalis*, of deep scarlet with ashy petals, the *Vinca rosea* of the periwinkle family, the *Thunbergia alata* covering the rocks in matted vines and flowering in unmixed white, pale yellow or deep orange, the foliage plants making a splendid show of color through the grounds, while a fine lot of tea roses enchant beholders; some bananas are at the fruit stage, a lofty cactus displays a solitary flower, and the *Tritonia uvaria*, familiarly known as red hot poker, carries erect its flame-like red and orange spikes which continue until winter, and which may be viewed as well at the Arsenal, where a specimen grows on the east side of the building.

The *Sophora japonica* flowering on Japanese Point southward from the large lake, represents the highest degree of beauty in its species. Other specimens are in the Ramble and also near the greenhouses. This native of China and Japan, a hardy and deciduous tree growing from forty to fifty feet in height, is indeed very highly ornamental. Its flowering, which commenced last month, continues through September. The tree is well covered with large loose terminal panicles of small cream-colored or greenish-white flowers borne on compound spikes. The foliage of pinnate leaves with eleven or thirteen oblong-ovate acute, smooth, shining leaflets is also very beautiful, and neither drooping nor turning pale in the most unfavorable seasons. The fruit of this species is employed to dye a fine yellow. If Loudon was informed correctly the flower produces a yellow of so superior a hue that it is reserved exclusively for dyeing stuffs to be worn by members of the royal family.

A more rare production here is the fruit of the ginkgo tree growing west of the Terrace, not far from the statute of the Falconer. Near the greenhouses there is another specimen of the tree, but without fruit. It is otherwise called the maiden hair-leaved salisburia, the somewhat triangular, fan-shaped, smooth and shinning leaves cloven half way down through the center, showing a formation of fine, hair-like, parallel ribs throughout. The catkins borne by the tree in spring were of a yellowish color. The fruit is a globular or ovate drupe about an inch in diameter. It contains a white nut with flavor compared to that of the almond. According to recent accounts from Japan it is prepared for food in that country by cooking. Both in China and Japan the tree is chiefly grown for its fruit, which also is exposed for sale in some quantity in Chinese markets. The fruit of the *Paulownia imperialis*, found near the Mineral Springs, has been mistaken within a few days past for that of the ginkgo. The leaves of the two trees are, however, quite dissimilar.

At present the great soft panicles of a magnificent variety of hydrangea—*Paniculata grandiflora*—are conspicuous, drooping heavily on their stalks, "as big as a peck measure," in milk white or tinted with rose or salmon. Even these are wrenched away, purloined by the base born. Splendid groups of these flowers are on the Terrace, and others appear in less open places with spikes of terminal panicles of flowers thickly massed and bent far toward the greensward by their own weight.

The brilliant lantanas flowering in their varieties from July until checked by frost are less numerously present. When cultivated in the form of a diminutive tree and displaying flowers of rose and purple or of orange and scarlet, the species furnishes a rich contribution of color to an autumn arrangement.

Children visiting the Park never cease to be interested in the long, swinging seed-pods of the catalpa tree, a native of our country, which flowers in July and August, showing corollas of white speckled with yellow and purple. The pods are now well grown, and seen dangling their remark-

ably long, narrow and horny forms at various points along the drives and walks.

In many places the *Beligonum siboldii* or Japanese asparagus is flowering profusely, but thriving best with abundance of moisture. It is a shrub with tassel-like yellowish flowers, growing largely in the borders in neighborhoods within the upper section of the Park grounds.

In all different quarters the althea or rose of Sharon is of almost universal presence, and of quality sufficient for an everyday pleasure. The exquisitely sweet *Lonicera cenensis* continues to flower and to distil its honey fragrance. The rank richly flowered trumpet vine swings from the trees about the lakes and near the Casino. At the latter locality are brought forward some admired tea roses, while the varieties of herbaceous plants there cultivated are in most excellent condition. In the Ramble beyond and near the Pool may be seen a fine specimen of the marsh-mallow (*Hibiscus moschentos*) with its large purplish flowers.

It is one of the objects of the superintendent gardener to label each species of plants growing in the Park, as rapidly as circumstances may permit, a commencement having been already made in the Mall. His predecessor, as may be remembered, made some effort in the same direction, which was unsuccessful. The system introduced was not such as to prevent the very labels being absolutely stolen and carried off. Evidently the cultivation of the moral sense is more difficult in this section than any sort of gardening.

Another improvement is accomplished with the cutting away of many trees. As is now believed, this change is one which has been needed for years. The trees have been much crowded together, rendering their finest development impossible. Mr. Fisher disliked to sacrifice anything so long as it retained life. Mr. Woolson considers that "a park should be made a park, not a swamp nor thicket." From material of trees removed a rustic fence has been built along the bridle path below the dairy and near the split rock.

UNEXPECTED MISHAPS.

Editor Forest and Stream:

"The best laid schemes," etc. Some three weeks ago I placed under a bantam hen a sitting of eggs, half of the Arizona quail and half of the native kind. Last Monday evening completed the twenty first day, and the next morning on going into the yard I found the hen dead, her throat having been gnawed open by some miserable vermin, and the unhatched eggs cold in the deserted nest. An examination showed that nearly all of them contained birds (of both kinds) which a few hours more would have brought out. Possibly, if I had had another hen, I might have saved some of them, but as I had not, all died in the shell.

To say that I am bitterly disappointed, particularly over the loss of the young Arizona quail, is making a very mild statement. My hen quail this season have laid very freely, but showed no disposition to sit, the Arizona quail having laid twenty-eight eggs, and a Virginia quail hatched and reared in the coop, having laid thirty-two. Some three weeks ago I succeeded in hatching in an ordinary poultry incubator thirteen young Virginia quail from seventeen eggs. They came, however, in the midst of a cold, wet storm which lasted several days, and were not able to endure the extreme change from the heat of the incubator to the outer air, a change of some forty degrees, and I lost them all in from three to five days. A setting of Arizona eggs placed under a common hen, were broken one by one, the hen being too heavy for them, and none of them ever hatched. So you see I have been especially unfortunate this year.

By a note from the superintendent of the Philadelphia Zoological Gardens, received last week, I was sorry to learn that the pair of Arizona quail sent him last spring from Toledo—being part of the birds sent me last fall by "Adios"—had both died, the female a month ago, and the male quite recently. The hen showed no disposition to lay. My own pair of these birds are apparently in as good health as ever.

It is true that the ruffed grouse are propagated like the aphides, and that one generation of males is good for several succeeding generations of females. I can hardly believe it, yet I have been trying since last February to obtain a live male ruffed grouse, and I cannot succeed in my attempt. Perhaps some reader of the FOREST AND STREAM can tell how it can be done, or better still, can do it. J. B. B.

TOLEDO, Ohio, Aug. 29.

WATER BIRDS OF NOVA SCOTIA—III.

BY J. MATTHEW JONES.

FAM. GRACULIDÆ.

Gen. Graculus, Linn.

1. Cormorant (*G. carbo*).—Very common. Breeds on the coast.

2. Double-crested Cormorant (*G. dilophus*).—Rare.

FAM. TACHYPETIDÆ.

Gen. Tachypetes, Viele.

1. Frigate Bird (*T. aquilus*).—Accidental. Only one specimen has been obtained; taken after a violent northerly gale some few years ago.

FAM. PHAETHONTIDÆ.

Gen. Phaethon, Linn.

1. Tropic Bird (*P. flavirostris*).—Accidental. One example only has occurred. It was taken at Shubenacadia after the heavy gale of Sept. 6, 1870, and is now in the Halifax Museum.

FAM. LARIDÆ.

Gen. Stercorarius, Briss.

1. Pomarine Jaeger (*S. pomatorhinus*).—Very rare. One was shot at Digby, on the Bay of Fundy shore, after the heavy gale of Oct. 4, 1869, by M. W. Gilpin.

Gen. Larus, Linn.

1. Glaucous Gull (*L. glaucus*).—Not uncommon.

2. White-winged Gull (*L. leucopterus*).—Not common.

3. Great Black-backed Gull (*L. marinus*).—Common. It breeds on some of the islands near shore on our Atlantic coast, generally choosing trees to make its nest in, but when they are absent it will take to the cliffs. It also breeds on islands in fresh-water lakes near the sea.

4. Herring Gull (*L. argentatus*).—Our common gull. This appears to be the only species of sea gull that follows the course of the St. Lawrence through the great lakes to Lake Superior, where it also breeds. It has been observed as far north as Fort Churchill, Hudson's Bay.

5. Ring-billed Gull (*L. delawarensis*).—Not common.

6. Ivory Gull (*L. eburneus*).—Extremely rare. A specimen was observed in Halifax harbor about 1849, by the enthusiastic ornithologist, Lieut. I. W. Wedderburn, of the 42d Royal Highlanders, and is, we believe, the only instance on record of its having been seen in the Province.

7. Kittiwake (*L. tridactylus*).—Very common. Breeds on almost all the little islands which dot the surface of our bays and harbors, as well as those which skirt our coast line.

8. Bonaparte's Gull (*L. philadelphia*).—Common. It is known on the coast as the "mackerel gull." Although so abundant, especially on their southerly migration in October, it has rarely been observed in full plumage.

Gen. Sterna, Linn.

1. Caspian Tern (*S. caspia*).—Rare. A few specimens occur occasionally. One was shot at Cole Harbor in the spring of 1883, and another in November, 1884, at the same place, which is now in Mr. Down's collection, a remarkably fine specimen.

2. Common Tern (*S. hirundo*).—Very common. Breeds on most of the islands in our bays and harbors, and on the banks of the mainland facing the sea, also at Sable Island in great numbers.

3. Arctic Tern (*S. macroura*).—Very common. It is known on the coast as the "steering gull." Breeds on the grassy islets in bays and harbors in company with the preceding species, laying its eggs in a shallow depression of the soil on the slope of a bank, the nest, if it can be called such, consisting merely of a few bits of dead grass.

4. Least Tern (*S. superciliaris*).—Rare. Mr. Downs procured a specimen in September, 1879.

5. Roseate Tern (*S. paradisea*).—Very rare. Only one specimen obtained about 1868, and was some time ago in the collection of Mr. John Rone, of Halifax.

FAM. PROCELLARIDÆ.

Gen. Procellaria, Linn.

1. Stormy Petrel (*P. pelagica*).—Rare.

Gen. Oceanites, Keys and Blas.

1. Wilson's Petrel (*O. oceanica*).—Very common. The following graphic account of the haunts and habits of this bird emanated from the pen of our esteemed friend, the Rev. John Ambrose, M. A., rector of St. Margaret's Bay, a parish lying on our Atlantic seaboard:

"Having heard that petrels were in the habit of breeding on Green Island, I visited that place on the 28th day of June, 1860. The island is situated at a distance of about ten miles out to sea, off the mouth of Chester Bay, and having no harbor or inlet of any kind, can be approached only in calm weather and when the sea is smooth. The best landing place is in a sort of nook in the rocks on the northeast side of the island. I had been informed that the puffin was also in the habit of breeding there, but when I landed not a bird was to be seen but some terns and mackerel gulls flying overhead, while the whole island under foot was perforated and undermined by the petrels. I first took a tour all around the grassy edge of the cliffs to look for gull's eggs. I found two dozen of the tern's eggs, and the men who rowed my boat found eight dozen. Then commenced the search for petrel's eggs. Tearing up the turf with my hands and following the little galleries with my fingers, I soon secured four and a half dozen of the eggs, and two of the parent birds as specimens. I could have obtained almost any number of the eggs and every parent bird therewith, as the poor little things cower back into their holes, making not the slightest noise or resistance while they behold the robbery of their property and the destruction of their dwellings. In no instance except one did I find more than one egg in a nest, and in that there were but two; and yet some of the birds were hatching, as some of the eggs contained the embryo, with its head and body so far developed as to clearly identify the species.

"The smell of the bird is at first very offensive, and so strong that we easily perceived it at a distance of two miles from the island to windward. A gentle air from the northeast often carries this odor to Peggy's Cove, a distance of about fifteen miles. This smell, which can also be perceived on the gull species, and which is something akin to the odor of the ram and goat among quadrupeds, belongs in a peculiar manner to the petrel and its egg, and is particularly perceptible in the dark brown oily fluid which, seemingly in self-defense, these birds squirt from their bills.

"These petrels are nocturnal in their habits—at least during their residence on our shores; as, like the owl, they are never seen abroad in daylight, except in dull, foggy weather. It was just sunrise when we landed on Green Island, and although we had seen several petrels flying about the boat during the night, and at dawn of day on our passage, yet on the island not one was to be seen; all were underground, where at first you could hear their twitterings like the squeaking of mice, while seemingly arranging about nests and accommodations; but soon after sunrise they became entirely silent, at least so far as the screaming of the gulls, which was always about the same, would allow you to judge.

"On taking a petrel out of its nest, it would not at first, on being set down, attempt to fly, but would endeavor to dig and shuffle its way down into one of the broken holes. Most of the nests seemed to be old ones newly fitted up, and I found several such where the birds had brought quite a sprinkling of fresh dirt out to the surface. The galleries run in zigzags parallel with the surface and at an average depth of about six inches. In making their nests in the angles of their galleries, the birds take care to have at least two ways of access to the surface, perhaps lest one should be trampled in by heavier animals than themselves, as instinct is always equal to chronic necessity. Each nest is merely a little recess on the ride of the galleries, so that the incomer or fugitive need not disturb her neighbors. The nest itself is composed of a very little firm dry grass and is always scrupulously clean.

"In digging their holes these birds use the bill for a pick-axe and throw the loose dirt behind them very rapidly with their webbed and shovel-like feet, kicking with each foot alternately, and wallowing and pressing along, as I could see by setting one, just taken out into the light, at the edge of one of the broken holes before she had sufficiently recovered her sight and scattered faculties to fly away.

"Sometimes in spring and autumn a very heavy gale drives these petrels inland, where they are occasionally found lying in the fields, unable to fly. Mr. Richard Daubin, of Peggy's Cove, informs me that his family, one morning in the month of June, found a petrel on the mantelpiece in the kitchen, which they thought could not have entered the house otherwise than by the chimney during the night. Mr. Daubin laughingly adds that on the previous day he had brought a large number of petrel's eggs from Green Island, and supposes the bird had arrogated to herself the 'right of search.' If, however, the sense of smell is more keen in the lower animals than in man, and if the odor of the birds can be perceived by the people of Peggy's Cove when the wind is fair from Green Island, is it not within the bounds of possibility that a smaller quantity of this scent could be traced by the bird, perhaps flying in the neighborhood of the house in which the eggs were deposited?

"After the foregoing visit to Green Island, having found the opinion very widely prevalent among our fishermen that the petrel hibernates on that lonely spot, I made a second visit to the place, in a schooner owned by Mr. William Crooks, of Peggy's Cove, on the first day of March, 1861. The sea being smooth, we landed on the island at sunrise, provided with a crowbar and an old axe, with which we soon broke up several holes, but found no birds, and only one addled egg, a sad memento of love's labor lost in the previous summer. This widely-spread opinion concerning the hibernation of the petrel may, therefore, be safely classed with the ancient and kindred myth regarding the winter quarters of the swallow. It is remarkable that so many respectable persons had assured me that the birds remain in their holes in a torpid state all winter, and that they themselves had dug them out in very cold weather. But as the petrel does remain until November, and the flocks commence to return about the beginning of April, I conclude that some stragglers or early birds may for a short space remain behind or precede the main body, and that such were the individuals secured by my informants. Indeed, a man from Great Tancook Island, who saw me digging, assured me that he had dug petrels out of the ground on 'Ironbound Island,' near Tancook, in the month of February.*

"I am convinced that the habit of our petrels is to spend the months of December, January and February somewhere south of our coast, and the greater part of that time at sea, near the edge of the Gulf Stream. Our Peggy's Cove bankers see them about thirty miles beyond off to the southward, about the end of March, on their first trip for codfish. Several of our fishermen who have sailed to and from the West Indies in the winter, inform me that they never fail to see myriads of those birds during winter in and about the Gulf Stream. They are to be found again in their burrows on Green Island about the middle or latter part of April."

Gen. Puffinus, Briss.

1. Cinereous Shearwater (*P. kuhlii*).—Rarely observed in shore but not uncommon some miles out at sea. It is known to the fishermen on the banks as the "hagdown."

FAM. COLYMBIDÆ.

Gen. Colymbus, Linn.

1. Great Northern Diver (*C. torquatus*) "Loon."—Very common. Breeds on islands in the inland lakes; nearly all of which are tenanted by a pair of these birds during summer.

2. Red-throated Diver (*C. septentrionalis*).—Common.

FAM. PODICIPIDÆ.

Gen. Podiceps, Lath.

1. Crested Grebe* (*P. cristatus*).—Very rare. Mr. Egan has a specimen of the young in his collection.

2. Red-necked Grebe (*P. griseigena*).—Inserted on the authority of Lieut. Wedderburn, who stated it to be "very rare."

3. Horned Grebe (*P. cornutus*).—Very rare. Male and female specimens have passed through Mr. Egan's hands.

Gen. Podilymbus, Less.

1. Dabchick (*P. podiceps*).—Not uncommon. Frequents the lakes in the vicinity of the coast in summer.

FAM. ALCIDÆ.

Gen. Utamania, Leach.

1. Razor-billed Auk (*U. torda*).—Common. Known on the coast as the "tinker."

Gen. Fratercula, Briss.

1. Puffin (*F. arcticus*).—Common. Known on the coast as the "parrot."

*It would be interesting to have this specimen submitted to Mr. Ridgway for examination.

Gen. Mergulus, Coues.

1. Dovekie (*M. alle*).—Very common off the coast. It is known to the fishermen as the "bull bird." Capt. McClintock states that this was the only species of bird that stayed at their winter quarters at Melville Bay, lat. 75° N., during the dreary Arctic night when the sun made no appearance above the horizon from Nov. 1 to Dec. 31.

Gen. Uria, Briss.

1. Black Guillemot (*U. grylle*).—Common. Known to the fishermen as the "sea pigeon."

Gen. Lomvia, Brandt.

1. Common Guillemot (*L. troile*).—Very common. Known as the "murre."

*Dead birds of the past year, no doubt.—J. M. J.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Two beavers (*Castor fiber canadensis*), one punctated agouti (*Dasyprocta punctata*), one prairie dog (*Cynomes ludovicianus*), one red fox (*Vulpes fulvus*), one robin (*Turdus migratorius*), one Whitney's owl (*Micrathene whitneyi*), one great horned owl (*Bubo virginianus*), one turkey vulture (*Cathartes aura*), three box tortoises (*Cistudo clausa*), five alligators (*Alligator mississippiensis*) and one copperhead snake (*Ancistrodon contortrix*).

IT IS APPRECIATED.

Editor Forest and Stream:

I want to indorse most heartily what was said editorially in your last week's issue about the cleanliness of the FOREST AND STREAM. Those old-time "sporting" papers!—I suppose they still exist—as full of dam(n)s as Mill River, and redolent of whisky and running over with "cussedness" generally. To get at something pleasant or instructive in either gunning or fishing, or travel and adventure by land or sea, one had to wade through columns of chaff—perhaps the English word "rot" would be better. Well, that style of paper never crossed my threshold, and if they still exist you can't prove it by me. But week in and week out, almost with the regularity of clockwork, on Saturday comes the FOREST AND STREAM, and in the evening when the lamps are lit the paper is opened and the articles judged to be of interest to the "best of her sex" and the other members of the household are read aloud, and other articles more adapted to interest the male animal are perused in silence by the head of the house; and so the hours pass pleasantly away, and at last the paper is finished, with no bad aftertaste or regret, unless it be that it was not twice as long. After it has been read through it is loaned to a neighbor's boy, and subsequently finds its way to the plains of Dakota into a family of boys who can shoot and fish and yet be young gentlemen.

HIGHLAND PARK, Ill., Sept. 1. HARRY HUNTER.

Game Bag and Gun.

Address all communications to the Forest and Stream Publishing Co.

THE CHOICE OF GUNS.—IV.

A FULL-CHOKED gun is one so bored as to throw the charge of shot as close together as possible; a modified choke is one that shoots less close than a full-choke, and a cylinder is, strictly speaking, one not choked at all but of the same width of bore from muzzle to chamber.

The choke consists of a constriction of the muzzle. There are several methods of accomplishing the same result, such, for example, as the "jug choke," the "muzzle choke," the "taper choke" and the "multiply choke;" but the principle of all is the same—all are modifications of the same system.

The cheapest and poorest is the "jug choke," which is accomplished by making the barrels a true cylinder and then boring them out .01 or .02-inch in depth, beginning from 4 to 6 inches, and ending from ½ to 1 inch from the muzzle. This is the method usually adopted by gunmakers when they "re bore guns to make them shoot hard and close," and it often produces good results. It is especially adapted to muzzle-loading guns, as the wad may fit down tight on the charge.

The "muzzle choke" is usually adopted by American makers, and is pretty generally regarded as equal to any other system. The barrel is a cylinder from the mouth of the chamber to within ½ to 1 inch of the muzzle, where it is suddenly tapered down from .005 to .03 of an inch smaller.

The "taper choke" is perhaps the best of all, especially for heavy shooting at long range. As its name implies, the barrel is gradually constricted from chamber to muzzle until the desired degree of choke is attained. Some makers combine the "taper" and "jug" choke, and claim therefore improved shooting.

The "multiply choke," as I understand it, consists in effect of two or more "jug" chokes; one near the muzzle, following it a short cylinder, and then another and longer "jug choke."

Mr. Greener says that "a 12-gauge cylinder gun loaded with 1⅛ ounces (270 pellets to the ounce) by weight of No. 6 chilled shot, fired at a target 30 inches in diameter at 40 yards, will make a pattern of 100 to 120; a modified choke 140 to 180; a full choke 180 to 220."

Roughly estimating it, a cylinder makes a target of, say 33⅓ per cent.; a modified choke, say 50 per cent., and a full choke, say 75 per cent. of the charge at a similar target. But guns shooting so close as the last estimate are rare indeed.

I have recently read in another paper some articles calling attention to the defective boring of some American choke-bored guns, and stating that the diameter of the bore was sometimes greater than it should be. The articles in question suggested as a test the pushing of a wad corresponding in number with the gauge of the gun, through the barrels; if it fits tight all the way from the mouth of the chamber, the gun is bored small enough; if it drops part of the way down toward the muzzle, the gun is bored too large, and will not shoot well. The suggestion is a good one, and there is no special fault to find with the test suggested, but only one side of the question is suggested by the above summary of the discussion.

The Parker guns are all bored one size larger than any other make of American guns, and as a rule they are strong shooting guns; but Parker Bros. recommend the use of a 10 wad in a 12 gun, and an 8 wad in a 10 gun, which of course is correct, brass shells being used; and they also recommend the use of wads a size larger than the number of the shell in paper shells. A gun can be bored, and a great many are bored, too small the entire length of the barrel, giving great recoil and less penetration. A gun ought to be bored so that a wad corresponding in number with the gauge of the gun will fit snugly all the way, but not so that a 12 wad in a 12 gun will give the best attainable results, but so that a 9 wad in a 10 shell and a 11 wad in a 12 shell will give the best results. If a man wants to use a smaller wad than will load well and shoot best in a 10 or 12 gun, he should get a smaller gun, for if there is any advantage in a 10 or a 12 over a 14, he loses it when he has it bored too small.

In a properly-bored 12-gauge gun, a 12 wad will fit snugly all the length of the barrel, and a 12 wad is large enough for ordinary shooting; but increased penetration will be obtained by using wads a size larger, and so of the other bores.

As above intimated, my preference is for the "taper choke." The gun should be bored largest just at the mouth of the chamber and gradually contracted to the muzzle; but the contraction should be more sudden from within six to eight inches of the muzzle.

Many sportsmen seem to forget that the gun that makes the best display at a target (that is best for trap-shooting, or for heavy long-range shooting) is by no means the best gun for field use. I have owned at least one gun that was almost useless in the field because of its excessive close shooting. It was like shooting a large-bore rifle; at short range quails were literally smashed—reduced to a pulp and rendered unfit for food—if squarely hit. I sold this gun to a trap shooter, and have no doubt he found it just the thing for his business.

For general use I prefer a 12-gauge to have the right, or first barrel, a medium modified choke, and the left a full, but not the closest choke. Loaded with three drachms of powder and an ounce and an eighth of No. 8 shot, of New York standard size, 399 to the ounce, such a gun will make a pattern of something like 200 to 225 with the right, and 275 to 300 with the left barrel fired at a target 30 inches in diameter 40 yards distant. Properly bored, the penetration of such barrels will be all that any sportsman could desire; the right barrel will shoot at 15 or 20 yards without tearing the game and yet be good up to 30 or 40 yards, and the left barrel will shoot as far and as hard as any 12-gauge gun.

If the gun is of smaller bore—16 or 14-gauge—I prefer to have the right barrel a true cylinder and the left a modified choke; and some sportsmen prefer to have a 12-gauge field gun so bored. Indeed, where the gun is to be used exclusively for quail and similar game, I myself prefer the cylinder and modified choke to the modified and full choke; but for a 12-gauge gun for general shooting, my preference is as above expressed.

In selecting a gun for field use it should be remembered that ninety nine out of every hundred quail that are killed at all are killed inside of forty yards, and that quite a large majority are killed within half that distance. For the possibility of making an occasional long shot, do not get a gun with both barrels so close that it will be useless at short distances

Even distribution, regularity of pattern, coupled with first-class penetration, are the main things to be considered. As much spread of shot as is consistent with good penetrating power, provided the pattern is not so wide that game birds may escape between the pellets, is not only allowable, but desirable. If, however, you should find your gun to shoot too close, you can, in some measure, overcome this fault by your method of loading.

In selecting your gun by its shooting, do not rely implicity upon the maker's statements as to its performances recorded on the tag accompanying the gun. It is a hard saying, but nevertheless a true one, that not one gun in ten can be made to shoot up to the tag. I have tried several of different makes and have barely found one that I thought performed according to the tag. The patterns recorded on the tags are not the average patterns, but are the best single targets which can be selected from an indefinite number. And I have been told that some of these wonderfully close targets are made at shorter range and with smaller powder charges than the tag says; but I do not believe any of the best American or foreign makers would record a deliberate lie on the tag, whatever a certain class of makers may do.

In targeting your gun let the same shots count for both pattern and penetration; for while, on the one hand, it would be of no service to ascertain how close your gun could be made to throw the shot if they possessed no killing power, it would, on the other hand, be equally futile to know that immense force could be imparted to the pellets if they flew so wildly that the chances of hitting a bird were reduced to the minimum. One or two shots will not be sufficient to ascertain the shooting qualities of your gun, but a dozen or two shots must be fired from each barrel with different charges and at different distances. But if after repeated trials you find your gun to shoot satisfactorily at forty yards, you may be pretty sure it will shoot well up to the extent of its range. It is well, however, to try it at different and longer distances, up to seventy-five yards, beyond which it is hardly necessary to go, save as mere matter of curiosity.

By these repeated trials, at various distances and with various charges, you will, by carefully noting both pattern and penetration, be enabled to arrive at a just and accurate knowledge of your gun's capacity and, at the same time, ascertain the charges most suitable for it.

If you have none of the prepared targets or penetration wads you can make a fairly good target out of heavy brown paper. Take a sufficient quantity, some thirty or forty sheets, cut it into squares of about ten inches and fasten in the center of a thirty-inch sheet of paper, with a nail, to a board, a barn, or other suitable surface. If you have not the paper conveniently at hand you may utilize a "Congressional Record" or "Patent Office Report." I have found these public documents better to shoot at than to read. Remove the backs from the books and fasten up as already shown. By counting the number of pages or sheets penetrated, the number of pellets inside the smaller and larger targets respectively, by observing whether the distribution of the shot is uniform and regular or patchy and irregular, and, in case of uncertainty or inexperience, by comparing the targets with those of a gun which shoots satisfactorily, you may readily ascertain whether your gun shoots to your notion.

It is a common belief that the penetration of a full choke gun is superior to the penetration of a modified choke, but in repeated tests I have been able to discover no difference, and I do not believe a full choke superior in this respect to a properly bored modified choke gun. Between guns of different weight equally well bored, with the same charge, the difference of penetration is in favor of the heavier gun; the difference is slight, but perceptible. And the same gun will show better penetration in the hands of a heavy man than in the hands of a light one.

If the gun does not exceed 8 or 8½ pounds weight it should not be larger than 12-bore, for better results and more comfortable shooting can be had with a 12-bore of this weight than a still larger bore of the same weight. And up to 9 pounds I have been able to discover no material difference between the 10 and 12 bores, for the reason that a 12 bore will handle with effect any charge that can be used in a 10-bore of less than about 9 pounds weight.

It is a little out of place, but not improper, here to say that any sized shot may be safely used in any well-bored gun, no matter how close the choke; provided that in using buckshot they be first chambered in the muzzle of the gun, and only that size used that will properly chamber in the muzzle.

You cannot overestimate the importance of having your gun fit you. If the stock is too long it is difficult and inconvenient to reach the trigger; if too short a backward motion is necessary to enable you to pull the trigger; if too straight the muzzle of the gun will be too much elevated and you will overshoot; if too crooked the muzzle will be too much depressed and you will undershoot. In any case, ease, dexterity and accuracy of shooting are greatly interfered with and impaired.

Gun stocks range from about 13½ to about 15 inches in length, and the drop or crook at butt varies from 1½ or 2 to 4 inches. A stock 15x4 inches is very long and crooked, while 13½x2 is very short and straight.

If you are a tall man with long arms and neck, you will require a gun with long and crooked stock. If you are of short stature, with correspondingly short arms and neck, you will need a short, straight stock. If you are neither tall nor short, but between the two, a medium stock will fit you. In other words, the shape of the shooter determines the shape of the stock.

Some gun dealers—not all of them, I am glad to be able to say—will tell you that the shape of the stock is a matter of little concern; that a stock a little too long or a little too short, a little too straight or a little too crooked, will suit you best. It is amazing to see how different dealers will "exactly fit" a man with guns of entirely different shapes, and how the same dealer will make the same gun fit a dozen men of dissimilar shapes. In this respect they are not unlike the Hebrew dealer in ready-made clothing, who will have his customer try on a coat, and who, after grabbing up a handful of surplus cloth in the back, will swear by all the prophets it is "shoost a fit."

A gun fits when the stock is just long enough for you to reach the front trigger easily and comfortably, and not so short as to require any backward motion of the arm or body in changing your finger from the front to the rear trigger; when it comes up level, so that, without any raising or lowering of the muzzle, without any inconvenient twisting of the neck or elevation of the butt of the gun above the hollow of the shoulder, you can instantly throw it on an object. You should be able, naturally and without any noticeable effort at taking aim, to bring the gun to bear on a stationary object at the very moment the heel-plate touches your shoulder. The ease with which this is done should approach that with which you point your dexter finger at an object. In trying a gun to see if it fits, do not endeavor to adapt the eye or adjust your position to the gun; this you may do, and this the dealer in ready-made guns may endeavor to have you do; but remember that the gun is to fit you, and not you the gun. If the gun does not "come up right" do not take it.

If you have not a number of guns to select from, one of the best methods of ascertaining whether the stock is of the proper length is the following: Take a gun that nearly fits you, or if you cannot get one take any gun, and for convenience of handling, remove the barrels from the stock; bend the elbow of the right arm so that the forearm shall be at right angles with the upper arm, while the upper arm is held closely to the side; take the stock in your right hand and place the butt-plate firmly and perpendicularly against the upper arm inside the elbow, and allow the forefinger, with the hand naturally and easily placed, to fall on the front trigger. If the forefinger, about one-third bent, so falls that you can easily pull that trigger, and by slipping the finger to the rear trigger can draw that one without any awkward or cramping movement, and without any change in the position of the arm, the stock is of the right length. If the forefinger goes naturally beyond the front trigger, or behind it, by just so much is the stock too long or too short.

To ascertain the length of the stock, measure from the center of the butt-plate to the center of the front trigger, with the hammers on full cock. If the stock you are trying is too long or too short, the distance from the center of the butt-plate to the point at which the front trigger should be to make the stock the right length, as shown by your trial, will be the length of stock you want.

To find how much drop or crook a stock should have to fit you, use a hammerless, or a low hammer gun, or a gun with the hammers removed if the hammers are high. Hold the gun naturally, as you would in the field; some say with the left arm well extended, and so I think is the better and easier way in the field, but this may not be convenient to you, and so, I say, throw the gun up naturally, comfortably and quickly, and, without any effort at taking aim, allow the cheek to come to the stock and glance along the barrels. If the sight is on a line with the breech, and no part of the top rib is visible, but only the whole of the sight shows above the breech, the drop is right. But try this several times to make sure. If, however, a part of the rib is visible, the stock is too straight; if the sight is either wholly or partly invisible, the stock is too crooked. If too straight, take some square bits of pasteboard, and with a rubber band such as is used for filing papers, fasten them one at a time on the top rib at the extreme breech end of the barrels, and, as you add a bit of pasteboard, continue to test as before, until you have found the exact crook. If the stock is too crooked proceed in the same way, except that the pasteboard must be fastened at the other extreme of the top rib. When you have found a fit, put it to other tests. Take deliberate aim at stationary objects above, below and on a line with your head; throw the gun up quickly and see if the sight continues to appear to be at the breech; throw it on a mark with both eyes open, then close the left eye and see if your aim is point blank; aim several times at a small object on a line with your head and some twenty yards away, and when you have located it in your mind, bring the gun up with both eyes closed, and while holding it in position, open the right eye and see if you are on the mark; try it in any other way that may occur to you, and if you have ascertained the drop with absolute correctness, the result will always be the same.

To measure the drop, lay the gun bottom upward, with the bits of pasteboard on it, if it has been necessary to use them, on a smooth, level table, taking care that the hammers are cocked or removed and that the sight is allowed to go beyond the edge of the table, and carefully measure to the sixteenth of an inch, the distance from the edge of the extreme butt to the surface of the table. This gives the "drop at butt." The distance from the "comb" (the elevation of the stock just back of the grip) to the table will give the drop at cheek.

Now, in my judgment, the drop at comb (or cheek) is properly ascertainable by the ascertainment of the drop just forward of comb. The drop at this point I deem of even more importance to the proper fit and easy handling of a gun than the drop at butt. If the drop at wrist—just forward of comb—is sufficient, you can comfortably and effectively use a straighter stock than you would otherwise be able to use. Indeed, without pretending to speak authoritatively, my judgment is that American sportsmen usually use stocks with too much drop or crook at butt and not enough at the point just in front of the comb. I am over six feet in height, and formerly deemed 3½ inches drop at butt just the thing for me; but by having guns made with more drop forward of comb, and less at butt, I found that 3 inches drop at butt was amply sufficient, and I am not now so sure that 2¾ would not be sufficient. The drop at comb should not be more than is absolutely necessary; for by having the comb high enough, you get four points of holding—the shoulder, the cheek against the stock, and the hands, and perhaps the best of all these is the pressure of the cheek and stock.

The drop just forward of comb should be as deep as possible, so as to keep the right hand grasping the stock out of the way of the eye in sighting, and so that in case of recoil, your hand will not knock your nose off. According to my notions, the drop in front of comb should not be more than one-half an inch less than the drop at butt; that is, supposing the drop at butt to be 3 inches, the drop forward of comb should be 2½ inches, or 2 7-16 inches at least. This would give the drop at comb 2 inches, which would be about right. The stock should have a good high comb, measuring 7-16 to ½ an inch.

It is hardly necessary to go at length into my reasons for the views above expressed. I invite the attention of my brethren to the subject, and hope they will report their views through the columns of this paper. I am confident they will find that the English have not been so far wrong in using so much straighter stocks than are used in this country, and that proper drop forward of comb will in great measure give the results that Americans have sought by increasing the drop at butt. With proper drop at the point forward of comb, and a good comb, a stock much straighter can be conveniently used than most sportsmen are in the habit of using. For quick work, the straighter stock will be found to possess advantages over the crookeder one. And it is observable that the gun with the straight stock will appear to "feel better," "handle better," and possess that "indescribable something" so often attributed to English guns at the expense of the reputation of American makers. The very straight stocks of the English guns have, to a certain extent at least, given them the reputation of possessing that "exquisite distribution of weight" which, it is said, is always

lacking in the American guns, which, as a rule, have crookeder stocks.

And I am inclined to think that American sportsmen use stocks too short for them, as a rule. The crook of the stock is often blamed for what is really due to its length. My observation is that a stock 14½ inches long (Greener's standard length) will suit the majority of sportsmen. The American standard—so far as any standard exists—seems to be 14 inches in length, which is a little too short for the great majority of shooters. My judgment is that a man can best use the longest and straightest stock which he can handle comfortably.

I ought to have said before that a "straight-edge" laid along the rib and extending to the butt is more accurate than laying the gun on a table to ascertain measurements; but I suggested the latter because usually most convenient. If the gun used to ascertain the measurements has a rib which is sunk between the barrels, a "straight-edge" is indispensable.

The weight of the gun should be well between the hands and within the last foot of the breech. The gun must not be "muzzle-heavy," causing you to undershoot, nor too heavy at the butt, causing the gun to hang heavy in the hands. This "balance" is a matter of great importance; but no exact rules can be laid down, for men's tastes and needs differ in this matter to a slight extent at least. The gun must "feel right" in your hands, and must not hang so awkwardly that it requires an effort on your part to handle it.

AH-PE.

A RIFLE TEST ON SQUIRRELS.

SEPTEMBER is here once more, and the crack and crash of the rifle and shotgun resound through the land. Monday, the last day of August, found my old friend Jack and your humble servant aboard of an outward bound train, armed and equipped with our rifles and "duffle," ready for an interview with the gray squirrels. Our destination was our old hunting ground in Central New Hampshire, which we arrived at, after jumping the track once and getting a pretty thorough shaking up. Jack and I have been at practice with our .22 cal. rifles at short range all summer, and just to make it a little interesting, we agreed to let the one that made the poorest score pay for all the cartridges that were used. I trust that you will not charge me with egotism when I state that I have paid for one case of .22 short, and I begin to realize that we do not get seventy-five and ten off the list as we used to. Jack carried a repeating rifle of .32-caliber, with which, he told me, he could cut a squirrel's head in the tallest tree every fair shot. I also have a rifle of the same kind, and if I should happen to hit a squirrel with it I should consider it an accident and not worth mentioning.

On the way to our hunting ground Jack remarked that Smith, our grocer, had just received a fresh lot of cigars, and that seven dollars would buy a box of one hundred. "Now," said he, "I propose that every squirrel that is not hit in the head shall call for one cigar as a fine. Every one that is missed calls for two, while every one that is barked off clean shall be credited two." "Very well," I replied, "just as you say, you have made me pay for the cartridges and now I suppose I shall have to pay this bill too." We had engaged quarters with an old acquaintance, so we were not long in getting settled after our arrival. Thinking we would like to take a stroll, toward night we went to a grove of oaks (of which I have spoken in a former communication) and found that although rather early the squirrels were working the trees in fine style; and after sitting down and keeping quiet a few minutes we heard a slight noise overhead, and the next instant a fine large fellow with a tremendous great brush whisked around the trunk of the tree and looked down at us with his big bright eyes as if to ask us if his murder was being premeditated. Several red ones as well as chipmunks also put in an appearance, and as we took our way homeward Jack remarked that "the indications were, in his estimation, very promising for a good morning's work, weather permitting."

Before retiring for the night Jack suggested that as "we were to start early, it might be a good idea to have things in readiness," and after filling his brier root and remarking that he would not mind "having one of those cigars now," he pulled his repeater from its case and commenced to stuff it with cartridges. Judge of his consternation when from my canvas cover, instead of a repeater, there was a 9lb. 30in.-barrel muzzleloader, carrying 100 round balls to the pound, or about .35-bore. Next a hickory swab stick and a string of cotton flannel wipers. Wiping out the barrel carefully with the hammer at half-cock, I noticed a peculiar look about Jack (who was smoking like a locomotive just after the fireman has stuffed the fire box with "Cumberland"), and after I had turned in the charge of powder from the flask, placed the small circular patch of Scotch Holland linen and flat-pointed slug in the muzzle ready for the guide and plunger, Jack found his speech once more and said he: "Look here, are you going to use that thing on this trip?" "Certainly," I replied, "I have nothing else with me." "Well, are you not a half century or so behind the times?" "Perhaps so," I replied, "but as you know I have modern arms at home." "Yes," he responded, "and if you had been level-headed you would have brought one of your breechloaders. Why, it will take you a week to load that thing. What is it anyway, one that Noah had in the ark?" "Oh no," I replied, "it is one of my own make, and as you see bears the date of 1885." After examining it he praised the workmanship altogether too much, but the one great fault with it was he said, "an old-fashioned way of loading that had been discarded years ago."

We turned in early to dream of the gray squirrels, etc., but before long Jack said, "Look hear, let's make that cigar trade include red squirrels as well as gray ones." "All right," I replied, and the next thing I heard was, "Come, boys, it's past four o'clock, and those graybacks are waiting for you." We were soon out of bed, and after a dip in water out of the cold corner of a forty-foot well, we felt as though we had been well repaid already for our journey from the hot dusty city. After a good substantial breakfast we started for the woods and arrived at the squirrel ground just at the right time, for it was still pretty dark in the woods. We each took our position as per agreement, with the understanding that we were not to shoot toward each other and were not to speak, but at a signal from the whistle the one blowing would go to the other.

Sitting down on a stone I waited a few minutes, and soon I hear one up in an oak over toward Jack. Then he turns and runs along a limb toward me. Now he goes down the trunk of the tree and whisks out of sight. I am afraid I have the "buck fever" a little, but soon cool off. Ah, my fine fellow, there you are, as pretty a shot as one could ask for. The leaves are very thick yet, and I do not know as I can see well enough, but I raise the rifle and through the large aperture of the Lyman sight I catch the bronzed bead of the Beach fore sight. Can I bark him off and earn my two cigars? No, he is too high up. A sharp crack follows and he comes to the ground with the top of his head missing. I have hardly time to wipe out the rifle and load before another one shows up in nearly the same place. I can see him distinctly, and he little dreams what is in store for him. He runs up on the trunk of an oak about twenty-five feet from the ground, there turns squarely around, and stops with his head toward the ground. A bullet strikes the tree just beneath the bark directly under his fore feet, and he goes whirling through the air and strikes the ground with a thud, and not a bullet mark on him.

I wait a few minutes and then scalp another, when a whistle from Jack announces his coming. "Are you doing much in here?" he queries. I pointed with my wiping rod to the three squirrels on the ground. "Why," said he, "I cannot see the first thing through my sights. I have seen several grays out there, but I could not sight them because the leaves are so thick and the sun is not up yet." "Well, Jack," I asked, "are you not a half century behind the times with your old-fashioned notch sights? If you will use sights like mine you can see to shoot your rifle in the woods as well as a shotgun." I suggested that he take his stand near the edge of the woods, where he could get more light, and we sat down once more to watch. In a few minutes I hear Jack's repeater begin to repeat, and four or five shots in quick succession tell me plainly that it does not "take a week to load that thing." "I've got him," Jack yelled. "I can see better out here."

The sun is up now and all nature seems to be alive. There has been very little or no frost, and with the exception of a few discolored leaves and ferns the woods have the appearance of midsummer. The sun creeps slowly up; the light improves and the sport begins in good earnest. The chattering of red squirrels, the barking of grays and the squeak of the little chipmunk, all help to swell the chorus to the sharp crack of the rifles. I am enjoying the sport hugely and am in the best condition. Pure country air, good wholesome farmer's food, and I am not cursed with bad whisky. The warm blood is bounding through my veins and I feel like a boy again, or like a prisoner set at liberty.

We remained in the grove until past 2 o'clock and then we began to think of something to satisfy the inner man and started for the house. We counted the spoils and Jack had two grays and four red ones to show for fourteen empty shells, and three only were hit fairly in the head. Your humble servant had (I dislike to tell it, but it would spoil the story if I did not) seven grays and three red ones, six were hit in the head, one in the neck and three were barked off clean, the concussion killing them as dead as a stone.

"Well," said Jack, "you have stolen a march on me this time; and now, my dear sir, will you please explain if you can tell why this is thus?"

"Yes, Jack," I replied, "I think I can. In the first place you are younger than I am, your eyesight is better than mine, and you are a better shot than I am, and, all things being equal, you can beat me at rifle shooting, whether at game or at the target. But this rifle I have been at work on at odd jobs all summer, and it has been made especially for this occasion. While you have been extolling the merits of the breechloader for accuracy, you knew nothing of the perfection of a good muzzleloader at short range. While a good breechloader with a patched bullet and shells carefully loaded is a splendid weapon, it cannot equal a good muzzleloader. While a poorly-made or badly-handled muzzleloader is bad enough, it can be no worse than the miserable rifles that are turned out by some of the factories, and are offered to us at retail for from $15 to $25 each, and what is lacking in the rifles is made up in the quality of the cartridges. I have found cartridges with no bullets in them, with only half a charge of powder, and in almost all conditions. I have made breechloaders that would shoot well enough to satisfy most sportsmen at any game, but for absolute precision I will use a muzzleloader every time. Secondly, you could not see your game distinctly in the woods at this season through your notch and bead sights. Get a good rifle and put a Lyman rear sight and almost any open bead sight on the muzzle, and you will astonish yourself in the difference it will make in your shooting."

"Well, yes," Jack responded, "perhaps so, but if I can do no better I will go back to the shotgun, but no old fagy muzzle-loading rifle for me, no I thank you."

Jack was convicted but not converted, and as we made our way to the house he said that he would get even with me yet. The next morning we shouldered our 10-bore breechloaders and gave the grouse a trial, of which I will tell you in my next. I omitted to state that I fired ten shots only at the squirrels.

IRON RAMROD.

SOMERVILLE, Mass.

NEW ENGLAND GAME.

THE interest in bird shooting in this section is greater than ever before. With the gun and ammunition dealers, trade has seldom been better. The sale of loaded cartridges has been very large for a week. This means bird shooting, but thus far the bags have been very small. Two noted gunners were questioned yesterday. They agreed in the idea that grouse in the towns not far from Boston are quite plenty, but remarkably shy. One of these gentlemen came across a couple of noted shots yesterday, brothers, one of whom hits a penny tossed in the air with a .32-cal. rifle three times out of five. They are crack wing-shots. They killed last year over one hundred partridges apiece. But so far this season their score has been almost nothing. They have seen the birds, but they take to wing long before the near approach of the hunter. The testimony of the sportsmen is that the grouse grow more and more wild each year. Their lying to the dog grows worse and worse. The markets have seen but very few partridge as yet, and woodcock have been scarce in the stalls where they have been quite plenty on former seasons. Some of the best gunners claim that the remarkably wet weather has scattered them to the uplands.

One or two letters from good grouse sections in Maine mention only very small bags, and the birds scarce. That State is being overrun with gunners this year, as well as last. Where shall the sportsman find room and game? There is a good deal of indignation felt among the pot and market hunters here concerning New Hampshire's non-exportation game law. They have been in the habit of boarding morning trains and going over into New Hampshire, returning the second evening with well-filled bags. It is understood that the new law will prohibit their bringing the birds out of the State, the same as in Maine.

One more terrible accident with a shot gun must be chronicled. The son of Mr. Morton, a Boston merchant, well-known in the fruit and oil trade, 17 years old, was on his vacation in the western part of this State. In getting over a fence one day last week his gun was discharged and the contents entered the young man's chest and passed upward and backward through the right lung, lodging near and breaking the backbone. He must have put the breech of his gun down, holding on to the upper end of the barrels, and the cocked weapon was discharged by some twig against the triggers. Truly our education is at fault. A gun is a dangerous thing; so is a precipice; yet who thinks of walking off it? Neither is there the least possible chance of harm from the gun, if one never, udner any circumstances, allows the muzzle to be turned toward his own body. A man or boy in his senses will not walk off a precipice in broad daylight. It is a matter of natural education. Why not train every boy to keep the muzzle of his gun away from himself and everybody else. There is just as much sense in seizing a razor by the blade with the thumb over the edge, as to seize a gun by the muzzle. It should be beaten into every boy's understanding, word by word: Never, under any conditions, allow the muzzle of a gun to be pointed toward your own body or that of any other person.

SPECIAL.

BOSTON, Mass., Sept. 7.

Ipswich seems almost deserted this year. Small birds are very scarce and have been all the season. Whipple, of Hamilton, got some black breasters and some uplands lately. Lewistone, of Ipswich, got eleven summers and a winter in two shots. Jim Lord, of Ipswich, got four uplands on Great Neck. One flock of coots recently seen in Squaw Bay. Next month they should be plenty. Harry Procter recently got some birds at Palmer's Pond, Swampscott. He saw a fine bunch of black breasters but they were shy. Partridge season opened very tame. Woodcock are scarce, though I hear two Boston gentlemen got twenty-nine at Sharon, Mass., lately. If this be true they had rare good luck. I think there was some shooting at Chatham last week as I saw doughbirds and jack curlew that were shot there. Perhaps October may afford better luck. Rail shooting should be in order by the 10th, as the tides then run high.

X. Y. Z.

SALEM, Mass., Sept. 7.

BOW VALLEY GAME.

THE close season for grouse, partridge, pheasants, prairie chickens, swans, ducks, geese and widgeons ended on the 15th inst, and as prairie chickens are unusually plentiful they are being bagged in great numbers. Last summer, in this district, was an exceptionally wet one, more rain fell from June to September than was precipitated during several seasons together. The present summer has been dry but not to an extreme. Occasional rain showers have furnished sufficient moisture for grass and crops. The heavy rains of last year destroyed an immense number of wildfowl eggs and the effects were visible in the scarcity of the smaller variety of birds.

So far, of the kinds of wildfowl named, I have seen no pheasants, though the ordinance for protection of game mentions these with the more common varieties. I may in this exception include the widgeon, as I understand he is not an inhabitant of these parts.

The laws for the local government of the District of Alberta, and in fact for the whole of the Canadian northwest territory are made by the Northwest Council, which is a partly elective and partly crown nominated. Its *locus in quo* is Regina, the capital of the entire territory. These laws are known by the more familiar and American term of ordinances, and they relate to all matters not essentially Federal or Dominion in character.

The Council meets once a year as a legislature and performs its functions without the ostentation which generally accompanies the proceedings of the Provincial Local Legislature of the Canadian Dominion. In 1883 this Council passed an ordinance for the protection of game in the Northwest Territory. Of course by the word game is meant everything wild in the shape of life except fishes, and our own species. The protection of fish from piscatorial vandals is left to the Dominion authorities, the same as in other portions of the Dominion. The ordinance contains about twenty clauses, and it is, I think, a good measure, but like all legislation of a similar character, it is rather in its operation than in its existence by which it should be judged.

The ordinance provides that elk, moose, caribou, antelope, deer, or their fawn, or hare must not be hunted or killed between the first of February and the first of September in any year. The close season for plover and snipe is between the 15th of May and the 1st of August. None of the kind I have mentioned, except the wavy must be killed or taken at any time by means of any rope, snare, spring cage, net, or trap of any kind, and no engine for such purpose shall be set or constructed in whole or in part.

The forbidden period for otter, beaver or fishes is between the first day of May and the first of October, and the period for muskrat is between the 15th of May and the 1st of November.

The enforcement of these laws is left to guardians, who are appointed by the Lieutenant-Governor in Council. These guardians have the power of constables, and they may appoint deputies. They are authorized to seize all animals or birds mentioned, or parts of them, in the possession or in the custody of any person during the forbidden period. The offender may be brought before a justice of the peace and the property confiscated in whole or in part. The animals or birds confiscated become the property of the guardian; but of course if the person charged shows that the animals or birds have been killed in the open season or have been sent from any place outside the Territories, there is no confiscation. Possession of any animal or bird by any person in the close season, except in certain cases, is deemed to be *prima facie* evidence that the same has been illegally taken. Guardians are empowered to open any case or receptacle in which he has reason to believe that game taken or killed is concealed. Every offense against any of the provisions of the ordinance is punishable, in addition to confiscation of the animal or bird, by a fine not exceeding $50 and not less than $5, and it is recoverable summarily before a justice of the peace or stipendary magistrate. Half of this penalty goes to the informer and the balance forms part of the general fund of the Territory. In default of immediate payment the offender must be imprisoned in the common jail of the district where the offense was committed for a period not exceeding two months. An appeal from the decision of a justice of the peace is allowed, to a stipendary magistrate, and prosecution is barred after six months from the time at which the offense alleged was committed.

The requirements for scientific purposes are met by a

clause which empowers the Lieut.-Governor to give permission to this end. There is another clause and an important one too, in a sparsely settled district like this, which protects the hungry traveler. This clause permits him to kill game and hypothecate eggs enough for his own use. The provisions of the ordinance applies to Indians as well as whites, but the country twenty miles north of the main Saskatchewan River and the north branch thereof is exempt from the operations of the ordinance.

The advent of the Canadian Pacific Railway and the disappearance of the buffalo from the benches and valleys of this region are coeval. With the exception of the whitened skulls and bones scattered over the prairies, and the seamed trails, there is nothing left to remind the traveler that along these benches and through these valleys the shaggy monster "roamed and roared." A few tame ones in the penitentiary grounds of Manitoba are all that remains of the great herds that a few years ago roamed over the prairie waste of British North America. But this is not new or news. There are no moose in Southern Alberta, but in the northern portion of the district north of the north branch of the Saskatchewan these animals are numerous. Their home is the great forest which begins in the latitude of Edmonton, 54° 20', and stretches far beyond the height of land which forms the divide of the Arctic water slope. In this sub-Arctic district the moose wanders without much interference even from the Indians.

Antelope, red deer, black and cinnamon bears, and the mountain sheep are the large game of this immediate district. The first-named are frequently seen in the Cyyress Hills country, a district wooded with the cypress, whence it takes its name, and so cut up with ravines and hills that it was feared during the recent rebellion that the hostile Indians would flee to these hunting grounds, and if they had done so they could have stood off ten thousand troops. What the lava beds were to the Modocs, so would have been the Cypress Hills to the Crees or Blackfeet against the common enemy, the whites. It was not to be wondered at, then, that Major Stewart with a body of one hundred and fifty cowboys held the approaches to this excellent cover. The Cypress Hills country is a portion of the great Milk River district, which stretches from Fort Assiniboine north, and just the country for antelope and the deer variety. It is, therefore, not often that local sportsman can get a pot at these animals, but he is more likely to succeed in the Cypress Hills than in any other part of the Northwest that I know of.

The black bear—and the cinnamon occasionally—is often met with in the foothills of the Rockies, but the capture of a grizzly or even the sight of one in these parts is a rare thing.

The Rocky Mountains to the reader is inseparably connected with grizzlies and the American tiger, but in this latitude there appear to be very few of these savages. Whether they have been driven off, or whether they have more favorite haunts than in the valley of the Bow, I am unable to say, but I am inclined to think the latter is most likely. One of the latest grizzly captures in this vicinity was that made a couple of years ago by the Rev. John McDougall, the well-known missionary who has spent many years in this country. I have seen the claws of Rev. Mr. McDougall's quarry, and any one who doubts the dreadful feats which they can accomplish with their claws should just take a peep at these iron-plated rakers. No sausage mill can do its work more effectively than can these leviathan paws. They crush, lacerate and growl at the same time.

The fox is seldom seen in these foothills, but the wolf and coyote are dwellers under the shadows of the great icy caves which tower thousands of feet above. Both are patiently waiting the advent of the thousands of sheep which the enterprising stock raiser is introducing into the country, and which in a few years will cover the fields, for the adaptability of this country for sheep-raising is now no longer a matter to be questioned.

Rabbits are a sure crop. Last year they overran everything in the foothills, and were snared and shot by the thousands. Their numbers are such as to make them a nuisance even to the housewife. GEO. B. ELLIOTT.

CALGARY, Alto, August, 1885.

BUSINESS AND PLEASURE.

ABOUT the 10th of September, 1884, I boarded the northern bound train on the Omaha, St. Paul, Minneapolis and Chicago R. R. at Tekamah with my English setter Heck, and my 10-bore gun. The rain poured down incessantly without any promise of let up, until about 5 o'clock P. M. But I was going up into Cedar county, Neb., after cattle instead of on a chicken hunt, so I was thinking very little of any great amount of sport. We arrived at Hartington, the terminus of the Hartington branch of the railroad, about 6 P. M. Having engaged a buggy and driver, 6 o'clock next morning we started out northwest from Hartington to see some cattle. About two miles from town, in the Bow Valley, I let Heck out of the buggy as we neared a fine stubble field, and driving around the field on the edge of the grass, we had only gone a few rods when old Heck sniffed the air as if he scented some birds. We drove up to him, I got my Baker in shape, and stepped out. By this time the old dog was standing as if carved out of marble. I pushed him along with my knee a few feet, when up went two fine prairie chickens. A few seconds, grace was given to let the chickens get a fair start, when there were two quick, sharp reports from the gun, and directly two fine chickens lay lifeless upon the sod. Heck very cautiously proceeded to fetch in his birds. He picked up and started in with it, but when about half way to me straightened out on another fine point with the dead bird in his mouth. I stood for a second and up went another bird, whang went the gun, and a third chicken fell to the earth with the thud that delights the sportsman on the discharge of his field piece. I stood almost in my tracks and shot eight fine birds from this covey inside of ten minutes, and each bird was brought to me by my faithful dog. What is there more exhilarating?

Our road left the fields and stretched out over the sand knolls and ridges from this on from twelve to fourteen miles; we found a few lone cock on the ridges and these I bagged. About 10 o'clock we arrived at our place of business, which was something quite of another character. I completed a bargain with the man on the cattle and we sat down to a fine dinner about 1 o'clock. The cattle were to be delivered at Hartington the next day ready for me to load and start home with the following morning. We hooked up and started for Hartington about 3 o'clock in the afternoon. I took the dog in the buggy the first eight or ten miles, as the sun had been shining hot all day and the sand ridges were dry and barren. About 5 o'clock we came down into a fine valley, where there was a delicious spring of water which our road passed close by. I let my dog out to get some water; he ran to the spring, took a good drink and turned around to start for a hunt, when he came to a dead stand not ten feet from the spring and close to the roadside. I was not long in getting to his side, when up went three fine chickens, two of which turned their toes up in quick succession. I bagged in a short time from this covey thirteen, only letting two escape. I thought this would do for one day, so I put up the dog and chickens, got in the buggy and drove to town in time for supper at the Hartington House, and the next morning had chicken on toast. I was very busy for about forty minutes. In the forenoon I arranged for cars to ship the cattle. My brother came in from the Southwest, where he had purchased some feeding steers, and about 4 o'clock in the afternoon we procured a livery and started out to meet his bunch of cattle that were being driven in.

Southwest of Hartington about six miles on the South Bow Creek we found fine chicken ground. I bagged forty-two chickens in less than two hours, killing one full grown chicken at eighty good full length paces. We drove back to town, found our cattle all in and in good stock yards, so we partook of a prairie chicken supper at the hotel; the next morning loaded our cattle, eleven car loads in all, and had a good run down home, where we arrived about 5 o'clock P. M.

CHILLED SHOT.

DEER IN THE ADIRONDACKS.

Editor Forest and Stream:

We take it for granted that all readers of the FOREST AND STREAM are interested in the working of the new deer law in the Adirondacks. Questions like these will be asked: Is the law popular? Is it observed and enforced? Will it work to preserve deer? These queries were in our mind as we went into the woods late in July, and we tried, by observation and inquiry, to answer these questions, at least to our own satisfaction. We give the result.

First, is the new law popular? Yes and no. With all true sportsmen who love only lawful legitimate sport, and who desire the preservation of game, the present law is popular, and by these it is vigorously sustained. Beyond this we have not seen any evidence of popularity. With that large class of tourists who go into the woods hoping they may kill a deer, caring little how, and caring less whether it be by lawful or unlawful means, this, with all other restrictive laws, is not popular, and is observed only when fear of getting caught exceeds their desire to kill. With the guides the law prohibiting hounding is decidedly unpopular, and this is the important class to be considered, for it lies almost wholly with the guides whether the law shall be observed, or whether game shall be preserved in the Adirondacks or not. The cause of this unpopularity is easily found. In the first place every guide owns one or more dogs. They are valuable dogs, family favorites, and they have kept them a whole year for the autumn's hunting. The dogs are on their hands and they are out of pocket for their keeping. It is natural that their feelings should be aroused against a law which brings to them disappointment and pecuniary loss. In the second place, for the present, the law, if enforced, lessens the number of autumn hunters, and so takes money out of the pockets of the guides. For it is well-known that, from the beginning of cold September nights until the leaves have fallen and have become wet by frosts and rain, it is very difficult to get deer except with the help of hounds. Heretofore large hunting parties have gone in who have engaged a number of guides with their dogs for a hunt. Besides the regular daily wages of the guide, his dog, if it brought in the deer, usually won the hide and a handsome fee. The guides fear, with reason, that they will lose this income. Moreover, a good many of them honestly think the law unwise, to put it mildly, they maintaining that not one race in ten is successful, that there is little killing compared with the amount of hounding, and that the majority of deer killed before dogs are bucks. All of which is partially true, and yet from their inference we disagree entirely. Many races are unsuccessful, yet a good deal of observation leads me to believe that the majority of the killing each year for five years has been done before dogs. We know of one small section where twenty-four (24) deer were killed last fall before dogs, and this year, in consequence, it was very difficult to find a deer there with a jack. We know also of a party which has been known to go—twenty-four hunters and twenty-five dogs—surround a lake, let loose the dogs, and clean the country of its game. These are unusual instances, we hope, yet they happened not ten miles apart. We believe that were the present law observed the deer would increase very rapidly.

But is it observed? To this second inquiry we answer again yes and no. In one part of the woods the law is both observed by the guides and enforced by the wardens. In this section a sportsman owns his dog at peril. If the truth was spoken to us, he won't do it the second time, if it is known. In another large section dogs are being used, not as much as last year, but as much as the guides dare to use them. In this section it is hard work to get deer without them. Campers want venison, sportsmen want to kill deer, the guides have dogs, and not having any quick consciences, by consent they use them.

There was a report going about among the hotels when we came out that our chief executive, the one man who of all others should respect and observe law, was hunting with dogs on the Saranac waters. We don't know that the report was true, but true or false it was enough to kill every scruple which disturbed the conscience of any guide. It was said with reason, "If President Cleveland can break the law I can, and when the wardens put him through and make him pay his fines, I'll walk up and pay mine."

Will the new law preserve deer? Yes. The law is and will be broken. Every game law is broken to some degree. This one may be in some places almost a dead letter, but even there it will work to preserve game. In other places it will reduce the killing fifty per cent. In spite of the present attitude of the guides and the seeming reason to some of their objections to the law, the law exists and its penalty hangs over the head of every transgressor, and he knows it. Any man who breaks the law is liable to be caught. The law is enacted. We want to see it faithfully tried. And we believe its faithful observance will be to the interest of every guide. He may lose a dog and a few dollars in fees this year. He will more than make it up in the years to come if in regions where a deer is now rarely seen, they again become plenty. So much, the result of my observation, about the law forbidding the use of dogs.

There is another law bearing upon the increase of deer to which I want to direct the attention of the sportsmen and law makers of New York, viz., this, the law which gives as a State bounty $20 for the head of a panther. This bounty ought to be increased to $50. As it is the bounty is so small that it is no object for the guides to hunt the panther, and they are not hunted, and consequently they are increasing. Now it is estimated that a panther will destroy about one deer a week the year through. Venison is known to be their principal diet and they never fail to kill a deer when they want one. A guide who has had many years of experience in the woods told me ten cats would kill more deer in a year than all the sportsmen who come into the woods. If there are ten cats in the woods, if they feed half the time on deer, we can see that they will destroy an immense number. No one can possibly object to raising the bounty on cats as suggested, and if it should lead to the killing of one more panther a year than is now killed, that would do more to save deer than the destruction of a hundred hounds. Were the bounty raised, I have the assurance of guides that panther would be hunted. I suggest, Mr. Editor, I urge, the raising of this bounty, and I am sure every one interested in the Adirondack region will heartily support the suggestion. H. H. K.

WEST WINSTED, Conn., Sept. 1.

Editor Forest and Stream:

I know that jack-shooting is practiced to a great extent from the 1st of May and even earlier until so late as the last part of August each year in the Adirondacks, and I do not see how it is to be stopped unless the guides and hotel keepers unite and insist on it. This they are not likely to do unless they become satisfied that the game is decreasing and they will soon lose occupation on account of the scarcity of game. P.

WELLSVILLE, N. Y.

WESTERN NEW YORK.

Editor Forest and Stream:

Conflicting reports are heard in this vicinity regarding the supply of grouse in the woods of Western New York. Toward the close of August a railroad engineer who "runs" south from this city painted for me a pleasing pen picture of the numerous broods of grouse which he had seen a short time before near the Pennsylvania line. I had also heard of large families of birds nearer home, and was prepared to see them rising on all sides on favorable ground. The information was all the more agreeable from the fact that woodcock have been rather scarce this season, and the grouse is almost alone in the woods, quail being extremely scarce, and no pigeons whatever appearing. A friend, who assured me that he knew where there were some grouse and woodcock, invited me to accompany him on the 1st inst., and try to bag a few. A railroad train and a vigorous walk took us to the ground early in the day, and we were not long in the bush before G.'s pointer made game, and a woodcock was shot and retrieved. After about two hours' work we had five woodcock and two grouse. None of the long-billed birds which we put up escaped, but we left three or four grouse to be called for later in the season, when the leaves are off the dense underbrush.

On the same day, W. J. B., ex-treasurer of the State Sportsmen's Association, and his son shot five grouse. Other men who beat considerable ground, report the birds very scarce.

Robert Taugnewy, in company with some friends, is building a steamboat to be used for sporting purposes in Florida this winter. She is forty-five feet keel, and eight beam, and as the veteran boatbuilder, Sam Hingston, is constructing her hull, she is sure to be a fine craft.

The gray plover are said to have appeared on our wheat fields within a few days, but none have yet been shot by any one of my acquaintance, nor are they in the market, a place where they are usually found soon after their advent. E. R.

ROCHESTER, Sept. 6.

ON MINNESOTA PRAIRIES.

THE village of Graceville is situated in Big Stone county, Minnesota. It is a small hamlet; a dozen stores, thrice the number of houses, a church, school house and railroad depot comprise about all the buildings in the place The inhabitants of the village and of the surrounding country are mostly Irish, and are sportsmen from instinct. They enjoy a foot race or horse race, a dog fight, a boxing match, or in fact almost anything which involves a contest or will test the physical powers or courage of man or beast. In this village reside my friends B. and Major O'T., the former until recently a bachelor, with a warm place in his heart for a horse, a dog and a gun, and never quite happy unless entertaining a friend in his comfortable bachelor quarters, the latter a graduate from the British army, in which he has passed the greatest part of his life, and an enthusiast in every thing which can be even tortured into a semblance of sport; both withal are gentlemen, genial of speech, graceful in hospitality, and delightful companions in the field.

Such are my companions, when before the dawning of an autumn day, I put my gun and cartridges into the wagon and am carried outside the village to hunt—the indefinite. Our cartridges are loaded for geese, ducks, chickens, cranes and jack rabbits; our dogs will, of course, stand and retrieve, and our inclinations are toward the first animate thing which will rise before the dogs, be it fur or feather. What a charm there is in a day like this! It is the ecstacy of loafing. A boundless prairie stretches out before us, dotted with little lakes and ponds, and broken here and there with stretches of wheat fields and breaking. We feel the freedom of the sailor upon the sea; we follow no beaten track, but drift about from pond to pond, from field to field, with no restraint upon the manner of our going, guided only by the rudder of our own sweet will. We watch our dogs as, like birds of prey, they sweep the expanse of prairie, and when they find, and stiffen with excess of rapture, an answering thrill flashes over us, sending new life into veins whose sluggard course old Time with ruthless scythe has clogged with wrecks of joys grown stale and profitless.

By break of day we were stationed on a strip of land between two good-sized lakes, and soon the boom of a gun told of another feathered prize, or more likely still, of a badly-frightened family of early-rising ducks, unscathed this time, but as surely going to pot as that in a multitude of hunters one will be found who sometimes gathers from the air even the swiftly-flying denizens of our lakes and ponds. Our sport grew moderate as the sun climbed toward the zenith, so we changed our cartridges and moved slowly over the prairie, our dogs ranging away from the wagon, sometimes as far as half a mile. Several grouse fell to our guns before we stopped for lunch at high noon.

We had now lazily drifted away from Graceville westward about ten miles, and were in the vicinity of Lake Traverse, on the western boundary of Minnesota, and among fields

which are sometimes gray with geese and brant. Many flocks of geese were seen by us sitting upon the fields, and selecting a piece of stubble which had been partly burned, with toil and heat we dug two pits, in which at about 4 o'clock P. M. we disposed of ourselves and "peeled our eyes" for geese. A couple of dozen decoy geese loafed with borrowed gravity about the pits. After a half hour's waiting a waving line appeared on the horizon, and we lay low for a shot as soon as the line should resolve itself into a flock of geese and visit the vicinity of their sheet iron brethren. On they came, their discordant honks making more distracting music than a country band. We crouch within our pits until we can see the flock just over us, not three rods away, and then we give it to them right and left. The sport continues until it is quite dark, the same flock often coming twice to our decoys, so deceptive were they; and then the drive home through the cold moonlight and the silence of the prairie. This completes a day of perfect enjoyment.

The variety of sport which an autumn day on our Minnesota prairies affords is the strongest inducement possible for a sportsman to visit them. The novelty of shooting from a wagon is a thing to be enjoyed only in the West. Nowhere else is the pleasure of watching the work of the dogs so keenly felt. Their every movement is under the eye of the master, and when they find game sometimes half a mile away and stand firmly upon their point until the guns arrive, they prove their mettle in a way that tries the patience of the best of them. Prairie chickens and grouse are often raised in the same field and sometimes in the same covey.

Small lakes and sloughs are numerous and furnish breeding places for countless ducks and geese; the fleet jack rabbit is liable to dart up and away before the dogs at any moment; and the wary sandhill crane may find an innocent-looking wheat stalk conceals a hunter who prizes its succulent breast when stuffed and baked more highly than turkey or goose. A fortunate bag often contains specimens of each of the kinds of game mentioned, and all obtained with little more fatigue than that caused by a day's ride and the effort of getting in and out of the wagon. Can any country under the sun furnish better sport than this? HUNT.

ST. PAUL, Minnesota.

ILLINOIS NOTES.

SPITE of the rain, prairie chicken shooting has been good. The same can be said of woodducks. Pretty good bags are made at Fox Lake and other club grounds around Chicago, but unless this month gives us more sunshine to dry up the marshes the snipe will be badly scattered. Here on my own particular ground (the Skokie Slough) there is now two feet of water.

Fall woodcock shooting is something we know little about in this part of the country, but one evening after a most successful day at the snipe, in passing through a twenty-acre lot that had been cut over the year before and had grown up to poplar sprouts, I flushed two or three woodcock, and the next afternoon in company of a friend we beat over this lot and bagged nine, and so on for a week, getting altogether if my memory serves me right forty-nine birds. They were evidently flight birds, for we cleaned out all there were each day, and the next day there would be about as many more. This was in the month of October, and about ten years ago. The next year I tried the same ground again but found no birds, and have tried many other as likely places since, but have never again shot a woodcock in October or even found a boring.

I am glad one contributor is tackling the gun question, and fully indorse his position on the "list" and "net" prices. It is high time there should be a uniform price to all.

HARRY HUNTER.

HIGHLAND PARK, Ill., Sept. 1.

"A HUNT ON THE YAZOO."

Editor Forest and Stream:

Hunting narratives are not very edifying unless the incidents, however trivial, are at least plausible. Mr. Jackson's memory seems to be faulty about some slight matters of fact, and he is quite too sensational.

A steamboat cannot leave New Orleans in the evening (the invariable leaving time) and reach Vicksburg by breakfast next morning. In 1870 the R. E. Lee, in a race with the Natchez, for a large wager, made the fastest time on record, twenty-six hours and some minutes. The usual time for packets is forty-eight hours.

Mr. J. states that the boat "struck a snag," the only noticeable result being to spill some custard into an old gentleman's hat. It is a very serious matter for a steamboat on the Mississippi River to strike a snag. The almost invariable result is a large hole in the bottom, and then the pilot runs for shoal water, so she can settle down with as little damage as possible. There is not always time for this even. In 1881 the Florence Meyer struck a snag opposite a government camp in my charge. Having at hand a tug and barges I saved all the passengers and crew except five, who were drowned. The boat sunk in deep water in a very few minutes after she struck.

Mr. J. relates that after strolling about Vicksburg and viewing the sights, his party embarked in a skiff with two pairs of oars, and I presume a pretty good load. They reached the mouth of Big Sunflower with the "lengthening shadows" that same evening. The distance is about sixty miles. A pretty good pull up stream, against a "stiff current."

The next morning they proceeded up the river, "rowing the entire day" and going five miles further the day following. Judging from the rate of progress the first day, their "permanent camp" should have been fifty or sixty miles above the "confluence of the Yazoo and Big Sunflower." And yet Mr. J. lightly traverses that distance "one morning" to examine an Indian mound. Returning to camp, "I floated down stream, using only my paddle to guide my course." This is unintelligible, in view of the fact that camp was a considerable distance up stream. Floating with the current, he passes near enough to an alligator on shore to touch it with his paddle—supposes it to be a log until it turns over twice and sinks into the water. Alligators resemble logs to a very slight degree. They never attack canoes, at least in this country. They never "turn over," but use their legs like other quadrupeds. They are never seen on the Yazoo in the winter time—they are then hibernating at the bottom in the mud.

Mr. J. was frightened by a "Spanish tarantula." There are no tarantulas, Spanish or other kind, in the Yazoo country. At all events, I have spent the best part of twenty years in the Yazoo and Mississippi swamps, and have never seen or heard of a tarantula there or elsewhere east of the Mississippi River. I have seen plenty of them further west.

Moss does not "festoon from branch to branch." It grows straight down from the branch it is attached to. There are no "lilypads" in the Yazoo or any other river in this country, and they are not seen in the lakes in the winter time.

It seems remarkable that a party of hunters in a peaceful country should agree upon a mysterious signal to announce their approach or call for "assistance in an emergency," and that they should select "the screech of an owl." This savors of dime novel literature. It is a difficult matter to imitate the screech of an owl, and it can be heard but a short distance. Perhaps Mr. J. meant the hoot of an owl. There are great numbers of owls in that country which keep up a pretty lively hooting on their own account. Mr. J.'s party must have had a good deal of exercise chasing owls about the swamp looking for cases of "emergency."

It seems incredible that a murderer and fugitive from justice, in hiding at the mouth of the Yazoo, should follow this party some hundred miles through the wilderness to place himself in their hands, in order to find out if they were looking for him, in which latter case he intended to kill them all, send them to keep company with the fellow he had already murdered, if they were imbeciles enough to allow him to do it. Murderers in this country seldom pursue such a very sanguinary course. They have rarely been known to hunt up sheriffs' posses, and the latter never pursue a murderer by rowing after him up stream in a skiff, as he could easily walk along shore and keep out of the way. The sensation about Ball's secreted knife, the carefully loaded shotguns with fresh caps, etc., is too ridiculous for comment.

Mr. Jackson has evidently mistaken his vocation. He ough to embark in a "yellow back" enterprise. If he essays to write more hunting narratives, it is to be hoped he will treat your readers to a little common sense.

T. G. DABNEY.

MEMPHIS, Tenn., Sept. 1.

BURNING PRAIRIE CHICKEN EGGS.—The St. Louis *Republican* reports that a number of St. Louis sportsmen returned last week from trips after prairie chickens in Iowa and Minnesota. Nearly all of them are greatly disappointed with their sport, and attribute their very inferior bags to the disregard of the people of the North to their own game laws. This feeling especially applies to the Minnesota men, the Iowans being apparently offenders in a lesser degree. There are, of course, many districts in Minnesota where both townsmen and farmers assist in game preservation, but they seem to prove the rule by exception. Near Albert Lea, Fairmont Wells, Spirit Lake, Jackson, St. James, Madelia and Winnebago City, chickens have been most scarce this year, almost all of the young having been killed off by village shooters when but squeakers and incapable of any kind of flight. The birds have also suffered greatly by the reckless method of burning off the dead prairie grass each spring. This practice was introduced in Minnesota some years ago with the object of destroying the young grasshoppers as they hatched out, and in many ways it was most beneficial. If it was to be a case of either no chickens and no grasshoppers, or all chickens and all grasshoppers, it was doubtless best for the State that the grouse should go at the same time as the hoppers, but when these last had finally taken marching orders to the Gulf of Mexico, there could be no reason for the burning of the prairies at so late a period in the year as that usual for the operation at present. It is now deferred until almost all of the breeding grouse have laid, and after the burning of a prairie cooked grouse eggs are to be found in every direction. One St. Louis gentleman tells of a farmer near Spirit Lake who found no fewer than thirteen dozen eggs so spoiled by one fire last spring on one bit of his prairie.

THE OLD GUN.—Melrose, Mass.—In my father's family was an old single-barreled gun that had been changed from a flintlock to percussion cap, and was said to have done wonderful execution in the old days, but in my boyhood rust and time had left their marks upon it. Still, for the boys of the village the old gun had a mysterious charm. It was said to have been taken from the Indians by my grandfather, and certain strange figures upon it seem to confirm this. Whatever its origin, the clear response of the lock and the workmanship of the barrel showed that it did not have a plebeian birth and that it was worthy of the honorable old age that it enjoyed. Whether the wonderful stories of what it used to do were the result of its merits or of poetic imagination is hard to say. All the traditions of its wonderful powers were treasured in my boyish mind—loons killed nobody knew how far, and ducks stricken upon the far off bosom of the lake. This fatality was said to have been attained by a particular way of loading. In my days this peculiar method was a lost art and the muzzle was so badly worn that no charge could be made to kill except at short ranges. It would still "sling shot" most terribly, but not in exactly the same way as of old. What it lacked in this respect I contrived to make up in perseverance and ingenuity. It seemed to take kindly to an ounce ball, or if an ounce ball was not handy any other smaller size would do with patches enough, and many a woodchuck attested the correct adjustment of the boy and the gun. I have dwelt upon this gun because it seems now in retrospection a part of my early life. How many of your reader now amid the busy cares of life can recall the old gun of blessed memory with all the sacred associations of home clustering about it?—W.

THE PROFITABLE WOODCHUCK.—The woodchuck, usually accounted a curse by the average farmer, has proved a blessing to New Hampshire rural districts. Not long ago the Legislature of that State provided a bounty of ten cents on every woodchuck killed, the tip of the tail to count as proof. The result exceeded all anticipations. The appropriation for bounties on vermin jumped up tremendously. According to a report made by State Treasurer Carter, the bounties paid on wild animals for year ending June 1, 1877, was $727; for year ending June 1, 1878, $620; June 1, 1879, $271.20; 1880, foxes and hawks having been added, $2,155; 1881, foxes dropped, $1,491.90; 1882, $2,030.10; 1883, $3,021.90; 1884, $4,087.30; 1885, woodchucks added, $14,756.10. During the month of June last, being the first month of the present fiscal year, the bounties amounted to $2,239.97, of which nineteen-twentieths were on account of woodchucks. Woodchuck farming was rapidly advancing to be a leading industry; it paid even better than keeping summer boarders; but a sudden stop has been put to the business by the repeal of the bounty. Now the question is, what are the New Hampshire people to do with their extensive "groundhog" plant?

"QUAIL" AND "BOB WHITE."—*Editor Forest and Stream:* "Wells" borned a child and christened it "Bob White," and now "Coahoma" assumes paternity and re-christens it "partridge Bob White." Whose child is this any way? I'm sorry for "Wells," for it's hard on him. As for the term "partridge," it has been shown conclusively, I think, in your columns that it is entirely a misnomer and should be dropped. As for Bob White, he may be any sort of disreputable human who neither has wings nor lives in coveys, and as for choice of names, I had rather have quail, for I never knew a disreputable quail. In all probability he was properly named after his European conqueror, whose right to the name no one will deny. It has always been my impression that he was in shape a European quail. He don't fly across the Mediterrancan, it is true, because it is too far off. He would if he could get there. No little thing like that would dishearten an American bird. Of course the European bird is dwarfed. It dwarfs anything to live under a monarchy. Here he has expanded to the full capacity of his original quail nature and has become the full blown American quail. It is not necessary to burden him with a human name. "Coahoma" calls him "our southern partridge." Since when? Now that we have one name for our country, let us have one name for the same bird wherever found. What's the matter with "quail," anyhow? "Wells" says "Bob White," "Coahoma" says "partridge Bob White." Somebody else might say "*Ortyx virginianus*, Bob White, partridge, quail," and add "pheasant," by which name he is called in some sections of the country. Those who so call him insist that they are right. I do not claim the name quail proper because it is a local one, but because the bird, as I suppose, more nearly resembles the true quail than any other bird or Bob White. Else why the name? There is no desire on my part to "tyrannize" over anybody—I am shrinking in my disposition. However, it is in human nature to be like the man who disputed holly with his wife as to the merits of a country or city residence, he wishing the former, and being unable to agree consulted a friend who advised him to compromise. Afterward his friend asked him if it was settled, and the reply was, "Oh yes, we compromised on the country."—S.

NEW HAMPSHIRE "PRIVATE SHOOTING BILL."—An effort to make the trespass law of New Hampshire more stringent was defeated in the last Legislature. The bill was a very sensible one, but it provoked such opposition that after having been passed and sent to the Governor for his signature it was vetoed by him, and being returned to the House the veto was sustained by a vote of 148 to 14. The text of the bill was as follows: "An Act to prohibit shooting and trapping on private grounds. Be it enacted by the Senate and House of Representatives in General Court convened: Sec. 1. When the owner or occupant of inclosed lands conspicuously posts on the same a notice that shooting or trapping thereon is prohibited, if a person thereafter willfully enters upon such lands without the permission of said owner or occupant, and shoots or sets traps thereon, or for the purpose of shooting or trapping, the owner or occupant may recover against such person, in an action of trespass for such entry, a penalty of ten dollars in addition to the damages sustained thereby. Sec. 2. The notice mentioned in the preceding section shall be given by erecting and maintaining sign-boards not less than two feet long by one foot wide, in at least two conspicuous places on the premises, which notices shall have appended the name of the owner or occupant. Any person who breaks down, defaces or injures such sign-board shall be fined ten dollars. Sec. 3. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed."

DEER AND CROPS.—Woodford's, Me., Sept. 3.—*Editor Forest and Stream:* I inclose item from a Machias (Me.) paper, which says: "One of our suburban farmers is sorely afflicted this season by the depredations of what he denominates Gov. Robie's neat stock. The wild deer are destroying his crops, and as he is not allowed to kill them, he has requested the Governor to see to it that no more damage is done by them." It would appear that the suburbs of the city of Machias are being devastated by deer, and I would suggest that the police force be increased so as to protect the crops. I am pleased to learn that our "deer laws" are proving so effective, and do not fear that Gov. Robie will give the "suburban farmer" the right to kill "his neat stock," or the State's neat stock, or his neighbor's neat stock, whether it be deer or horse or cow. The "suburban farmer" ought to have that trespassing deer impounded, and Gov. Robie should pay the bill. Many years since a deer jumped through a door (or window) of a store in the city of Bangor, ran to the other end of the store and jumped into a large mirror. I do not remember if he suffered the death penalty for his crime or not, but am quite sure that neither the city of Bangor nor her injured citizen petitioned the Governor of the State for protection against such savage attacks of wild beasts. This citizen of Machias must not murder the neatest stock the State owns, unless the stock bites him.—MAC.

LASSOING A BEAR.—Clarendon, Tex., Aug. 29.—As W. H. Oliver was riding over the range of which he is foreman in company with one of the boys, they discovered a black bear to which they immediately gave chase. They soon overtook his bearship, who showed fight. Neither having any firearms, they availed themselves of the only weapons they had, their "riatas." Mr. Oliver succeeded in catching the bear by the neck, and his friend secured a hold by one hind foot. They stretched him out and leaving the horse to hold him, cut his throat with a pocket knife. The bear will probably weigh 200 pounds and is in fine order. Plover are very plentiful and very fat, several fine bags have been made. The last time I was out twenty-six of them fell victims to my Spencer. I shall keep a record of outings and birds bagged, also shells used. I do not expect to equal some of those that have been given in FOREST AND STREAM, but get as many as any one who shoots with me.—PERITO.

PROTECTED BY A NEWSPAPER.—Baltimore, Aug. 25.—Near Oakland, Md., last Wednesday, Lieuts. Chisholm and Jamison, of the Garrett Guards, were out bird hunting. They had but recently separated when Jamison raised a bird. He fired, and besides bringing the quail down lodged the largest portion of his charge in the body of his friend Chisholm, who was concealed from view by the underbrush. The shot pierced Chisholm's clothing, but fortunately most of them lodged in a copy of the *Evening Star*, which the lieutenant was carrying in the inside breast pocket of his coat. The folded paper was literally filled with shot and prevented serious injury being done to Chisholm. One stray shot lodged under one eye, inflicting a painful wound, but his breast was saved by the *Star*.—*Washington Star.*

PHILADELPHIA NOTES.—Sept. 5.—The West Jersey Game Protective Society is again this year showing great activity in the preservation of the game in that State. Two additional detectives, Jacob Cowan and George Hannold, of Gloucester City, have been appointed to aid in enforcing the laws, and stringent measures will be taken to prevent a violation of the statutes. The society has paid out over $1,000 in rewards for hawks' heads in South Jersey, and these birds have been nearly exterminated. Only one was shot last month. Rail birds have not arrived in any great numbers and very few sportsmen have tried the marshes for them. The tides thus far since the opening of the season have been poor, and the winds blowing from the west. Reed birds are more plentiful and in good condition. No teal have arrived, but they are looked for after the first easterly storm.—HOMO.

TEXAS.—Galveston, Aug. 27.—Up to this time the weather has been so hot and the ground so dry that we have had very little sport; but after this month we will have good shooting until February. I tried a round with the doves and bay birds last week and found them plentiful, but very shy. The doves are so fat that when shot they burst open when they fall to the ground. Bay birds, such as snipe, willet, curlew, etc., are plenty, but their meat is dry and not fit for the table. Very few ducks have arrived as yet, but a norther which came last night will bring them.—RED BREAST.

PIGOU POWDER.—American sportsmen are to have an opportunity to test the famous English gunpowder known as Pigou. In response to repeated inquiries for the powder Mr. Henry C. Squires, of No. 178 Broadway, this city, has imported a stock, and advises us that it is now ready, as will be seen by a notice in our advertising columns. The powder stands very high in England, and will doubtless meet with favor among those on this side of the big pond who are very particular about their ammunition.

BUFFALO ROBES.—Soon the American bison will rank with the ichthyosaurus and the dodo. This season's shipment of robes from Wolf Point, Poplar River and Berthold—a few years ago sources of immense supply—consisted of one bale, in which were three and a half full robes, two splits and four calf skins. At Winnipeg there may be 1,000 robes in store, held over from last season, and they represent Canada's total.—*St. Paul Pioneer Press, Aug.* 19.

FORT RENO, Ind. Ter., Aug. 31.—Chickens are unusually scarce here this season, the birds being very much scattered. Think the cold spring prevented all except late broods from hatching out. Quail promise to be plenty, turkeys ditto, deer fair. The duck season will depend, to a great extent, on the fall rains. A dry fall means few ducks with us. Plover are exceptionally scarce, but very fat.—C. H. C.

MARYLAND.—Fair Hill, Cecil Co., Md.—The prospects for quail in this section are not good. There seem to be enough old birds, but I have not seen nor heard of a covey of young ones. Rabbits are plenty and squirrels very scarce.—E. S. G.

PENNSYLVANIA.—Somerset, Aug. 25.—Ruffed grouse, here called pheasants, will be very scarce here this year. A very hard winter and forest fires have brought about this result. Just in this neighborhood there are no quail or Bob Whites.—AMATEUR.

THE ST. LOUIS CONVENTION, to be held in that city Sept. 29, is attracting much attention in the West and Southwest, and the promoters anticipate a large gathering of representatives from the various sections.

Camp Fire Flickerings.

"That reminds me."

167.

ONE of the best shots of the Audubon Club of Chicago was John T. Abbey, long since gathered to his fathers. The club used to adjourn to the little suburb of Lyons on Saturday afternoons to indulge in a little trap-shooting. One day Old S., who was known to most of the club, drove by and hearing the shooting, stopped to see the fun. Now, old S. was no sportsman and had not handled a gun since boyhood, but shooting pigeons from a trap seemed to him mighty easy work. He rallied the boys a little about their want of success and allowed that he could do a great deal better himself. Some of them seeing a chance for a little fun, tipped the wink to the others and egging the old man on got him to challenge Sid K., one of the best shots of the club. Sid accepted the challenge and the match war arranged for the next Saturday, ten birds each, the loser to pay for a supper for the club. When the day arrived the club turned out in force to see the fun. Sid shot first, at old S.'s request, who "kinder wanted to see how the thing was done," and missed his bird. Then the old man was placed in position with a gun which had been selected for his use and kindly loaded for him. Meantime Geo. Abbey stepped behind a tree, gun in hand, and at the instant the old man cut loose George did the same and down tumbled the pigeon. This thing was kept up all through the match, Sid getting eight birds, the old man (George Abbey) ten, the boys meantime keeping up such a fusilade that old S. never suspected but what they fell to his gun. The whole thing furnished a world of fun to the boys, and the true inwardness of that match never dawned upon S. He got pretty well pounded up with the big loads the boys fixed for him, but that wore off in a week, and the supper was paid for by Sid; he refusing to allow the others to chip in as had been agreed upon.

HARRY HUNTER.

ILLINOIS.

Three enterprising eel-pot fishermen have been reaping a substantial harvest this summer by poisoning the sea gulls that have resorted to the bay. They watch the shoals where the birds go to feed, and then knock them out by putting small fish charged with arsenic or strychnine on the bars. The birds thus killed bring from fifty to seventy-five cents each from the feather dealers in this city. Five years ago thousands of sea birds congregated on the sand bars of Shinnecock; to-day not half a dozen can be seen. Some time ago a whale came ashore on the beach abreast of the lighthouse. When the bone and blubber were cut out the poisoners commenced operations. Hundreds of gulls and terns of all sizes hovered over the carcass of the fish one morning; by afternoon the sand and surf were covered with the dead gulls. The matter was kept quiet, and since then the business has been worked for all it was worth.—*New York Sun.*

LESTER RIVER.

IN the first few warm days that came in May amid the blustering east winds, and before the ice had melted from the rocky head lands, a hungry angler (trout hungry!) was trudging along the road leading east from Duluth, bound for this famous trout stream. Old Lake Superior shimmered and rippled in the bright sunshine, and despite the huge masses of ice floating in the bay it was truly an enchanting and a beautiful sight to a wearied and half-sick angler, who for months had been pent up amid frost and snows, and who for two summers had not wetted a line in a trout stream or creek. Plodding along mile after mile until seven of them were reckoned, the road suddenly ended at a washed-out bridge. Toward the lake shore we looked upon huge piles of ice white and glistening, but as firm as in January; though lovely to look on, especially when its scintillations dazzled even to paining the eyes, yet to a trout angler who almost longed for some of these gamy fishes, these ice-bound cliffs brought out a sense of weakness and a certain hesitancy about entering this rushing stream that lies so far below us. For the first time in many years' experience we dreaded this cold water, but the roar, as of a mighty torrent, came down the ravine and excited our curiosity, so taking up the rod we plunged into the deep thickets until we found a trail. Another moment and a mass of foaming waters leaping and tumbling over a pile of blue rocks into a whirling pool came into our range of vision. We sat down and contemplated this beautiful sight for some minutes. Down fifty feet below us these waters swirled and rushed, just broken loose from the winter's snow and ice. Though feeble-kneed and faltering we determined to climb down to the gravelly sides of the stream and try if any trout had their home in this pool.

It was a risky piece of business to one so long unused to climbing and already tired out by the long walk, but by hanging to roots and branches we slipped and tumbled, coming right side up at the bottom, rod and all. We speedily jointed this, put in reel and line, attached a new leader, leaving this to soak, while we sat down and watched for symptoms of flies upon the water. No fly! no sign of a break! only the faintest indications of a trout in the dark, boiling waters as they rushed by me. We sat on a big rock enjoying the warm sunshine, and with that inherent love for the massive, the grand, the beautiful in nature, our eyes followed the scarred lines in the rocks towering high above us. The winds sung and soughed in the pines above us, but it was in the treetops; scarce a breath came into this pool. We sat dreamy and wondering, no hum of insects, no voice of birds, no sound of hammer, no lowing of cattle; but the changeful monotone of the flood pouring over the rocks. Other scenes, other fishing days passed before the memory, until we wondered if the sun of our life was on the downward trend, and such scenes as these showed how weak one can become.

Gathering the thoughts that were straggling into our knowledge box we opened the fly-book and put on two favorites, and in a few minutes the nerve force gathered at the bidding of the will, and the flies were lightly lying out forty feet from us, at the very eddy of the falls. We did not know we could do it, but it was done, and we attempted a longer cast, but could not lay out another foot of line. There was a corner in the rocks I wanted to drop my tail fly into, and could not reach it. Into the water I plunged knee deep, made the cast and then another, succeeding in hooking a fish which from its fighting I took to be a trout. This I led into my landing net and as quickly unhooked and dashed the beastie amid the huge boulders. It was a horned dace, ugh! the wretch to thus desecrate a trout pool and violate the abode of *S. fontinalis*. A closer inspection showed me the pool was full of them.

My exercise and the excitement had warmed every drop of blood in my body, and though the water was cold I remained in it. Dropping down stream to a bend in the river below a series of riffs, we again took water at the head of a big pool, we fished carefully, often changing flies, but with no success. At times a big form seemed to roll up to the fly as it sunk below the surface, coolly examine it and turn again under the shadow of the big rocks. We determined to try bait. It was evident to the mind that some big fellows—lakers—held possession of this pool, and had driven all the small fish away. We determined to give them something they would look at. They are cannibals (we have since caught them, and found young brook trout in their throats hardly marred); so we put on a fly spoon—a miller fly—dropped it carefully into a mass of foam, allowed it to sink through, and then quietly played it. Instantly I felt the tug and struck home. I knew my fish, though I had never handled one of them before in these waters. My little rod bent and sprung, but there was no giving out, until I lifted him to the gravel at my feet, and then sat down to admire him. I do not wonder at the enthusiasm evinced by some anglers. These fresh-run trout are beautiful fish, as handsome as a salmon, yet having some of the coloring of the brook trout.

I was satisfied that trout were in this pool; so, taking off the fly I determined to try a big lake fly and sink them. Putting on an Alexandra, I again cast into a mass of foam, allowed my fly to drift down stream into it and sink. I could see nothing, but judged by the sense of feeling, I struck and missed; every time a fleck of foam came down stream I cast into it, and every time found I had a tug. Finally I struck quick and hooked, played, and landed another, the match of my first.

I worked hard for these trout, and under ordinary circumstances would condemn the use of either of these flies. The fishing with them is barbarous, and is only excusable when big trout hold a pool and drive everything out. The Alexandra is, I deem, as dangerous as a minnow, and experience has proved to me its killing powers. I know both mine whirl and spin almost as a bass spoon will.

I unjointed my rod and at once tramped off homeward, slowly and fagged out, as the electric lights of Duluth came into sight; but I was content, and determined to wait until the mosquito got in his work and the flies began to buzz ere I again visited Lester River. My string of trout would satisfy an epicure. You can imagine how a trout-hungry angler would enjoy them.

A month later the stream had run down, the sun was high in the heavens, the ping of the "skeeter" was abroad in the land, the birds had come, the trees were putting on their spring costume, nature was smiling. The same angler, with an elastic step, made the seven miles in an hour and a half, and in a few minutes had pulled on wading boots and was into the water. A belted kingfisher began scolding and chattering at me for invading his domain. Another came, and then another, until I was enjoying a free concert of not very entrancing music. They are bold and predacious, and resented in their own style the brown-coated biped waving a slender wand across the stream at them. I longed for my .22 rifle to get a specimen of these fine birds. They caught fish if I caught none, for once in a while they dash into the water within casting distance of me, and came up with a fish in their long bills.

After soaking my leader I put on two flies, a needle-eyed coachman, a Seth Green, and left a loop at the bottom for something else. I cast out across the stream and found only small ones rose at the flies. I changed many times, but failed of hooking trout. I could see them come to the surface of the water, inspect the flies and at once turn heads down. I knew what this meant, and like "Nessmuk," I adopted a ruse to beguile the trout, or I should go home with an empty creel. I had taken with me some red worms, well scoured in damp moss. I slipped into my lower loop a Kinsey hook and put on a small worm for my tail fly. I cast out carefully under the rocks and made a commotion. I saw three large trout dash for my worm and fly. Strange enough I caught on the Seth Green the largest trout of the lot. We had plenty of fun, many rises, many strikes, and the number taken with a fly was just about one-half of the whole number caught. We thought we knew something of the strange fancies of *Salvelinus*, but this action beat all our past experience. We cast for an hour without hooking a single trout; they didn't want flies; yet, as soon as I put on a worm, I began to get as many with flies as I did with my worm bait

I understand fully some of the brothers of the angle will be ready to upbraid and cry, "Out on him for an an angler!" Keep cool brothers! I love fine fishing with the best of you, and boast of as fine tackle as any of you, and use them too. But when trout are as capricious and subtle as are these Superior trout, and as John L. Stockton, known to many readers of FOREST AND STREAM, said to me years ago, "T., the trout along the north shore of Lake Superior are barbarians; you must humor their whims and fancies. When they won't take your flies, put a worm on the tail of the line, or a tip of a worm on the tail fly, and you will fetch them every time." In the remaining hour I caught sixteen as handsome fish as I ever brought to creel, some of them going over a pound weight. I turned my steps homeward, no halting footsteps or weak knees this time, but with a sturdy swinging gait.

Many times since that June afternoon, when harassed and perplexed, we have taken the implements of war and started for Lester River; we come home calm and refreshed, and a good number of trout in the creel, all of them of good size. Trout weighing two and a half pounds have been caught there this summer, and some higher than this, but these were rare fish.

I want to say a word about these north shore streams. Somehow they have been belied, and objections raised against them, principally the expense in getting to them. Some instances have come to my knowledge where parties coming from Illinois, Missouri and Kentucky have been turned aside from a trip to Duluth and the north shore by persons interested in the park region of Minnesota, telling these gentlemen that one cannot get to the streams without hiring a tug to convey fishermen to them, and you risk the chances of getting home again. This is false. The means of communication with the fishing waters are very frequent and easy. Boarding can be obtained, sweet and clean food and plenty of it, fresh milk, abundance of wild raspberries, "just slathers of them," as Uncle Dan says in "Kingfisher's" letters, and good beds. But the best way to enjoy fishing is to get a kindred spirit, hire a boat, take a tent along, some camp fixtures and a U. S. survey chart of this end of Lake Superior. The steamers running from Duluth will drop you at almost any point you may wish to stop. I wish "Kit Clarke" could be induced to come a little further up Superior and enjoy some of the finest fishing he has ever seen.

I anticipate another summer to visit Isle Royale, and though my wife and boy are my companions on these fishing trips, yet I hope to induce some gentlemen who love trout fishing to visit this lovely isle.

Of these streams nearer Duluth I will say something in the future. W. DAVID TOMLIN.

DULUTH, Minn.

RANGELEY LAKE AND BEYOND.

WE drove from Bethel to Phillips with our team sixty miles in one day the last week in August. The next day drove to Rangeley, twenty miles, and down the length of the lake, ten miles, to Mountain View House, where we left our team and crossed the carry to Mooselucmaguntic House, where we took a small boat and rowed up through Cupsuptic Lake to Billy Soule's camp on Pleasant Island, near the mouth of Cupsuptic River—a good center for fishing or hunting. Some of the largest trout are taken near this camp, and large game is abundant near by; in fact we saw tracks and roads of moose, caribou and deer within two miles of his camp. I saw lady guests at his camp, among whom was Mrs. C. H. Ottignon, late superintendent of Camp Kennebago, Indian Rock, where the famous Oquossoc Angling Club make their headquarters. Mrs. O. graciously directs camp affairs, and entertains other guests when the camp is crowded, which makes everything pleasant for all concerned. Miss Cornelia T. Crosby, of Phillips, was also among the guests. She is a reporter for some journals. Billy Soule is a son of the old original hunter, Geo. Soule, one of the first white hunters of these lakes, and he inherits much of his father's genius for the craft. Billy will guide a hunting or fishing party to sure success, and his location is as good, if not the best, for fish and game of all the lake country. His address is Indian Rock, Me.

I saw many small boats, anchored in deep water in the big lake, fishing for big trout by sinking near the bottom. Many large ones, of from three to eight pounds, are taken daily in this manner. During September trout congregate at certain points, preparatory to moving on to their spawning grounds, and will take the fly at these places all through the month. The big lake is drained down to its natural level, owing to a breakage in the dam, and we predict a good catch of trout this fall.

Large game is very abundant this season. Many bears have been killed all through the lake country, and still they ravage among the flocks of sheep on the farms near the verge of the forest. Moose, caribou and deer fill the woods.

The Mountain View House, at the outlet of Rangeley Lake,

owned and run by Mr. H. T. Kimball, is a beautiful spot, facing Baldhead Mountain, with a piece of the lake between and a wonderful growth of pretty trees cleared of underbrush all about the place. There were twenty-five guests when I was there, and we had church service on Sunday, conducted by Rev. Mr. Heath, from New Bedford. The landlord and his good wife make you feel quite at home and show you every attention. A daily stage brings the mail to Rangeley from Phillips and the little steamer brings it to Mountain View. You can also telegraph from the head of the lake.

BETHEL, Me. I. G. R.

THE MENHADEN QUESTION.

Editor Forest and Stream:

I have followed with much interest the discussion of the menhaden question as it from time to time appears in your columns, and it seems to me, as the result of actual observation in the course of much cruising along our coast, that if ten times as many steamers and men were engaged in taking these fish as are now found in their profitable pursuit, there would still be no appreciable diminishing of the supply of menhaden.

The truth is, not that too many menhaden are caught, but that they are simply frightened away from the waters near shore (which locality they at certain seasons prefer) by the constant hunt of the fishing steamers. If we enact and enforce a law preventing the fishermen from hauling their nets within one mile of land, it is my opinion that one season, or two at most, will show us more menhaden ruffling the waters of our harbors and inlets than have greeted our eyes for the past five years.

Large bluefish unquestionably do follow, kill and eat very extensively the menhaden. Striped bass and codfish do the same, when they can catch them. And wherever the menhaden go, the first named fish will follow.

The whole thing lies in a clamshell. Banish the steam fishermen to the open sea, one mile from land, and the menhaden will return to their old summer haunts, with an army of large bluefish and bass following, to catch and be caught.

ROSLYN, L. I., Sept. 7. THOMAS CLAPHAM.

THE COMING TOURNAMENT.

AT the next tournament of the National Rod and Reel Association, to be held in Central Park on Oct. 13 and 14, there is a prospect of having a change made in some of the rules, although the Committee on Rules has not yet reported. In the casting for heavy bass the following has been suggested:

NEW YORK, July 25.—Mr. Francis Endicott—Dear Sir: As president of the Rod and Reel Association, I desire to call the attention of yourself and associates to a change I would suggest in the manner of making and recording the tests of heavy and light bass casting.

The change suggested will, I think, induce numbers of gentlemen to enter and try their skill who have been kept out by the fear of making all their casts wide and of not appearing on the record. My proposition is as follows: Have a distinctly marked center line only, except such stakes as may be needed to obtain the necessary right angles. Then record the full length of each cast made, however much it may deviate from the center line. Then record the deviation in feet from the center line and deduct the deviation from the length of the cast and the balance will be to the credit of the caster. This table will show to every one just exactly what was done both in distance and in wide casting. This does away with any lane and reduces the trial to a scientific record. I would propose the casting should be done over the ground, to enable the measurements to be easily made.

I would propose, if this plan shall be adopted, that it should be made known as early as possible, that those practicing or thinking of practicing could know what to expect.

Please consider this a communication to your Association for their consideration, and oblige, yours truly,

W. H. WOOD.

GAMENESS OF THE BLACK BASSES.

Editor Forest and Stream:

Like all brother anglers the writer has been greatly interested in the discussion relative to the small and large-mouth bass. During the past ten years I have taken hundreds of either kind on rod and line, using minnows and artificial flies, and am somewhat competent to speak knowingly as to the game qualities of the fish. It may have been that being particularly favored by locality, my experience differs from others. My fishing for bass has been mostly on the St. Lawrence River, from Lake Ontario to the rapids, and on the numerous lakes and tributaries adjacent. I wish to speak a good word for the large-mouth, commonly called "Oswego bass."

Pound for pound the small-mouth excels its brother, the large-mouth, as a game fish, but in this respect only; taken in cold or deep water, the large-mouth bass, when running from two to six pounds, offers to the angler using fine tackle as good sport as could be desired. The writer has from choice angled for the large-mouth in preference to the other, principally for the reason that the former were of good size. During the past summer while fishing on a lake forming a part of the St. Lawrence River, from one side of the skiff could be taken the small-mouth of one and a half pounds, and from the other side, in the same water, large-mouths, weighing from three to five pounds. These fish were full of life and game.

The main difference between the two kinds of black bass being, aside from weight, that when struck, the large-mouth less frequently broke water, though they would sulk and fight for every inch of line with as much determination as ever shown by the small-mouth, and the angler having one on his hook had business on hand. I use a rod weighing nine ounces, but prefer one an ounce lighter, of split bamboo of first-class make, and have not as yet broken or injured one, though good luck has prevented accident several times. To give the large-mouth bass an opportunity to make its reputation as a game fish, I will be pleased to give brother fishermen any information as to where they can be taken as full of fight as any caught by OPINICON.

UTICA, N. Y., Aug. 31.

Editor Forest and Stream:

Thanks to Mr. H. P. Ufford for his kindness in giving so full a description of his bethabara rod. I arraign Ira Wood for slander in his article on the "cod-mouth" in comparing the large-mouth bass to a sucker. I don't think he has ever taken them in Minnesota lakes, clear and deep, where I have had several bass leave the water four times before landing them. To see one leap three feet into the air and throw the frog six feet when he shook himself would convert him. There is no sucker about the Minnesota large-mouth, not any. HOLLOW RIB.

HASTINGS, Iowa.

THE ENGLISH TOURNAMENT.

WE are under obligations to Mr. R B. Marston, editor of the *Fishing Gazette*, for an advance report of the fifth annual *Fishing Gazette* tournament in aid of the fund of the Anglers' Benevolent Association. We notice that our friend Thos. B. Mills, of the fishing tackle firm of William Mills & Son, 7 Warren street, New York, took part in the casting.

"In weather that was all one could wish for the tournament, which appears likely to become an annual institution, took place at the Pike and Anchor Fishery, Ponder's End, Saturday afternoon, Aug. 22. There was a fair attendance, and an average number of entries for the casting competitions; while for the peg-down match no less than eighty-five anglers entered. The spot selected for the tournament was a large field, alongside of which runs a bit of the old river Lea—one of the stretches Walton must often have fished. The ground on which the bait-casting took place left nothing to be desired; nor was there much to complain of in the fly-casting stretch on the river, until the latter began to get small by degree and unbeautifully less, in consequence of the supply being stopped by the miller, or same other spoil sport, up stream. The fly-casting took place from a platform level with the bank of the river, the latter running deep between its banks.

"The casting this year calls for no special remark, being decidedly below the average, except in a few instances. The absence of Major Traherne, Mr. Malloch, and other former competitors, was disappointing, and certainly detracted from the results, Mr. Kelson, as will be seen, easily getting his own way in the fly-casting, and evidently not casting his full cast in all cases. In the casting for accuracy and delicacy, a novel feature was introduced by Sir Randal Roberts, who set the competitors the following problem: 'You see that bit of green weed on the other side of the stream; now you are to imagine that a trout is feeding just off it, and the position you take to try for him, as well as the casting, will be considered in deciding the winner.' This competition caused some amusement, at any rate, to the spectators. One gentleman, whose casting under difficulties—viz., with a borrowed rod too heavy for his liking—was much admired, backed into the field, then squirmed along the ground on his stomach like a snake, taking advantage of a bush to cover himself from the fish. Another rather stout competitor endeavored to hide himself behind a young tree just below the fish; others got hung up in bushes; and finally Mr. Bennett won with some extremely neat casts, which not only captured the imaginary trout, but rose some actual dace just where the trout should have been. Another interesting competition was an extemporized affair, in the Nottingham style, between two expert members of the Fly Fishers' Club, who experimented with the flighty Nottingham reel for the first time. They beat all previous records. Mr. W., after making his bait describe a parabola or curve of the second order, deposited it one yard and a half from his feet; the Rev. Mr. S. evidently imagined it would be hopeless to beat this, so he described a beautiful hyperbola with the weight, and landed it three feet from his own. This little affair afforded great amusement to all the spectators, with the exception of one—the owner of the rod, who evidently feared the competitors would either kill themselves or smash his rod, and of the two catastrophes hoped it might not be the latter.

"A reference to the result of the peg-down match will show that nearly ninety anglers, most of them thoroughly expert, fished for two hours with the sublimely ridiculous result that only five of them caught fish, and that their combined take only weighed eleven and a half ounces! This match took place, not in the private fishery in the old Lea, which was not extensive enough or the results would have been very different, but along the towing path of the canalized portion of the Lea, disturbed by the passages of barges and boats. Hence, doubtless, such a small mouse out of so big a mountain."

COMPETITIONS ON WATER.

Amateur Overhand Fly-casting with Salmon Rod not exceeding 16ft. in Length.—Two prizes. Entrance fee 5s. First, Mr. Geo. M. Kelson, with a cast of 117ft.; second, Mr. R. B. Marston, 110ft.; third, Mr. W. Thomas, 99ft. 4in.; fourth, Mr. T. B. Mills, 99ft.

Amateur Overhand Fly-casting with Salmon Rod not exceeding 18ft. in Length.—Two prizes. Entrance fee 5s. First, Mr. Geo. M. Kelson, with a cast of 111ft.; second, Mr. W. Thomas, 108ft.; third, Mr. Harris, 106ft. 6in.; fourth, Mr. R. B. Marston 102ft.

Amateur Switch Fly-casting with any Salmon Rod. 6ft. only allowed behind the competitor for the rod or line to extend. Entrance fee, 5s. Two prizes. First, Mr. Geo. M. Kelson, with 17ft. 9in. rod, 102ft.; second, Mr. W. Thomas, with 18ft. rod, 96ft.

Amateur Fly-casting Competition with Single-handed Fly-rod.—Three prizes. Entrance fee, 2s. 6d. First, Mr. Geo. M. Kelson, with a cast of 81ft.; second, Mr. T B. Mills, 76ft. 6in.; third, Mr. R. B. Marston, 72ft.; fourth, Mr W. Thomas, 67ft. 6in.; fifth, Mr. E. Middleton, 67ft. 6in.; sixth, Mr. Watson, 61ft. 6in. (In this competition, Mr. Mills and Mr. Kelson, both using a split-cane rod made by Leonard, of New York, made a tie at 75 feet. In throwing off for first prize, Mr. Kelson won as above.)

Amateur Competition with Single-handed Fly-rod, in Throwing Fly with Greatest Accuracy and Lightness under Bushes.—Two prizes. Entrance fee, 2s. 6d. First, Mr. Bennett; second, Mr. R. B. Marston; third, Mr. W. Thomas; fourth, Mr. E. Middleton; fifth, Mr. T. B. Mills.

Amateur Fly-casting Competition with Double-handed Trout Fly-rod, Length 14ft.—Two prizes. Entrance fee, 2s. 6d. First, Mr. Geo. M. Kelson, with cast of 85ft. 3in.; second, Mr. R. B. Marston, 81ft.; third, Mr. W. Thomas, 79ft. 6in.

COMPETITIONS ON LAND.

Amateur Competition in Casting in the Thames Style.—Three prizes. Entrance fee, 1s. First, Mr. Hester, with a cast of 108ft.; second, Mr. Granfield, 106ft. 6in.; third, Mr. Larkins, 101ft. 3in.; fourth, Mr. Fitch, 94ft. 6in.; fifth, Mr. Hobden, 90ft.; sixth, Mr. Da Costa, wide.

Amateur Competition in Casting from Reel in Nottingham Style.—Three prizes. Entrance fee, 1s. First, Mr. Mayhew, with a cast of 138ft.; second, Mr. Hobden, 129ft.; third, Mr. Slater, 105ft.; fourth, Mr. Granfield, wide.

Amateur Competition (open to Thames and Nottingham style) in casting toward a fixed mark. The angler casting the bait nearest to the mark to take first prize; the next best cast made by another angler the second; and the third best cast by another angler to get the third prize. Three prizes. Entrance fee, 1s. The judges placed a flag at 30yds. distance; First, Mr. Slater cast within 1yd. of the mark in Nottingham style; second, Mr. Granfield within 1½yds. in Thames style; third, Mr. Powell within 1½yds. in Thames style; fourth, Mr. Fitch within 2yds. in Thames style; fifth, Mr. Hester within 2½yds. in Thames style; sixth, Mr. Foster within 2½yds. in Nottingham style; seventh, Mr. Larkins within 3yds. in Nottingham style; eighth, Mr. Mayhew within 4yds. in Thames style.

Amateur Competition in Casting in the Thames Style, each competitor to use the same rod, line, winch, and weight, which, in this instance, was 2oz. Three Prizes. Entrance fee, 1s. First, Mr. Granfield, with a cast of 139ft. 6in.; second, Mr. Thompson, 138ft.; third, Mr. Fitch, 135ft.; fourth, Mr. Stidolph, 135ft.; fifth, Mr. Hobden, 135ft. (In throwing off the tie or third prize, Mr. Fitch and Mr. Stidolph both made 129ft., Mr. Hobden, 117ft.). Sixth. Mr. Powell, with a cast of 125ft. 3in.; seventh, Mr. Evans, 117ft.; eighth, Mr. Larkins, 96ft.; ninth, Mr. Archer, 87ft.

Ledger Bait Casting toward a Fixed Mark.—Three Prizes. Entrance fee 1s. First, Mr. Granfield cast within 18in of the mark; second, Mr. Foster, 1yd. 4in.; third, Mr Slater, 2yds.; fourth, Mr. Wood, 2yds. 2in.; fifth, Mr. Mayhew, 2½yds.; sixth, Mr. Fitch, 3yds.; seventh, Mr. Parker, 4yds.; eighth, Mr. Da Costa, 4yds; ninth, Mr. Hester, 4½ yds.; tenth, Mr. Powell, 5yds; eleventh, Mr. Howes, 12yds.; twelfth, Mr. Tibbatts, wide.

Special Competition.—Two Hours' Fishing Match (Peg-down), under direction of Mr. R Murphy. Twenty valuable Prizes. Entrance fee 1s. First, Mr. Hales (Ponder's End), 2¾oz.; second, Mr. Wheeler (Waltham) 2¼ oz; third, Mr. Osborne (Hoxton Brothers), 2¼oz.; fourth, Mr. Davey (Odds and Evens), 2¼ oz.; fifth, Mr. Day (Golden Barbel), 2oz.; (eighty-five competitors).

KEEPING HELGRAMITES. — Kansas City, Mo. — *Editor Forest and Stream:* "D. T. G.'s" account of his method of keeping dobsons in your paper of Aug. 20 brings up recollections of my own experience, which may be of interest to some of your readers. I have kept helgramites or dobsons for months by the following method: I fill a tin, wooden or earthen bucket with pieces of rotten wood thoroughly saturated with water, having also about an inch of water in bottom of vessel, and during the hot months of summer and autumn renew the water and rinse and wash the decayed wood at least once a week, keeping in a cool place. By this method I kept nearly fifty alive from the close of the bass fishing season in New Hampshire last year until March following, more than six months from the time I caught them, and had I been able to have continued the experiment, have no doubt could have preserved most of them until the opening of the bass season this year. They were quite lively when I examined them in March. A few had evidently been eaten by their fellows, as I discovered from time to time the horny heads of some in the vessel, the soft part having been entirely consumed. Authorities say the transformation from pupa state to the horned corydalus (*Corydalus cornutus*) usually takes place in early summer. I have found the full grown larva as late as Nov. 1 in New Hampshire, and several feet from the water, under conditions which indicate that they had burrowed there preparatory to the transformation. Would the fact of their being disturbed and confined as I treated them last winter arrest their transformation and indefinitely prolong the pupa stage?—C. H. P.

CATFISH RISE TO THE FLY.—One year ago last spring I stocked a pond with brook trout fry and visited the pond quite frequently for several weeks after to inspect them and see what they were doing in the way of improvement. Later in the season I visited the pond to take a look at them but could not see any; could see lots of sunfish and many other kinds. I visited the pond one day this week and thought I would surely get a rise from a trout, thinking they would be large enough to rise to a fly. I attached but two flies to the leader, brown hackles, and the first cast I saw a swirl in the water, and striking quickly hooked two dace, one on either fly. I continued fishing for at least a half hour, and on making a long cast across the pond my flies had scarcely touched the water when there was a rush, and on striking I took a large catfish on the stretcher and a chub on the dropper. Did you ever hear of an angler having a like experience, and is it usual for a catfish to take the fly? I will also mention that I did not see or have a single rise from a trout; think they have all died; water is about four feet deep on an average, and fed by under current springs. Lots of moss grown up in the pond.—AH LOOK. [We have recorded several instances where catfish have taken the fly, but the instances are rare.]

LONG ISLAND COAST FISHING.—Springs, Gardiner's Bay, Long Island, Aug. 17.—But very few Spanish mackerel are caught in the pounds and nets of these bays, as the fish wisely prefer to keep in deeper, outside waters. Neither are the bluefish taken in great numbers in the pounds that line these bays from Montauk Point to the headwaters of Peconic Bay, a distance of more than forty miles; the fish chiefly caught being weakfish, porgies, flounders and butterfish. One party of my friends here have five pounds, placed in Fort Pond, Montauk, which they visit about thrice weekly, taking from two to fifteen boxes of fish at each lift. These fish are boxed up in ice and sent to New York, and the money returns are made weekly. The returns for the last three months have been very good, so I suppose fish are in good demand in Fulton Market. The sea bass fishing in these bays has been very poor this season, but in the waters of the Long Island Sound the fish have been very plentiful, and great catches have been daily made with the hook and line. But for the last two weeks, during the hot weather, the bass catch has greatly diminished, and this is owing perhaps to the heated condition of the water. The fish must have deserted the rocky shores for deeper and cooler ocean tides.—I. MCLELLAN.

NO NEED OF A VACATION.—My business prevents me taking any vacation, and it is quite as well this summer to have remained at home. I have all the same caught or "killed" a great number of bass, and that too without being away from my own kerosene oil lamp and feather bed a single night. Fifteen minutes drive from my office takes me to the liveliest, fattest, sweetest and most gamy bass I know of.—SYRACUSE.

DOWELS VS. SIMPLE FERRULES.—Cynthiana, Ky., Aug. 31.—In reading over my article on "Dowels vs. Simple Ferrules" in your issue of Aug. 27, I find that I have inadvertently used the word "tenon" instead of "mortise," wherever it occurs in my hastily-written screed. Of course "tenon" is synonymous with "dowel," though my meaning will be apparent to most readers.—J. A. HENSHALL.

PRESERVING FISH LINES.—Houston, Tex., Aug. 16.—*Editor Forest and Stream:* I noticed in your paper of July 16, an article from "Petra," giving a method for preserving fishing lines, to wit, the application of, as he terms it, Miner's Oil Company's finishing oil. What I want to know is what that means; what kind of an oil it is, or where could it be obtained? I would like to find something that will preserve a line or net in our waters here, and especially the waters of the Trinity River, as I have yet to find anything that will keep lines from rotting in this stream more than a month, let alone a year, except coal tar. That will do it, but it is miserable stuff to handle, and takes so long to dry—six months will not dry a line so it will not muss up the hands as soon as put into the water; but then, if well saturated with it, the line will last two years in the water all the time. I have used pine tar, or pitch tar, linseed oil, etc., but they will not preserve a line a month in that stream. The water of Trinity River is alkaline to such an extent that it just eats up tackle like nitric acid.—C. L. J. [The Miner's Oil Co. are at 43 Front street, New York.]

STRIPED BASS.—Buzzard's Bay, Cape Cod, Mass., Sept. 7.—*Editor Forest and Stream:* One of your correspondents complains of the absence of salt-water fishing items. Here is one: The cool, beautiful days of autumn have brought striped bass here, and with rod, large reel, 150 yards Cuttyhunk line and hook, bass weighing from 3 to 15 pounds each are now caught very frequently. The largest striped bass caught here this season weighed 38½ pounds. With the same tackle bluefish are often caught weighing from 2 to 12 pounds, and when a 10-pounder is hooked, with 100 yards of line out in the swift running tide, it is the most exciting sport imaginable, and to bring the fish to shore requires both skill and strength. No boats are required, as you fish from off the railway bridge, which is 300 yards from Parker's Hotel. Fare from New York city to this place, via Fall River steamboats, $3.90. Here, among the good, kind people of Cape Cod, here, breathing the pure, healthy, bracing air, with the ever-changing views of Buzzard's Bay spread before your eyes, is happiness, with now and then a good fish thrown in.—WILLOUGHBY.

IN CAMP AT A HORRBLE PLACE.—Gardner, Mass., Sept. 5.—The Monomonock Sporting Club, of this town, went into camp at Lake Monomonock, Rindge, N. H., to-day. Near where Nanequahunkopopoppequashanticut Brook flows into the lake the camp is located. Messrs. G. R. Pratt and S. Leone Walker are the caterers. The party includes Aaron Greenwood, J. D. Edgell, G. F. Ellsworth, L. W. Brown, Thomas Greenwood, George Nichols, C. F. Read, T. P. Perley, G. H. Newton, F. M. Greenwood, Ambrose Stevens, A. Warren, L. A. Wright, Frank Pierce, Amos Coleman, Leslie Bent and Edni Coleman, of Gardner, and Frank Nichols and Thomas Sheldon, of Fitchburg.

LARGE BLACK BASS.—A black bass weighing 4 pounds and 10 ounces was taken on Aug. 14 in No. 10 Pond, Calais, Vt., by Mr. C. G. Levison, of Brooklyn, N. Y., inventor of the "Levison" patent fly-book. He used a split bamboo rod weighing 7 ounces. Three days later the same gentleman took another black bass which weighed 5 pounds and 12 ounces, using a split bamboo rod of nine ounces. Mr. Levison has the reputation of having killed more large fish during the past five or six years than any man in Washington county, Vermont, and that some of his fish in former years brought down the scales to 5½ pounds.

THE MISCARRIED BUTT-CAP.—Casselton, Dak., Sept. 2.—*Editor Forest and Stream:* Have just received a letter from the "Chicago and New York house," of which I spoke in your issue of the 27th ult., in which they inform me that they "exchanged the butt-cap June 24, and replied to mine of July 6 upon July 9." As neither the butt-cap nor the reply came to hand, the fault must be shifted from the firm's shoulders to those of Uncle Sam. Will you please give this space, that no injustice may be done to the aforesaid firm?—H. P. UFFORD.

"KINGFISHER" has just returned from "the annual fish."

FERTILITY IN HYBRIDIZATION.

BY HON. ROBERT BARNWELL ROOSEVELT.

[From the Proceedings of the American Association for the Advancement of Science, Vol. XXXIII., Philadelphia Meeting, September, 1884.]

BEFORE entering into the gist of the matter implied by the title of this paper it may be wise to determine the true meaning of the word "hybridization." "Rare old Ben" Jonson remarks of a young lady in one of his plays that, "she's wild Irish born, sir, and a hybride." Now if that is to be the acceptation of the word "hybrid" the end of this article is reached before it is fairly commenced, for that fertility exists among the "wild Irish," and to no small degree, no one doubts who has seen the "beautiful plenty" of children in and around the cabins of "old Ireland." Indeed, under that construction, our entire American nation might be called a race of hybrids, for are we not the intermixture of representatives of the sons and daughters of the entire earth, whether born on the green sod of the "Gem of the Sea" or under the tropical sun of Africa, the "what is its," of Central America or the moon-eyed followers of Confucius? Fortunately, however, we discover a charming diversity of opinion herein as with the case of more than one other scientific problem and find a doubt and disagreement as to the very meaning and derivation of the term hybrid. By some learned authorities it is derived from "*hybrida*," Latin for monstrosity, an outrage upon or insult to nature, order, propriety and beauty. But other equally scientific writers assure us that the word is derived from the Greek, which means superior, above, improved. It is unnecessary to observe how well that definition would apply to the American nation and even "rare old Ben" may have had this interpretation in view when he printed that line as he spelled the word with an "e," making his wild Irish girl a "high bride." Something of this superiority I hope may be found in the creatures to which I am about to refer, although they will at the same time come under the more common definition of mongrel or cross between different races or families. The term race or family is not used in a purely accurate scientific sense, for hybridization even with plants has been limited to species nearly allied. With them specifical hybridism may be said not to be unusual even in a state of nature, but with living creatures it is mostly if not entirely forced, or brought about through the interference of man. The union of the wild bore with the domestic sow and of the wolf and the dog, which are more or less natural are not hybridization in the true sense of the word as the species which have thus united are admitted to be identical in their origin and only modified by domestication. The case of the lion with the tigress is too rare to be considered, and among animals we are brought practically to that of the horse and the jackass which produces our common and useful mule. That the mule is the superior of its progenitors on both sides will hardly be admitted, but both the mule and the janette with a few rare exceptions have proved themselves sterile. The law of nature throughout all terrestrial life seems to be that no mongrel should procreate, no hybrid create a new race or species, but that like the fairies when they died they were to die out of existence leaving no heirs to their fame or name. This rule holds as to the *mammalia* without an exception, and it is only when we come to another and perhaps inferior order of life that we have lately found modifications of it.

When fishculture grew from mere individual and occasional effort into a science and system, one of the possibilities which suggested itself to ingenious minds was the crossing of different species. As the entire operation of producing fertility was artificial, there was no sexual repugnance against intercourse to be overcome, the eggs of any species of female being stripped from her could be fertilized by the milt from the male of any other species. That is, the spermatozoal embryos could be brought into contact whether fertility followed or not, which at first was doubtful. The crosses made in this way under the New York State Fishery Commission have been very numerous and in some instances quite unnatural, and the results have proved equally surprising and unexpected. The first cross was that of the California salmon (*Salmo quinnat*) and the brook trout (*Salmo fontinalis*). This was in the year 1876, and the species being so closely allied fertility of the eggs and vitality of the young could almost be predicted with certainty. Then came the cross of the salmon or lake trout (*Salmo confinis*) with the brook trout, then the California trout, the *Salmo iridea* and the brook trout, and thereafter the entire range of the salmon and trout families, as far as they were within the reach of the operators, were combined in many and curious proportions. Outside of that, even more remarkable attempts were made, such as the union of the striped bass and shad, which came about by accident, utilized by intelligence. A ripe female striped bass or rockfish (*Labrax lineatus*) being caught in the nets during the course of the operations of the shad hatchery on the Hudson River, and there being no male bass to be obtained, the eggs were taken and brought into contact with the milt of the male shad (*Alosa sapidissima*). Then these eggs were placed in a box entirely by themselves, and every precaution was taken to make the experiment perfect. The eggs hatched; of that there is no question, but whether the product was the result from that impregnation, or whether it was reached by the chance contact with floating seminal animalcules from bass, or whether the young lived after they were hatched, may be regarded as still open for consideration. As there was no possibility of keeping the fry in confinement, the experiment goes no further than opening the field of study and research.

Fish do not attain sexual maturity as soon as is generally supposed, and in confinement it is probable that this period is even more prolonged. The earliest hybrids to mature their ova were the cross between the male California salmon and the female brook trout. This took place in the year 1879. They not only became gravid but ascended the spawning races as naturally as those of either distinct species and evidently with the intention of procreating. But as they deposited no eggs and did not appear to mate, an examination of them was made and it was ascertained that they were all of one sex, the entire family being females. To remedy this a number of male spawning brook trout were admitted to the same race-way; these promptly paired with the half-breed lady fish, selecting their wives as readily as they would from their own species, but although they made all the preliminary preparations, no results appeared from their union. The nests had been constructed but no eggs had been deposited in them. A further examination proved that the eggs were too large to pass the ovarian opening. When they were extruded by force, as in the stripping process, the shells were crushed and a few which were obtained by the use of the knife, a sort of modified Cæsarean operation, and were brought into contact with the milt of the trout, failed to impregnate and perished. This experiment led to the conclusion that where the male was much the larger fish, the ova might be too large for extrusion, and also that possibly under certain contingencies all of one hatching might be of a single sex. In all subsequent operations, however, the proportion of each sex has been about equal. Some of these females of the first batch of hybrids which never matured eggs, although they had not the honor of parentage, are still living, grizzled and gaunt like the proverbial old maids of the jocose story-writers, but they have never repeated the attempt to perpetuate their species, one abortive effort in that direction seeming to exhaust their aspirations for maternity.

The cross of the male brook trout and the female salmon trout, the *Salmo fontinalis* with the *Salmo confinis*, matured ova in October, 1880. There were about 72,000 eggs cast which hatched as readily as those of either parent, although it was found that a larger percentage of them could be impregnated with the milt of the male brook trout than with the milt of their own kind. The percentage of fertility was good, and the young proved to be perfectly healthy and as able to stand the struggle for existence as any of their brethren of pure strain. Upon this discovery rested the possibility of a great future for fishculture. There are qualities in each of these species which it was exceedingly desirable to combine. The *Salmo confinis* grows to a far greater size than the *Salmo fontinalis;* they are hardier, easier to hatch and handle, and more able to take care of themselves, while the brook trout are the more delicate in flavor, the more admirable as a sporting fish and will take the fly in fly-fishing, which is the crowning virtue in a fish from the angler's point of view. In the hope of reaching such a result this process of interbreeding has been kept up regularly from its inception. At the first cross one-half of the salmon trout was eliminated, their young impregnated with the milt of the male brook trout left only a quarter of the coarser parent, and then came those which were seven-eighths brook trout to one-eighth salmon trout, which is as far as we have got at the present time. The young of each of these generations show the effects of the cross, just as we have witnessed the occasional bleaching out process in this country between the children of Africa and those of colder climates. The first in descent had none of the carmine specks which are the distinguishing feature of the "speckled trout" of our brooks. In the second generation the spots began to appear, and in the last they are distinctly visible, although fewer in number than in the trout of *Sangre Azul*. Of their habits and qualities other than their growth and their flavor on the table we have had as yet no opportunity to judge. Those of the first cross have been eaten on several occasions by epicurean judges and were pronounced excellent, fully up to the reputation of either of the parents. In the year 1883 there were distributed to the brooks of the State 45,300 hybrid fry which were one-half salmon trout and one-half brook trout, and in 1884 a second planting of 79,000 three-quarter brook trout was made. Neither of these has been in the streams long enough to determine how they will act nor how they will get on when left to shift for themselves. They may go back like the fancy pigeons to their original breed or they may remain permanent or even branch out into infinite modifications. The fact remains that in this artificial way a new breed has been established, whether it is designated as a new species or not, which can be maintained by manual perpetuation forever, and another conclusion is proved that hybridism is not necessarily another word for sterility.

That the young will spawn naturally is probable, if not certain, in view of their procreative instincts when in confinement, and that they will live and grow is fully ascertained. They are in no wise like the monstrosities with two heads or two bodies which occasionally appear and that die as soon as they reach the feeding age after the umbilical sac is absorbed. The first, which were deposited in wild waters, were found in six months to have attained a growth of four and a half inches in length, equal to the growth of a brook trout in the same water for an entire year. These operations have been conducted on a sufficiently extensive scale to justify the deduction of some quite positive conclusions and have been attempted with several quite incongruous species. The first cross as we have seen was that of the *Salmo quinnat* with the *Salmo fontinalis;* the second, the *Salmo fontinalis* and the *Salmo confinis*, then the salmon trout, *Salmo confinis*, was bred with the whitefish, the *Coregonus albus*, the brook trout with the fresh-water herring, *Salmo clupeiformis*, the brook trout and the California trout, *Salmo iridea*, the shad, *Alosa sapidissima*, with the the striped bass, *Labrax lineatus*, and the shad with the salt-water herring. There are at present at the New York hatchery 10,000 breeding hybrid fish of the various modifications and during the year 1883-4 hundreds of thousands of fry were hatched. The cross of the shad with the salt-water herring appears to have lived, as the fishermen have taken them so frequently as to designate them as "Seth Green's shad;" it is possible, however, that they are all males, as those which have been examined seem to be so. While mentioning the name of the putative father of the "herring-shad," I cannot withhold the well deserved meed of praise to Mr. Seth Green and his brother, Monroe A. Green, for the intelligent and earnest interest they have taken in these experiments.

In these operations we have not only made interesting discoveries which promise benefit to the consumers and catchers of fish, but we have reserved for the world of science, that I have seen so fully represented at this meeting of the Association, a pleasure which of all others they most enjoy, the opportunity of inventing long, learned and distinguishing names for the product of our efforts. It will be their special duty to tell the world just how the mixed-up babies should be termed, whether the young of the brook trout unto the third and the fourth generation is to be the *Salmo confinis fontinalis* or *Salmo fontinalis confinis*, and whether the *fontinalis* is to be duplicated like treble x ale in the succeeding generations, and how they will distinguish such an "odd fish" as that of the intermingling of the *Alosa sapidissima* one of the *Malcropterygii* or soft-finned fishes with the *Labrax lineatus*, a prominent member of the *Acanthopterygii* or spine-finned fishes. As the trout has married the salmon and the shad has united its fate with the herring and the whitefish has taken in unholy, because artificial, wedlock the brook trout, it would seem to be impossible to determine where the limits of hybridism in fishculture may yet be found.

SALEM, 1885.

MISSOURI.—A car manufactured and fitted up for the Fish Commission of Missouri arrived the other day from Litchfield, Ill. It will not, however, be complete until a further appropriation by the Legislature doubles the number of fish boxes it contains at present.

POT LUCK FROM EXCHANGES.

This is the season in which the English sparrow masquerades on the bill of fare as a reed bird.—*Baltimore American.*

When a miner has been eaten by a grizzly, the Western people speak of him as being admitted to the b'ar.—*Yonkers Gazette.*

Every close observer knows that fishing stimulates the imagination to such an extent that thought is an impossibility.—*Memphis (Tenn.) Avalanche.*

A number of granite rocks have been found by Indians on the Snake River, Oregon, which contain impressions of deer and bear feet, and one of which has a very distinct human footprint.—*San Francisco Call.*

The Hon. William H. Harper reports that fishing in the Superior region is not as good this fall as usual. "I have been here a week," he writes, "and have drawn only one good hand in all that time."—*Chicago News.*

A Berlin paper contained an advertisement the other day promising 30 marks "to him who the person who cut off his dog's tail, which was not at all fierce, will point out, so that he can convict him before court."—*Evening Post.*

Bill Moore, a pioneer, tells the *Silver State* that the ducks are so numerous at the Sink of the Humboldt this season that they have to take turns in going on the lake, and old drakes stationed along the shore see that all have a fair show in getting to the water.—*San Francisco Call.*

We have some of the laziest negroes in the world right here in Palatka, and in summer they live on catfish and melons. We saw one of those lazy creatures the other day. He had his fishing line tied to his dog's hind leg, and when a fish would bite he would give his dog a kick.—*Palatka Herald.*

The Columbus *Enquirer* wants to exterminate worthless dogs in Georgia. If our brother will talk with Col. Tom Howard for about 10 minutes he will learn that many thousand pine woods Georgians prefer one mangy dog to a flock of sheep and a woolen factory.—*Augusta (Ga.) Chronicle.*

Last Wednesday C. W. Sanders, of Kershaw county, shot a carrier pigeon on whose right wing was printed in purple ink by a rubber stamp the following inscription: "2,012—if caught or shot, please report this number to 'Star,' 78 Cortland street, N. Y." On another feather "4." On the inside of the wing the word "Pensacola." Mr. Sanders reports that the pigeon, when shot, was flying behind some doves.—*Charleston (S. C.) News, Sept. 4*

One day last week a son of Benson J. Lossing, the historian, was riding on a mowing machine on his father's farm. In the left pocket of his overshirt was a hickory stick about four inches in length, three inches wide and an inch thick. As he was riding along a rifle ball shot by some one struck the stick and imbedded itself in it. The boy does not know from which direction the ball came nor who shot it. If the stick had not been in his pocket he would have been instantly killed. As it was he was not injured at all.—*Poughkeepsie Eagle.*

Mr. W. B. Robinson, a lumberman of Sinnemahoning, who is a guest at the City Hotel, says that Mrs. Mary Ann Jordan, who resides on the East Fork of the Sinnemahoning, in Potter county, owns a tame deer, which leaves her every winter and goes off into the woods, returning in the spring. This spring it returned bringing with it another deer, and both now roam around in the barnyard. The pet deer wears a bell hanging from its neck, and thereby escapes the guns of the hunters during its wanderings. Sometimes dogs chase it, and then it makes a dash straight for Mrs. Jordan's house, rushes in and jumps upon a bed, evidently deeming that a safe place.—*Williamsport (Pa.) Gazette.*

One of the instances of the Imperial meeting was a grand hunt at Kremsier. The Czar and the Emperor of Austria are both represented to be "splendid shots," and how these expert sportsmen exhibited their skill appears in the narration of a correspondent. Two hundred and fifty tame stags and roe deer were driven into an inclosure, where they were imprisoned by means of a net fence, while the Imperial Nimrods, assisted by nine sharpshooters, selected from their suites, banged away at the poor pent up animals. It is much as if our own Hayes should organize a prairie chicken shooting party and then arm his friends with clubs for an indiscriminate assault on his hen houses.—*New York World.*

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Sept. 29, 30 and Oct. 1, 2.—Third Annual Dog Show of the Southern Ohio Fair Association. H. Anderson, Secretary, Dayton, O.

Sept. 29, 30 and Oct. 1.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

Oct. 6, 7, 8 and 9.—Second Annual Dog Show of the Philadelphia Kennel Club, in conjunction with the Pennsylvania State Agricultural Society. E. Comfort, Secretary, Philadelphia, Pa.

Oct. 6, 7, 8 and 9.—Fourth Annual Dog Show of the Danbury Agricultural Society, S. E. Hawley, Secretary, Danbury, Conn.

Oct. 7, 8 and 9.—Dog Show of the York County Agricultural Society. Entries close Sept. 28. A. C. Krueger, Superintendent, Wrightsville, Pa.

Oct. 8 and 9.—Second Annual Dog Show of the Stafford Agricultural Society. R. S. Hicks, Secretary, Stafford Springs, Conn.

FIELD TRIALS.

Nov. 9.—Second Annual Field Trials of the Fisher's Island Club, for members only. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 9.—First Annual Trials of the Western Field Trials Association, at Abilene, Kan. Entries close Oct. 15. A. A. Whipple, Secretary, Kansas City, Mo.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

November.—Fourth Annual Trials of the Robins Island Club, Robins Island, L. I., for members only. Wm. H. Force, Secretary.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2588.**

AMERICAN KENNEL CLUB.

Editor Forest and Stream:

There will be a meeting of the Executive Committee of the American Kennel Club at Pittsburgh, Sept. 29.

G. E. OSBORN, Secretary.

BIRMINGHAM, Conn., Sept. 9.

THE SETTER STANDARD.

Editor Forest and Stream:

In reply to your invitation *in re* altering the setter standard, I have bred setters, English and Gordon, for many years. Although not known as a breeder of setters, the get of my stud dog has won first in the 18-months class at Washington and New York. Spaniels are my forte. I write as an exhibitor and breeder to say that it is not for dog show authorities to create or alter a standard, which alone pertains to breeders and exhibitors. When they move in the subject, and adopt a standard, it will then be the duty of the A. K. C. to adopt it and sustain it. J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Sept. 6.

ENGLISH KENNEL NOTES.

XXXIII.

RUMORS wild and vague have chased one another through the kennel world to discover the cause of "Lillibulero's" delaying silence. It is a simple one, if my editor or I chose to give it—but we do not. The cheap sneers of "Wildfowler" have probably been provoked by the flash of the "fierce light" that has relentlessly beaten upon him in your columns. In one of our papers I have noticed a remarkable letter called "American Plain Speaking," and signed with initials. I have no stomach for your questions of the hour, but if I have understood the guarded significance of this letter's phraseology, Rowethello has spoken—

"Clement, I love thee;
But nevermore be officer of mine."

The unstability of canine institutions has received astounding confirmation in the "ratting" of the Birmingham committee. The great Midland show was, in old-fashioned fanciers' circles, regarded with a feeling amounting to affection, with a respect that it commanded for its John Bulldoglike stand against the overt and covert opposition of its southern rival. One by one the small shows have crossed over to the Kennel Club's side of the ring, content to pipe their purchased applause at each fresh blow struck by the braggart bully of Cleveland Row. When Darlington failed to come up to time the hearts of the backers sickened, but they rallied the closer to their champion, "Old Brum." "Birmingham men," they confidently boasted, "were too well endowed with the dogged, indomitable courage that relieved the brutality of the prize rings of other days. Brum will never throw up the sponge." But the July Kennel Club's official organ has revealed the abasement of the "National Dog Show Society," Brummagen has fallen from its high estate and will now hold the bottle for another. Would that the old show ground might be closed and the ladder planted against the wall for the effacing hand of the insensible bill-sticker to post "Ichabod" over its silent portals.

Not a few accidents have contributed to the catastrophe. When Birmingham made its first firm stand against the Kennel Club and its lucrative registration rule, which selfishly subverts the principle of *do ut des*, the National Dog Club was founded under the weighty auspices of Dr. Walsh, editor of *The Field*. Mr. Vero Shaw, who was then on the staff of that powerful periodical, was elected secretary to the new society, and intrusted with the task of compiling its stud book. The secret history of that stud book's failure has still to be written—want of funds, or want of energy on the secretary's part; there may be those who know, I do not. Then came the first show under the new society's rules; it was a falling off, but not a disheartening one. There was still no need that the badge of cowardice should be produced by the town world-famed for its fighting strains of gamecocks, among whose plumes a white feather was never found. Next followed the expedient resignation of the Kennel Club secretary, a man whose principles, right or wrong, were firm and consistent, a man of some spirit too. His terms to Birmingham were, "No fusion, no compromise; unconditional surrender. Lay down your arms and march out."

The society's secretary had also lost his post on *The Field*, and between Mr. Vero Shaw, B.A., kennel director of the greatest sporting organ in the land, and Mr. Shaw, of "The Live Stock Agency," Queer street, there was a wide brook that few of the followers of Prince Fortunatus cared to span. But this may still be accomplished by all-healing, forgiving Father Time. While with Lockhart's sad metaphor "the muffled drum is in prospect," God forbid that I should point the finger or harbor any other feeling than the hopeful wish that the curtain may rise again.

Heigho! I would all men were rich, for then I think we should all be good and true.

But my narrative lags. Well, the two secretaries are gone, and the Kennel Club secured for their vacant post a gentleman who was an accountant, ignorant of dogs and the ways of their owners, but clever, quick and docile. Now that the burly form of the late secretary no longer blocked the way of negotiation, now that the contemptuous whiff of his "returns" no longer fumigated the building, the conspirators, Mr. S. E. Shirly and the Rev. Lovell, who had before, with the rest of a wether-led committee, quailed before the ardor of his presence, straightened themselves up to their full height and then furtively entered into treaty with Birmingham, resulting in the compromise announced, viz., that "In future the National Dog Club show at Birmingham will be held under Kennel Club rules, and on the other hand the Birmingham Society will be represented on the Kennel Club committee, on all points relating to these rules, by two gentlemen to be elected every three years by the National Dog Show Society, Birmingham."

Because I do not care to conceal my contempt for "ratting," I do not wish to be understood as condemning the Kennel Club and its rules out and out. In fact I think the club's rules are emphatically good; they are still capable of improvement. Who and what is not? The present regulation which requires an exhibitor to lodge the objection that is intended to disqualify a brother exhibitor is bad in theory and practice. I think it has been quite lately referred to in one of our own papers. The show itself should "object." Then, now that an accountant is at their books, we can hope for an equitable readjustment of the charge made for registration. The club at present admit what it would be puerile to deny, that the shilling impost yields a large profit which they say "We give away again in prizes." For that statement we have only their own word, and though none of us, knowing the men responsible for the assertion, would be inclined to doubt it, yet I am sure Mr. Aspinall would understand me if I told him it was not business. By their own admission it is the public's own money they thus distribute, and it would seem only reasonable to let the actual donors have some voice in the eleemosynary direction it is afterward to take. Of course the club very materially studies its own interest by only patronizing those shows out of the public purse which support the authorities of Cleveland Row.

Before I leave this subject I must first say I always look forward to my *Kennel Gazette* for the list of freshly elected associates, whose mission in the club I described some months ago. The editor seems puzzled how to describe the associates, and escapes by calling them "the following;" he doesn't say what, only "the following were elected."

For a bit of downright farcical reading, commend me to the report of the late Crystal Palace show by the judges. The report in the *Kennel Gazette* was the most comical, and that in the *Stock Keeper* the worst that appeared. The gallant, the gay and evergreen Capting was not "on the job," to use his own expressive idiom. On the first day he had his own friends and other people's friends to entertain, and the rest of the week belonged to pleasure.

But to this report of the judges. The St. Bernard judge naively confesses that "unless the dogs were seen off the bench, some of his awards may appear puzzling." He then mentions the sale of Plinlimmon at a fearful price. The purchaser, a Mr. Chapman, is a freshman with much more money than —— discretion. Mr. Shirly, writing of a couple of dogs in the deerhound class says: "The former requires a little surgical operation," which, whatever it may be intended to mean, reads uncommonly like an admonition to fake. The fox-terrier judge, Mr. Theo. Bassett, makes an admission damaging to himself and uselessly exasperating to the deceived owner of the losing dog in the champion fox-terrier bitch class. Mr. Bassett coolly admits that "after a very careful scrutiny after the judging I came to the conclusion that the award as given was incorrect, so in justice am forced to confess it." That may be his idea of justice. I should not wonder if the aggrieved loser would the next time prefer a little more competence and somewhat less of that sort of justice. Lord Antrim's report leaves no room for criticism, as it is a close copy of the prize list. One of the exhibits tried to bite the wire-haired fox-terrier judge, so he advises his owner to "hang it." The bulldog judge owns that he blundered in the open class; more consolation! I was curious to see what Mr. Percival would say about his gloriously incongruous awards. He had the same dogs to judge in two separate classes and reversed his decisions—he says the sun was in his eyes. Finally I repeat my often expressed opinion that the value of reports from the judges is illusory, and that the practice produces neither credit to the judge nor satisfaction to the exhibitor.

I see that Mr. Emmet, who purchased Rector, stated that when he was over here that he has never regretted the high price he gave for the dog, and so far as I know, the vender has never regretted selling him. Mrs. Emmet has taken back with her the Yorkshire terrier Conqueror, whose late owner, Mrs. Troughear, is £250 richer since the transaction. An essentially feminine correspondence is raging in the *Stock-Keeper* between Mrs. Troughear and the owner of a rival kennel, Mrs. Foster, who accuses the other lady of having faked the dog that has gone where all our good dogs go before they die, the United States of America.

I suppose you have the news of the bulldog Monarch's death. He was the finest specimen of his breed I ever saw. The famous Laverack, Tam o' Shanter, is also dead. His owner has lost a handsome annuity.

I observe that Mr. Harding Cox has registered his racing colors preparatory to making his *début* on the turf.

It appears that the best joke in connection with the late Brighton dog show remains to be told. The inhabitants of the queen of watering places supported the undertaking and entered their dogs freely. After the show, the Brighton Excise people, who seem to be a rather enterprising body, waded through the catalogue and sued about a hundred of the exhibitors for keeping dogs without a license. I hear they got several convictions. A member of the show executive set up a defense that might have landed him fairly in the fire if he had escaped the frying pan; he pleaded not guilty because he was "only showing the dog for somebody else." This gentleman requires a course of study in the Kennel Club rules.

As anecdotes about doggy men appear to be the order of the day I will rescue the following from oblivion. The hero of the tale, Mr. Cumming Macdona, having left the church and belonging now to a profession that can afford a joke, will not object to its publication: In the days when the gentleman who is now reading for the bar was the rector of Cheadle he was very fond of traveling and pleasant company, so much so that he could spare very little time for his parish duties. A few days after his return to Cheadle from one of these pleasure trips he applied again to his bishop for leave to absent himself on the grounds of ill health. The bishop replied soliciting a call, which the rector at once complied with, and in answer to his superior's inquiries as to the nature of his latest indisposition informed his lordship that it was nothing serious, and that all he required was "change of air." "If that is all that is necessary for your cure," replied the bishop slyly, "why not try Cheadle?"

I am a rank old Tory, one of the fossil sort, but heaven help me, how I laughed when I read the list of Princess Beatrice's wedding presents, the embroidered quilt, the electro plate, pshaw! it was *indique* to publish such details. The lack of originality was pitiable. Considering the well-known passion of our royal family for dogs I am astonished that it occurred to nobody to present the happy couple (that is the proper expression I believe) with a sharp little black and tan terrier to guard the cottage, or a noble St. Bernard to accompany them on their rides abroad. I venture to affirm that in this age of valuable dogs a handsome specimen of a popular breed would be found a suitable and acceptable present.

The Earl of Haddington has presented the Queen with a fine specimen of a pure-bred white collie which was reared on his estate. His lordship's keeper, Macpherson, conveyed the dog to London and the day after his arrival he was admitted to the Visitor's Hall in Windsor Castle. Her Majesty, accompanied by her two daughters, Princess Henry of Battenberg, and the Marchioness of Lorne, on entering the room expressed her approval of the earl's gift, and patting the animal on the head repeating how highly pleased she was with the little creature.

I have only heard of one other pure white collie and that was bred on the Duke of Roxburgh's estate. It was shown at the Alexandra Palace some years ago, and I remember suspecting a touch of English setter blood.

Somebody in our press has been making merry over the idea of tooth brushes for dogs. I think it a very practical suggestion indeed. The foul breath of many a pet dog is due to the neglected state of its mouth. Why should not extra coarse tooth brushes be made for the purpose and a rough powder used? The benefit is so apparent for dogs of luxury kept in an artificial state. I may be told that if one gives the dog bones you would be accomplishing in a natural manner the same purpose. I know that and I also know toys don't get bones, because "it makes the carpet in such a mess." If you commence the tooth brush on a three-year-old dog you will find a firm tartaric formation just below the gum, but this will easily crack off by putting a penknife under it and beneath you will find the pure white tooth. We go to the dentist to scrape our own teeth, why shouldn't we do as much for our companions.

The *Stock-Keeper* is forging ahead in doggy matters, and judging from its own statement that it has "increased in circulation a thousand copies in three weeks" (the statement smacks a little of partiality), the kennel world appear to appreciate the change. I have seen a most jubilant letter from one of the stockholders, boasting that they give for half the money "three times as much kennel news as will be found in any of the other papers."

They are essaying to start an American "Lillibulero," and have printed two letters on American doggy subjects under the heading of "American Kennel Notes." Your Mr. Wade has also lately contributed to its columns.

In their "Intercepted Mail Bag" they some weeks ago published a letter directed to "Lillibulero." It was amusing for the cool impudence evinced by the writer in giving the impression that he was quite aware of my identity. I have a sneaking regard for the *Stock-Keeper*, created, I must own, by the compliment they so often pay me of padding their columns with excerpts from these notes.

Before me lies a letter gaping full of information, couched in satirical sentences. The writer, an ex-judge, gives me his name and supplies data for all his statements. He concludes: "Now, Mr. 'Lillibulero,' some of these facts may be stale to you, but they will not therefore suffer for confirmation. Some of the men I mention may be friends of yours, and so it might be unnatural to expect your righteous nose to scent their offenses. But it is possible that in spite of your numerous reserved sources of information that I have been able to tell you something you did not know. If so, use it, how, when and where you please."

Hum! this is all very well, but there may be things I do not know and do not seek to learn. How shall it profit me to discover that this reporter guzzled more than his share of wine at a show committee lunch and continued to lap up champagne at his hotel and "put it down to the show"? What boots it, or clothes it, to me that another swindled a country tailor out of a suit of clothes? What is it to me that another "his bread in sorrow ate," provided by her gracious Majesty in one of the State hotels, where each visitor is given a room to himself, plenty of climbing exercise, medical attendance, and, hear this, you envious, honest folk—no bill to pay? Shall I fashion into form these

"Airy tongues, that syllable men's names"?

Such a task has not been accepted nor even offered. Necessity not opportunity will guide me in the use I may make of my knowledge. You have read of the magic cloak brought to King Arthur's court by "the littel boy." It would only fit true and honest subjects, and instantly slipped off the shoulders of the tainted. The garment was made of a stuff that is not fashionable nowadays, besides we don't like the cut of that cloth, the texture is coarse, the pattern does not suit us; no, we prefer to run no such "dreadful risk of catching cold." It suits us to go about as usual, trusting that a resemblance will be seen to Cowper's friend, Joseph Hill:

"An honest man, close-button'd to the chin,
Broadcloth without, and a warm heart within."

LILLIBULERO.

AUGUST 25, 1885.

AN UNUSUAL DISEASE.

Editor Forest and Stream:

Many of our sportsmen are losing valuable dogs from a peculiar disease of the mouth and throat. The first manifestation of sickness seems to be difficulty in swallowing and inability to protrude the tongue from the mouth. An examination now will reveal numerous white patches of canker on the under side of tongue and inside of lip. This rapidly increases until the entire mouth, throat and tongue are covered, taking usually about twenty-four to thirty-six hours. About the third or fourth day the inner surface of mouth and the surface of tongue and throat are covered with large granulations, secreting pus of the most offensive odor. In some cases an inch or more of the tongue has become gangrenous and sloughed off. The disease is remarkably contagious, appearing in its severest form, however, only among our setters thus far. It reduces its victims to a stage of extreme weakness in a surprisingly short time. Those that have died have done so within a week from the time of the attack, seemingly both from blood poisoning and weakness. They all have extremely high temperatures and a very rapid pulse from the outset. Those that have lived have been saved only by limiting the extent of the cancerous patches by early application of caustics.

In some respects this resembles dyphtheria, yet at the outset it seems quite different. There is no membranous formation in the throat at any time, but just a clean, constant, eating ulcer, which spreads to its neighbor, until the whole surface is covered. Any of your readers who have seen anything like this and can suggest curative remedies will confer a favor on his unfortunate sporting brethren in this vicinity. M. D.

WILLIMANTIC, Conn., Sept. 1.

[This seems to be entirely analgous to cancrum oris (canker of the mouth) or gangrenous stomatitis in the human. It appears as a rule in childhood, from the third to ninth year. The causes are bad air, bad food and too much mercury. The symptoms are, first the formation of small gray, sloughy, foul ulcers on inside of cheek, with red gums and foul breath, going on to destruction of fauces and pharynx, and death. The discharges of pus are highly infective. The treatment is thorough cauterization with nitric acid, antiseptic washes, and supporting food. Quinine is also given. We should like to have further details of this disease, as observed by our Willimantic correspondent.]

WANTS ONE OF HIS OWN.—Hartford, Conn., Sept. 3.—*Editor Forest and Stream:* Please send by return mail a copy of Hammond's book, "Training vs. Breaking." I have just read it, and wish one of my own. Inclosed please find $1.—G. S. CAIRNES.

THE PHILADELPHIA DOG SHOW.—*Editor Forest and Stream:* Quite a number of working collies have been entered for the trials to be held during the Philadelphia Kennel Club October show, and this feature of the exhibition is attracting not a little excitement among the professional drovers about here. The representatives from the several hunt clubs met at the rooms of the Philadelphia Kennel Club on Thursday last to talk over the plans for hurdle jumping, and it was decided to have in connection with high leaping a ditch for broad jumping. The Hunt Club members will meet again at the grounds on Tuesday to conclude arrangements, and it will then be decided if it is practicable to have the fox hunt desired. Mr. Mather, of the Bryn Mawr Hunt, says he can furnish a pack that will follow the scent within the inclosure, as it is proposed to lead a live fox over the grounds to attract the hounds.—HOMO. In entering dogs for the cash kennel prizes offered at the Philadelphia Kennel Club's October show, an extra fee will not be charged to compete, as the animals will have been paid for in the regular classes entered.—E. COMFORT, Secretary.

ALBION.—*Editor Forest and Stream:* I noticed in your issue of Sept. 3 the sale of a bull-terrier puppy called Albion, by the Royal Bull-Terrier Kennel of New Haven, Conn., to a gentleman of Rutland, Vt. I claimed this name for a bull-terrier puppy bred by me, whelped May 10, 1885, by Dutch ex Nellie. I should like to ask whether my claim to the name made through the columns of the *A. K. R.* is not ahead of one made through the FOREST AND STREAM where no fee is required. The registration of my puppy appeared in the June number of the *A. K. R.*, while the claim to the name by the above mentioned kennel appeared in FOREST AND STREAM some time after. As I claimed the name first I request the present owner of the puppy to change the name of his dog. It seems to me that a little originality in the selection of a name for a dog would save much confusion in the future, especially when the dogs are of the same breed.—E. S. PORTER (Blandford, Mass., Sept. 5).

ANOTHER STRANGE POINT.—An article headed "A Strange Point" calls to mind a strange and very uncomfortable one for a dog that my pointer Bleak made last fall. We had had a fair day's sport near Otis Ponds, Mass., and were almost out of a large patch of woods, and were just thinking of drawing our charges, the dogs leading the way, when my companion sang out, "Look at Bleak!" He was apparently standing on his head on a large boulder, and "stiff as a rail." My companion went to one side of the boulder and I to the other, and down at the foot of the rock was an old hen with four or five third-grown partridges, as they are called here. Bleak was as comical a sight as I ever saw, with his nose flat on the rock and his tail standing up almost like a lightning-rod. He looked at me as much as to say, "You ought to give me the old hen," when I flushed them and did not raise my gun. He was in the sulks for the rest of the day.—LIEUT.

SHOW DISTEMPER.—*Editor Forest and Stream:* In reply to the request of Dr. J. R. Housel in your issue of Sept. 3, I am not prepared to state whether there was such a case of distemper in the show or not. I did not see any, but my time there was somewhat limited after the first day; however, I would suppose he was safe in that assertion, as it would be a marvelous thing if there were not some dogs afflicted in such a large gathering. I did not question that part of his argument, in fact cared naught about it—it was nothing here nor there to me—I was simply protecting the rights of my dog. In conclusion would suggest to Dr. Housel that in future he mark his game before rushing into papers with it, thereby implicating others who are innocent.—J. M. FRONEFIELD, JR. (General Wayne, Pa., Sept. 4.

SPANIELS AT PITTSBURG.—*Editor Forest and Stream:* I am told that there will be at the Pittsburg show a special of $10 for spaniels. I am given to understand that this prize will be awarded under the standard of the Entre Nous Spaniel Club, of which "Senex" is the presiding genius, provided "Senex" can furnish names of twelve members of the Entre Nous Club. If the twelve names are not forthcoming (and I don't think they will be found) the prize is to be awarded under the American Spaniel Club standard, Mr. James Watson to do the judging. For the sake of the grand old cocker of our grand old sires, I hope "Senex" will come forward with a baker's dozen of his fellow members.—FLIMFLAM.

DEATH OF BARRY.—Another grand dog gone the way of all flesh, human and canine. This time it is Mr. Sydney Smith's famous rough-coated St. Bernard dog, old Champion Barry. He was a huge animal, with the most perfect of rich orange tawny flat and straight coats. As a St. Bernard we always found fault with his rather sour expression. He won his first prize in Darlington in 1876, and finished his career, which embraced 166 cups and prizes, by winning first and prize for best stud dog at the first St. Bernard Club Show. Barry was just ten years old when he died from abscesses in the head. Mr. Smith imported him in 1876.—*Stock-Keeper.*

GRAPHIC.—In commemting upon the offer of Mr. Anthony of the free service of Graphic in the stud, which appeared in FOREST AND STREAM Aug. 15, the *Live Stock Journal* says: "Stringent as the conditions may appear to be, they are only fair consideration for the advantages to be derived from the free use of so valuable a stud-dog as Graphic, and they do not in any way detract from the generous motive which prompted Mr. Anthony to place his dog at the service of the public for the purpose of improving the breed of pointers in America. The example which has thus been set might well be followed by owners of stud dogs on this side of the water.'

THE MILWAUKEE DOG SHOW.—Milwaukee, Wis.—*Editor Forest and Stream:* The entries for the dog show to be held here, commencing Sept. 23, are coming in nicely, and we hope to give the best show ever held in this part of the country. In addition to the regular prizes, which aggregate about $1,000, there will be given $800 in special prizes, nearly all of them in cash. These will be given to the best of the different breeds and kennels. The entries close Sept. 12.—M.

GIVE THE A. K. R. NUMBERS.—*Editor Forest and Stream:* I am a registered dog. My master entered me in a dog show last spring, and gave my A. K. R. number, but it was omitted in the catalogue, because "it was too much bother," said the superintendent. Now we registered dogs insist that our numbers be published in the catalogues, and we hope managers of fall shows will take notice.—A.K.R. 1765.

THE PITTSBURGH DOG SHOW.—The prospects for a good show at Pittsburgh are flattering. There will be a valuable lot of special prizes offered for almost every breed, including one of $50 for the best mastiff. We shall look to see a large entry of setters and pointers. Pittsburgh has many valuable animals and exhibitors from all parts of the country think it great honor to win over them.

THE ATTLEBORO DOG SHOW.—There will be a dog show at Attleboro in connection with the Farmers' and Mechanics' Association Fair on Sept. 15, 16 and 17. Mr. W. Tallman, the superintendent, informed us that quite a number of entries have been received, and that the show of beagles and New England foxhounds will be very fine.

THE IRISH WOLHOUND.—*Editor Forest and Stream:* It has become a matter of question with me since the articles on the subject of the Irish wolfhound have appeared in FOREST AND STREAM whether the head of the dog used by the Philadelphia Kennel Club as its crest is that of a deerhound or that of a part deerhound and wolfhound. This cut was made from

one of Landseer's drawings executed years ago, and certainly does not resemble the deerhound of the present date. The flews in the drawing are heavier, the muzzle squarer, and the ears more drooping and set on the head lower. From the reputation the artist Landseer has made, his drawing was no doubt a correct one; but it certainly appears to the writer that the living model he used was a different dog from that of today. I inclose an impression from the original die of the Philadelphia Kennel Club, and ask criticism on the subject here and in England.—HOMO.

CHESAPEAKE BAY DOG STANDARD.—*Editor Forest and Stream:* Messrs. J. T. Norris, H. Malcolm and Jas. T. Pearson being the committee appointed by the American Kennel Club on a standard for Chesapeake Bay dogs, request all breeders and exhibitors to correspond with them. Address JAS. T. PEARSON, 6 Spear's Wharf, Baltimore, Md.

"Un" will please send address to this office. It was omitted from article sent to us for publication.

DOG DAYS.—For list of dog days see "Fixtures."

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex,
4. Age, or
5. Date of birth, or breeding or of death.
6. Name and residence of owner buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Prince Napoleon. By T. H. Adams, Pawtucket, R. I., for lemon and white English setter dog, whelped July 8, 1884, by Prince (Pride of the Border—Petrel) out of Fairy II. (Bailey's Victor—Blue Daisy).

Leo. By T. H. Adams, Pawtucket, R. I., for pug bitch, whelped Feb. 15, 1885, by imported Punch out of Daisy III. (A.K.R. 2142).

Messenger. By H. E. Bowles, Pawtucket, R. I., for black, white and tan beagle dog, whelped Oct 4, 1884, by Mingo (Spot—Rose) out of Nell (Sailor—Nellie).

Mischief. By Joseph H. Brady, Pawtucket, R. I., for lemon and white beagle bitch, whelped Oct. 4, 1883, by Mingo (Spot—Rose) out of Nell (Sailor—Nellie).

Pearl Laverack. By Alonzo Campbell, Clay Center, Kan., for lemon belton English setter bitch, whelped Jan. 2, 1884, by Colonel Thunder (Thunder—Moll) out of Princess Belle (Rufus—Rose).

Lady Elcho. By A. B. Truman, San Francisco, Cal., for red Irish setter bitch, whelped April 3, 1885, by champion Elcho (A.K.R. 295) out of champion Noreen (A.K.R. 297).

Paris Boy, John L., Bragdon, Francesca. Madona and Nana. By Edgar E. Haines, Waltham, Mass., for English setters, one black, white and tan and two black and white dogs and one black and white and two black, white and tan bitches, whelped July 9, 1885, by Count Paris out of Lyna.

Jerry. By T. J. Pender, San Francisco, Cal., for Irish water spaniel dog, whelped Feb. 10, 1885, by Whirlpool (Neptune—Mermaid) out of Biddy (Snider—Wapsie).

Mascot and Favette. By J. E. Hills, Newton, Mass., for lemon and white pointer dog and bitch, whelped July 6, 1885, by imported Bang (champion Bang—Luna) out of Rita Croxtetn (A.K.R. 2548).

Rollo. By H. D. Chauncey, Ridgewood, N. J., for mastiff dog, age not given, by Major (Gurth—Lady Ringwood) out of Juno.

General Grant and Nellie Grant. By Wm. T. McAlus, Philadelphia, Pa., for fox terriers, dog and bitch, whelped July 23, 1885, by Raby Tyrant (Baliff II.—Peach) out of Warren Lady (Brockenhurst Joe—Swansdown).

Royal Jet. By E. A. Higgins, Cohocton, N. Y., for black cocker spaniel dog, whelped July 25, 1885, by champion Hornell Silk (A.K.R. 1297) out of Hornell Sunlight (Hornell Ra.tler—Hornell Blanche).

Fedora H. By E. A. Higgins, Cohocton, N. Y., for black cocker spaniel bitch, whelped July 1, 1885, by Hornell Bub (A.K.R. 131) out of Smith's Curley (Burdette Bob—Carroll's Gyp).

Bosco H. By Henry C. Hart, Cohocton, N. Y., for black cocker spaniel dog, whelped July 24, 1885, by Hornell Jock (A.K.R. 1877) out of Hornell Flora (Bub—Jenny).

Joe Jr. By J. H. Butler, Penn Yan, N. Y., for liver and white cocker spaniel dog, whelped July 23, 1884, by Sam (Romey—Jessie) out of E. A. Higgins's Fannie.

BRED.

☞ *See instructions at head of this column.*

Princess Belle—Colonel Thunder. Dr. G. A. Seaman's (Marysville, Kan.) English setter bitch Princess Belle (Rufus—Rose) to Colonel Thunder (Thunder—Moll), Aug. 20.

Morning Star—Gun. Chas. York's (Bangor, Me.) English setter bitch Morning Star (Dashing Dan—Daisy Starlight) to his Gun (A.K.R. 1538).

Daisy—Silk Socks. S. S. Wickersham's Italian greyhound bitch Daisy (Leo—Min) to E. W. Jester's Silk Socks (Sport—Pearl), July 29.

Peep O.—Silk Socks. I. Yearsley, Jr.'s (Coatesville, Pa.) Italian greyhound bitch Peep O. to E. W. Jester's Silk Socks (Sport—Pearl), Aug. 14.

Pudge—Treasure II. Essex Kennels' (Andover, Mass.) pug bitch Pudge (A.K.R. 1595) to their Treasure II. (A.K.R. 2148). Aug. 31.

Hoosier Belle—Paul Gladstone. E. J. Wallace's (Bartlett, Tenn.) English setter bitch Hoosier Belle (Royal Scout—Daisy Dean) to W. B. Gates's Paul Gladstone (Gladstone—Livalette), July 29.

Nellie C.—Paul Gladstone. Jerry Cockrell's (Memphis, Tenn.) English setter bitch Nellie C. (Rake—Phyllis) to W. B. Gates's Paul Gladstone, Aug. 10.

Rose—Suil a-Mor. M. Wise's red Irish setter bitch Rose (Kit—Ruby) to Joseph Hayes's Suil-a-Mor (Claremont—Dido), Aug. 29.

Leah—Glen Rock. G. F. Clarke's (St. George's, Del.) English setter bitch Lean (A.K.R. 1284) to E. W. Jester's Glen Rock (A.K.R. 1616), Sept. 5.

WHELPS.

☞ *See instructions at head of this column.*

Nora. Joseph Hayes's (Boston, Mass.) red Irish setter bitch Nora (Cigar—Belle), Aug. 29, seven (four dogs), by his Suil-a-Mor (Claremont—Dido).

Dashing Jest. E. W. Jester's (St. George's, Del.) English setter bitch Dashing Jest (A.K.R. 1614), Aug. 28, five (two dogs), by his Glen Rock (A.K.R. 1616).

Meg Merrilies. Harry A. Fletcher's (Portland, Me.) red Irish setter bitch Meg Merrilies (A.K.R. 2181), Aug. 1, eight (four dogs), by Jack (champion Elcho—Meg).

Rita Croxteth II. J. E. Hills's (Newton, Mass.) pointer bitch Rita Croxteth II. (A.K.R. 2548), July 6, eleven (five dogs), by imported Bang (champion Bang—Salter's Luna).

Flounce. J. W. Murnan's (Keeling, Tenn.) English setter bitch Flounce (Druid—Ruby), Aug. 30, eleven (six dogs), by champion Gladstone.

Althea. Herbert Flint's (Haverhill, Mass.) cocker spaniel bitch Althea (A.K.R. 842), Aug. 30, seven (four dogs), by champion Obo II. (A.K.R. 433); all black.

Hazel Kirke. Herbert Flint's (Haverhill, Mass.) cocker spaniel bitch Hazel Kirke, Sept. 1, eight (five dogs), by Young Obo (A.K.R. 861); one black, seven liver.

Princess Blossom. W. B. Gates's (Memphis, Tenn.) English setter bitch Princess Blossom (Dashing Rover—Princess Rose), Aug. 12, four bitches, by his Paul Gladstone; all black, white and tan.

Jule. Geo. H. Piercey's (Jersey City, N. J.) pointer bitch Jule (A.K.R. 1042), Aug. 29, seven (four dogs), by Clifton Kennels' Donald II. (A.K.R. 2545); all liver and white.

Gayley. A. Quick's (New York) pointer bitch Gayley (A.K.R. 1440), Sept. 1, ten (seven dogs), by Clifton Kennels' Donald II. (A.K.R. 2545); all liver and white.

Toodles. Geo. W. Dixon's (Worcester, Mass.) pug bitch Toodles (A.K.R. 2147), Aug. 6, five (two dogs), by C. H. Amsden's imported Tuck (Comedy—Lady).

SALES.

Dolly. Lemon and white pointer bitch, 9yrs. (Sensation—Dolly), owned by A. E. Burche, Washington, D. C.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

WASHINGTON, D. C.—My Irish setter dog is fourteen months old. The hair is all off his face and lower jaw and his skin is dry and scaly. The skin is blue and swollen and under his ears greatly swollen. I washed with chloride of soda, and it seems to have done him good. His nose is cold and appetite good. Sometimes bowels all right, but seems dull and sluggish. Ans. Get the following ointment and apply twice daily to the worst spots on the body, after cleansing with soap and warm water: Of zinc oxide and ammoniated mercury 2drs. each; of lard 2oz. Give five drops of Fowler's solution of arsenic in the food twice daily. Stop the arsenic in a month.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

Oct. 20.—First Georgia State Fair Tournament, under auspices of the National Gun Association. Judge M. R. Freeman, Manager, Macon, Ga. Beginning Oct. 20.

THE TRAJECTORY TEST.

Editor Forest and Stream:

As all rifle matters are of interest to me, I very naturally look forward to the outcome of your trajectory trials, to be inaugurated next month. To have the actual facts regarding the line of flight of bullets, using the varied ammunition at present in use, will settle many an uncertain statement that we often hear regarding the results to be obtained by the use of certain rifles and ammunition. There is little doubt but what there is a large percentage of "high curve" ammunition in use for hunting purposes, noticeably the 44 40-200, for the use of which cartridge so many rifles are fitted, all of which might be displaced for something far preferable, and in many cases not change the shells materially.

I hope the trials to be made under the management of the FOREST AND STREAM will influence the cartridge companies to furnish more suitable cartridges for hunting purposes, that is for use up to 200yds. In the majority of cases, in using the fixed ammunition sold to day, should a man misjudge the distance to his game, by 25yds, in 200, he would miss it entirely by several inches.

Besides trying the ammunition at present in use, I will express a hope that you may go a little further, and tell us by actual demonstration what can be done in the way of flat trajectory, by loading the same shells with lighter bullets, even down to the pistol sizes, keeping the powder charge the same as in the cartridges first used. Many of the cartridges thus made might prove inaccurate, but that would be something for the rifle maker to remedy; let them change the form of twist or rifting enough to properly control such bullets, should your trials show them to give such results as hunters require in both trajectory and penetration or striking energy.

Just here comes in the question: How much can we afford to lose in accuracy, for the sake of extra flat trajectory? Naturally we must expect to lose something in accuracy by the change. At least that is the inference I draw from the general opinion as held and expressed by riflemen that a heavy bullet in proportion to powder charge is essential for the greatest accuracy from 200yds. up at least.

The largest rifles in use at the present time will put their bullets into a four-inch circle at 200yds. I do not say that is the best they will do, for I have seen far better work, but it is what most of them will do at any time, shot from the shoulder, with muzzle rest. This is far more accurate than we can expect to do on game, for game will not stand for sighting shots, neither can we always have a sight just right for the object aimed at, as we do in target shooting, where, in order to hit the four-inch ring successively, we aim at a bullseye or spot from eight to twelve inches in diameter, that it may be plainly seen, and again, a special shaped fore sight is used to enable us to center this spot as fine as possible—such arrangements for accuracy cannot be used in hunting game; for these reasons would not a hunting rifle be accurate enough if it would place its shots successively inside a six or eight inch circle at 200yds.? With this ratio of variation we could feel quite sure of a four-inch object at 100yds. and a two-inch one at 50yds. How far can we see a turkey's or squirrel's head, or the eye of a deer, over the rifle sights? Surely we can shoot at it no further away than we can see it over the sights of our rifle.

The conclusions to be drawn from this would seem to be that we need have our rifles for hunting purposes no more accurate at any certain distance, than to be able to hit the smallest object we can see over the sights at that distance, and that would be a much larger object than we could easily see with the eyes unobstructed by the sights.

The next question to arise would seem to be: Can we obtain this flat trajectory and sufficient accuracy with moderate charges and still retain sufficient killing power? I believe that it can be done, but, of course, only the actual trial will demonstrate to a certainty. Here is where the importance of this further test, to be made by you after the original programme is carried out. Few riflemen, except those interested in rifle manufacture, have opportunities to experiment in this way with different charges and calibers, whereas, you will have all the rifles at hand for your purposes, and the shells could readily be loaded, as according to your plan only a few shots will be fired of each, sufficient only to obtain an average of the curves.

To go further into the subject, we will start with the round ball of the muzzleloader; this bullet was supposed to have sufficient killing power within its ranges, but with the breechloading hunting rifle we expect greater range, and to obtain this end we elongate the bullet, giving greater bearing in the rifling, and keeping it steadier in its flight. The round ball for the respective calibers in use are about as follows: .50-194 grains, .45-140 grains, .40-100 grains, .38-88 grains, .35-70 grains, .32-50 grains, .30 41 grains, .25-24 grains, .22-16 grains. Should we give the elongated bullets twice the weight of their respective round balls, and retain the same powder charges that are now used in the target rifles, we would have cartridges about as follows: .50-115-388, .45-85-280, .40-70-200, .38-55-175, .35-50-140, .32-40 100, .30-35-82, .25 32-48, .22-10-32. Here we find a powder and lead ratio, from less than 2 to 1 in the .25-caliber, to a little over 3 to 1 in the .45-caliber.

I will say here that the Bullard cartridge of .50-caliber has a bullet of 300 grains, showing that an elongated bullet of less than the weight of two round balls has been made and tried; whether successfully or not I cannot say from my own experience. The .25-caliber mentioned above as having powder charge of 32 grains had an accompanying bullet of 67 grains, which gives a ratio of nearly 2 to 1. Also that the .22-caliber measures nearer .20, which would make its round ball 12 grains and elongated one 24 grains. There are also longer shells for the .40 and .45-calibers, which hold 100 or more grains of powder. In the above list of charges there would seem to be variety

sufficient for all purposes, provided upon trial they should prove to give good trajectory and sufficient accuracy for our use; one advantage would be in the shells, being of the same shape and size as at present in use.

Whether there are any points in the above of advantage or worthy of consideration by you in this trial of hunting rifles, I shall be glad to leave to you to say. They are principally thoughts brought to my mind by experiments made at odd times, and I write them here for what they are worth. A. B. DODGE.

MANCHESTER, N. H.

Editor Forest and Stream:

Nothing could be more commendable than your determination to test the trajectory of hunting rifles. It is certain that the results of such tests will be highly esteemed by riflemen of the United States and attract widespread attention throughout the world. Now, as you ask for suggestions, I avail myself of your invitation and offer a few. I agree with the excellent remarks made by your correspondent, Mr. Leopold, in almost everything he has said; but I think it a mistake and a step backward if muzzleloaders are allowed a place in the competition, not through any fear that they will make a good showing, but because valuable time should not be wasted in testing obsolete weapons which have practically passed out of use. We want hunting rifles of to-day, not of the past.

Again, if a cloth patch is used, as suggested by Mr. Leopold, the barrel is wiped after each shot, and cleaning should then be permitted in other rifles. The weight of the guns should also be considered, and I think a limit ought to be arranged in this respect, as no one wants to carry a columbiad to shoot small game.

The weight of the rifle will make a difference in the trajectory even when clamped in a vise, and while the trigger pull will not, the trigger pull materially affects the accuracy when the shooting is done off-hand, and to some extent when shot from a rest. The shooting in your tests should be from the shoulder with a muzzle rest.

In order to make your tests practically valuable your readers should be able to determine which rifle will furnish the flattest trajectory and which is the most accurate when used as a hunting rifle. If a 40 pound rifle shows a flat trajectory, how are they to know that a 10-pound or an 8-pound rifle of the same make will do the same thing? It certainly would be unfair to test a very light rifle in competition with a very heavy one. Guns should be graded. Suppose, for instance, that a rifle is made for the express purpose of furnishing a low trajectory, it may be a success in that way, but still only be efficient as a squirrel rifle. W. I. C.

SYRACUSE, N. Y

Editor Forest and Stream:

I wish to make a point against a test of rifles for trajectory with fixed guns. Now, I do not shoot a rifle, have had but little experience with them, and have no favorites, but have experimented considerably with shotguns by shooting for pattern and penetration. For penetration I used cards obtained at the printer's of about same thickness as postal cards. Using same charge of powder and size of shot the heavier gun always gave the greater penetration. Now, greater penetration requires higher velocity, and higher velocity gives flatter trajectory.

If weight signifies in a shotgun will it not also qualify in the rifle? Indeed, I consider it one of the main features in a gun whether the arm be for shot or ball. Fixing the guns, as I understand it, does away with weight, and in that respect reducing all guns to the same level. Now, I would suggest that all guns be fired from the shoulder, allowing the gun to rest lightly at the extreme muzzle to secure accuracy of aim.

I have not the least idea how you will proceed to make the tests. No doubt it will be in the most approved way. The idea suggests itself that it could be satisfactorily done by using engineer's cross section paper, which is ruled both ways with great accuracy. A foot is divided on these papers into tenths or inches; these are subdivided into tenths or the inches may be divided into eighths and sixteenths. The division into decimals is the most convenient. To use this paper let frames be erected at points where it is desired to have record of the rifle ball. By using engineers' transit and level the several papers could be aligned and made truly horizontal, marking the frames for subsequent use. Put small target in exact center of first paper, and have rest for gun so the center of the barrel will be in line with center of paper, take careful aim with butt against shoulder and muzzle on rest and fire. Note where first paper is punctured, and so with each paper in succession. Here is your record which can be easily tabulated and the trajectory deduced.

For instance, suppose first paper is 25yds. from muzzle of gun, second 50yds., third 75yds., etc., and ball passes .12ft. above horizontal line in first paper; to make straight line it would pass .24ft. above on second paper, .36 on third paper, .48 on fourth, and so on to the end of range. Any deviation from this line will show the curve made by the ball.

Now, without having had any experience in this matter, this is my idea, and it is offered for what it is worth.

Your trials will be watched with great interest by lovers of the gun generally, and it is apprehended that hunters and sportsmen will generally acquiesce in the result, in the firm belief that the trials will be conducted after the most approved method. W. L. P.

VICKSBURG, Miss.

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

ON THE 16th of the present month the thirteenth annual fall meeting of the National Rifle Association will open at the Creedmoor range. The directors have provided a liberal programme of matches with the necessary prizes attached, and ample time has been given for the completion of all the contests. This in itself is a new and well directed step. Then the medal nuisance has been abolished, and a fictitious importance will not be given the matches as in the old times when $7 medals appeared as $30 trophies in the catalogue. Cash prizes, many of them two in each match, is now the rule, and the total has run up to $2,161, which, considering the support which has been given the sport of recent years, is a very respectable figure.

As yet there has been no great showing of entries, though it is confidently expected that the present week will be a busy one in and about the Association office. Several of the States will be represented in the interstate matches, while in the team matches the small-bore men and crack military shots promise to make a close contest in every case.

The programme for the meeting has already appeared in our columns. It will be made complete up to date by the following from the supplementary programme just issued: Pool shooting will begin each morning at 7 and run one hour, and after that, as far as possible, pool targets will be kept open. In Match No. 4 the position is standing at 200yds. and any at 500 and 600yds. In this match the term "U. S. Service Rifle" is intended to cover the Springfield rifle as issued by the Ord. Dept. U. S. A., having a barrel 32.6in. long, cut with three grooves. One turn in 22in. and chambered for a shell 2 1-10in. long. No alteration of above will be allowed.

In matches Nos. 6, 11 and 13, cleaning will be allowed between shots for rifles other than military.

One new match has been added as follows:

No. 19, Chambers Street Match.—Open to all comers, 500yds., 7 shots each, position any, any rifle within the rules, no cleaning allowed; military and special military rifles will be allowed one point each score, the aggregate of two scores to count for each of the prizes. Entrance fee $1 each or three for $2 if taken in one name at one time. Cash prizes at least $100, prizes in kind at least $50. Competitors will have the choice of prizes in the order of merit of their scores.

The sight protector of the front sight may be used as a shade for the same on all military rifles, except in matches Nos. 8, 9, 14, 15 and 16.

The matches will be shot as nearly as possible upon the following days, though the right is reserved after entries are made to change the order of shooting:

Wednesday, Sept. 16 Nos. 1, 2, 6, 7, 8, 11, 18, 19.
Thursday, Sept. 17, Nos. 1, 2, 6, 7, 8, 11, 18, 19.
Friday, Sept. 18, Nos. 1, 6, 7, 8, 9, 11, 14, 15, 16, 18, 19.
Saturday, Sept. 19, Nos. 1, 6, 7, 8, 10, 11, 12, 18, 19.
Monday, Sept. 21, Nos. 1, 5, 6, 7, 8, 11, 18, 19.
Tuesday, Sept. 22, Nos. 1, 3, 4, 6, 7, 8, 11, 13, 18, 19.
Wednesday, Sept 23, Nos. 1, 6, 7, 8, 11, 18, 19.
Thursday, Sept. 24, Nos. 1, 6, 7, 8, 11, 17, 18, 19.

FOLKLORE ON THE RANGE.—"Cuthbert Bede," in *Notes and Queries*, states that when the Queen's prize was won at Wimbledon on July 21, 1885, by Sergeant Bulmer, Second Lincoln, his victory was hailed with the usual "ovation," accompanied with the unusual cry, "Well done, yellow belly." This was in allusion to his being a Lincolnshire man (Spalding), and therefore supposed to possess a frog-like nature. This is an old superstition of the Fens; but it is remarkable to see it crop up on such a special occasion in this year of grace, thereby showing the vitality of folklore. The old monkish chroniclers gravely asserted, as a proof of the wisdom of Providence in adapting persons to their situations in life, that the Fenmen were created with yellow bellies and web feet, in order that they might be better fitted for their amphibious existence. Lord Macaulay, describing the Fenmen of the latter part of the sixteenth century, says that they were "a half-savage population, known by the name of breedlings," who "led an amphibious life."

GARDNER, Mass., Sept. 4.—At the recent telegraph match between the rifle club of Jamestown, N. Y., and the Gardner Rifle Club, the Creedmoor target was used by both. The following are the totals of each:

Gardner—G. F. Ellsworth 49, C. A. Hinds 46, W. C. Loveland 46, H. C. Knowlton 45, F. H. Knowlton 44, S. B. Hildreth 44, A. Mathews 43, F. E. Nichols 43, C. O. Bent 40, G. C. Goodale 38; total 438.

Jamestown—S. N. Ayres 45, H. V. Perry 43, F. K. Dowler 42, R. H. Burns 42, J. R. Moore 42, N. J. Fenner 41, H. D. Delisle 41, H. Ahlstrom 41, A. C. Jones 38, J. D. Curtis 36; total 411.

The Heywood Guards, Company F, Second Regiment Massachusetts Volunteer Militia, went out to the Hackmatack range of the Gardner Rifle Club to-day for practice before going to the annual shoot of the regiment on the State grounds at South Framingham. Each company is to send a team of 5 men who have made 17 out of a possible 25, distance 200yds, shooting to be off-hand. At the practice to-day the following totals were made: Corporal Kindall 22, Private Carr 22, Sergeant Block 20, Private Bishop 20, Corporal Thompson 19, Lieut. Edgell 17, Private Thrasher 17.

The Heywood Guards, Company F, Second Regiment Massachusetts Volunteer Militia, went out to the Hackmatack range of the Gardner Rifle Club to-day for practice before going to the annual shoot of the regiment on the State grounds at South Framingham. THE TRAP.

LIGHT GUNS FOR TRAP-SHOOTING.

Editor Forest and Stream:

At the meeting of the National Gun Association in New Orleans last winter the question of light guns was fully discussed, and it was decided by a majority of those present that if a man was willing to use a 12-gauge of 8 pounds or less, against the heavy 10 bores commonly used, he should be entitled to two yards. It was then thought that not many guns of the above weight would be used. It was pretty well ventilated about a year ago through the sportsmen's papers, and some of the writers were very positive in declaring that the light 12 would have no chance on even terms with the heavy 10s. Some of them saying it had been tried over and over again unsuccessfully. The shooters in New England were nearly all of the same opinion, and when I ordered my light gun they all said I was making a great mistake and predicted that I would use it about half a day, and then go back to my 10. I think I have convinced a good many of them of the capabilities of a light gun, and some of our best shots have followed my example. H. W. Eager, of the Worcester, Mass., Club, was a strong advocate of the heavy gun and published a letter saying that he thought a gun should weigh about 12 pounds and have 34 or 36 inch barrels, as the weight of the gun would tend to steady the shooter when facing the traps. Mr. Eager now shoots a gun of same grade as mine, 12-gauge, 7½ pounds weight, and has done much better shooting than with the heavy one.

Now, some of the 10 bore men are "kicking" against the 2yds. allowance. As far as I am concerned, I am willing to stand on even terms with them, excepting in special matches. In such cases I should stand up for the allowance. At nearly all the shooting matches in New England all guns stand at the same distance, and it is only in exceptional instances that the light guns are allowed any advantage. Now, there are a good many men who do not care to own more than one gun, and such men usually prefer a No. 12, from 7 to 8 pounds. A gun of this description, with right barrel modified and left full choked, will answer for both field and trap work, and if the owners of these guns could be encouraged to attend the tournaments, the number of entries would be larger. As it now stands, they do not care to compete upon even terms with the big guns. There is no doubt in my mind but that a 12-gauge of the prescribed weight will do good work, although it requires closer holding, the killing circle being smaller, but the tendency will be to make better shots. C. M. STARK.

DUNBARTON, N. H.

WOODSIDE, L. I., Sept. 2.—Regular monthly pigeon shoot of the North Side Gun Club of Long Island. Match at 27yds. rise, Stocky and Grau 24yds.:

Winholz	1111111—7	Barlow	0011110—4
Lyon	0110101—4	Stocky	1101100—4
Tapken	1011011—5	Grau	0011101—4
Manning	0111110—5		

Sweepstake matches were shot, 25yds., 1 barrel, miss and out. They were won as follows: Lyon first, Trask and Winholz divided second, Bullwinkle fourth, Winholz fifth, Bullwinkle sixth.

JAMAICA PLAIN, Mass.—The Jamaica Plain Gun Club has elected the following officers: D. A. Brown, President; S. D. Charles, Treasurer; C. H. Cilley, Secretary. Match for a gold medal presented to the club by H. W. Deans, 30 Peoria blackbirds, 18yds., at 3 angles, screened trap:

D A Brown	110010111111011111010101101111—22
S D Charles	111111010000011110101200101—18
J B McKay	110101110111111000111111111—24
C H Cilley	011100011111101116111111111—24

Cilley 1111111—7. McKay 1111110—6. Ties on 24, miss and out: C. H. Cilley won, McKay second, Brown third.—C.

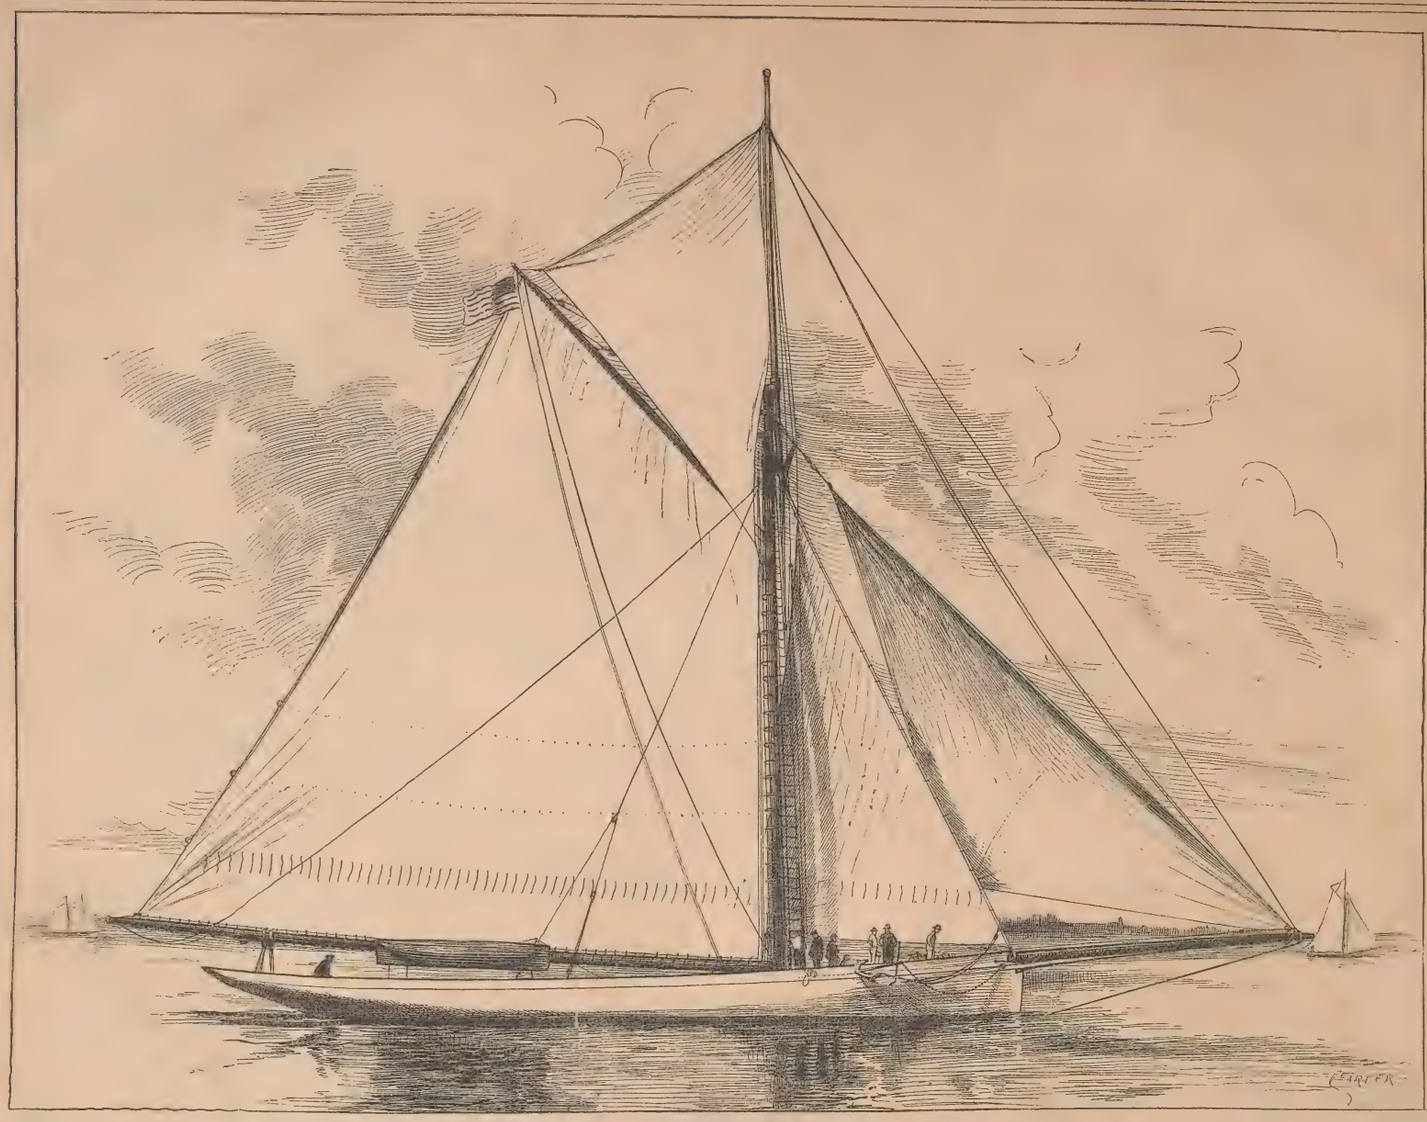
CLEVELAND, O.—The East End Gun Club will hold a tournament, Sept. 17, open to all, for 23 prizes, ranging in value from ten to three dollars each. The secretary is Mr. F. G. Hogen, care Forest City Oil Company, Cleveland, O.

Yachting.

FIXTURES.

Sept. 7, 9, 11—America Cup Races.
Sept. 12—Quincy Y. C., Third Championship Race.
Sept. 12—Boston Y. C., Fourth Club Race.
Sept. 12—Corinthian Y. C., Fall Matches.
Sept. 14—Newark Y. C., Open Regatta.
Sept. 15—N. Y. Y. C., Bennett and Douglas Cups.
Sept. 17—N. Y. Y. C., Brenton's Cup Race.
Sept. 19—Beverly Y. C., Nahant.
Sept. 19—Hull Y. C., Champion Race.
Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 22—N. Y. Y. C., Cape May Cup Race.
Sept. 28—Pentucket Y. C., Championship Regatta.
Sept. 28—Newark Y. C., Open Sweepstakes. Newark Bay.
Sept. 30—Knickerbocker Y. C., Fall Regatta.

YACHT RACING.



PROBABLY no sailor, though he may love the sea, has a great regard for a ship that makes long and laboring passages between port and port, and, as a matter of fact, among seamen, and British seamen especially, a fast vessel under canvas is always been a favorite. But steam, more particularly since the screw propeller has displaced the paddle, has completely separated fast sailing from smart seamanship, and speed is gained, not so much from dexterity-aloft as from hard, grimy work below in the unpoetical stoke-hole. About twenty years ago there were some fast and exciting ocean races from China with the first of the season's teas, but the days of such famous clippers as the Spindrift and the Taeping were numbered with the opening of the Suez Canal, which required the use of auxiliary power between Alexandria and Aden, and this has been so increased of late that steam is almost entirely relied upon throughout the full voyage. Between the Clyde and the St. Lawrence till very recently there were keen contests between the vessels in the timber trade, and it was not unusual for captains to remain day and night in their top-boots encouraging their crews in working the ship by what is called "kedging," through long channels of ice, so as to have the proud honor of being first at Quebec. Steel and iron being chiefly used in ship-building, there is no great hunger after timber cargoes, and the interest in the annual sailing of the fleet has been allowed enterely to lapse. Early fruit from Spain is now also brought by steamers, as is the first fish from the herring and cod fleets. The old sailing spirit of our forefathers is only to be found on board the boats of our white-winged fleet, more particularly those denominated "racing yachts."

Comparisons have frequently been made between yacht-racing and modern coaching. Some people are ignorant enough to think that the former has been instituted for the purpose of keeping alive the nautical tastes of our forefathers, just as the latter has been started for the purpose of preserving to some extent the sensations which were experienced in a drive on a mail coach. Long before the "steam pot" hissed the "Tantivy team" from off the road, yacht racing had come into favor, and though the speed of the competing vessels could not compare with that of the racing boats of the present time, skilful seamanship was displayed, and the enthusiasm was greater, even than it is now. As early as the year 1720, a club, now known as the Royal Cork Yacht Club, was formed by the gentlemen who used to cruise inside Queenstown Harbor; but it was not till about 1815 that some fifty noblemen formed themselves into a club, which is now identifiable as the Royal Yacht Squadron, the most aristocratic yachting club of the world, and the only one in Great Britain the members of which are entitled to fly on board their boats the white ensign of her Majesty's navy. The early members of the squadron were those who had been connected with the senior branch of the service, and ready, of course, like all old naval officers, to oppose innovations. Up till 1815 the officers of the navy had not added greatly to the progress of science, and those of them who belonged to the newly formed sailing club did not attempt to improve upon the old-fashioned types of yachts, and their bluff, cod-like heads, and their lean, mackerel-tail like sterns. Fifty years ago a yacht's length was just three times its breadth; but about that time Wanhill, of Poole, began to lengthen and sharpen the bow; and in the north, Fife, of Fairlie, on the Clyde, father of the present noted yacht-builder, turned out a boat of 36 tons, named the Wave, which was very sharp-bowed and high in the bilge, the breadth of which was just one-third her length of keel. The latter, after being given a leaden keel and ballast, beat older boats of exactly double her size, and so the bluff bow was made more narrow still, and the mackerel like tail lengthened out and made more full and shapely. The Poole builder then began to seek stability, that is, roughly speaking, "self-righting power," by depth, and boats have been getting deeper and longer ever since. Leaden keels began to be generally used, and the shifting of ballast was allowed; then, and for many years afterward, each competing vessel having generally five or six tons of shot, such as is used by sportsman, in bags to pile up to windward as soon as the vessel changed her tack. In narrow water and a headwind this work was exceedingly heavy, for no sooner was the last bag shifted over from the ee to the weather side then the word "Ready about" was given, and it was necessary to throw the shot back again to the side from which it had just been taken. Fortunately, in the true interests of the sport, the shifting of ballast has long been forbidden, and the work of the crew is limited to the handing of the sails.

In 1823 the Royal Thames Yacht Club was founded for the encouragement of yacht sailing, and the formation of this club, which now has the largest membership of any in the world, was followed by the institution by a number of Plymouth gentlemen of the Royal Western of England in 1827, as well as at Queenstown of the Royal Western of Ireland, and about the same time, the Royal Northern of Scotland. In 1838, the Royal London, the second club of the Thames, was established, and this was followed by the Royal St. George's of Ireland, with its headquarters at Kingstown, Dublin Bay, in 1842; the Royal Victoria at Ryde in 1844, and the Royal Mersey at Liverpool, in the same year. Interest in the pastime by the establishment of these clubs was gradually disseminated, and the holding of annual regattas led to strong rivalry among crews and builders, the Thames men do their best to beat those of the Solent, and the Mersey men those of the Clyde or of Dublin Bay and Queenstown. Still up till 1851, beyond gradually making the bows more wedge-shaped, increasing the depth and length and narrowing the beam, there was not much improvement made in yachts. In 1851, however, the celebrated America, schooner yacht, came over to this country and startled every one who took an interest in sailing by winning easily a challenge cup which had been confidently thrown open to the world. Her hull was somewhat different in shape from the British boats of that time, she being what is called "straight floored," *i. e.* without any taper in her bottom between waterline and keel, while her run or after part was gradually rounded as the stern post. Her bow, which was cut away sharp, was also supposed to have a great deal to do with her success, and this and the straight floor form of her hull was actively copied. Soon, however, it was found that her success lay not in the hull at all, but in the sails which were set almost as flat as cards. In the British boats they were baggy, the after "leeches," or parts of the mainsails between the boom and the point of the subtending gaff, alone being as round as one-third of the circumference of an umbrella. So well was it set up in the America, that those on board watching vessels some distance in her wake could not distinguish it from the mainmast.

This improvement in sail making was the only great lesson the America's victory taught us, but yacht racing received a tremendous lift from the recitals of her performances, which were witnessed by immense crowds, Cowes never having been so full of visitors since. More boats were built, more yacht clubs established, more prizes sailed for, and yacht racing became a general sport all round the British coast. From 1851 to 1860 numerous improvements were made in yacht hulls, and exciting contests were witnessed between such vessels as Musquito (known as Old Ironsides), the Surge, Aline, Alarm, Oethona, the Sevrige and others. In 1863 we were introduced to that huge twin mainsail the spinnaker, which was first used in the forty-ton cutter Niobe. This the wonder of onlookers at regattas, soon superseded the square sail in running before the wind, and now no yacht is without one. In 1865 Fife built the famous cutter Fiona, the length of which was under five times her breadth, her draft of water aft being 12ft.; and in the twenty years which have elapsed since then we have had more than half as many champions, no vessel during the last eight years having been able to maintain her supremacy for more than a single season, so strong is the competition which has set in among the naval builders and architects. Cytera, Neva, Kriemhelda, Vol-au-Vent, of cutter; Egeria, Cetonia, Pantomine, Miranda, of schooners; and Florinda, Jullenar and Latona, of yawls, all have had their day, and it is very questionable whether they would be able to make the semblance of a contest with the vessels comprising the present racing fleet. It has been the same among the minor classes. The Formosa, cutter, may be said to have been the last of the old squadron, and her day came much sooner than was expected. Having beaten everything, the Prince of Wales purchased her from the owner, Mr. Sloane Staley, in 1879, confidently expecting that she would carry all before her in 1880, but in a Clyde shipbuilding yard there was cradled on the stocks a boat which was destined to cause as great a revolution in yacht building as the America schooner had caused in sail-making. This was the celebrated Vanduara, better known perhaps as "the steel cutter," designed by Mr. G. L. Watson for Mr. John Clark, of Paisely, with the view of sweeping the seas, so far as yachting was concerned. With 63 tons of lead run into that part of her which corresponds to the keel of a wooden boat, and a large spread of canvas, she proved very fast, more especially to windward, and in the opening race on the Thames, half an hour after starting, had ranged herself on the weather bow of the Formosa, much to the surprise of all on board. On the Saturday following the Prince sailed on board of his own cutter, she completely proved that his Royal Highness had no chance of heading the list of winning yacht owners, at any rate with the Formosa. In the end of the season she met a worthy opponent in the cutter Samoena, also a new boat, and now both are as much outclassed apparently as Fiona was by Formosa. Length on the waterline with enormous lead keels below, and a tremendous spread of canvas, seem to be what the naval architest, who has supplanted the rule-of-thumb builders of other days, aims at, and comfort is in many cases sacrificed to speed. The Wendur, Marjorie and others are luxuriously fitted up, and can in no sense be called racing machines, which are boats specially built to win prizes, their holds not being apportioned into cabins and berths in the usual style, but for the sake of trim left to remain unfurnished as sail lockers. The owner who wishes to race such a boat, must, if he has not a cruising or a steam yacht of his own, make his way from regatta to regatta as best he can, unless content to put up with the simplest of meals, and a bed on the top of some damp sails. The use of steel in yachtbuilding allows of a larger vessel, and as in composite boats, the fixing of the necessary ballast as low down as possible—a matter of importance, seeing that a vessel like Wendur carries 75 tons, Irex 65 tons (originally 73 tons) and Marjorie 50 tons, Genesta, Galatea and others have about the same weight of metal under them.

Though, however, the discomforts which formerly attended racing have been removed, the great increase in the initial cost and the heavy expense of keeping a racing yacht in commission deters many keen sailors from joining in the pastime. Roughly estimated, a first-class racing yacht of composite construction—that is, steel frames planked with wood and sheathed with copper—classed twenty-one years at Lloyds', and without upholstering extravagances of any kind, will cost, if of 20 tons yacht measurement, about £1,800, of 40 tons £3,500, of 90 tons £7,000. The suits of canvas which would be included in the above, but which might have to be renewed at the commencement of the season, would cost for a 20-ton boat £200, 40-ton boat £450, 90-ton boat £650. The cost of racing, inclusive of fitting out and laying up, would be for a 20-ton boat £600, a 40-ton boat £1,200, and a 90-ton boat £2,000. Men's wages would run away with a large proportion, the captain being paid £120 to £200, and more according to ability, while allowed from 5 to 10 per cent. on the winnings, whether in cups or money. The members of the crew get 26s. per week, and have, during the racing days, an unlimited supply of beer, £1 each for winning a prize, and 10s. for every time they start but lose, as a reward for their hard work during the contest. Two caps, two Guernsey frocks, one pair yachting shoes, one pair of leather "go ashores," a suit of ducks, and sometimes a suit of oil-skins, are also nice little perquisites. Possibly the owner of a cruising yacht, which is not raced, may think these wages high, but it has to be kept in mind that it is not every sailor that makes a first-class yachtsman; one may be a splendid hand on board of a square-rigged ship, and equal to every emergency that rises therein, but to win yacht races he must be expert in "bending" and "unbending," which means fixing and unfixing sails to topsail yards, the stowing of jib topsails, the setting of spinnakers, and many other things which are not practiced in the navy or the ships of our mercantile fleets. Nor do ordinary fishermen become first-class yachtsmen, as the Marquis of Ailsa found out when he first raced his famous little cutter Foxhound, of 35 tons, in the 40-ton class. With commendable patriotism his lordship had his new boat manned by fishermen from the little fishing village of Dunure, on his own estate on the Ayrshire coast of the Clyde. All were hardy seamen and splendid fellows in their own little boats, but they were of no use against the experienced men of

THE PURITAN.

Colchester, who, in the close of the season for oyster fishing, have long made yacht racing a profitable business. On the advice of yacht-racing men the crew of the Foxhound was changed, with the result that the little vessel proved herself a marvel for speed in her class.

The yacht-racing captain is as much superior to the ordinary yachting captain as the expert Newmarket jockey is to the plough man who rides a race with his fellow of the furrow home from the field on one of his tired team. At the commencement of the season he has to put his boat in commission, get her rigged from bowsprit to stern, see that the tackle is strong and reliable, and that the sails are properly and gradually stretched. If he is a fool he will try and stretch his new mainsail by sheer force, instead of waiting for the wind to do so by degrees, and the result will be shaking of the canvas and loss of wind force. After racing in the matches from Thames to Harwich, and also in the matches from Thames to Dover, and the Royal Cinque Ports match, he must be able to take his boat around Land's End to the Mersey. At the conclusion of the races there he will have to carry on for the Clyde in a Channel match, and after severe contests there, race to Belfast Lough; from Belfast, after the regatta, race to Kingstown, Dublin Bay; from Dublin Bay back round Land's End to Falmouth; thence up the Channel to Cowes and Ryde for the annual regattas of the Yacht Squadron; down Channel again as far as Torbay, then home to lay the vessel up. Only those who have gone what is known as "the racing round" can understand the troubles of the captain of a racing yacht or appreciate his wisdom in setting canvas on the morning of a race, his skill at starting, his confidence at mark-boats, or his patience in refraining from racing at all when he sees that the wind promises to blow too strong for his particular craft unless he reefs his mainsail, and to a certain extent spoils it for subsequent races. Bowsprits will snap at times, and topmasts will break in the very moment of victory, bringing down gaff and cross trees. He will have to make for the nearest shipwrights, and try to get everything ready for the race next day. Frequently it is necessary to run down to the starting line, still busy repairing the damages, after working all night with the men. The yacht-racing captain must be intelligent, skillful, plucky and patient, and be in addition endowed with powers of endurance. From the decision which he is daily required to exercise, he would probably make a splendid man for steering torpedo boats.

It may be asked by some what amount of pleasurable excitement the owner of a racing yacht gets for his money. The answer can only be supplied by experience. The reader must come on board a racing yacht and accompany me in such a race as I have sailed before now. All night we have been carrying on hard in a Channel race, on what is known as the northern round, now bursting up a long phosphorescent wake as our gallant vessel heeled to the freshening breeze, now with spinnaker set to catch the lightest of airs, racing ghost-like in the moonlight through a fleet of startled herring fishers, who, while their anchor lights bobbed on the surge we caused, no doubt thought with fear of the Flying Dutchman. Now, a few hours after our arrival, we are preparing to start in the principal race of the day. Racing flags are fluttering at the mast-heads of half a dozen competitors, two of which are rigged as yawls, and one as a schooner; bunting is flying in confusion from the rigging of the Commodore ship, moored at the entrance to the bay; union jacks float from every church spire of the little seaport town; a fast and stately steamer, specially engaged to accompany the match, hovers about with a fair gay crowd on board, the local band playing from the fore deck such tunes as "A Life on the Ocean Wave," and "Rule Britannia." The morning breeze has been piping up fresh, and promises to increase in strength. The captains of the competing vessels are much exercised as to what size of topsail to set, there being apparently, so far, no necessity for reefing. It wants but twenty minutes to the time for starting, yet each seems watching and waiting to see what his opponent will do. At last our own able skipper makes up his mind, and in a few minutes the crew is busily engaged in hoisting our balloon topsail, with its huge yard fifty feet in length; a work by no means easy when the weight of the spar and canvas, together with the fact that it has to be raised one hundred clear feet from the deck to the topmast head, is taken into consideration. "The breeze is always lighter here outside when it is from the northwest," says our captain in explanation, "and we will have it free all down the shore." The other vessels are following our example and soon balloon topsails are set on all of the fleet, that on our own boat sitting like a bit of cardboard. A glance through the binocular shows that there is some excitement on board the Commodore's boat, and as we rush past we can see the officer in charge with watch in hand by the side of the gunner, who with his hammer ready stands by the little four-pound brass swivel in order to strike the cap at the word of command. "Give us time from the flash," cries our captain. "There it goes."

As he speaks the crack of the first gun rings out, and we know that five minutes afterward to the very tick, we shall have the second, before the firing of which we must not cross the line. Our owner, who acts as timekeeper, holds a chronometer and calls off the minutes as they run, thus keeping check on the timekeeper on board of the Commodore ship while assisting our steersman in judging how he shall manœuvre his vessel so as to get a good position when the race commences. "One minute gone," he calls as we race up the bay in a direction straight away from the course we have to sail. "One gone, sir," repeats the captain, who has been casting his eyes anxiously round to observe the movements of his opponents, who are cat-like also watching his own. "Two minutes gone!" cries the timekeeper as we still hold on up the bay. "Two gone, sir." is the quiet answer to this, followed by the sharp command, "Stand by to go about; lee helm." Round she comes! With both hands he shoves the helm hard down, the bowsprit swings around till the head sails are in the wind; there is a heavy fluttering and flapping of canvas, a rattling sound of blocks and flicking sound of loose sheets, and then as the latter are hauled aft and belayed she fills again and goes off steaming down the weather shore for the line. "Three minutes gone, sir!" says our timekeeper. "Three gone," repeats the captain after him. "Burst the jibtopsail out smartly there, we must travel as fast as we can to catch the gun." As the flying jib, which has been fastened to the forestay by thin hanks of spun-yarn, is burst out by a hard pull at the sheet, our gallant vessel springs to the signal like a greyhound from the slips at Altcar, sending the white foam up in spurts from her lee shoulder, while the broken water snorts and hisses in the lee scupper, like escaping steam from the throttle valve of a locomotive engine. "Four minutes gone!" is called, and responded to in the same quiet manner; but as yet we are a considerable distance off the line, on the edge of which some of our opponents are hovering about so as not to be far off when the signal is given. What a mistake they made in doing this, they will soon find out. "Four minutes and a half gone," is the warning call. "All right," says our captain, looking not a little disappointed, however, as he sees our most formidable opponent, the largest of the cutters, close on our weather bow. "Quarter to go," "Ten seconds to go," cries our timekeeper excitedly, as midst the shouts of excited captains, the booming sound of loose canvas and the roar of rushing water like a Highland torrent in a spate from the stems of the competing vessels we charge through, getting the wad of the newly discharged starting gun almost across our bowsprits. Drawing his helm to him, our steersman tries to force his way through the lee of our opponent, who is so close to us that the foam from the bruised billows she occasionally catches under her fore foot lashes over us in showers of white spray, but in vain. Inch by inch she creeps up in the puffs, only to fall away in the lulls. Never disappointed our steersman tries again, and the jib-topsail has almost filled clear of that of our rival. Once that is effected we are through. We are almost certain of success, when all of a sudden we feel a scraping sensation beneath us, and the local pilot, who has up to now been very quiet, springs up and shoves the helm hard down, with the remark "No more away, captain, for any sake;" and just in time, for the sensation we feel is that of the boat's keel grating on the sand, and any moment might see us with mast, sails, and everything going over the bow in one huge entangled mass. Gradually we have been nearing the first mark-boat, and our captain resolves to try and get through our opponent's lee no longer, but makes preparations for the next stretch of the course, which is six miles dead to windward, and so giving promise of plenty of tacking. The square balloon topsail is hauled down smartly, and a three-cornered one without a yard, technically known as a jib header, hoisted in its stead, while the jibtopsail on the topmast stay is lowered and made fast ready for setting again (it cannot be used going to windward) by a man who sits stride legs on the bowsprit end. Round we swing at the stern of our rival, taking care not to foul the markboat, for if we even touch it we shall be out of the race, and with sails flat, the sheets having been hauled in, we hold on our original tack, our opponent standing off on the opposite one with the view of getting the early flood tide to assist her. Gradually we draw away from each other, and then we go about full two miles apart at the same time. Closer, and closer, and closer again we draw together, and the question arises which is first boat. We are on starboard tack, and she on port, and the rule of the road at sea will act in our favor if it comes to be a near thing. The distance between us lessens, "Can she cross us?" every one seems to ask of himself. "We have got her," says our captain confidently, as he sees our opponent's headsails commence to flutter as the helm is put down, and she goes off to starboard tack, while we make ready to go about, as the captain says, on the top of her—that is, well to windward—so as to keep her under our wing for a time.

In the third tack we weather our second markboat, and with our huge spinnaker on the port side dragging us along at a fearful pace, commence to run home to the Commodore, our opponent following, also with spinnaker set, and a water-sail carried under the mainsail. Faster than we are dead off the wind, she closes up on us gradually, and then, by the backing of our spinnaker and a slackening of our speed, we know that she has completely covered us and taken the wind out of our sails. As our canvas hangs limp she surges past, but we hold on in her wake, and at the Commodore she leads but by three-quarters of a minute as we start to do the second and finishing round. We have been allowed two and three-quarters for her superior size, and are hopeful; so, with the breeze still freshening, we go off in hard pursuit down the shore, with less-feared competitors close astern. In the showers the wind blows harder, and goes more into the northwest, so that we have less tacking to windward. We round the boatmark and set our head for the Commodore, just exactly a quarter of a minute within her time allowance, and we have to keep inside that in order to secure the prize. In the hardening breeze we have had to lower our topsail; but our opponent still carries hers, and our captain seems sorely perplexed as to what to do, for our own gallant little vessel appears to have as much as she can carry. Close up to the windward sit the crew with scarlet cowls against the rail, looking like red-combed sea birds cowering under a sheltering shelf of rock. To windward the sea is a mixture of foam and spindrift, and we are in hopes that one of the shower-laden squalls will bring down our opponent's topsail, topmast, and all.

But no! the showers pass and the wind rather softens. Questions seem to be passing every now and then between the eyes of the crew and the eyes of the captain, and the former seem to be glancing aloft appealingly. Their request is answered by an upward jerk of his thumb, and the remark, "Give it her!" In less than half a minute the jib-headed topsail is hoisted above the mainsail, and the little ship struggles gamely, the captain sometimes speaking to her and cheering her on, as if she were really a thing of life. Soon the flash of the gun tells us that our opponent has crossed the winning-line, and our timekeeper commences to count off the time, and two and three-quarter minutes allowed. The two minutes pass as slowly as if they were months on a bed of sickness, and yet we are still with buckling topmast and straining stays singing in the wind, ploughing the green water. The half minute, too, had gone, but the helm is shoved hard up, and as we gibe over, the flash of a second gun informs us we have won a good race, after forty-eight miles' hard sailing. Such is, possibly, but a fair description of an average day's racing in a modern yacht.

The sport is not without incident and healthy excitement, and worthy of encouragement. Business men, we know, are often called upon to cross the English or Irish Channels or the Atlantic, on very short notice, and all who have been yachting in their youth must rejoice in their experience when they see their fellow passengers writhing under the dreaded *mal de mer*, the only one remedy for seasickness being a love of the sea acquired in boyhood. The yacht-racing man, as a rule, is a good swimmer, and being accustomed to such unrehearsed effects as a sudden immersion at times with his clothes on, possesses that confidence and nerve which the fancy swimmer of smooth water in ponds and baths lacks. He enjoys his Channel passages and ocean voyages to the full; in shipwrecks or collisions he is cool and collected, and able to assist in launching or in managing the boats, and at home at his fireside he reads with an intelligence and appreciation he could not have otherwise possessed, descriptions of maritime disasters and feats of bravery by seamen. Sea stories have for him a fresh charm, and he can readily detect the difference between the swinging sea roll-like style of the expert and the pinchbeck "starboard-bowsprit" nonsense of the lady novelist who has never been out of sight of land. He loves, too, to look at the sea pictures of the olden time, when British seamen, with death raging all round them, would lay down their cutlasses at the word of command, and with both hands at the halliards and eyes aloft, obey the orders of the sailing master as coolly as if in harbor, while their comrades on the yards shook out their reef-points as if totally unconscious that they were the marks of picked riflemen below.—*T. Dykes in Fortnightly Review, August*, 1885.

THE AMERICA CUP RACES.

IT was generally expected last week that by to-day two races of the series would have been sailed, and that though the Cup had not yet changed ownership, the relative powers of the boats would be better known and each of them would be credited with one race. On the contrary, in spite of two trials no race has yet been made, and while Puritan displayed wonderful ability in Monday's sail, the final result is still in doubt. Twice have the yachts come to the line off the Scotland Lightship, once failing to sail the course in seven hours and the second race ending in a disastrous foul on the line, necessitating a delay of several days. Both failures are unfortunate, as they are apt to try the patience of the crews, while a large number of persons who have come from a distance to see the race, have been obliged to return without doing so. On Sunday both yachts lay off Tompkinsville, Genesta at anchor and the Puritan in the American Docks, where she was officially measured. The dimensions and elements of the two yachts are:

	Puritan.	Genesta.
Length over all	98ft.	96ft. 5in.
Length on waterline	81ft. 1½in.	81ft. 7½in.
Extreme beam	22ft. 7in.	15ft.
Extreme draft	8ft. 5in.	18ft. 6in.
Depth of hold		11ft. 9in.
Displacement, tons	105	150
Ballast on keel, tons	27	70
Ballast inside, tons	20	2
Ballast, total, tons	47	72
Rates of ballast to displacement	.45	.48
Tonnage, Y. R. A. rule	140	80
Racing length, N. Y. Y. C. rule	88.85ft.	83.05ft.
Mast, deck to bounds	60ft.	52ft
Mast, heel to cap	78ft.	77ft. 10in.

Bowsprit to boom end	144ft. 7in.	140ft. 6in.

The difference of .8ft. is equal to an allowance of 31 seconds from Puritan to Genesta on a 40 mile course, making practically a race on waterline length and disposing of the rubbish about rules made to favor the cutter that was current last winter.

About 1 o'clock Puritan got under way, there being very little wind, and crossed the bay to Fort Lafayette, where she hung motionless for some time. An hour later Genesta also lifted her anchor and sailed for the Hook, going down slowly through the Narrows against the young flood. Once outside the boats met and a brush ensued between them for a few minutes. The entire bay was covered with steam and sailing yachts bound down or up, the latter making little headway in the light air. The racers continued down to the Horseshoe, where they found a large fleet already at anchor waiting for the next day's race.

Monday morning promised little in the way of wind, a light air from the north stirring at first, while a thin haze lay over the city and bay. As usual, the tug E. Luckenbach was engaged as committee boat, and on board were Messrs. J. F. Tams and C. H. Stebbins of the Committee, Mr. Daniel Appleton, of the Eastern Y. C., and Mr. L. P. Bayard, of the Seawanhaka C Y. C., both of the latter gentlemen assisting the Committee. A few members of the New York Y. C. and a number of newspaper men were also on board. The tug steamed down, calling at Staten Island, and then running on to the Hook. On the way vessels of all descriptions were passed, tugs from New York, Boston, New London, and other points about the Sound and Hudson, little launches, graceful steamers, the Empire State from Boston, the Taurus with the N. Y. Y. C. members on board, the awkward Kill von Kull, as big and high as a modern city block, the dismal and ancient Wm. Fletcher and dozens of others. Besides these the steam yachts, half a dozen Stilettoes, apparently, as the peculiar black and white hull was hardly noticed in one place before the same streak of foam with three masts popped up in an entirely opposite quarter. In and out among the fleet she twisted and turned, greeted with cheers and steam whistles. Steaming along in a more stately and dignified manner was the long, black Nourmahal, the stylish Amy, Atalanta, Electra, Corsair, Stranger and the entire fleet of New York steam yachts, with others from Boston, while under the Oswego Y. C. flag was the Ruth with Vice-Com. Condé and his family on board.

Sailing craft were present in equal numbers, yachts, pilot boats, working vessels, all bound on one errand, almost the only exception being a fleet of a dozen oyster sloops working out of the Narrows for their grounds in Princess Bay. Below, inside the Hook, was a wonderful sight, the low sandy point hidden by the fleet of vessels, whose masts were closer and more numerous than telegraph poles on Broadway. Such a turnout has never been seen on the bay before, as in the famous Cambria races there was no steam yacht fleet at all, and so one marked feature of Monday's display was missing. First among them all were the two racers, Puritan with a dull coating of black up to the gold streak which the white bulwark marked out sharply her sheer, and Genesta, with red and black flag at masthead and a smaller one down on the leach of her mainsail. The Boston boat was already in tow of the tug Luther C. Ward, and a line was passed from the Luckenbach to Genesta, and both started out for Scotland Lightship with the entire fleet in company. There was absolutely no sea, the veriest tubs and the smallest launches ventured out with impunity, and all were soon lying idle about the Lightship without any wind to speak of, the little that there was at times being from the south and east. From 11 to 1 the tedious wait continued; but at the latter hour there came up a light breeze from southeast, and the Committee resolved to start the race. The course, southeast, was given to both yachts, and the Ward, with Mr. Olsen in charge, and the big mark float aboard, started out, towing a log on each quarter. As soon as she was well away, at 1:30 P. M., the preparatory whistle sounded. The tug lay about 300yds. east of Scotland Lightship, the fleet being scattered in all directions, leaving a narrow lane to the southeast. When the whistle was blown at 1:35, Genesta was directly above the line standing slowly for it on port tack, while Puritan was further to the eastward and reaching along with freer wind. Both carried lower sails with small clubtopsails and jibtopsails. At first it seemed as though Genesta would lead across; but she moved quite slowly, while Puritan came reaching along at a pace and rushed by her astern, rounded the judges' boat at the east end of the line, and crossing on port tack, staying as soon as she was well over and standing out to sea. Genesta, meanwhile, coming directly down for the line on port tack, stayed just above it, and when on starboard tack reached along the line for some distance, only crossing it 37s. after the last gun. The times were:

Puritan.....1 35 55 Genesta.....1 37 37

Thus the latter had a handicap of 37sec., or 0sec. more than her time allowance, and as Puritan started 1min. 5sec. ahead of her, Genesta must finish within 58sec. of her to win the race. The first leg took them to the north of Sandy Hook Lightship, right out into the Atlantic. Puritan had made a big gain at the start and was now about 200yds. directly to windward of Genesta, both boats pointing nearly the same, and for the time footing equally. All about the two yachts on every side were the accompanying vessels, making a wonderful water pageant. The Gallia was sighted bound in, and some speculation was indulged in as to what her passengers would think of the procession; whether they would not imagine that all America was bound abroad, deserting the country entirely. In spite of the numbers present the yachts were not seriously incommoded, though one steamer, the Eliza Hancox, insisted on running dangerously near them in spite of the requests and protests of the committee. At one time the huge Kill von Kull took the wind of the Puritan and later on the fleet steamed through Genesta's weather, but no harm was done and no complaints made by the yachtsmen. At intervals during the race carrier pigeons with messages attached were sent away, carrying news to an evening paper.

The sailing was even for a short time, but Genesta was to leeward and her skipper started to lift her to a better position. At 1:55:30 she made a tack, coming about like a top, in a manner that astonished and shocked the friends of the American boat. Hardly was there a flutter in her headsails before she was over and away with her bow now heading further to the south. Puritan was not long in following, but did not come about so quickly, leaving her adversary still to leeward. Within a minute of the time she left the first or port tack, Genesta was about a second time and heading in the original direction, with Puritan about again a d to windward. All was done in a twinkling, two tacks made by each yacht and they were back in their original positions with little change. Genesta was undoubtedly quicker in staying, but Puritan had begun to outfoot her. The wind was very light, but steady, filling Puritan's sails at all times and not coming in puffs. The water throughout the race was perfectly smooth, neither boat having much motion. While it was dubbed a cutter day, it was not one of those variable winds, now light and now a calm, that shows the weight and momentum of the cutter to advantage; neither was there sea enough to roll the wind out of the wide boat's sails, but the latter had a steady breeze, such as it was, that kept her canvas drawing nicely all day. After sailing for an hour on the original tack the only difference noticeable was that the distance between the two boats, still side by side, had widened to nearly three-eighths of a mile. Both were pointing very evenly and Puritan was slowly moving ahead, while holding well to windward. At 3:08 Genesta again tacked, followed by Puritan, but the narrow boat was still far to leeward. Keeping a good full she stood in shore but still gained nothing. Matters were enlivened for a time by a brush between the schooners Montauk and America having a little race between themselves, in which the former went through the latter's lee. Gen. Butler had addressed a polite note to the committee asking that the America might be allowed to sail over the course and that her time might be taken, but they were obliged to deny his request. By 5 P. M. a part of the fleet were gathered near the tug Luther C. Ward which had thrown out the flag buoy. Several miles to the north the two yachts were slowly working along, the wind being now so light that it was very evident that the race could not be finished in time. After waiting until 6:30 the tug steamed back to Puritan and declared the race off, and then ran on to Genesta, passing her a line and starting home. Running at a speed of about 10 miles, the tug was 4m. in reaching Genesta after leaving Puritan, which would make the distance about ⅔ of a mile between them. The Ward took Puritan in tow, and both steamed slowly for the city. Nearly all the excursion boats had returned, and the ocean was quiet and calm with no sign of the crowds that had disturbed it through the day. Inside the Hook both boats were dropped, and the Luckenbach ran on up, reaching Pier 3 shortly after midnight. While the race was really no race, it served to show that in smooth water and a light breeze, the wide boat could beat the narrow boat to windward.

The race was called for the next day, and on Tuesday morning the Luckenbach steamed off again, calling at Staten Island, and then hurried down to the Hook.

The weather was very like that of Wednesday, but there was a little more wind in the early morning and a little roll outside. The fleet of the day before was not present, there being two of the iron steamboats, some steam yachts and tugs. Both the yachts started out from the Hook under sail, and at 11 A. M. all were at the Lightship. The Luckenbach was anchored to the east of the ship about 300yds., the Ocean King with Mr. S. B. Lippincott and Steward Olsen had started for the outer mark, 30 miles S.S.E. Genesta, under club topsail, stood along on port tack some distance to leeward of the line, at 11:32 when the whistle sounded, while Puritan, also on port tack, was much nearer the line, but well to the eastward and at a distance from Genesta. The latter held her port tack until just to leeward of the Lightship and as far as she well could go, then she tacked and stood squarely down on starboard tack for the line. Puritan was still far away when Genesta went on starboard tack, but continued along the starting line on port tack, evidently working for a weather position if possible. Genesta had come up so close to the Lightship that there was barely open water between them as viewed from the tug, and it seemed that the only course for Puritan was to stay under her lee bow, or else to bear up and cross before gunfire. Neither of these suited the Boston skipper, but to the astonishment of all the spectators he held his course and rammed his ship into the rapidly lessening gap between Genesta and the Lightship. For a moment Puritan's lofty canvas closed out like a white curtain the view of Genesta, and all held their breath. Then came a clear sharp crash that boded ill to one or both, a moment later the end of Genesta's bowsprit was seen through Puritan's mainsail close down on the boom, a rip of canvas, a big hole in the sail, a final crash, and the big cutter swung into view as she payed off under Puritan's stern, her handsome bowsprit in the water under her stern, and nothing over the bows but a broken fibres like a worn out broom. The spar was broken off just outside the gammon iron, the splendid quality of the stick, of Oregon pine, being shown by the long splintered fracture. The copper bobstay bar, 1½in., was bent nearly to the shape of a fish hook, and the chain plate of the port bowsprit shroud was broken short off.

The timekeeper had his hand on the cord to blow the whistle as Puritan hid Genesta from view, but did not blow it, as it was seen at once Genesta was disabled. Puritan sailed alongside the judges' boat and Mr. Forbes asked for instructions whether they should sail over the course alone, to which Mr. Tams replied with a very emphatic negative. The tug next steamed up to Genesta, whose crew were busy clearing away the wreck and getting the bowsprit on board. The first question from the cutter was as to the limit of time in which a protest could be lodged, to which Dr. Woodbury, after consulting with the Committee, answered, "Three o'clock on Wednesday." Mr. Webb proposed to hail a tug, but Mr. Tams offered to tow Genesta up. The tug withdrew, and the Committee held a further consultation, after which they hailed Genesta again.

Mr. Tams announced that they had ruled Puritan out and that Genesta would be allowed to sail over the course, claiming the race if made in 7 hours. Mr. Roosevelt Schuyler asked whether time would be allowed to rig a spinnaker boom as a bowsprit and then to start with a 7-hour limit, but Sir Richard Sutton interrupted the parley by thanking Mr. Tams and stating that he desired a race and not a walkover. The Luckenbach took Genesta in tow and brought her up to her old anchorage and then continued up to Poillon's yard with the broken spar. Mr. Webb and Captain Carter accompanied the tug, and after some trouble selected a stick of yellow pine. The workmen turned to at once, and worked all night so that the bowsprit, a very pretty stick, was ready by Wednesday afternoon. At 3 o'clock it was taken away on a tug. The weight of the old stick was 1,736 pounds; that of the new one is 2,000 pounds.

The outside race will be sailed on Friday and the New York course on Monday, the third race being on Wednesday. The owners of the Puritan visited the committee off Staten Island and expressed their regret for the occurrence, acknowledging that the blame rested entirely with their boat. They also sent a note to Sir Richard Sutton, offering to bear the cost of all repairs. The arrangements as to time and course for Friday are the same as published for last Monday's race.

THE EASTERN Y. C. CRUISE.

AFTER reaching Newport on Aug. 31, the fleet lay at anchor for a day. Phantom had a new jibboom fitted in place of the one lost on Monday, off Sekonnet. The schooner Gitana, Rear Com. W. F. Weld, joined the fleet in the afternoon. On Wednesday there was a strong breeze from the northwest, and the fleet was promptly under way, carrying single reefs all around. Beating out of the harbor, the yachts were off Beaver Tail at 11 A. M., and at 11:10 the starting signal was given from the flagship, the following yachts starting in the scrub race to New London: Meta, Addie, Rebecca, Tioga, Clara, Huron, Thetis, Stranger, Phantom, Foam, Gitana, Fortuna, Mohican and Sylvie.

The wind allowed them to lay a course for Point Judith, and they were soon strung out, Phantom, Meta and Fortuna leading, followed by Thetis, Addie, Huron, Clara and Gitana. Thetis, with jib and staysail in place of the single jib with a club which she carried in the spring, was leaving the fleet at 12:30, with Huron, Clara, Fortuna and Stranger in order astern. The wind held strong and Thetis continued in advance, leading Fortuna by 23min. at Fisher's Island, while Clara was third boat, 30min. astern of the leader. Phantom had again lost her jibboom, and Huron had parted her throat halliards, but both repaired damages and continued.

At New London Thetis was timed at 3:52:50, Fortuna 4:19:30, Clara 4:20:10, and Gitana 4:37:45. This would make Clara 27min. 20sec. behind Thetis, but it must be remembered that the latter is 64ft. on waterline with 19ft. beam and 8ft. 3in. draft, while Clara is only 53ft. waterline by 9ft. beam. The sloop's performance was excellent all day, but the strong wind is what is wanted as was shown by her races in New York this spring. With the change in her head rig since then she is going much better. The full times of the fleet on the run from Newport to New London were:

	Start	Finish.	Elapsed.
Thetis	11 10 30	3 52 50	4 42 20
Fortuna	11 10 30	4 19 30	5 09 00
Clara	11 10 30	4 20 10	5 09 40
Gitana	11 10 30	4 37 45	5 27 15
Stranger	11 10 30	4 42 45	5 32 15
Phantom	11 10 30	4 42 50	5 32 20
Foam	11 10 30	4 59 40	5 49 10
Huron	11 10 30	5 07 28	5 56 58
Silvie	11 10 30	5 09 10	5 58 40
Rebecca	11 10 30	5 17 30	6 07 00
Addie	11 10 30	5 27 02	6 16 32
Mohican	11 10 30	5 43 20	6 32 50
Meta	11 10 30	5 52 15	6 41 45

In the evening a meeting was held, at which it was determined to run for Huntington, about 70 miles, on Thursday. The wind was light in the morning, and an early start was made, the yachts drifting for some time near Bartlett's Reef lightship. After a time a light breeze came from southeast, shifting finally to southwest and blowing fresher, Stranger and Clara were now ahead, Thetis being sixth boat. Shortly after noon the wind came harder, and Stranger took in her topsail, while Thetis stowed her balloon jib and Fortuna lost the clew of her jibtopsail, having to take in the sail entirely.

At 1 P. M. the order of the leaders was: Stranger, Fortuna, Clara and Thetis, but a little later the latter took third place, and soon after she passed Stranger, now astern of Fortuna. Gitana was now coming up and made a bid for second place, leaving Thetis third. At 4 P. M. Fortuna was off Oldfield Point, with Gitana next. An hour later both reached the anchorage at Huntington Bay, the times of finish being:

Fortuna	5 38 33	Stranger	6 42 40
Gitana	5 52 25	Meta	6 43 02
Dreadnaught	6 01 32	Foam	6 55 00
Phantom	6 11 49	Tempest	7 00 13
Thetis	6 11 56	Addie	7 03 06
Sylvie	6 30 10	Mohican	7 08 13

Clara continued on to New York and was not timed. On Friday the fleet sailed down to New York, with a very light wind, and anchored off Bay Ridge, a few of the boats going over to Staten Island.

OSHKOSH Y. C. REGATTA.

Editor Forest and Stream:

The annual regatta of the Oshkosh Y. C. was sailed yesterday. At the start there was quite a fresh breeze blowing from the northwest, and the race was very exciting. There were six boats entered in the race, three in the second class and three in the third class. The yachts in the second class were Carrie Morgan, Hattie and Pinafore, of Fond du Lac; third class, Mary, Sylvia, Fond du Lac. The prizes, second class, champion pennant and $15; second prize, $15; third prize, $10. In the third class, champion pennant and $10 first prize; second prize, $5.

The Hattie took the pennant and first prize in second class, and the Mary took pennant and first prize in third class. The course was a triangular course of six miles twice around; the race was sailed according to the Seawanhaka Y. C. rules. The Sylvia in actual sailing, beat the Mary 1m. and 18s., but had to allow the Mary 3m. and 24s.

SECOND CLASS.

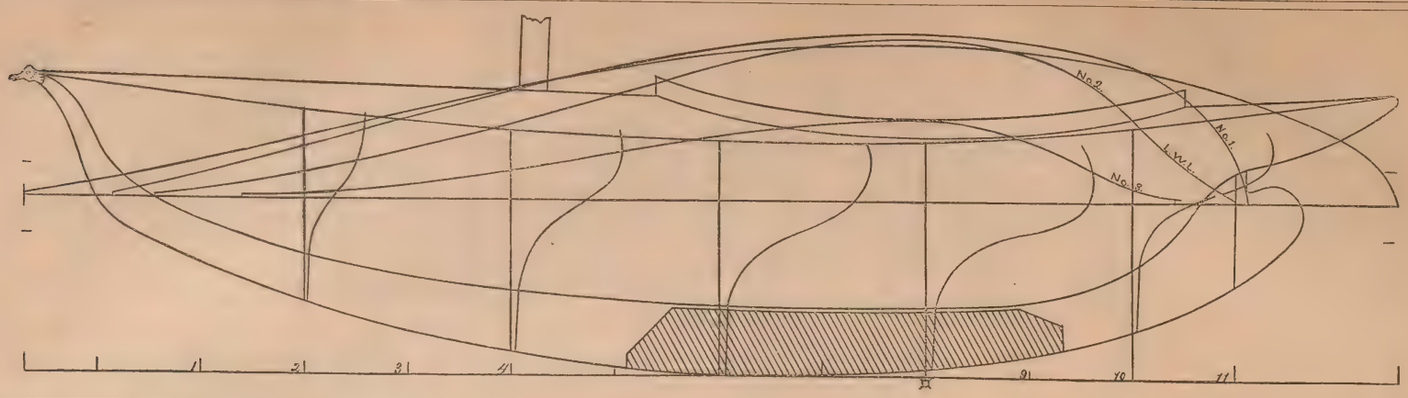
	Start.	Finish.
Hattie	2 16 20	4 27 30
Pinafore	2 17 40	4 50 40
Carrie Morgan	2 19 00	4 40 00

THIRD CLASS.

Sylvia	2 24 38	3 50 50
Mary	2 24 40	3 52 00
Cat	2 24 40	3 56 00

Third class sailed once around. The Hattie is cutter rigged and the Carrie is what we call a skimmer. The Carrie at Fond du Lac, two weeks ago, beat the Hattie 3½sec. in a heavy wind and sea. Another season I think that there will be more interest taken in yachting. There are several new steam yachts on the lake this season and there will be four more built this coming winter.

OSHKOSH, Wis., Sept. 5. GEO. M. HASBROUCK, Sec. Oshkosh Y. C.



PURITAN.—*Editor Forest and Stream:* As a firm upholder of the centerboard yacht, I rise in reply to the manifestly unfair remarks of "Loyalty" on Puritan as "the representative American sloop." The gentleman so signing takes the ground that Puritan is a cutter in disguise because of her two jibs, her stern and the fact that one-half the ballast she carries is beneath her hull, while at the same time he utterly ignores the fact that her ballast, in its entirety, weighs but half as much as Genesta's. Yes, Puritan wisely carries two jibs, for the very good reason that one jib on so large a sloop would be unmanageable and difficult to trim to the correct angle. Well, old Gracie, our typical "skimming dish" of other days, sported with double head sail years before cutter Madge came and taught our over-languid yachtsmen a lesson in machine racing, then wisely retired and has remained in retirement ever since. Nobody called Gracie a cutter. Puritan carries some of her weight "low down." Unhappily this is true, and I fully agree with the editor (see late issue of FOREST AND STREAM) that she would be a better sea boat with all her ballast stowed inside. But this certainly does not make a cutter of her, for the writer distinctly remembers that some thirty years ago a few American sloops and schooners tried this low weight experiment, then discarded the thing as a speed killer. Concerning Puritan's stern, I must candidly admit I am ashamed of it, for here, clearly, there has been an attempt to flatter Cousin John. Probably because her designer had a dim notion that Genesta would see more of that ugly fantail than any other part. To-day I enjoyed the treat of a good look at Puritan on the drydock, and how or why any unprejudiced person can call her a cutter in shape is strange. FOREST AND STREAM says she has a plumb stem. Allow me to correct the mistake. There is no approach to a plumb about it, but there is considerable rake, as well as very nearly the curve which will be seen in all the stems of Herreshoff's yachts. Cutters have great draft of water. Puritan is, for her size, a light draft sloop, unless we class among the deep ones such boats as old champion Julia, Arrow, Orion, Vixen, Sadie and Shadow. Ah yes, Shadow, the only sloop which fairly beat Madge. This reminds me to thank "Loyalty" for calling her a "full-blooded American sloop." The gentlemen responsible for Puritan are also old friends of Shadow, and as a natural result, Puritan may be considered Shadow's big daughter. The family likeness cannot be mistaken by one who sailed a Herreshoff sloop for twelve years, namely—THOMAS CLAPHAM (Roslyn, L. I., Sept. 4).

GENESTA IN THE DRYDOCK.—On last Thursday morning Genesta towed up to the Erie Basin, and about 10 o'clock was floated into the smaller dock, which, by the way, is 510ft. long and 125ft. wide on top. The keel blocks had been prepared in advance to fit the rocker of her keel, and she was lined on them and shored with four shores from each side of the dock. Her crew were afloat, six on a raft and five on a scow, each party having a tub of oxalic acid and water mixed with sand. Starting at the bow, the raft on one side and the scow on the other, all hands scrubbed away with brooms at the copper, going aft as the work proceeded. When the stern was reached the water was lowered in the dock about a foot, and the crews started back, scrubbing as they went. On each trip the water was lowered, until by afternoon the dock was dry and the entire body of the cutter was exposed to view. A large crowd lined the side of the dock and descended as soon as it was dry to inspect the bottom. The copper was very clean, as she had been docked late in April, and the plates below the lead keel was torn off in places. Several imperfect sheets on the sides were replaced by new. The most striking features of the hull are the raking sternpost and low bilges. The keel, which is well rockered, is quite short, while the sternpost rises at an angle of 45 degrees, the rudder being very deep but narrow. The bilge is dropped very low, but the bulk is so distributed as to make a very fair body both amidships and at the ends. On Friday morning the dock was filled and the yacht towed down to her anchorage, where she was measured by Mr. John W. Wilson, and at 2 P. M. on Sunday she sailed down to the Horseshoe, her owner having joined her on Saturday.

QUICK RUNS OVER THE NEW YORK COURSE.—*Editor Forest and Stream:* I find in your last week's issue that in referring to the Puritan's quick run over the N. Y. Y. C. course, 3.52.37, you state that "The elapsed time is with one exception the best made over the course, the Montauk in 1882 doing it in 3.52.17, or 20sec. faster than Puritan." These and other quick runs over this course have been frequently referred to by local chroniclers, but I do not remember to have seen any notice of the run made by Livonia when racing with Columbia, Oct. 19, 1871; and in view of the possibility, and even probability, considering the superior rig and excellence of the craft to compete next week, that all previous records may be eclipsed, it may be well to call attention to the run of Livonia. Her time was 3.53.5, or 48sec. more than Montauk's and 28sec. more than Puritan's. If, however, I am not greatly mistaken, the Livonia sailed over a course about a nautical mile and an eighth longer than Montauk's, and Livonia's time is consequently several minutes faster than that of any other yacht. Livonia, as I am informed by a participator in the race of Oct. 19, 1871, started from opposite Stapleton and returned to finish at the same point. Montauk started further up the bay, near Buoy 18, but finished outside the Narrows, off Buoy 15. Any one who will take the trouble to measure these distances will find the difference as I have stated it. It is somewhat singular that in noting the quick runs made over this course that of Livonia should have received no notice.—J. H. (New York, Sept. 4).

OPEN BOATS ON THE DELAWARE.—*Editor Forest and Stream:* The fourth of a series of races, taking place every other Tuesday from Cooper's Point, Camden, came off on Aug. 25. From 18 entries the following boats got away at 2:45, all being of the 15ft. class: Cook, Metz, Allmond, Wilkins, Henshaw, Russell and Conrad. During the forenoon the heat was oppressive, wind light from southwest, shifting just before the start to northeast, which increased to almost a gale, with hail squalls. It was a hard fight, dead to windward through a nasty chop sea. The Allmond and Wilkins, steadied by iron low down, made tolerable good weather, however, until reaching the upper end of Petty's Island, the turning point at Willow Grove, here the water was picked up and sent in flying spray far over the pavilion. It was just here the desperate fight ended in fact, between the two boats, the Wilkins succeeding in weathering the point, the Allmond passing around a few minutes after. They fairly flew before the wind and strong ebb tide, arriving at the home stakeboat, Wilkins 3:54:30, Allmond 4:01:43, the only boats that succeeded in going over the course. The Wilkins (new) has won every race she has been engaged in (four) and will sell any boat of her length for $100. Live ballast and sand has received another black eye. It was an ugly day for open boats of any size to be under sail. Even the 28ft. boats refused to start. The Conrad swamped and went out of the race after making one hank to windward.—R. G. W.

TORONTO Y. C.—The race from Toronto to Niagara on Aug. 29 was very successful, as there was a good sailing breeze. At 11 A. M. the fleet of seven yachts—Cygnet, Oriole, Aileen, Condor, Alarm, Winona and Verve—started over the line, all but Cygnet being handicapped. The course was to windward for the entire distance, and the cutters worked steadily away from the sloops. Oriole (schooner) finished at 3:15, her time being 4.09.30. Aileen was second, 4.33, and Verve third, 4.59. Verve takes second prize on time. A hop was given at the Queen's Royal Hotel in the evening, at which all the yachtsmen were present. On the same day a race was sailed by the open boats Mischief and Meteor, with shifting ballast, anchor start. At 2:30 the gun sent them away under spinnakers for Queen's Wharf, where they were timed: Meteor 2:40:30, Mischief 2:40:33. On the wind out to the spar buoy Meteor gained, and both were timed: Meteor 2:55:30, Mischief 2:56:15. Meteor was so strained that she leaked very badly, but still she gained, finishing at 3:59:30, with Mischief 4.30 later. Meteor will have to be strengthened and repaired.

LARCHMONT Y. C. PENNANT REGATTA.—The fall regatta of the Larchmont Y. C. was sailed on Saturday last in a light breeze from the northeast, 11 yachts starting over the club course. The breeze died out entirely later on and it rained for a time, the race being a mere drift. The times of the yachts that finished were:

	Start.	Finish.	Elapsed.	Corrected.
JIB AND MAINSAIL BOATS.				
Mimic	11 43 00	5 05 40	5 22 40	5 22 40
CATBOATS.				
Fairy	11 42 21	5 00 40	5 18 19	5 16 32
Cruiser	11 43 00	5 04 47	5 21 47	5 17 41
Orienta	11 43 00	5 04 00	5 21 00	5 19 30
Ada	11 41 48	5 04 20	5 22 32	5 22 32
Nozli	11 43 00	5 26 08	5 43 08	5 33 03

Fairy wins the pennant in her class. Gannet won in hers, beating Nora, but was not timed.

IS IT REALLY "QUITE ENGLISH YOU KNOW?"—The daily papers that are making such a cry over the "exclusiveness" of Genesta in declining all scrub races and docking in Brooklyn instead of New York, might easily have found another target for their remarks nearer home. The committee to whom was intrusted the construction of Priscilla started with the assumption that what they were doing was nobody's business but their own, and have acted on it ever since, withholding as far as possible all information concerning the yacht, and declining to let reporters aboard when under sail, while the boat was kept out of the way as far as possible until actually started on the cruise. All this may not be "English exclusiveness," but merely a sham American makebelieve; but whatever it is, it was entirely out of place, and not in accordance with American ideas, and in view of it the less said about Genesta the better.

MISSING MARK BUOYS.—Providence, R. I., Sept. 1.—The courses for a sailing regatta are laid out from the latest Government chart, with directions to turn a given striped buoy. During the race it is discovered that the striped buoy has been replaced by a black one. A certain boat loses the race in consequence of losing time looking for the striped buoy. What is the duty of the judges in this case? [The judges should order the race to be resailed if in their judgment the protesting yacht was actually hindered by the change in buoys. If all round the same mark promptly, even though it is not the one specified, the race should stand.]

WAS HE CORRECT?—Two gentlemen were walking down Nassau street one day last week, when one stopped the other in front of a store window in which some photos were displayed. "There," said he, "I'll show you what an English cutter is, see that straight stem, and that long thin overhanging stern? See the tall topmast and the forestay with a jib on it and the other jib set without any stay, and the round bowsprit, that's a cutter." The name at the bottom of the picture was "Puritan."

CORINTHIAN Y. C.—Marblehead, Sept. 2.—Sail off for championship pennant of second class centerboards:

	Length.	Actual.	Corrected.
Dash, A. S. Browne	20.01	1 14 53	1 08 49
Delphine, F. J. Bradlee	20.10	1 17 03	1 11 34

Dash holds the pennant for the season.

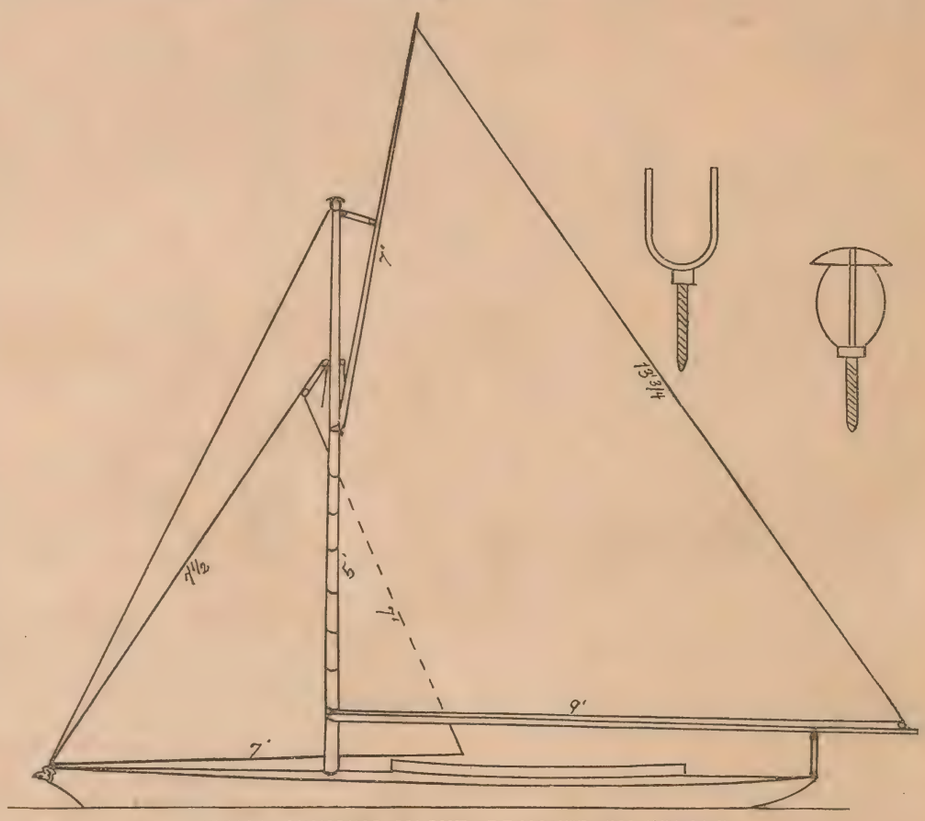
AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present names to the the executive committee. Money should be sent by *registered letter* or money order.

BROOKLYN C. C. REGATTA.

THE closing regatta of the Brooklyn Canoe and Sailing Club was set for Saturday the 5th inst., at which time Sailing Class B, Paddling Class III., Tandem and Upset races were to be held. The rain storm which raged at the time spoiled the day's sport, and the paddling races were postponed. The sailing race for Class B, the first competition on the programme, was started in a drizzle, but the committee hoped from the clouds' quick motion that the weather would clear up before the race was over. It did not, but shortly after the signal to start was given, the rain poured down, and he was indeed unlucky who had forgotten his oilskins.



At 4 o'clock P. M., the sailing race was called with the following entries: Freak, C. V. R. Schuyler; Minx, M. V. Brokaw; Jennie D., A. R. Dunnell; Slipalong, Charles Gould; Tip Top, R. J. Wilkin.

All got away well together, the Jennie D. and Tip Top a little behind the others, and all went off on the port tack to the turning mark, a sloop anchored about a mile distant. The Freak and Minx held close together and turned about on the starboard tack almost at one time, the former in advance, and these two passed the sloop and ran under full sail for the home stake. The Slipalong lost considerably by making three short tacks, but went around third, followed by Tip Top and Jennie D. The Freak won, with Minx second and the Slipalong, Tip Top and Jennie D. came in in the order named.

No other races were called, and the members and friends then adjourned to the Shattuck House on the hill back of the club house and partook of a light repast. The bad weather spoiled what had promised to be a very enjoyable day; but in the evening at the boat house with songs, pipes, tobacco and ginger ale, the "Alligators" passed a jolly hour.

The regular monthly meeting of the club will be held on Tuesday, the 8th inst., when four new members will be elected, making a total membership of 23.

THE TIPPY CANOE CLUB OF CHICAGO.—This club, organized two years ago, now numbers eighteen members. We are indebted to the purser, Mr. A. W. Kitchin, for the following list: Captain, D. H. Crane; Mate, W. M. Dunham; Purser, A. W. Kitchin; officers and executive committee, R. P. McCune, P. F. Munger, G. M. Munger, F. H. Waters, W. H. Rockwood, H. S. Wells, L. J. Marks, H. A. Foss, C. F. Matteson, J. B. Keogh, B. W. Wood, E. S. Sweep, R. M. Morris, C. H. Sargent, H. M. Johnson. Boat house on the lake shore, foot of Thirty-ninth street. Regular monthly meetings the last Thursday in the month. Regular annual meeting the first Thursday in January.

SMALL CRUISING YACHT, DESIGNED BY "DEJA."

A SUBSTITUTE FOR A CANOE.

THE accompanying drawing and description refer to the cruising boat mentioned by our correspondent "Deja," in the FOREST AND STREAM of July 9, as superior to the canoe. The following is the designer's description of his craft:

There is a fortune in store for the man who will revive the art of constructing boats and canoes out of gutta percha. It is the best, lightest, and most durable substance ever used. Next to it is white cedar, and when properly worked in the hands of a skillful builder it will be found an admirable substitute.

Judging by the light of my own experience, I would advise the amateur not to attempt the construction of his own ship, no matter how large or how small she may be. It is a trade, and requires not only a great many expensive tools, but infinite skill to produce anything like a satisfactory piece of work. Most of the builders through the country are as well able to outdo the uninitiated in this art as Burt is capable of surpassing the provincial cobbler in his.

The ribs should be of steel, punched every half inch. Streaks of white cedar, 1in. wide and 1/16in. thick, running full length. Decks of yellow pine, same dimensions, and finished in oil and varnish. Copper fastened throughout, and if provided with tarpauling to spread over the boom at night, the cruiser can always have a dry, clean and well-ventilated place to sleep, an item of priceless value on a long voyage through sparsely settled regions. She has depth and beam enough to afford ample stowage capacity for clothing and stores. Her principal dimensions are:

Over all	13ft.
Beam, extreme	3ft.
Depth, extreme	2 1/2ft.
Camber of deck	3in.
Draft	21in.
Ballast (on keel)	100lbs.
Length on L. W. L. (including rudder)	11 1/2ft.
Extreme beam on L. W. L.	3ft.
Depth inside	18in.

The keel should be of chestnut, 2in. thick on top, chamfered away on the bottom until just wide enough to receive a quarter-inch half-round steel shoe, put on with screws, except where it hits the lead, through which three copper bolts should extend to top of keel.

Her spars may be of spruce or yellow pine. I prefer the latter because of their superior lightness.

Mast, deck to truck	9 3/4ft.
Diameter at deck	3in.
At top	2in.
Gaff	7 1/2ft.
Diameter at throat	1in.
At peak	1/2in.
Boom	9 3/4ft.
Diameter at jaws	1 1/2in.
At block	1in.

The illustration of the truck shown at the masthead exhibits an invention of my own. The strapping can be made of wire by any good smith, and the truck can be turned out of black walnut. The under surface should be chipped out to receive the top of the block, so that, when the burrs are turned down on top, the whole is as solid as the top of the stick itself. To set it up properly use a small gimlet, with which bore into the masthead half the length of the thread, then dip the latter in oil or paint, and turn down carefully until the shoulder rests firmly on the summit of the mast. When in place the block ought to stand as shown in order that the halliards may lead clear fore and aft. This arrangement can be made any size, and canoeists are invited to try the experiment. I have used them for years and never had one break or get out of order. But to increase their durability they should be kept well painted, of suitable colors, black being most preferable. However, red or gilt are admissible.

The rig herewith is for cruising in open water. For racing, especially with two on board, a much larger area of sail can be used with out danger. In this article, however, I have addressed myself mainly to the canoeists just graduating from the paddles, who must learn by degrees. When, therefore, they wish to exhibit the full power of the trim little craft, they may spar and canvas her in accordance with the following rules, especially if they adopt the cutter rig, which I have found the best either for racing or cruising:

For every square foot of immersed midship section spread thirty-six square yards of plain sail. Topsails, jibs and kites to suit the fancy and the weather.

For mainmast, twice the beam added to the extreme depth, and topmast three-fifths of main. The Haggerty hoist is a capital invention, and can be used to advantage in all sailing canoes.

No hatch forward of the mast. Then it will not fall off and be lost, or suffer itself to be carried away by some boy. Anything stowed forward can be reached with the sculling oar or a boat hook, both of which should always be provided.

The best steering gear is the tiller, pure and simple. I learned to ship it under the deck after an adventure in swift water which came near costing me a long swim for my life. Passing through a narrow channel toward night, and sweeping round the elbow of an island on a current like a mill race, my tiller caught on a dry limb sticking out from a half overthrown tree, arresting the boat's career so suddenly that hatches and two handsome lines, with hooks, bait, sinkers, and a good coat went overboard. The boat careened and filled, throwing me out in water twenty feet deep, cold as ice, and roily from recent heavy rains. Relieved of my weight and everything else movable the boat broke clear, and catching the painter in my teeth I tried to swim and tow her. Humoring the current, I aimed to reach the shore at another bend a quarter of a mile below. The narrow channel was accounted for by the island, which had been neglected until its giant maples had grown to unusual size, and their heavy foliage, swaying in the June wind, shut out what little light remained. Darker and deeper grew the stream. Narrower and swifter the current became, and pull as I would the boat resisted all efforts to get much nearer the shore. There were two reasons for this. She was submerged to her gunwales and the water was failing, consequently it was higher along each shore than in midstream, so that I had to swim up hill a long distance. I was in danger of passing the point, in which event I would be swept into the main channel, the middle of it, too; and chilled through as I was, hampered and weighed down with clothing suitable for cool weather, I felt my strength going. There was only one thing to do in order to save my boat. I took a turn of the painter round my waist, which brought me near enough to the boat to get what buoyancy was left where it would sustain part of my weight, and then struck out directly for the shore. Making an extra effort just before coming opposite the point I succeeded in touching bottom, and hauled the boat aground. A watertight locker kept my matches dry, and after wringing my duds I got a fire of twigs, made a shake-down of wild willows, and dreamed of fishing through the ice.

DEJA.

BROCKVILLE C. C. REGATTA.

THE Brockville C. C. will hold their second annual regatta on Sept. 10, 11 and 12, at Brockville, Ont. The programme is as follows:

Thursday, Sept. 10.—No. 1, Sailing Race for Skiffs—10 A. M. Distance 5 miles. First prize, gold medal (value $15); second and third prizes, silk flags. Entrance, 50c.

No. 2, Sailing Race for Canoes—10:10 A. M. Class A. Distance, 5 miles. Entrance, 25c. First and second prizes, silk flags.

No. 3, Sailing Race for Skiffs—2 P. M. Reaching. Distance, 2 miles. First prize, silver cup (value $15); second and third prizes, silk flags. Entrance, 50c.

No. 4, Sailing Race for Canoes—2 P. M. Class A and B. Reaching. Distance, 2 miles. Entrance, 25c. First, second and third prizes, silk flags.

No. 5, Paddling, Single—3 P. M. Club. Distance, 1 mile with turn. Open to Class 3 and 4. First prize, silver medal (value $7); second prize, silk flag. Entrance, 25c.

No. 6, Three-Paddle Race—3:35 P. M. Distance, 1 mile with turn. Open to canoes of 28in. beam or over. First and second prizes, silk flags. Entrance, 25c.

No. 7, Upset Race—4:15 P. M. Distance, 150 yards. Canoes to be

turned completely over at signal from judges. First prize, silver medal (value $7); second prize, silk flag. Entrance, 25c.

Friday, Sept. 11.—No. 8, Sailing Race, Canoes—2 P. M. Class B. Distance 5 miles. First prize, silver cup (value $5); second prize, silk flag. Entrance 25c.

No. 9, Paddling, Tandem—3:30 P. M. Distance 1 mile and turn. Open to all canoes of 28in. beam and over. First prize, pair paddles; second prize, silk flag. Entrance 25c.

No. 10, Portage Race—4:15 P. M. One mile with turn, two portages; two men in each canoe. First prize, camp kettle; second prize, silk flag. Entrance 25c.

No. 11, Hurry Scurry Race—5 P. M. Five yards run, 50ft. swim, 100yds. paddle. First and second prizes, silk flags. Entrance 25c.

Saturday, Sept. 12.—No. 12, Paddling Single Race—5 P. M. "Best and best" boats. Open to all members of the A. C. A. or members of any recognized amateur canoe club. Distance 1 mile with turn. First prize, silver cup (value $15); second prize, silk flag. Entrance 25c.

BUFFALO C. C.

THE last race of this club was sailed Sept. 5, from the canoe house to Townsend's, on the west side of Grand Island, just below the Falconwood Club House. The wind was dead ahead as usual, and blowing rather brisk at times, dying out entirely before the last canoe finished. No topsails or jibs were carried on this day, as they would have been of no advantage in working to windward. Elf carried his cruising lugs, for he had none larger, and as formerly was left far in the rear. Helene was unfortunately absent, which caused many expressions of regret, for she was the favorite with many for second prize. Otter and Nellie kept very close together all through the race, except on the last port tack, when Nellie made the dock without altering her course, while Otter was obliged to come about to clear an obstruction.

The order of the canoes as they finished was as follows: Nellie, F. E. Wood; Otter, William Lansing; Elf, E. L. French. The first prize of the series was won by Mr. Lansing with a score of eleven. The second by Mr. Wood with nine points to his credit. The third by Mr. Campbell, who secured five points, although entered in only two races. The paddling race did not occur, as the regatta committee have not seen or heard from the paddle which was offered as a prize some time ago.

THE REGATTA COMMITTEE FOR 1886.—Com. Rathbun has named for the Regatta Committe Messrs. J. B. McMurrich, Oswego C. C.; S. T. Fairclough, Kingston C. C.; and Reade W. Bailey, Pittsburg C. C.

LAKE ST. LOUIS C. C. ANNUAL REGATTA.

THE first regatta of this young and flourishing club was held on Aug. 29 at Lachine, Canada, in the presence of a large number of spectators. The events were as follows:

1. Sailing race, course one mile and a half with turn. B. W. Richards, Commodore Brockville Club, W. Barry, W. Girdwood, St. Anne's. Richards led, and finished before the others had gained the turning buoy, W. Barry second. Prize, silver cup. Time, 26:15.

2. Portage race, paddle quarter mile, carry canoe twenty-five yards over stony point and paddle back. C. S. Shaw and F. W. Stewart. Shaw led and finished twenty yards ahead of Stewart. Time, 6:55. First prize, gold tiger eye scarf pin; second, silver scarf pin.

3. Boys under 13, half mile with turn. Campbell Stewart, Adolph Amos, Davidson brothers, Brock brothers. Won by the Davidson brothers, Stewart and Amos second. Prizes: First, scarf pins; second, cuff studs.

4. Tandem race, one mile, "Challenge Cup," four entries, C. S. Shaw and A. W. Shearwood, Lachine; M. F. Johnston and J. Chrysler, Brockville; G. Auldjo and C. E. Howard, Lachine; Girdwood brothers St. Anne's. Shaw and Shearwood paddled in their new racer, which they received a few days ago. Johnston and Chrysler used double paddles in a very fast canoe, while Auldjo and Howard found it impossible to use their new racer, not being able to sit her, it only having arrived on Saturday morning, and had to use their English canoe. The Girdwood brothers also used their English canoe. The four canoes got into line. The latter had the advantage if anything. For a quarter of a mile neither crew gained any advantage on the others, but shortly after this point, Shaw and Shearwood gradually drew away, and at the turning buoy led by about two lengths, and came home winners by about four lengths. The cheers and shouts were deafening as Shaw and Shearwood came in, and at the presentation of prizes in the evening, three hearty cheers were given for the winners of the "Challenge Cup."

5. Upset race, single, 300yds., upset twice. Four entries. W. Robertson gained his canoe first, with Stewart and Dowker together. Dowker came in first, with T. Stewart second. Prizes: First, dram flask; second, pocketbook.

6. Single paddling race, half mile, C. S. Shaw, A. W. Shearwood, G. Auldjo. Shaw led from the start and finished about three lengths ahead of Auldjo, with Shearwood a good third. Prizes: First, gold sleeve links; second, silver sleeve links.

7. Boys' race, single, under 18 years, half mile, three entries, G. Barry, W. Harrison, F. W. Stewart. From the start to the turning buoy Barry and Stewart kept on about equal terms. Stewart, who had the new racer, and had never sat in her before, was making strong efforts to overtake Barry, when he suddenly upset. But for this he would have taken second place. Barry first, Harrison second. First, scarf pin; second, canoe cushion.

8. Tandem race, one mile. From the start J. Robertson and G. Barry led, and finished two lengths ahead of T. Stewart and C. Gwilt, Harrison and Henderson third. Prizes: First, revolvers; second, paddles.

9. Hurry-scurry race, single, swim 25 yards, paddle 300 yards, five entries. C. S. Shaw won, T. Stewart second, A. J. Henderson third. Prizes: First, silver medal; second, razors.

10. Lady and gentleman's race, half mile, three entries. C. S. Shaw and Miss Radford. A. W. Shearwood and Miss Harrison, W. Girdwood and Miss Gregory. Won by C. S. Shaw and Miss Radford by about a length, W. Girdwood and Miss Gregory second. Prizes: First, lady, silver dog collar, gent, scarf ring; second, lady, brooch, gent, collar button.

11. Greasy pole walk. After several tries, the flag at the end of the pole was captured by F. W. Stewart.

The judges were Messrs. A. Boyer, M. P. P.; Capt. Howard, Jas. Stewart and H. D. Whitney. Starter, J. G. Monck; Referee, Duncan Robertson, Jr.

In the evening a reception was held at the boat house, and the prizes were distributed.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. E. R., Flemington, N. J.—Write to J. Adamson, Whippany, N. J.

F. L. S.—The Connecticut law forbids the killing of high holders and meadow larks except on shooter's own property.

G. S. S., Middletown, N. Y.—Where can I get bethabara wood? Ans. Write to our advertising dealers in fishing tackle. Some of them import it.

SKEPTIC, Groveton, Tex.—1. Have lived in Southwest Texas, where quails are very abundant. They have no dews there, nor were there any streams or waterholes nearer than several miles. Do these birds live without water, or do they go this distance for it? 2. Do foxes ever climb trees? A man from Virginia tells us that some time since, in his State, the hounds were after a fox. The fox ran by him and climbed 30 feet up a perpendicular pine. He shot at the fox and knocked him out, and the animal then climbed about the same distance up another tree. Is the fellow lying or not? Ans. 1. The birds do not live without water. 2. We have recorded numerous instances of foxes climbing trees; it is not an uncommon occurrence.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America; and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

PIEPER

Nos. 586, 588, 589 and DIANA.

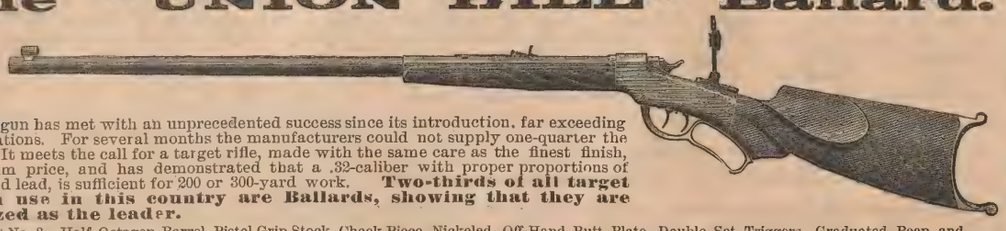
There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

IF YOUR DEALER HAS NONE, DON'T BUY TILL YOU INSPECT THE PIEPER. SEND FOR PIEPER CATALOGUE TO



SCHOVERLING, DALY & GALES, Sole Agents.

Wholesale Dealers in Guns and Gun Goods.

84 & 86 CHAMBERS ST., NEW YORK.

The NEW MARLIN .32 and .38 Rifles, 7½lbs., kill twice as far as any other of same calibers. The DALY HAMMERLESS captured the Illinois Diamond Badge again this year.

The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand. It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**

Prices:
No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches..... $37 50
No. 9.—Same, but with Single Trigger..... 33 00
Can be furnished with Vernier's Mid-Range and Wind Gauge Front Sights for $6.50 extra.

EVERLASTING SHELLS, 32-40, 6cts. Each.

Grooved Bullets, .32-caliber, 165 grains				per 1000,	$7.25
" " "	185	"		"	7.75
Patched " "	185	"		"	9.75

Cartridges loaded with 165 grain grooved bullets, .32-cal.....per 1000, $27.00

EVERLASTING SHELLS, 38-55, 7cts. Each.

Grooved Bullets, .38-caliber, 255 grains				per 1000,	$9.50
" " "	330	"		"	11.00
Patched " "	255	"		"	11.00
" " "	330	"		"	11.50

Cartridges loaded with 255 grain grooved bullets, .38-cal.....per 1000, $33.00

Reloading Tools, $5.00 per set.

The New Marlin Rifles, .32 and .38-calibers, are meeting with great favor. Twice the range of any other Magazine Rifles of same calibers.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 39 Park Row.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

ANSWERS TO CORRESPONDENTS.

OUR RIFLE TRIAL.

THE preparations for the trajectory test which has been undertaken by the FOREST AND STREAM on behalf of those who own and use hunting rifles have been about completed, and immediately following the close of the Creedmoor fall meeting we hope to have such weather as will be favorable to the open air shooting. A secure iron rest, capable of fine adjustment, and with spring buffers to take up the recoil and render it uniform at each shot, has been secured and will insure a perfectly accurate and fair trial for each weapon used.

In answer to a demand from many quarters for a trial of the smaller caliber rifles now so popular, we have concluded to build a platform at the 100-yard point in addition to that at the 200-yard point for the main trial. The screens for the longer distance will be set at 150, 100 and 50 yards from the target, while for the 100-yard range similar screens will be provided at 75, 50 and 25 yards. In this way we will get exact data of the curves made by the moving bullet. As far as possible full details will be given concerning each rifle used.

The manufacturers are responding very generally to our invitations to provide rifles, taken from the regular stock on hand, for the purposes of the trial. It was our wish to get such weapons as an ordinary customer writing an order from an interior point to one of the companies would get in return for his money and patronage. Then as to ammunition, the endeavor will be to have such as an order to one of the cartridge companies would provide. Such a test with such a combination of arm and charge is the one which will interest the mass of sportsmen, and such we wish to have. Of course each marksman of experience will have his own ideas as to loading and will carry them out, often with marked advantage over the ordinary factory loading.

The trials will be conducted under the care of one of the best known experts in matters of this kind. When the final report is presented in our columns within the next few weeks we hope to make it so full and satisfactory as to put an end to much of the speculation now passing for fact.

It is probable that the trials will begin on Thursday or Friday of next week, the date depending upon the progress of the Creedmoor meeting. They will be held on the Creedmoor range, which is reached by the Long Island Railroad (Queens station). All persons interested are cordially invited to be present. Exact information on all points will be given in our next issue.

THE PRESIDENT AND THE HOUNDS.

IN the New York *World* of Aug. 26 appeared an account of a reporter's unwarranted invasion of President Cleveland's camp in the Adirondacks. In the course of the account the statement was made:

"While we were eating breakfast the distant baying of a deerhound was heard. The President, Mr. Ward, Mr. Bacon, and three of the guides went down to the pond and stationed themselves at various points to wait for the deer that the excited baying of the hound showed to have been started. They saw never a deer, however."

Commenting on this, we expressed the opinion that the statement that the President's party employed hounds for hunting deer was not sustained by the facts of the case. The story might well enough have been permitted to drop then and there as a reporter's yarn, had it not transpired that the report was eagerly seized upon by Adirondack visitors of lax morality as an excuse and defense for their own misdemeanors. The story was industriously circulated from one end of the North Woods to the other that the President of the United States had openly defied the law of the land, and had shown his contempt for the deer hounding statute by himself employing hounds at his camp. It would be hard to conceive a more utterly ridiculous canard than this, but the fact is that the story did have credence in the woods, and for that matter out of the woods too.

Upon the return to Albany of Dr. S. B. Ward, the President's companion in the Adirondacks, we addressed him a note asking his authority to contradict the report that Mr. Cleveland had employed deer hounds. In reply we have received the following note, dated September 13:

"I have to acknowledge the receipt of yours of the 10th inst., and while it seems rather absurd to be called upon to reply to newspaper gossip, I have to say, in answer to your inquiry, that during the past month no dogs were put out after deer by the direction of either the President or myself. Very truly yours, SAM'L B. WARD."

So much for the silly story that the President of the United States so far forgot his position as to break the game laws of New York.

THE ST. LOUIS CONVENTION.

IF THE actual attendance of sportsmen at the St. Louis convention, Sept. 29, proves to be as large as the responses already received lead the promoters to anticipate, there will be a large gathering, representing many of the States. The St. Louis clubs, whose members number a strong one thousand, are making arrangements for the entertainment of their visitors, who are invited to have their guns on hand for sweepstake trap-shooting. There is no question that the sportsmen who visit St. Louis and accept the hospitalities proffered them there, will have a most enjoyable time, and one to which they are now justified in looking forward with pleasant anticipation, and to which they will look back with equal pleasure. The convention will unquestionably be useful in that it will bring together the sportsmen of different sections and make them acquainted with one another.

The committee in charge of the affair express themselves as hopeful of more tangible results than this. They are of the opinion that the meeting will have an influence on future game legislation; that it will lead to the accomplishment of more uniformity in the game laws of the different States; that it will render assistance to the execution of the local laws in the different States; that it will lead to the regulation of marketing game, that it will in some measure remove the causes of conflict between sportsmen and game dealers, and that it will foster and increase the supply of game and fish. All these are results of very great importance, and if the convention, or the national association which is to be established, shall succeed in attaining them, future generations of sportsmen will rise up to call it blessed.

There are, however, many obstacles in the way of attaining immediate benefit from the St. Louis movement, and it will not be wise to anticipate too much from it. The actual change in game laws, when such changes are desirable, must after all be undertaken and carried through by hard work in each particular State, and it is not quite clear in what manner the national association can be of any use in such work, beyond, perhaps, by its annual conventions stimulating the interest and determination of State delegates.

THE "KINGFISHERS."—Last week we said that "Kingfisher" had returned from his "annual fish." Next week we shall have something about "Kingfishers" and jailbirds.

A CALL FOR MASSACHUSETTS VOLUNTEERS.

IF peace, as well as war, has its victories, they surely are not won without fighting. There is a very momentous conflict to be waged, and a most important victory to be gained in Massachusetts, and the leaders who are now planning the coming campaign are calling for Massachusetts volunteers to come to their aid, and by united effort carry the day.

It is the old, old struggle of game protection against lawlessness and greed. The Massachusetts Fish and Game Protective Association is not discouraged by its defeat of last winter. The officers are maturing their programme for another endeavor to amend the laws. They ask for the cooperation of game clubs and individuals in every part of the State. All persons interested are urged to send their names to the secretary of the society, Henry J. Thayer, Esq., No. 246 Washington street, Boston, Mass. We hope the response will be general. Individual effort exerted at random may not accomplish anything, but the united efforts of the Association and its individual allies ought to be powerful enough to secure all the legislation needed.

THE AMERICAN KENNEL CLUB.—There is to be a meeting of the American Kennel Club at Pittsburgh on Tuesday, Sept. 29. It is of the greatest importance that every member of the association be personally represented. This meeting will be the turning point in the existence of the club and it is to be hoped that every effort will be made to direct its action then taken, so that no question can arise as to the fitness of the association to take charge of the kennel interests of the country. No narrow-minded sectional nor weak-kneed policy will be tolerated, only a broadly national and thoroughly upright course can succeed in winning the confidence and support of the public, without which the association must go to the wall. There is pressing need of an organization to preside over the canine interests of the country, and we urgently press upon every one entitled to a voice in the matter the vital importance of attending the meeting at Pittsburgh and using his influence to place the American Kennel Club in a position worthy its name and mission.

MR. H. R. FRENCH, president of the game dealers' society in this city which bears the misleading and deceptive title of the "National Game Preserving Company," their only preserving being in refrigerators and cold-storage houses, has written to the St. Louis convention committee that his society will be represented there if the sportsmen of the West have become convinced of the injustic of the present laws regulating the sale of game and are now ready to modify these laws for the benefit of the dealers. We beg to assure Mr. French that the sportsmen of the West have become convinced of no such thing, and contemplate no change in the law to facilitate the shipment of their game to his cold storage warehouses. What the sportsmen of the West ask for are more stringent regulations to control the shipment of game to the great Eastern markets.

THE ADIRONDACK FORESTRY COMMISSIONERS just appointed have been put into place none too soon. The summer has been frittered away without anything being accomplished in the actual work of Adirondack forestry reform. Now that the commission is finally appointed, the public will expect to see progress, and progress unhampered by the curse of political shackles. The commonwealth cannot afford to sacrifice its forests to politicians' aspirations.

TO JOIN THE WILD PIGEON.—The St. Louis and Indianapolis trap-shooters are engaged in a laudable endeavor to prove the adaptation of the English sparrow to trap-shooting If they succeed, the English sparrow nuisance problem will be solved, the trap-shooting citizen will pose as a patriot, and the imported feathered vermin will go to the bourne whence the wild pigeon has not returned.

IT IS EASIER to help form a national sportsmen's association than it is to enforce the local game laws in one's own town and county. If the delegates who are going to St. Louis to attend the convention are bound thither with the hope of finding there some hitherto unknown mode of enforcing local game regulations, they are greatly mistaken.

A NEW ENGLAND FARM RECORD.—The Vermont farm, on which is the plot of land described by Mr. B. Hosford, in another column, has been in the uninterrupted possession of the family of that name for six generations. This is a noteworthy record for a New England homestead.

IN A. D. 1950.

THE usual September drouth was upon the earth. The grass was dun and slippery under foot; some of the small scattered trees wore a scant leafage of dull green, but more were burning in the smoky landscape with premature autumnal flames of yellow and red, casting blurred shadows under the redder rayless sun that burned its slow way through the brassy sky now endoming the desiccated fields and barren hills. Through a sedgy level a narrow, muddy stream wound sluggishly, too dull to reflect the blue spikes of pickerel weed that grew along its black shores, or the white blossoms of the saggitaria that drooped languidly over the spent arrows of their leaves. This slender waterway floated to-day a beautiful boat, with sides as thin as eggshell, but strong as steel, and buoyantly upholding its freight, a noble young gentleman of fourteen and his gray-bearded father, whom he had kindly permitted to accompany him—indeed, had done him the unaccustomed honor of inviting him to go with him on this trial trip of his new canoe. The younger of the two guided the craft by almost imperceptible movements of his forefinger upon the tiller, while the elder propelled it with rapid strokes of the double-bladed paddle, and he, though laboring hard, seemed most of the two to enjoy the outing. He was revisiting scenes that, though changed, were yet familiar, and recalled to his mind the past, concerning which he presently spoke.

"Right here," said he, as the canoe, under the skillful guidance of its master, lightly turned a bend of the narrow channel, "right here, when I was about your age, I killed my first duck with my first gun, which was only a double-barreled breechloader, a weapon somewhat out of date even then, but a great improvement on the percussion muzzleloaders our fathers had used, so we boys thought, for," said he with a sigh, "the males of the human race were called boys then till they were at least fifteen years old. The duck was of a kind now almost extinct, a dusky, or black duck, as we called them."

"*Anas obscura*, I think is the proper name," said the young gentleman.

"Ah, yes! *Anas, Anas*, what do you call 'em? And it was one of a large flock."

"Team! A team of duck would be better," suggested the younger.

"Very well; then one of a large team of five, and I brought him down with my second barrel."

"Ah! Then you missed with your first? Why, I never miss."

"Those," the elder replied, "who never shoot, or never take any chances, seldom miss, though far be it from me to insinuate that this is why you never miss. However, we boys used to miss occasionally, while we were boys, but when we were older we scarcely ever did. I can remember very many hits, but very few misses. ["How these old fellows do brag," thought the youth.] But this time, notwithstanding the miss, I was greatly elated, for it was my first duck, and I shall never to my dying day forget the place, nor just how it looked then, with the wavelets of the duck's plunge swaying the stems of the wild rice, and tossing the floating feathers, and the reflection of the trees that then lined the banks. And I remember too, with a twinge of shame, that I was not a bit conscience-stricken when the upbraiding look of the dying bird's eyes met mine. But that feeling comes later; boys are harder-hearted than men. A little further on, just around the next bend, one of those rare and most beautiful wildfowl, a woodduck, got up from the log where it sat sleeping in the sun."

"*Anas sponsa*, you should call it. Now that the game is gone we should treat the dear departed with proper respect, and I believe fewer ducks than a team are a plump, so you got up a plump of *Anas sponsa*."

"Anything to oblige you, my son; but then, it was not plump, but thin as a shadow, as I found when I picked it up after bringing it down, as I was about to tell you, with my first barrel. Doubtless it had run the gauntlet of a hundred guns before it fell to mine. Then I was indeed jubilant, having got what many an older sportsman had failed to get, two ducks in one day—or perhaps I should say, part of a team and a whole plump in one day—more than a sportsman of these days might hope to get in a season. Oh! but there were ducks in those days," the garrulous old man went on. "I have seen yokes; no, tandems; no, teams of a dozen and more right here on these marshes, where grew acres and acres of wild rice, and my father used to tell of seeing when he was a boy—for he, too, was once a boy—hundreds and hundreds in a—a—team. I suppose it might be said that these waters were then teeming with ducks. These waters, I say, for there were indeed waters here in those days all the year round. There were trees to shade them here and prevent their evaporation along these level reaches, and trees on the mountains that are now only bald wastes of rock, to shade the springs and keep the snow from melting all at once, to hold the moisture in the sop of deep moss and dole it out to the streams with a frugal hand. This waterway was twice as wide and deep as now, and full of good fish, pike-perch, bass, pickerel, with no end of perch and bullheads. Now only a straggler of the better kinds, some hardy survivor of his race, ever visits it, and the mudfish and gars have it all to themselves. Hundreds of muskrats built their huts of sedge and mud along the channel's edge in the fall, and found food in plenty at all seasons here, where now hardly a trace of one is ever seen. The great blue heron fanned his slow flight over the marshes that he is now a stranger to, and in the warm days of spring the guttural booming of the bittern sounded from every marshy cove. Now one might as well listen for the voice of the jungle fowl. Even the bullfrogs, since it became the universal fashion to eat them, have almost entirely disappeared, and the few that are left have grown so shy that one rarely hears the deep bass of a solo singer, much less the grand chorous of a hundred voices that of old used to roar along the sedgy levels and make them tremble with their loud melody—yes, and set the young leaves of the poplars aquiver on the distant hills."

"It must require a rather lively imagination to discover anything musical in the thin bass bellow of a bullfrog, I should think," the young man remarked.

"Well," his father replied, "it was pleasing to my uncultivated ear, as were the voices of the song birds then so abundant. In early spring were bluebirds—excuse me if I do not remember scientific names—the earliest minstrels of the year, 'shifting their light load of song from post to post along the cheerless fence,' as a poet of the last century says, and song sparrows singing songs of good cheer, with the jolly robins to help them keep our hearts alive with hope in the dismal days between winter and real spring. And purple finches atilt on the elm tops, and later the bobolinks, drunk with the wine of spring, singing as they staggered awing over the violets and dandelions of the May meadows. And flashing orioles that made one glad and sad with their song, and yellowbirds in summer, hanging like blossoms of gold on the thistles. They are almost all gone now. The stomachs of men and the bonnets of women have made way with them. It was the absurd and wicked fashion sixty years ago for women to wear stuffed birds on their hats, a fashion that raged so virulently that if a bird had handsome plumage or even shapely form, his sweetest songs and his prettiest ways could not save his life from the savage skin hunters who invaded all parts of the land, more cruel, rapacious and destructive than all beasts and birds of prey. And men, so called, ate robins, and even tickled their maws with the atomic carcasses of the beautiful snow buntings that used to come down in hordes from the north and give life to the white wastes of our wintry fields."

"Ah!" the young gentleman sighed, "they must have been very nice; much more delicate than crows, almost the only game birds one can get now."

"There were snipe on these marshes, a bird most excellent to eat," the old gentleman continued, "and woodcock, still more delicious, in the swamps and willow and alder copses that bordered the streams. The snipe were shot in spring and fall until, if there were any left, the marshes had become too dry for them to feed upon, and so they were exterminated or disappeared. The woodcock were shot in summer, and even in spring, and the swamps they haunted were cleared and drained to make meadows, the copses cut away to gain a few more rods for tillage, and so the woodcock were destroyed and banished. It was impossible to enforce the game laws, for they were cumbrous and full of loopholes that rogues, with the help of tricky lawyers, might escape through, and though liberal, they were held by the masses to be undemocratic, and after years of continual violation were abolished. In some places rich men leased large tracts of shooting grounds and protected the game on them. There were beside the snipe and woodcock, some ruffed grouse, a most noble bird now quite extinct, and wild quail, from which our domestic quail are descended. Also hares of two kinds in the eastern part of the continent, and red foxes. One or two individuals of this species are yet in existence, owned by the gentlemen of the Newport hunt, and are hunted by them every season. One of the foxes is so old and feeble that he has to be drawn before the pack in a low-wheeled cage, trailing behind it a bag filled with anise seed. The sport is said to be very grand and exciting, and nowhere else in America can one see this ancient and noble pastime pursued, with carefully bred hounds, blooded horses and well-equipped and gallant riders, and a real, live fox. The extinct raccoon and opossum also afforded a great deal of sport, and were preserved in the leased tracts, and in them was found too the terrible skunk, the most formidable and dangerous wild beast of the continent. It secreted a potent fluid which it ejected by the gallon, paralyzing whoever inhaled its fumes, when the ferocious animal would spring upon and savagely bite its victim, who sooner or later expired in the agonies of hydrophobia.

"But these domains were eventually invaded by the march of improvement, the marshes drained, and all the woods cut down, for when the running bean became the fashion in Boston, every tree in the land half as big as your wrist was taken to furnish the immense bean fields with poles. Perhaps it was because the supply of poles was exhausted, and therefore the supply of this most brain-nourishing of beans fell short of the demand, that the ancient center of culture lost its distinguished position, and the continent became a great bicycle, as it were, Chicago the hub of its big wheel and Boston that of its little wheel, for you know, of course, as you know everything, that on the great plains of the West was conceived and put in practice the idea of training bean vines on sunflower stalks, by a wild man from England, which was not then a republic, for this was before the Battle of Dorking, you know."

"And here we are almost at the lake, or what was once the lake. Alas! it is only a great puddle now, or rather a series of puddles, and if the ancient explorer who named it could see it now, he would be sorry that he ever discovered it. But hark! There is a—a—I cannot call the correct name, but what we used to call a helldiver, almost the only bird of the duck kind left. And there is a sportsman stalking him, and will soon open fire on him with his hopper-gun."

They watched a man clad in a suit of woven sedges and looking exactly like a great animate sheaf of the wild grass he was making his way through, till he arrived at the margin of the stream, where he set a tripod supporting a machine of curious construction. Into its hopper he poured a quantity of powder, shot and wads, and began turning a crank, whereupon the water for yards about the poor diver began to boil with the storm of leaden rain poured upon it by half a dozen revolving barrels, and for some minutes a succession of rapid reports filled the air. When these ceased and the foaming water became quiet, a cloud of feathers floated upon the surface, and were quickly brought to the sportsman by his retriever, till now unseen by the occupants of the canoe. Drawing near to the sportsman, they asked to see his game, and he with some pride showed his game bag half full of feathers.

"Thank you," said the elder of the canoeists, "but my son is something of a naturalist, and would be glad to see the bird."

"Oh," said the other, smiling, "there goes the bird swimming his best for the lake without a feather to his back. I did not wish to kill him, for he has furnished me a day's sport a year these five years, and if some bungler does not fall in with him, will give me as many more. I have picked him clean more than once, without injuring his bill, legs or eyes, or, I think, breaking his skin."

They went their way, marveling greatly at this shooter's skill. When they came to the lake their further progress was stopped by a sand or mudbar covered only by an inch or so of water. It was a dismal scene. The old rocky shores of the lake, once clothed with trees and washed by bright waves, stood now some furlongs inland, with a wide stretch of bare sand, cracked dried mud, and mossless, water-worn stones between them and the shrunken lake, whose turbid bosom no goodly fish broke into circling ripples, nor waterfowl swam upon. Not even a heron waded the black shallows, nor kingfisher clattered above them; not a sign of wild life was to be seen. The mountains to the westward were monstrous sterile piles of treeless rocks, savage and forbidding, not giving so much as a home to the eagle.

"Let us return," said the old man. "This is all so changed from what it was when I was a boy that I cannot bear to look upon it. The axe and fire—man's greed and carelessness and spirit of wanton destructiveness have spoiled it all. Let us go home, where we have at least an orchard and a well of clear water, and fields that are not entirely without greenness.

"O, why could they not have spared the trees upon these rocky shores, where they cumbered no tillable ground, and were so useful and so beautiful? The woods are gone, the waters are passing away and the hearts of men are grown as arid as the world they have spoiled. When I see how their Lands are never withheld from laying waste the earth, from making sterile and forbidding all that was once so fruitful and fair, from exterminating nature, I cannot but be glad that in a few years my eyes will be shut forever from the sight of this 'abomination of desolation.'"

AMONG THE WATERFOWL IN DURANGO

THERE are places enough in the United States where one may still see plenty of ducks and geese, but plenty of waterfowl by no means implies plenty of shooting. There are many places where good shooting may be had, but it is too often at an expense of bodily comfort which the pleasure may fail to repay.

Of wildfowl shooting amid the howling blasts or driving rains of autumn, of shooting that involves starting before daybreak on cold mornings and lying in a battery on one's back or cramped up all day in a blind, shivering and lonely, there may be two opinions. But of wildfowl shooting during the middle of soft, warm days, upon ground where no boat is needed and perhaps even wading boots are unnecessary, and beneath bright sunny skies, while the lakes of the North are closed with ice and the once glad fields are lost in heavy drifts of snow, there can be but one opinion.

In Southern California I have seen some shooting of this latter sort. But there the ducks fly but little during the day unless stirred up, when they circle once or twice and then fly off to some other place. I have seen nothing there that equals the shooting between Lerdo and Noe in the State of Durango, Mexico. And considering the variety of game, its amount and manner of flight, combined with the ease and comfort of hunting it, I believe it now unapproachable any where in the United States.

Seldom have I seen the sun rise upon a fairer sight than that presented by the cotton and corn fields on each side of the Mexican Central Railroad, as on a bright warm morning in the latter part of December I went whizzing down the line on a hand car, propelled by several stout peons. On each side of the road stretched broad fields of lofty corn standing yet unhusked, and wide fields of cotton whose tall stalks, growing four or five years without replanting, are blowing the whole year round, were hanging full of snowy balls. Along the track and under the track ran ditches of water coming from the Nases River far above; and from these many of the fields were flooded with water, while others were perfectly dry, and some were still moist from recent irrigation.

On the right and on the left, from the ditches themselves and from the ponds of water formed in the fields by the irrigation, rose ducks and brant by the hundred. Two English gentlemen were with me, and I had hard work to keep them quiet until we got to headquarters. They wanted to stop, but I had been over all the ground before, and knew that we were only among the advance guard of the host we were going to meet. We kept on some five miles to a long stretch of fields, into which the water had been lately turned. Here a rare scene opened upon us. The ducks in the fields that had been flooded for several days, though plenty enough, were as nothing compared with the hordes that rose dark and roaring from those into which the ditches had been turned but yesterday. And even these were as nothing compared with the long lines that could be seen streaming along the horizon miles away over the wide sweep of the irrigated fields. On every hand mallards, sprigtails, canvasbacks, redheads, widgeon and other ducks in strings, dense bunches and wedge shaped masses, went spinning across the top of the corn and cotton, or with stiff set wings were settling into it. No large geese were to be seen or heard, but gray brant were winging their way here and there in clamorous bands, or from the sky above were pitching and tumbling downward in their peculiar way to alight. The black or bronze curlew in long black ranks, and with light and even stroke of wing, rode the warm air in different directions; occasional bunches of the sickle-billed curlew, seeming ill at ease, went wandering along on high; English snipe pitched about aloft or rose with their usual remark from the boggy ground along the ditches or out of the cotton or corn; and plenty of doves winnowed the air in every direction. Plenty of other birds were there too to add variety to the landscape, the snowy egret standing thoughtfully along the ditch, the white-throated and white-tailed hawk preening his dark wings upon the mesquite bush, the buzzard sailing far away in the sky. Gulls too, and even pelicans, were there, passing probably from one to another of the distant lagunas.

Mexico seems to be the winter home of the sandhill crane. I thought I had seen some sandhill cranes in the Western States many years ago, but neither there nor in California

have I ever seen them so abundant and so tame as they were on this ground. By many sportsmen and by nearly all who are not sportsmen the sandhill crane is considered worthless to eat. Its name is unfortunate as well as its shape, for most people think a crane is a crane and can be nothing else. The thousands who turn up their noses at the sandhill crane are just as wise as the man who won't eat eels because they resemble snakes, and is afraid to try frogs' legs because a frog is like a toad. The sandhill crane has little in common with the herons, bitterns, and egrets, all of which are commonly called cranes. Its general shape, however, is sufficient to make the crowd class it with the fish eaters. But it is as different from them as a mallard is from the sheldrake or loon. The sandhill may possibly, like the mallard, eat fish or bugs from necessity, but when it can get plenty of grain or grass it is a vegetarian. Though it goes occasionally on wet ground it generally frequents the high, dry uplands, and water seems not at all essential to its comfort, as it does to that of other cranes. Here it feeds entirely upon corn and cotton seed, as do the brant and large ducks, and it becomes very fat. When the sandhill crane is in good condition from feeding upon wheat, corn, etc., no finer flavored bird of its size flies the air. Steaks cut from the breast of a young one and broiled with butter will convince the most sceptical. And an old one parboiled for an hour or so, then stuffed and well roasted will walk off with the affections of the most particular epicure.

In other respects he is fully worthy of the most skillful sportsman's attention. No bird, not even the turkey, is more wild or more wary than the sandhill crane generally is; and, in general, it requires even more care to get within certain rifleshot of one than to get within certain rifleshot of a deer or antelope. To get near enough to one to kill it with the shotgun is next to impossible, except by concealment upon the line of its flight. Even then the concealment must be nearly perfect, and the shooter must remain motionless until the bird is too close to escape by turning aside or rising. The slightest motion of the head to watch its coming, or of the gun to get it in readiness to shoot, is apt to be fatal to your success. It is, indeed, easy to hit when once within reach of the shotgun. And so is the wild turkey. But there is skill enough required to get a shot to give to its pursuit all the flavor of hunting of the highest order.

On these grounds it seems to have relaxed its caution to an extraordinary degree, and becomes comparatively easy to shoot. I say comparatively because it is still actually quite wild. But here it is possible by the use of caution and good judgment to make a handsome bag of cranes almost any day without resorting to either pits in the ground for concealment or to decoys to bring them within reach. Whereas, on most grounds in the United States where they are found it is impossible to get one with the shotgun without using such aids. Over a tract of ground some ten miles in diameter these birds are here found in immense numbers. Often a hundred flocks, each containing from twenty to eighty or ninety birds, may be seen in the air at once, some swinging low along the tops of the corn, others drifting far away on high, while from almost every corn or cotton-field comes the long-drawn *grrrrrrr* of cranes feeding among the stalks. Where the fields are more open they may be seen standing in dignified array watching you at a distance with their long bluish-gray necks and heads, looking almost white in the sunshine, or else rising in a wild confusion of flapping gray with uproarious *grrrrrrrs* from the cotton or corn as the hand-car rolls along.

If this crane be so worthy of the sportsman's regard, what shall we say of his great white brother the white sandhill, sometimes called (if I remember rightly) the whooping crane. This is perhaps the most rare and difficult bird in North America to shoot. Many sportsmen who have shot all over the United States have never seen one, and few indeed are the men who have ever bagged one. Twenty years ago, upon the wildest grounds there were in Illinois, where the common sandhill was abundant, comparatively few specimens of the white one could be seen and these generally kept far out upon the open prairie and could not be approached even within rifle shot. All attempts to get on their line of flight were generally useless, for they either rose too high when disturbed or were so wary that they would see the hunter lying ahead of them. Many a year had passed since last I saw this beautiful bird, until last winter I saw them near Lerdo. Here they are more abundant than in any other place where I have ever seen them. Far away in the zenith you may see them sometimes about midday floating like specks of down in long circles and spiral lines, sending down through two or three miles of air a long note as ringing and clear as the blast of a bugle. Sometimes one will see three or four of them mingled with the other cranes, flying with them in orderly array, and keeping time to their stroke of wing, their long necks and legs outstretched in the same way, their snowy raiment, all spotless except the glossy black band that tips the huge white wings, contrasting strangely with the ashy gray and blue of their comrades. Sometimes one sees a few standing with upraised head and watchful eye out upon the open fields, and once in a while, though rarely, they skim low above the corn. This bird is fully equal, if not superior, in flavor to the other sandhill, but is much wilder and infinitely rarer. I saw one flock in Durango containing nearly two hundred. But with that exception I have found them only in small companies of three or four, and but few of these companies in a day. Though abundant here compared with their numbers in the United States, they are still quite rare and are found only by dozens where the others may be numbered by thousands.

To have good success with either of these cranes here one must make a bed of corn stalks and either sit or lie down upon it and bend a lot of them together over his head for a partial blind. There one should stay and keep perfectly quiet until one can hear the soft sound of their wings. By that time they are too close to get away. But there is no safety in any motion, however cautious, or in showing your face. You should not shoot at anything else, no matter how tempting the opportunity. Should you be upon open ground and see a flock coming toward you low enough to shoot, about the only way to obtain a sure shot is to lie down at once upon your face, and do so behind a bush or in a hollow of the ground, or in grass or weeds if possible. Lay your gun beneath you and lie perfectly still without showing your face until you hear their wings over you. Then jump with all the quickness of which you are master, and you may see one come whirling down from before each barrel.

I tried to persuade my friends to confine their attention to cranes, and use all their caution about hiding. But I could not convince them that they could not get both cranes and ducks at the same time; and finding that for most of the ducks concealment was almost unnecessary, and each one having with him for retriever a peon (all of whom dress in white cotton), a bag of cranes was out of the question, though dozens of flocks passed them just out of shot that would have come within twenty yards had they been properly hidden.

That day reminded me of some of the brightest of days gone by. It was all in all such a day as I had never expected to see again. One of my companions, a gentleman of wealth and leisure, whose name stands at the head of the crack shots of England, told me he had never seen its equal, though he had shot all over the world. Many a time before I have seen far more ducks, and seen them fly in denser ranks, and whizz even nearer to my head; but I never saw such a steady succession of close shots during the middle of the day. On every hand ducks, brant and crane were flying about of their own motion; on every hand they were rising with obstreperous wing and shining ranks from the fields as we advanced; on every hand ducks already started were circling around us, setting their wings and hissing down from above to alight in almost the same place from which we had started them; and on every hand at the report of a gun the heavy beat of hundreds of wings would arise from places from which so many birds had already arisen that we supposed them quite bare of anything more.

Easy as this shooting was it still savored too much of work. I knew that something better could be had. So I posted one of my friends in one place, and another in another, while I took four peons and went around among the neighboring fields where ducks were alighting by thousands, to keep them stirred up. It was a veritable "drive" of ducks. The amount of ground freshly irrigated did not exceed over a mile square, and no amount of disturbance could drive the ducks from it. Though they alight readily enough in any of the fields that are wet, and though there were thousands of acres of such ground on every side containing ducks, yet the majority seemed crazy about the freshly irrigated tracts. They rose in dark sheets from one spot, and without even circling about in indecision, set their wings and slid down the air to another not half a mile away. Sometimes they rose in tier after tier from the corn, those in the rear just rising above the corn and passing over a thousand comrades to alight a short distance ahead, as blackbirds often do. Single ducks went whizzing about in all directions, seeming more bewildered than those in flocks, but few of them would leave the place. But the brant and cranes left at once and staid away. Many a flock of the gray sandhill cranes came steering toward us from far away, but rose high in air as they came within half a mile of the uproar. Away on the edge of the tumult I could see the white ones turn off and leave us a mile on one side.

I doubt if there was a native within a mile who did not quit work or stop in his travels and wait until the sport was over. Groups of peons, all clad in white cotton, gathered upon the railroad embankment and climbed upon the hand-car, where they could see better, and kept the interval between the reports of the guns well filled with expressive *carajos* and *carambas*. Others on horseback stretched out backward full length upon the horse and laughed as though they would split whenever a duck came plunging from above at an unusually long shot.

My English friends had both been in "a hot corner" in *battues* at home, but had never seen so many birds fly over them as they did that day. In about an hour after the drive fairly commenced they had emptied both pockets and sacks of the cartridges they had taken with them and we had to stop. We ran into Lerdo that afternoon with the hand-car loaded down, there to meet a storm of *carajos* and *carambas* and other ejaculations too expressive for print, such as the good old State of Durango had not heard for many a year.

During all my hunting in Mexico I have found the people exceedingly obliging and polite. Instead of ordering me off they have come out and shown me where game was. Peons have followed me about like children, taking as much pleasure in the shooting as I did, plunging into the water and mud like a dog to retrieve a duck. They will do it for nothing if one is mean enough to let them, but will feel well repaid with twenty-five cents or a pair of ducks. It is probable enough that an American market shooter would not remain long in favor, as the Mexicans generally do not look upon the eradication of all that is fair in nature with the same composure with which the American sees his landscape swept bare to tickle the palates of city swells who are too lazy or too stupid to appreciate game anywhere but on a plate. But one shooting only for pleasure may feel assured of kind treatment.

Much apprehension exists in the United States about visiting Mexico. But a gentlemen who behaves himself as he would in any other foreign country, will be treated well by every one. In fact it is marvellous how well the Mexicans do treat the Americans in view of the way the most of them have acted here. Foreigners acting in the same way in the United States would in twenty-four hours have heads that would puzzle a phrenologist. I have found among my countrymen here many true gentlemen, who are as much respected by the Mexicans as anybody. But the majority of them I am most heartily ashamed of, and it is a standing wonder to me that the Mexicans tolerate them as they do. As for myself, I must say that I have never been treated better in my life than during the five months I have spent in Mexico.

T. S. VAN DYKE.

"You talk about dogs," said the judge, "you talk about dogs—I can tell you the funniest story about a dog." "Did you know the dog?" said the doctor. "I did. This dog belonged to a friend of mine, who used always to take him out with him." "A bad habit," put in the doctor; "you should never let a dog know too much." "The dog used to wait outside for him when he went in to call on a friend. One night they were a very merry party and they kept it up late. My friend got very drunk. The dog finally got restless and began to howl. A champagne bottle passed his nose and he smelt it and shut up. About 2 o'clock in the morning my friend came out. He said good night, shut the door, walked by the garden gate all over the flower beds, and finally unable to get out, he laid down on a rosebush and went to sleep. The dog watched by him till the milkman came along in the morning, picked him up and took him home." "That's nothing," said the doctor. "You just wait a minute. Two or three nights later he went and called on his friend again and took the dog with him. The dog waited outside a little while and began again to howl. Another champagne bottle was thrown at him. He smelt it, winked to himself, and trotted off. He went home, scratched at the door till the servant girl opened it, attracted my friend's wife's attention, made her follow him to a pile of planks and whined till they got out a very long and broad one. Then he directed them to where his master was, and when the door bell rang and the door opened, the revelers found the dog, my friend's wife, the servant and a stretcher. The dog knew what was needed, you bet." "Well," said the doctor, "I thought I knew all the dog stories, but that's a new one."—*Detroit Free Press.*

NATURAL HISTORY OF THE WHITE PINE

IT IS fitting when important measures are prominent to add even a small amount to the general knowledge on the question involved, if that can be done, since it is often the case that those who profess to know the most, flounder about in uncertainties, and like geese in a fog, only show by noise their need of sun or stars to tell their position and course. We need facts and figures; and these the present article aims to supply.

Forestry, a subject ever important, is receiving more attention at the present time than at any former period, and especially in this country, where the pursuit of wealth sweeps all before it, regardless as the hosts of Attila that desert and desolation follow its track. At present the course of thought is like a procession of mourners. The direst calamities are presented as the inevitable result of the destruction of our forests; remedies multiply, some immediate, some remote, many impracticable, while not one has touched the great law of compensation in nature, the succession and reproduction of foliate life. Not one has dared to assume what is here done without fear of philosophic contradiction: that the creative force, that which gives life to matter is, back of all, just as active to-day, just as potent as it was "in the beginning," and that the earth is now a thousand fold better able to produce vegetable life without seed than it was as that remote period. What but creative force produced the tree that produced the seed at first? And tell me, if you can and dare to do so, what creative force has died or lost its power? That schoolboy philosopher who sought the fountain of life and gave out at a protoplasm, brought out from one soul at least in its anguish the exclamation, "Blockhead, why did you not stop at an elephant, just as near the origin of life, as at a protoplasm, because some child might ask what an elephant was and you could tell him, you could add to his knowledge, you could raise him in the scale of intelligence; but the same question, just as sensible in regard to the protoplasm must be answered, if at all, by, 'There is nothing to it, nothing to describe;' and thus your great subject of life has petered out until there is nothing left, absolutely nothing. One thing you might have known at first, or should at least have learned in the pursuit, that the principle of life is with the Infinite and not committed to your care nor mine."

In our researches among these mysteries in nature the work is poorly done if we fail to mark those points where the phenomena find analogy and counterpart in human life, and also where human life has wonderful illustration in other departments than its own. We find, in fact, distributed among animals, every trait of human character, and we find combined in human character, all we find in the orders of life below us. "Survival of the fittest"—that paradoxical, unexplainable, murderous law in nature, so often referred to by evolutionists—has striking illustration in the growth of the white pine. It is literally with that tree from the beginning a struggle for life regardless of the life of others. The law is, in effect, prostrate the weaker, crush the feeble and lowly beside you, break down and destroy all rivalry, and in every case make the dead and the dying contribute their life and substance to your own aggrandizement.

Not a rifle shot from my birthplace a grove of white pine covering two acres has grown, culminated and passed away. My first recollection is of when the trees were some twenty-five feet high, almost thick as a canebrake, and quite as straight and graceful. The tops were so interwoven that no ray of the sun could penetrate below, consequently a deep soft carpet of needles covered the ground, and not one green leaf of the humblest plant could be found upon it. It was at that time, in the year 1820, the most beautiful grove of white pine in all New England. I could step from tree to tree over the entire surface. My father supplemented any remark on its beauty with the statement, "When at seven years old I came from Hebron, Conn., there was a field of wheat on that lot." This would make the grove at the present time just about 100 years old. One year ago the timber, much of it two and a half and three feet in diameter, was sold standing for $1,200 and was all cut off. Here we reach an important fact, the first reliable data in the growth of white pine in its first century. We also reach the profits of that growth on two acres of land unfit for cultivation and abandoned after the first crop. But this was not all, for for half a century there had been constant draft on the grove for light building and fencing purposes, by the dying of a few trees and by thinning out the crowded parts. The phenomena of its growth and the multiplied uses to which the pine is applied make its history of pecuniary value as well as an interesting study to us; certainly no other tree shows such diversity of character, such extremes of value growing side by side; no other tree on the earth ministers so largely to the comforts and necessities of civilized and enlightened life.

The most prominent and important characteristic is a central spike shooting upward with each year and leaving with each shoot a circle of horizontal branches at its base. This central spike and the horizontal branches are covered with needles paired together, of a deep green color; and these remain through the winter. The succeeding spring comes a second shoot, the same spike, the same green needles, and the same circle of horizontal branches at the base. The third spring opens with a third shoot precisely like the others. Consequently, in June and July we have three lengths the growth of three years covered with the needle foliage of its nature. In September the joint three years old changes color and casts off its needles like all dead leaves. And thus, paradoxical as it may seem, the needles fall every year, although none fall until three years old. But this is a general characteristic of all evergreen trees. The balsam and spruce vary somewhat, retaining foliage longer than the pine and of course more dense and heavy than that tree. When this central spike is growing it is green, has a sweet, piny taste, is succulent and juicy, but so tender that a thoughtless bird seizing upon it and endeavoring to balance on the unsteady perch breaks it down and the growth seems entirely spoiled. But it is only a temporary setback, however; the largest horizontal branch at its base turns its central spike upward and by right of the strongest assumes to be "head of the family." The smaller branches, of which there may be a dozen in the circle, acknowledge the right by giving up life and substance "to the fittest," except where one directly opposite is equally strong. In that case they approach each other and in a few years two trunks stand perpendicular with no trace of horizontal opposition remaining

The growth of the pine in the first year is of little consequence. It is simply a green cone, wide as it is high, liable to be trampled down by cattle, cut off by scythe or mowing machine, and really worthless. But escaping these, it is silently laying in strength for after life, so that at five years cattle walk round rather than over it. The growth and strength now double with each year, until at fifteen, perhaps, it reaches the maximum point. I have one spike forty-two inches in length, the growth of a single year at that age. After that the yearly growth decreases in length, until at the height of 140 feet capillary attraction and natural forces fail and a scraggy, horizontal cap surmounts the whole.

But the tree is yet below middle life. If left to a course of nature, perhaps two centuries are yet before it. In the second century, as it can grow no higher, it makes a diameter of six feet where the first gave only three, the natural forces all absorbed in depositing wood fiber on the outside. It is from this outer coat, this growth of the second century, that what is termed "clear stuff" is obtained. Another thing. The second century opens the capillary tubes, and gives to the timber a quality of rift which the growth of the first does not reach; the old pines can be split into sheets or shingles while the trees of one century must be cut by machinery. In the first twenty years the growth is rapid, the fiber is soft and corky, consequently in the second century this center is liable to decay, and the great trunk becomes hollow from the ground upward. In view of this fact, with the facilities of machinery in its manufacture, and more than all, the long credit of two centuries for its full maturity, it is altogether probable that where the old stock is exhausted, the reproduction will not be allowed to reach the same age and perfection; but like the grove under consideration, will be taken at the growth of one century as being the highest point of its value and usefulness.

Another point to be considered is the necessity of sunlight, on which its very existence depends. I measured a square rod of ground in a thicket of white pine on which I counted one hundred trees from two to ten feet high, and forty of that hundred were already dead. The larger trees overshadowed the lesser and weaker ones, their branches united in a dense canopy above, shutting out entirely the sunlight and its mysterious influence. The little trees struggled a while for life, then, withered and shrunken, gave up the unequal contest in death, and as I said before, contributed their life and substance to the aggrandizement of the power which destroyed them. Nor are even the "fittest" exempt, except in a measure, from this same law. The higher horizontal branches overshadow the lower, which die and fall to the ground, and in time are overshadowed by new branches above and with the same result.

In this connection comes up the strange phenomena of the utterly worthless character of the pine when growing alone in the open fields. There it throws out large, crooked misshapen branches almost from the ground, seizing and absorbing all the juices which should go to produce height and majesty of form; and so interwoven in its destiny is this tendency that trees on the outer circle of this grove showed invariably on the outside of the trunk, large, crooked branches almost to the ground, while on the inner side, the same trunk had not a living branch in sixty feet. In the open field all branches reach the sunlight, although mainly in horizontal positions, and hence all live and grow with the tree. Trimming is often resorted to, but is wasted labor. It is good so far as the axe can reach perhaps, but what is a clear trunk of six feet when there should be sixty. I saw one tree standing alone, a beautiful trunk of ten feet, and ninety above that were gnarled and knotty, worthless even for firewood.

Another peculiarity in the growth of white pine is that when cut down at any age, the root dies with the trunk. It is now the close of the second summer since the grove was cut off. Not a twig of evergreen can be found where the pines stood, while every stick and stump of the hard wood undergrowth, smashed down in removal of the pines, seemed to start again with new life in sprouts from the root, ten-fold in number and ten-fold in growth, because the roots all lived, were all drawing sustenance from the earth and without regard to what was being done above ground, made this forced growth a result.

In regard to reproduction, I speak of what has been done on the estate where I was born. True, it was the middle section of the pine belt where it crosses New England, and of course where the tree grows at its best; and yet in general, what is true here is true of the belt in the circuit of the globe. The original stock, the growth of three centuries perhaps, was cut off to clear the land for cultivation, but these two acres were abandoned after the first crop as too arid and stony to repay the agriculturist. A few pines in the neighborhood scattered seeds over the pasture, the only place where they take root, one in ten thousand, and they grew thick and high, unnoticed and forgotton. But in all this time they shot higher, the roots spread broader and deeper, so that when the old stock was exhausted and men began to look in despair at the desolation, lo and behold, forces in nature had been silently at work to supply human wants in the future, and also effectually teaching us a lesson of prudence for all time.

But I anticipate. When the trees of this grove had attained their full height, with green branches near the top, the sun again looked in and the whole order and condition of things was changed. Vegetable life which had slept for centuries seemed to awake suddenly, and we first noticed that the whole two acres were covered with little trees thick as a grain field, but hardly of the kind we should expect to see. Not a pine tree among them, but nearly every other tree known in that climate, and many whose seeds could not have fallen on that ground in the centuries preceding. A question comes up then in regard to the fecundity and non-fecundity of pine seeds. Whither went the seeds which fell from these pines three-quarters of a century in yearly showers, not one of which took root in the grove? And again, whence came the seeds of that young forest among the pines, not a tree of the kind having stood on that ground while the pines lived?

There are hundreds of acres along this valley densely covered with young pines which had been a summer pasture a quarter of a century, and which seemed to start into life all at once, with not a seeding pine within a mile of them.

Seeds are a convenience, a necessity, in the interchange and distribution of climatic production, but let us remember that the creative force, that which made seeds at first, still lives, and by methods not known to us concentrates that principle of life in matter, and from which is evolved, through human agency it may be, the perfect form and quality that life was designed to produce.

In view of these facts, duplicated as they are beyond enumeration, is it at all strange that one man at least looks beyond seeds and beyond succession for the germ, the origin of life, and only credits ignorance or insanity with other conclusion?

We also see that it is not among the designs of Providence that the "evergreen belt" of our latitude shall pass from sight. There may be a "lean streak" between the two, but Reproduction is following the track of Decimation across the continent as the Connecticut Valley demonstrates. The mourners may dry their tears as the "calamities" fade in the distance and patiently wait. They might perhaps enliven the monotony of the "lean streak" by planting and pruning pines, but planting for one hundred years hence, and worthless at that except in thickets, is not a current benevolence at the present day and not likely to be largely entered into even by them.

The course pursued on this estate is unquestionably the best, the only true one. In the last half century every nook and corner not fit for cultivation has been given up to the growth of pines as the young trees claimed squatter possession, and we now come down by regular succession from the highest to the lowest. There are hundreds of trees now on the estate rivaling in value the best in the grove. There is one patch, an acre or two of younger trees 100 feet high; another, two acres, 75 feet, three acres 50 feet, another, two acres, 40 feet, another 25 feet, while little thickets of pine, 100 to the square rod, are too numerous to mention.

And what is the result of this foresight which has cost comparatively nothing? Succession and abundant reproduction for the next hundred years and with it a lesson for all time.

Surely it is safest to follow nature's work in these things. It is ours to assist, improve and beautify the work before us, but if we mar that work the result has neither evasion, palliation or forgiveness. If in our greed for present wealth we sweep the "evergreen pine" from our latitude with no effort for its reproduction, we shall justly receive the invective and execrations of generations to come. B. Horsford.

North Thetford, Vt.

√ The Colored Patch in the Crown of the Kingbird.—*Editor Forest and Stream:* The kingbird, in common with other members of the genus *Tyrannus*, has a patch of brilliantly colored feathers in the center of its crown. When the bird is in repose this spot of color is concealed by the adjacent feathers on each side. But it has the power of retracting these latter at will in such a manner as to display the bright orange feathers and the white bases of the black ones adjoining. So far as I am aware, no satisfactory theory has yet been advanced to account for the presence of this spot, which is common to both sexes. Mr. Samuel L. King, of Bristol, Tennessee, has suggested a novel theory for its explanation. He writes me as follows: "I inclose herewith a scalp of the bee martin or kingbird. You will observe on blowing your breath upon it that a strong resemblance to a flower appears. I have never seen in any work upon ornithology that this 'flower' is used to entice bees, but from my observations I believe such to be the case. The kingbird takes its position in the top of a low bush, weed or tree, and spreads out the red and white feathers on its head to resemble a flower. The honey bee (or other insect) comes along, thinks he will get some honey from the bloom, goes too near and is caught."—C. Hart Merriam, M.D.

The White Goat.—Burrard Inlet, Sept. 2.—*Editor Forest and Stream:* In my letter on the mountain goat in your issue of Aug. 13 either your printer made a mistake in reading my copy or I made one in copying my notes, as the figures you give, viz. 3 feet 6 inches of length of goat should be 4 feet 6 inches. The other figures are correct.—John Fannin.

ON THE PLATTE.—I.

We had spent the early fall in writing to parties living along the Platte River in order to find the best place for our annual crusade on the geese, and had at last settled down upon Newark, a small village on the B. & M. R. R., about ten miles east of Kearney. In a few days after this decision, our friend A. M. Brewer, a merchant up there and withal an enthusiastic sportsman, wired us to come on. Taking the first train for the West, leaving here at 10 that night, our party, five in number, were dropped off at Newark the next day at noon, and were at once conducted to a farm house, about half a mile distant, where arrangements had been made for boarding us, and which proved to be a most enjoyable place. Dinner was awaiting us, and as soon as that was dispatched we donned our hunting rig, climbed into the big farm wagon behind an elegant span of horses, and bowled away for the river, about a mile distant. Every one was in high good humor, the weather was lovely, geese reported as being abundant, and the horses, apparently taking on the enthusiasm, cantered off at a lively rate. But just as we were making a short turn to come into the main road, the wheel on the inside of the curve ran upon an old barrel lying concealed in the weeds, and in a jiffy turned the wagon over and piled the contents promiscuously upon the ground. Every one was so hampered with toggery and wading apparel that no one except Lanham made any effort toward jumping out of the way. He was sitting in front with the driver, and before our vehicle was fairly on its side had landed about ten feet away in a patch of wild sunflowers, where he soon lay groaning as though every bone in his body had been broken snap off. Young Hathaway had fallen square across the body of his father, and Charley Baum had been unloaded on top of me and given me a jolt that hung to me two or three days. But after feeling Jack's leg awhile, and assuring him that he was making a deal of fuss over a small matter, it was but a short while before we were spinning away again, quite thankful that no bones had been broken.

The Platte, at Newark, is divided into three channels. Brewer had selected the middle one for our base of operations. So, crossing the first, which was easily done in the wagon, we drove over to the middle one and unloaded our decoys and other paraphernalia. At several points above, where we struck the river, there was quite a showing of geese on the bars, that had come in from the fields before noon and were taking their afternoon siesta prior to going out for their last feed, and the sight encouraged us to believe we would have some fair sport here.

After standing upon the bank and discussing the situation for a while we finally selected sites for our respective blinds and at once began work on them, first carrying out the share of decoys allotted to each, and our guns, stools and ammunition, and then brush for what the natives call the "bough house." Albeit it was near the close of October the leaves on many of the small willows were as green as in midsummer, and this was not as serious a matter as it had been on former occasions and at other places. By the time the flocks of geese began their afternoon pilgrimage to the fields the party were about all ready for them, and a few "single footers" coming within range, in their desire to investigate these new displays, were tumbled over and at once set up on the bars near the respective blinds to augment the flocks of decoys. Large displays are always desirable, the larger the better, and it is universally conceded that a dead goose, properly placed, makes a better decoy than anything else, except a live one. Even live ones are not good, if they are continually striving to get away or are every now and then yelping out their note of warning.

We did not do much good on the return flight from the fields, the geese coming in late, flying high and coming down in all three of the channels. This did not discourage us, however, as we had never had much success on the afternoon or night shoot, and when George announced, by a yell on shore, that he was there to haul us back to the house, we waded ashore and climbed into the wagon, sanguine of a good day's sport on the morrow. Supper was ready for us on arrival at the house, and renewed the promise of the noon meal that we were to fare sumptuously during our stay. Having slept but little the night before on the cars, and desiring an early start in the morning, we retired early to cozy rooms and clean, sweet beds, where we slept and dreamed of geese by the carload.

We were somewhat disappointed in the bag we made the next day. On account of a stiff south wind the greater number of incoming geese as they headed up the river, drifted to the northern channel and settled down there to our extreme disgust. By paying strict attention to our business and making the most of our opportunities, we bagged, I think, eighteen geese and a few ducks, and went home that night somewhat down in the mouth. We found the next day that our shooting in the middle channel had had the effect to send the geese to the others, and although the weather was quite propitious and the number of geese had materially increased, not so many came into our decoys. Yet, for all that, by reason of redoubled vigilance, the relocation of some of the blinds, and better shooting, we brought down more game than on the previous day.

On the morning of our fourth day, when we waded out to our respective blinds, we found they had all been visited during the night by thieves and over one-half of our game and decoys stolen. At my blind, which was the furthest down the river, they had made a clean sweep. It being near the hour of the return of the geese from their breakfast in the fields, I took the channel of the river and visited the other boys. None of them had suffered as I had, all of them having been left some of each dead geese, ducks and sheet-iron decoys. Getting from these as many decoys as I could well carry, I returned to my blind in time for the incoming flight, which proved rather a good one, and enabled us, in a measure, to retrieve our lost fortunes. But when George came down with our dinner we concluded to pull up stakes, spend the afternoon in quest of the thieves, and the next day have him drive us down to our old stamping ground at Foote's, back of Kenesaw.

The above programme was carried out by our leaving Newark early in the morning and taking roads running parallel with the river and as near it as possible, with the intention of pitching camp at the first favorable spot not already occupied by other hunters. But we found the territory everywhere covered, saw the tents of hunters at nearly every house near the river, and could hear the boom of their guns as they were let loose at some wary flock passing up or down stream, seeking a spot where they might light in safety and take a rest. Besides these unfavorable signs we met other squads of hunters going up as we went down, and from them obtained the most discouraging reports. Near 3 o'clock in the afternoon we arrived at Foote's, hungry and pretty well tuckered out, to learn that a party was due there that night from Burlington, having telegraphed ahead to save rooms and beds. But our party had always regarded this as our home, and we at once gave Mother Foote to understand we could not be set aside for strangers. So we took possession, selected our beds and reconnoitered the field.

When the geese are flying right, Foote's, in my judgment, is the best place on the river. Here all the channels meet in one, just back of the house, which stands but a few yards from the bank. The hunter can walk out to his blind at any hour he chooses, and be in at meals without inconvenience or fatigue. But for the last three or four years these advantages drew the hunters in such great numbers, and filled the bars so completely with death-dealing blinds, that the geese abandoned that territory, and the hunters were left. Yet on this occasion we found the field nearly entirely deserted, while Willie and Ira, both good shots and doubtless the best honkers on the river, reported a fair flight and the chances of a moderate bag good. Of course we hired the boys to help us, and got the use of their decoys and dead geese. Here we remained two or three days, with varying success, when we pulled up, and, getting Mr. Foote to haul us over to the railroad, came home, having bagged less than 100 geese all told. When the Burlington people came over the night of our arrival at Foote's, the old mother stowed them away somewhere and somehow, if not so comfortably, and I guess they felt a sense of relief when we took our departure.

It was here that we met one Talbot, of Sioux City, Iowa, with his big and expensive outfit of tents, wagons, horses, hunters, attendants, four practical taxidermists, and a quarter of an acre of decoys, killing geese, skinning them, throwing the carcasses away, and shipping the skins the Lord only knows where. This wholesale murder looked cruel and wanton to us, and especially since not a pound of flesh was utilized, not even being eaten by buzzards, as there are none in that country. In our own case every fowl we killed went into some housewife's bake-oven.

On our return home we met a couple of our townsmen who had just gotten back from a point on the Platte, fifty miles above and west of Newark, and who had killed and brought home over 150 geese, their bag one day alone being nearly sixty. It appeared the geese had, in sheer self defense, drifted up that way to get a place to rest. They were not shy and decoyed readily to a small display of decoys. In our correspondence during the fall with parties up that way we had elicited the information that the geese had not been in the habit of coming up so far in any great numbers and

were not recommended to extend our pilgrimages to those points. We learned before the season was over that better shooting even than that enjoyed by our two friends might have been had even still further west, the geese being in greater numbers and not so shy of blinds and decoys. What course they will take this fall is yet to be decided, but my belief is it will be necessay, in order to have good sport, to hunt them fifty to one hundred miles west of Kearney. That territory being pretty well settled now, the geese can find plenty of grain fields near at hand upon which to feed, and yet so remote as not to be so constantly disturbed either while feeding on the land or resting in the river.

My belief is also that, upon the whole, the river Platte is the best territory for hunting geese in the world. The river is peculiarly attractive to that fowl. It is broad and shallow and showy, filled with little and big flat sandbars, flowing for hundreds of miles in a country not overburdened with lakes or rivers, and right across the track of the millions of geese in their journeys north and south, and through a territory teeming with grain to be had for picking it up. The geese begin making their appearance from the 20th to the 25th of October, and mostly remain here till severe weather drives them southward. Some come earlier and many hurry on south, but the bulk of them linger along till the streams hereabouts freeze up. They are not here long before they become fat as pigs and the young ones are especially delicious. During their stay in the fall very few are lost by spoiling. Three years ago a party of five of us killed 313 at Foote's in five days shooting. They were all left sitting on the bars night and days' around the blinds for decoys. They were brought home and expressed to friends around, 200 of them going into consumption here, and we heard of only two that were at all tainted. In the spring, when the shooting is infinitely better, the case is different. One then can't count on his game for more than a day or two. This same Burlington party went to Foote's last spring, killing some 160 geese, all of which spoiled but ten. Spring shooting by parties from abroad should be discontinued. As I went back to the Platte after the dates described herein, I will give the account of that trip in another letter. BURR H. POLK.

LINCOLN, Neb.

THE HUNTING RIFLE TEST.

Editor Forest and Stream:

Like many more of your readers, I was delighted at reading in FOREST AND STREAM of Aug. 6 that you are about to make a trial of the trajectories of the leading sporting rifles. The results ought to be of incalculable value to sportsmen, and I hope they will afterward be published in a book.

I do not think it would be possible to improve upon the suggestions made by Major Merrill in your paper of the 13th, for testing the accuracy and trajectory at 100, 150 and 200 yards, but another point of great importance is the distance up to which each rifle will carry without the necessity of making any allowance whatever for the curve in the flight of the bullet. This might be ascertained by setting the block sights of small game rifles so that the highest point of the curve will not be more than ½ inch. For large game the highest point might be, I think, 1½ inches, so that there would be no chance at over-shooting when aiming at an animal's brain.

A register of the recoil, as shown by some reliable machine, would be valuable. An experience of about twenty-five years with the rifle, has taught me that a weapon which will carry accurately at a target when held firmly always in one position, may make very poor practice at game when shooting in various positions up or down hill, or when, quickness being necessary, the trigger is pulled almost before the butt of the stock is embedded in the shoulder. In such cases a rifle which kicks severely will sometimes twist in the hand sufficiently to give a wrong course to the bullet when the aim has been quite correct.

I cannot agree with Major Merrill's opinion that 200 yards is an unnecessarily long range for sporting weapons. It is true that, in forest shooting, about three-fourths of all kinds of large game are killed within 75 yards; but in the mountains and open plains of India it is often impossible to approach nearer than 200 yards to various kinds of antelope and wild sheep or goats. The same must be, I would imagine, the case on the American prairies, and on the plains of South Africa such long shots are very common.

The trials of English express rifles in 1883 were limited to 150 yards, not because British sportsmen do not wish for a longer range, but, I believe, because comparatively few express rifles shoot truly at 200 yards. Shortly after the *Field* trials took place I asked a noted London gunmaker what sort of target his rifles made at the latter distance, and his reply was, "That is rather too far for trying an express." His rifles have been proved to carry as closely at 150 yards as the best of those fired at the *Field* trials, although he was not one of the competitors.

At those trials the large bores (from 8 to 12 gauge) were shot at only 50 yards, which was really absurd, for a good ball-shooting smooth-bore will carry well up to that distance, and a properly made 12-gauge rifle will put a number of successive bullets into a six-inch square at 100 yards. That such a range is necessary is shown in the accounts of shooting rhinoceros, buffalo and bison, by Sir Samuel Baker, Captain Forsyth and others.

It will be interesting to judge from the results of your trials how much or how little is really gained by the very heavy charges used in English express rifles. I have often doubted if the increased flatness of trajectory fully compensates for the loss of that invariable delicate accuracy which is so desirable in shooting weapons. For some years past I have owned a breechloading .45 express by one of the best English makers. It weighs 8 pounds 12 ounces, and is loaded with 125 grains of powder and a hollow bullet of 270 grains. The curve of the trajectory is about 3½ inches up to 150 yards, at which distance it will carry closely enough to hit a deer in the right place five shots out of six, but at 200 yards the shooting is so inferior that I would consider it a great piece of cruelty to fire unless pressed for food. If the rifle could be made quite accurate at this range I would willingly sacrifice one or two inches in the trajectory at 150 yards. I have had three different express rifles, not one of which could be depended upon beyond the latter distance.

The weapon with which I have made the greatest number of successful long shots was a two-grooved rifle that had a trajectory six inches high up to 100 yards, and required a leaf sight to be raised for every 50 yards beyond. It carried so closely that I frequently killed, not only antelope, but such small animals as gazelles at 200 yards. It was stolen from me in India sixteen years ago. Since then I have used six weapons of various kinds at game, and remain convinced that extreme accuracy in a sporting rifle is the one quality which should never be sacrificed for any other. The best judges of distance will make mistakes and lose animals by shooting over or under them, but in the long run they will lose far more by using rifles that carry irregularly.

J. J. M.

LONDON, August 30.

Editor Forest and Stream:

I think some of your correspondents lose sight of the fact that the object of the proposed trajectory test is to test the trajectory, not the pull of trigger or weight of gun. Of course I agree that as it is to be a test of hunting rifles, field artillery should be excluded and only rifles that can be carried day after day without excessive fatigue be tested. As to the discarding of the fixed rest, as advocated in your last issue, I hope and suppose that it will not be done, for no man can invariably take the necessary sight by simply resting the muzzle that can be had when the gun is held in a vise, and absolute certainty is what we want. Of course, trigger pull affects accuracy, but it don't affect trajectory. Reduce pull if too great. Why should muzzleloaders be excluded? "Obsolete" are they? Well, you will find obsolete men who will take pride in muzzleloaders for years to come. It is not to be (as projected) a test of magazine rifles or breechloaders but of hunting rifles. I am not a zealous advocate of muzzleloaders, but I should be sorry to see them shut out. If, as our correspondent says, the trigger pull affects the trajectory to some extent even from a rest, how much more uncertain and unsatisfactory would the result be if fired from the shoulder even with muzzle rest. We want to know what the gun, not the man, can do. Your correspondent says "it would be unfair to test a very light rifle in competition with a very heavy one." Why? We want to know just what light rifles and certain ammunition will do, even if they are fit "only for squirrel rifles." The men who pump .44 lead from a repeater are not the only ones who take great pride in rifle shooting. Men who use rifles, and those who contemplate using them want to know exactly what repeaters, breechloaders and muzzleloaders will do with different weights (within certain limits) and different charges and at different distances, and this can only be done, as we take it, by putting the rifle where it cannot move. As we understand it this test is intended to be comprehensive, and we must express our great satisfaction that the FOREST AND STREAM has it in hand, for we know it will be thorough. S.

Editor Forest and Stream:

Your proposed rifle test will be of very great interest to those who love that weapon and use it against game. I think that in order to insure the best results, the rules should be as simple as possible. Let not this test be hampered by any high-flown notions of any sort. To the riflemen of forest or plain it is of no importance whether the charge of his weapon is heavy or light, whether the ball be patched with hollands, leather or broadcloth, provided the desired results are attained.

The "Leatherstocking" said that "a true hunter will always use the skin of a fa'n for patches if he can get it;" and he is reported to have done good shooting. He would doubtless, however, have beaten his own record if he had not been too much under the control of Mr. Fenimore Cooper, who made him "continue to pound his bullet" after driving it home, while he was gossiping with Judge Temple.

This communication was accidentally laid aside at this point, a week or two ago, and may reach you too late for publication. I had little more to say, however. It is my expectation that any increased effectiveness in the rifle of the future will be mainly due to improvements in the nature of the expulsive force employed. It is not unlikely that in some little shop or office experiments may now be in progress, the results of which will be of moment in future trials of this kind, and I hope that all sorts of weapons and ammunition may find a fair show in your coming test.

Therefore, if a man shall present for the approbation of your committee a thing like a Chinese matchlock, loaded with a spoonful of syrup and an iron bolt patched with a pine shaving, look not unkindly thereat, but give him opportunity to demonstrate the superior effectiveness of the combination.

So shall you, possibly, entertain unaware the long-sought "rifle of the future." KELPIE.

SEPT. 2, 1885.

[See also our rifle columns.]

THE ST. LOUIS CONVENTION.

THE following letter was received recently by Messrs. W. W. Judy & Co. from Captain French, of New York, president of the National Game Preserving Association. It well illustrates the position of the game dealers in the situation and is therefore reproduced:

"NEW YORK, Sept. 8.—Your letter of August 25 ult., to Theo. P. Gilman, secretary, was sent to me while absent on a summer vacation. On returning I find Mr. Gilman is absent. In a brief interview with some of the members of our ex-committee, we find ourselves at loss about the scope of the proposed convention and the interests to be represented. You speak of a convention of sportsmen and game dealers for the purpose of modifying and making more uniform the game laws of the country. A printed circular has come to hand headed, 'National Sportsmen's Convention,' and signed L. D. Dozier, president, but this seems to be local and intended to provide ways and means for a festive entertainment. Our association is composed of game dealers, and soon after its organization we made overtures to the sportsman's organization of this city to confer with us, with a view to certain modifications of the law of this State. Our suggestions were curtly declined and they have since enforced the absurd and oppressive feature of that law more vigorously than before. The laws of which you and we complain have been instigated and enforced by sportsmen. If they—the sportsmen of the West—have come to realize that game dealers and game consumers are unfairly treated and desire to meet with them in convention for the purpose of a friendly and candid consideration of the situation, and the devising of better laws in the interest of food and trade, as well as of sport, I am sure we of the East would be glad to send delegates and do all we could toward settling the difficult question upon a just and comprehensive basis. Will you, therefore, please tell me something more about the origin of this movement, and particularly whether influential sportsmen have gone into it in anything like the spirit I have suggested. A prompt reply will probably be in time for us to take some official action, if it seems politic and proper. Very respectfully, N. R. FRENCH, President."

This convention was called by the Missouri State Sportsmen's Association, at their annual convention, held in St. Louis, June 2, 1885.

The objects of the convention are to devise ways and means to arrest and prevent the further alarming waste and destruction of our game and fish by improper and unwise methods; to prepare and provide for the enactment and enforcement of game and fish laws; to secure more uniformity in the laws of the several States and Territories—regulating the commencement and duration of the open season—to take steps looking to the improvement of the relations between the sportsmen, game dealers and the land owners, and to consider such other matters as relate to our game and fish resources.

The following railroads and steamboat lines offer rates as below: Chicago, Burlington & Quincy; Indianapolis & St. Louis; Louisville & Nashville; Ohio & Mississippi; St. Louis & San Francisco; St. Louis, Iron Mountain & Southern; Vandalia Line; Diamond Jo Line; Louisville, Evansville & St. Louis; Missouri Pacific; St. Louis & Cairo Short Line; St. Louis, Keokuk & Northwestern, St. Louis & St. Paul packet; Wabash, St. Louis & Pacific.

Recognizing the fact that the object for which this convention has been called is of much greater importance than many are aware, and desiring to reach every sportsman in the country, we have labored the more faithfully through the press and our circulars to awaken an interest with every true lover of the gun and rod throughout all the States, and shall continue our efforts in that direction to the 29th of September, feeling that our time and labor will be amply repaid if success crowns our efforts.

From the number of letters already received with promises to attend, we feel encouraged that our work in the great cause has not been in vain. It has been said that "what is everyone's business is nobody's affair." So it has been with the preservation of game and fish, and the enforcement of our laws relating thereto. We feel that nothing effective can be done without unity and concert of action, and we invite the coöperation of every sportsman from Maine to California, and from the lakes to the Gulf.

There are, perhaps, several thousand organized gunning and fishing clubs in the several States and Territories with, we dare say, a constitution providing for the preservation of game and fish and for the promotion of bodily and mental health and pleasure, but, we are sorry to say, that on account of irregular, inconsistent and inoperative laws, it is almost impossible to enforce them.

Game and fish are the food of the poor. The quantity sold annually in our markets is but a small item as compared to that taken and eaten by our farmers, and could the value be computed as food, we would find the figures way up in the millions. With such facts before us should not every true sportsman awake from his lethargy and lend a helping hand in having laws enacted that will arrest the wanton destruction of game and fish in close seasons, and thereby perpetrate our field and stream pleasures, as well as secure food for the farmer and the poor? This, in our judgment, can only be accomplished by united efforts and concert of action. Therefore we invite every true lover of the rod and gun throughout our broad land to attend the convention.

Delegates or friends to our cause are requested to forward us at once a correct copy of their State game and fish laws. The committee need them badly.

All delegates are requested to assemble at Elk's Hall, southwest corner Sixth avenue and Walnut street, promptly at 9:30 A. M., Sept. 29 and immediately present their credentials to the acting secretary that no time may be lost.

According to the call each sportsmen's club in the United States will be entitled to two delegates in the convention. The credentials of delegates should give the name and address of the club sending them, in full, together with the names of officers and number of membership. It is expected that notwithstanding the call limits the representation to clubs alone, individual sportsmen, fish and game commissioners, fish and game dealers and all others interested in the preservation of fish and game, will be admitted to participate in the deliberations of the convention.

To facilitate the progress of the convention's work, each club is requested to advise H. C. West, 114 Pine street, St. Louis, Mo., by mail as quickly as possible, of the number expected to attend from their club.

Sportsmen in cities, towns and villages, where there are no organized clubs, and all who may desire to attend the convention and participate in its deliberations, are urged to organize one at once and elect delegates. It costs but little or nothing to organize a club, and with an organization they can better assist in the enforcement of the game and fish laws. A number of the Fish Commissioners of the several States and Territories have already signified their intention to attend the convention, and it is to be hoped that many more will follow suit, as the work to be considered is of great interest to their noble cause. It is believed that much good would follow if all Commissioners could meet and exchange views. H. C. WEST, L. D. DOZIER, J. D. MALIN, J. P. CARD, J. F. SHEPLEY JR., Committee.

TO MAKE THE GROUSE LIE.

Editor Forest and Stream:

I am one of the "constant readers" of FOREST AND STREAM and have been for years, buying it from our newsman. It brings me a weekly treat which I dearly enjoy; and I would like to express my opinion of it as not only exeeedingly interesting, but a clean, gentlemanly, manly paper, which I can leave without mistrust among all the members of my household. I am now nearly an octogenarian, and my enjoyment of field sport being now limited to fishing for black bass from a boat, the next best thing for me is to read of what younger men are doing. Pardon all this gossip, which of course is not for printing; but I feel somehow as if I were writing to an old friend.

My object in writing is to tell what may possibly afford some sport to some of your readers, on the prairie, after the grouse begin to pack and become wild. A young Hungarian friend, speaking of the grouse which are plentiful on the steppes of his country, described them as very closely resembling our prairie chickens in appearance and in habits, and mentioned a plan, in use by sportsmen there, to obtain some shots after the birds have packed, and are difficult to approach. Some large buckshot have two holes drilled through them, crossing each other, and made as large as convenient. A charge of these is fired, not into the pack when it rises, but well over it, when the birds instantly drop into the grass and lie there "like stones," till several good shots may be obtained. The idea is that the birds fancy the whistling of the perforated shot to be caused by their natural enemies, the hawks. Possibly this might be found to work in the same way with our *Oupidonia cupido*, and perhaps some of your readers might think it worth while to try, and report results. PFARRER.

PORT RICHMOND, Staten Island, Sept. 11.

THE CHOICE OF GUNS.—V.

THERE is not very much difference in quality, material or workmanship between guns of equal price made by machinery and turned out in large quantities for the general trade by the different American manufacturers. The work of each establishment has its individual characteristics, and these peculiarities, as they happen to be admired by one sportsman and disliked by another, lead to opinions and selections as diverse and numerous as the styles of the guns. But some of these peculiarities add to, while others detract from, the durability and appearance and, consequently, the value of the gun in which they exist.

The principal American manufacturers of moderate-priced hammer guns are the Parker Brothers, the Colt Patent Fire-arms Manufacturing Company, E. Remington & Sons, the American Arms Company, L. C. Smith, Harrington & Richardson, the Ithaca Gun Company, Forehand & Wadsworth and N. R. Davis & Co.

Of all the guns mentioned, the Parker, as recently improved, is perhaps the handsomest model, and it is fully as well made and as neatly finished as any, and is perhaps as well balanced as any of them except the old Fox gun, formerly made by the American Arms Company. Even before the recent improvements which have been made in it, the Parker, with its lifted action, its single lug, without hinge-check or extension rib, fairly held its own among American guns; with its extended top rib, its improved check-hook, its solid head plungers, its top lever, its rebounding bar locks and its hammers below the line of sight, it is very much improved.

The regular sizes of the Parker are 10 and 12 gauge, but 8, 16 and 20 gauge guns are made to order at a slight advance on the price of the regular sizes of corresponding grades. This gun is made as light as 7 pounds in 12-gauge, and as light as 6 pounds in 16-gauge.

The extension rib of the Parker is not of a shape to possess much holding power, and the improvement of the rib would still further add to the merit of this excellent gun; but the old Parker has proved its durability even without an extended rib. Indeed, viewed from the standpoint of a sportsman, I know of no foreign gun of any make whatever costing net within 25 or 30 per cent. more than the $75 or $85 grade Parker (which, by the way, I consider, comparatively speaking, price being kept in view, the most valuable and desirable grades) that equals it, in workmanship, durability, shooting powers or in any other of those points which commend a gun to the practical sportsman, the æsthetical sportsman to the contrary notwithstanding. This is high praise, but the gun deserves it, and it is not one whit stronger than of right belongs to this excellent home-made gun.

The Parker is not a double-bolted gun, but is strongly fastened by its single bolt locking into the rear bottom lug, at the greatest distance from the hinge-joint, and there is little danger of the gun becoming loose by any fair usage. The forward lug has a shoulder which catches upon the hinge-check, and admirably serves its purpose of taking the strain off the hinge-joint, when the gun is opened. The locking-bolt is held back by a trip till the gun is closed.

The thumb-piece of the Parker hammers is hardly so long as it ought to be, but it is not short enough to be seriously objectionable. The hammers are fastened on with flat-headed screws, which I have observed, in one or two guns, to have a tendency to work loose from the manipulations of the hammers. If screws with nut heads were used, as in the Colt, they would more nearly conform to my ideas of what they should be; but this is an individual opinion merely, and probably is not shared by many sportsmen. The patent fore-end snap-fastening is used on the Parker, and it is both convenient and durable.

It is hardly necessary for me to say a word about the shooting powers of the Parker. Indeed there is so little difference between the standard makes of American guns in this particular, that it is hardly proper to mention the shooting of one without repeating the same language with respect to all the others that I shall describe and recommend. I may say, however, that for field shooting no gun is superior to the Parker.

The Colt is of more recent origin than the Parker, and has always had several of the improvements which are new to the Parker. It was formerly made with small-headed firing pins and without the extension of the top rib, but it now has solid firing-pins and extended rib, and has, and always had, double bolts, top-lever, patent fore-end, rebounding bar locks, and automatic firing pins. The act of opening the breech withdraws the firing-pins by a positive motion without springs, thus avoiding the danger of premature explosion by the contact of the points of the pins with the primers.

The Colt is well made and of great durability and shooting powers. For hard work it has no superior of its class. It is not so symmetrical and handsome a gun as the Parker, nor I think, hardly so well balanced. Its high and rather awkward-looking hammers and its huge top-lever with immense screw head, detract considerably from its appearance; and in my opinion the high hammers are a serious objection to the gun for wing-shooting.

On some grades of the Colt gun there is used an excellent device for taking the strain off of the hinge-joint when the gun is opened. I do not like the check so well as the Nichol's hinge-check used on the Parker and Lefever guns, as it is not so simple, and is, consequently, more likely to get out of order, but it seems to answer the purpose very well. I think the Colt hinge-check is only used on their guns of the $70 grade or upward. It ought to be placed on all grades. The company can very well afford to do so, as the profit on all machine-made guns is larger than it is popularly supposed to be. The failure to place the hinge-check on the cheaper guns (where perhaps its need is greatest) ought to detract from their sales, for the gun is not complete without it. The Colt check consists of a sliding bolt attached to the forward lug which projects against the bottom of the slot in the frame when the gun is opened. The extension of the top rib of the Colt is of the doll's head form, which, for reasons already indicated, is objectionable. But I do not wish to be understood as saying that the Colt is not a good gun, quite the contrary. It stands in the front rank, and it and the Parker are among the most popular of them all with sportsmen.

The Colt is only made in 10 and 12 gauge, and I believe 7¼ pounds is the lightest weight in 12-bores, and 8½ the lightest 10-bore.

The Remington model of 1882 is somewhat similar in general appearance to the Colt, but it is hardly as well finished, and does not present quite so neat an appearance. As formerly made, the gun was opened by lifting the lever, but now it has the regular top lever and is opened by pressing the lever to the right. The Remington has large head strikers, patent fore-end, extension rib, and is double bolted. The extension is a doll's head, and there is no barrel check. It is a close, hard shooter.

The lowest grade Remington is made with plain decarbonized steel barrels, and they are claimed to be safe, sound and durable; but I cannot believe that such barrels as are used in this grade possess any great tenacity, and would not advise their use. They are undoubtedly safer than the "Fine Damascus Steel Barrels" so often found on the cheap imported guns, but are not equal to the plainest genuine twist. The higher grades of the Remington are well worth the prices at which they are usually sold. The Remington is made in 10 and 12-gauge, but not lighter, I think, than 8 or 8½ pounds.

The Baker gun, manufactured by L. C. Smith, has long stood pre-eminent for its fine shooting powers, especially adapting it for water-fowl. It opens by pressing forward the front trigger. The point of locking is at great distances from the hinge, and it has an extension of the top rib dovetailing into the solid breech. It has rebounding locks with very high hammers, and is made in 12-gauge from 8 to 9 pounds, and in 10-gauge from 9 to 11 pounds. The Baker is also made with three barrels, a rifle barrel, chambered for the .44-cal. Winchester cartridge, underneath the shot barrels in the place of the bottom rib. This three-barrel gun is made with either 10 or 12-gauge shot barrels so light as 9 pounds. In many respects it is a remarkable gun, and, in certain localities, must be a desirable one.

The rifle hammer of the three-barrel Baker is hung in the trigger-plate, and extends upward between the two shotgun locks. It is operated by cocking the left hand shotgun lock and pushing forward the thumb piece of the rifle hammer, which stands immediately in front of the triggers and inside the trigger guard. Pulling the rear trigger throws the rifle hammer and causes it to strike its firing-pin and stop, thus not allowing the left hammer to reach its firing-pin. After firing the rifle, the cocking of the left hammer throws the rifle lock out of gear, and renders the shotgun locks entirely independent of it. The action of the three-barrel is the same as that of the double-barrel Baker gun.

I believe the manufacture of the Baker double-barrel gun has been discontinued, as the maker has made a very great improvement upon it in the introduction of the Smith gun. This gun is the latest American model, combines all the recent improvements in hammer guns, and, according to my notions, is constructed upon sounder mechanical principles than any other. Manufactured by the maker of the Baker gun and bored in the same way, its shooting powers are assured, while the principles of its action must give it great strength and durability.

In all guns which are fastened by means of bolts locking into bottom lugs, the metal of the frame is necessarily more or less cut away to receive the lugs and bolting mechanism. The Smith gun is not bolted by means of a bottom lug; it has a powerful extension of the top rib, brazed between the barrels and extending backward into the standing breech, and is locked by a double cross-locking rotary bolt. This rotary bolt is made from one solid piece of steel, and has a square forward arm which passes completely through the mortise made for it in the extension of the rib and under the metal of the frame, three-sixteenths of an inch. The rear flange of the bolt passes through the slot in the end of the extension. Thus, it will be seen, the gun is bolted at the greatest practical distance from the hinge-joint.

The gun is unlocked by means of a top lever having a post extending downward; by pressing the lever to the right, a coupler, attached to the post and straddling it, forces the locking-bolt back, where it is held by a trip until the barrels are closed, thus avoiding one-half the wear and reducing the force necessary to close the gun. The coupler is provided with a hinge-screw to hold it in position, which compensates for wear. The spring which throws the bolts home is made long, so as to increase its elasticity and lessen the danger of its being broken; but if it should get broken in the field, the gun could still be operated.

In the Smith gun, the metal of the frame in front of hinge-joint center is not cut away, but the solid cross-section of the frame is left intact to support the hinge-roll the entire length of the surface which comes in contact with the lug. The lug, which turns upon the hinge-pin, or roll, passes entirely through the frame and is well fitted; thus the bearing surface of the lug is increased, and any dirt or obstruction may pass through the frame.

The frame of the gun has a slot for receiving the eccentric pin of the rotary joint-check. The ejector passes through the diameter, and is operated by the rotation of the eccentric joint-check. When the gun is opened to load, the weight of the barrels is taken off the hinge-joint by the eccentric pin of the joint-check catching against the angle of the receiving slot in the frame. The point of the ejector, when the barrels are thus caught and held, has passed just beyond the point of the ejector rod, so that, if desired, the cartridges may be pushed entirely home in the chamber before the gun is closed.

The locks of the gun are rebounding bar locks, with the mainspring let into the lock-plate to a sufficient depth to bring the center of the spring on a line with the center of the tumbler; the hammers are low, cocking beyond the line of sight, and the gun is provided with large-head, direct strikers. The hammers and strikers are almost identical in arrangement and appearance with those of the Parker.

I ought to mention that the gun has the patent detachable fore-end, provided with a compensating spring to take up the wear. The Smith is made 10 and 12 gauge, from 7¼ to 11 pounds' weight.

The Smith gun has hardly been long enough before the public to have its durability thoroughly tested by actual use—the surest and best of all tests—but I do not hesitate to predict for it great popularity among those who desire to possess a gun constructed upon correct mechanical principles; nor do I hesitate to assert that these principles, combined with good material and workmanship, must of necessity give the Smith gun great durability, and great power to withstand the strains and wear and tear of constant, and not unfrequently rough, usage.

I have now noticed those American machine-made guns, manufactured for the trade, which seem to me to possess most merit. The Ithaca gun, made by the Ithaca Gun Company, deserves, however, more than a passing notice. For the quality of the work it seems to be remarkably cheap; and I do not know that I would not select the Ithaca if low price were a prime object. I have never used the gun, but those who have used it speak in high praise of it. It is the invention of the patentee of the Baker gun, and is an improvement on it. It is a strong and durable top-lever gun, with low hammers and rebounding locks. It has a "self-compensating" fore-end, but no hinge-check. It locks in the rear bottom lug, as did the old Baker. The extension of the top rib is like that of the Baker, and does not possess any special merit.

The Davis gun is sold at a low price, and is well worth it. It is by no means a handsome model, appearing particularly awkward through the frame. I have used one of these guns and found it a serviceable, sound gun. It has a long and very strong frame and wide and solid lug, large head plungers, and low rebounding hammers. For rough work, where beauty is no object, it is doubtless a good gun for the money.

The Harrington & Richardson hammer gun and the new gun which Forehand & Wadsworth have recently put upon the market, are similar in appearance, are of the ordinary top-snap model, with doll's head extension of the top rib, solid head strikers, rebounding locks, no hinge-check, etc. They have no special merit—no extra meritorious features—that require special notice. They are, doubtless, sound guns; but, with the Ithaca and the Davis, just mentioned, belong to the "top snap" family, without special features to distinguish them.

It is hardly necessary for me to say that the Smith, the Parker, and the Colt are my favorites among the American hammer guns. They are not only top snaps like the other guns mentioned, but possess valuable features not possessed by any of the others, and are certainly as well made as any. The reasons for my preference I have endeavored briefly to point out. Every merit which the other makes of American guns have, the Smith, the Parker and the Colt possess, and in addition they have features of value in the order in which these three makes of guns are mentioned.

But of the old Fox gun it is but just to say, that of all American machine-made guns it is the best balanced, and, when closed, the handsomest. But its action always condemned it in my eyes. It is opened by means of a thumb-piece placed on the back-strap. Pressing this forward withdraws the bolt, and the barrels, instead of tilting forward, turn outward by a lateral motion. The gun is no longer manufactured; but for the quality of its material and workmanship it deserves high praise. Notwithstanding the inconvenient action with which it is handicapped, it is abundantly worth the greatly reduced price at which the guns remaining on hand are sold, and it would be hard to get more value for your money than by buying a Fox. But the action is a long way behind the times and will hardly find favor with any but those whose long use and familiarity with its peculiarity have overcome its awkwardness. If the makers of the Fox would bring out a gun constructed on principles which the progress of the times demands, and build it with that honesty and care which have always characterized the material and workmanship of the Fox, it could not fail to meet with the success to which its merits would entitle it.

Although writing of double guns, it may not be improper to say in this connection that the American Arms Co. (the makers of the Fox gun) are now making a single barrel gun that surpasses any other single gun of which I have any knowledge. It is "half hammerless;" that is, it is cocked by an outside lever, while the hammer is internal. It is made in 10 and 12-gauge to weigh from 6 to 9¾ pounds.

AH-PE.

A VERACIOUS RELATION.

Editor Forest and Stream:

As we had no dog to use for grouse we concluded to make the hunt include everything in the shape of game or vermin. Our object in taking a week for an outing was to enjoy ourselves in any and every way practicable. And whether we hunt or fish, lie around in the woods and loaf, gather wild cherries and wild herbs, we are sure to be benefited thereby. Jack carried a 10 gauge cylinder while the one that I used belonged to a friend. I have re-bored it for him and take it on this trip to test it on game. My orders were to "bore the right barrel full choke and the left chock full." I had little faith in this kind of gun for wing-shooting, but have a better opinion of it now. I used brass shells, 4½ drams Hazard sea shooting powder, one pink-edge wad on powder and one on shot, 1 ounce No. 4 chilled shot. This gave a good pattern, a good killing circle, together with tremendous penetration.

The sun was just rising above the mountains when we entered the woods. We saw some squirrels, etc., but not a grouse did we find until after 9 o'clock. Jack suggested that we "try the berry pasture at the edge of the wood, for," said he, "we shall be apt to find the birds where there is something for them to eat." We made for a pasture where blackberry briers were plenty on a side hill near the woods, and Jack's suggestion proved to be a good one, for on tramping through the blueberry bushes and briers we soon found them, and whirr—whirr—whirr went six or eight of them on a bee line for the woods. Jack raised his gun and coolly knocked over two of them, one with each barrel, while I scored a couple of the most unpardonable misses that I ever made in my life. "Well," said Jack, "it may be none of my business, but if that is the way you kill your birds, it is far different from your stories about your killing four or five in succession." I must acknowledge that I winced some under this keen thrust, but Jack was smarting under his defeat of the day before, and so I forgave him. The fact was that I was too sure of the birds and so did not hold on them, but I did not forget those two blunders the rest of the trip. "Now," said Jack, "we are not going to find many single birds, for the coveys are not scattered yet, so when we do start them doubles will be in order." In a short time we found four more and this time I made a double shot, and both of them were killed clean at the longest range that I ever dropped a bird. I will not tell a great story about the distance, for I did not measure it exactly, but one thing I did note, that is, No. 4 chilled shot will do great execution when there is plenty of powder behind it. Meanwhile Jack was not idle, for although making a miss with the first barrel he winged the second one, and after a lively chase through the briers he managed to catch him and wring his neck. We were in good spirits now, for we had made a good morning's work.

As the sun was pretty warm out in the open we thought we would take to the shade, and as we had as many birds already as we cared for then, we did not hunt for them longer. But fate said otherwise, for just as we reached the other side of the field another large covey flushed and again I got a double, while poor Jack, I never shall forget the look that he gave me when he found that he had missed both birds. It was then that we compared notes as regards the merits of choke and cylinder boring and we both came to the conclusion that the full choke is the best thing for a 10-gauge, for if you want to shoot ducks, foxes or large game you have a good gun for such work, while if you want to shoot grouse, etc., in cover, you can use light charges of

coarse shot and make a pattern about the same as a 16-gauge cylinder, while the penetration is sufficient to cut down brush and the bird besides. One thing is certain, a bird that is shot at a less distance than twenty yards is liable to be smashed any way, while beyond thirty yards the choke has many advantages. However, opinions differ, and so do guns and shooters, and if each individual can have what suits him best we will all be happy, at least as far as guns are concerned.

As it was getting along toward noon we started for the house, for we had the promise of stewed squirrel for dinner, and somehow it seemed strange that we should become so ravenous in so short a time. After a dip with the pocket cup into a cold boiling spring we made our way over by the pond. On our arrival Jack pointed out into the water at something, and inquired what it might be. As it disappeared beneath the surface I answered, "A loon, Jack, and a big one, too. After dinner we will take our rifles, and if we do not have some sport with him, then I am mistaken." For quite a distance with our course an old cart path ran parallel with the edge of the woods. Between this road and the fields there were a lot of rocks, and in those rocks were many hedgehog dens. Jack said that he wanted to "kill some of them." I protested against it, saying that "life was as sweet to them as any other animal; that they were doing no harm, and that they were of no use to us after we did kill them; that it was a waste of ammunition that gave no practice, and downright cruelty anyway." "Cruelty be blanked," responded Jack; "hedgehogs are good for nothing only to spoil sweet apple trees, as well as hemlock trees in the forest, except it is to fill cattle and dogs' noses with quills;" and a few minutes later the roar of his old 10 bore rang out the death knell of something—I never inquired what.

We went up to the pond in the afternoon and had an interview with that loon. Now if I were writing this for the "remarkable shot" column, I should tell you how we cut off his head at 100 rods the first shot, but the truth is that we fired and fired at him until we were tired of it, and never touched a feather so far as I know, although the balls seemed to throw water all over him. We could not estimate the distance very closely on the water, and when we fired he would dive and when he came to the surface again he would seem to be 200 yards from where we fired at him. We could not get nearer than 50 rods before down he would go and swim under water a long distance. We enjoyed ourselves, however, if we did not hit the loon. We saw the track of an otter in the mud at the edge of the pond, and saw a mink running along over across the cove.

Three years ago we were here and found no grouse, as we worked a week for them and killed but three. This year there are plenty of them. Why is it? I do not know. Upon nearing the house we met "Uncle John," (our host) and said he, "Boys, there is a mighty big flock of black ducks gone up to Rye Pond, and if you wish I will hitch up old Billy and we will go up there in the morning and give them a twist. Of course we were ready for duck shooting but did not like to tramp three or four miles and get no ducks. "Uncle John" has his team out to get in some barley which he had cut, so we take a hand at it and help him get it to the barn. Then we lay our plans for the morning's hunt, the result of which I will tell you further on. IRON RAMROD.

SOMERVILLE, MASS.

DEER IN THE ADIRONDACKS.

THE only game law observed to any extent in the Adirondacks if one which, though unwritten, is known to all the guides and sportsmen in that region. It is "No one ought to starve in the Adirondacks."

The reasoning of campers on this question is very plausible. "The written law," they say, "was made to protect game from those who shoot to sell, but the little we kill will make no difference." It does, however, make a big difference, for this same reasoning is indulged in by a host of people, and as deer are more easily approached with jacks in May, June and July than after the season commences, since they stand more in the water and are less scary, almost as much havoc is made out of season as in season. When men are hungry or excited the difference between bucks and does is often not noticeable, and when the does are killed early, even if their fawns live, the latter are probably stunted for life.

One of a camping party boasted to me of having killed both doe and fawn. The constables being appointed from the country round and knowing many of the guides, it is a generally understood thing that if no venison is in sight there will be no search for any. As soon, therefore, as a deer is killed the carcass is buried or hidden in the underbrush, and if a constable should pay a visit to the camp he and the campers have so many pleasant topics of conversation that it seems a pity to introduce unpleasant ones. Accordingly, if a bone is carelessly left exposed to view or a dog comes in munching one, the minion of the law courteously looks at the salt pork for explanation, and all have a pleasant time. From the venison being deprived of air and being overheated most of it spoils before it can be eaten; but even if the party is large enough to eat the whole deer while it is in good condition, if another can be shot, little beside the haunches and the saddle are kept, as the other parts are not so good and are, moreover, lean and stringy early in the season. From these causes the waste of meat is enormous, except in the case of a few sportsmen who, wiser than their fellows, allow their guides to sell the meat not wanted for the camp and divide the proceeds.

When sportsmen go to the Adirondacks for the first time they go when the law is "up," but when they find that the deer, having been hunted for more than two months, are very wild, and they are assured on all sides that the unwritten law above alluded to is upheld by sportsmen, guides and most constables, they generally fall from grace, arguing that one person should have an equal chance with another. Living on salt pork and trout is, I may say from experience, a very powerful argument in itself. Camping out is in fact very demoralizing. A man may arrive looking a walking advertisement for some sporting tailor. In about two weeks, with clothes dirty and torn, hands inlaid with ashes and powder, face unshaved and hair unbrushed, he looks a veritable tramp. Another arrives, so observant of the fourth commandment that he chops a double amount of wood on Saturdays. After a time, however, you will not only see him chopping wood, but out paddling, and later taking out his gun, because, as he says, "We really must have meat, you know, and I don't consider this work."

And the hunter in like manner becomes so thoroughly demoralized after a week or two in the Adirondacks that he is no more troubled by qualms of conscience for having killed deer, grouse or ducks at any season than it is said our Western cousins are after shooting Indians. Should there appear a constable determined to enforce strictly the laws of the State he would be regarded as trying to overthrow an older and more sacred law, and a howl of indignation would be raised throughout the Adirondacks and threats would be poured in on him from all sides.—*Correspondence New York Herald.*

SOUTHERN SHOOTING GROUNDS.

THE following letter was written in response to a letter of inquiry concerning a desirable locality for winter shooting. The inquirer described himself as a sportsman compelled to go South for his health, and anxious to find a point convenient to good shooting. He wrote to Mr. Freeman because he had seen that gentleman's name in the FOREST AND STREAM:

Dear Sir: I think you will find this city a good place to make your headquarters for the winter. Ice is uncommon and snow very rare, though at times the thermometer for one or two days will range down to about 30°, but this is very seldom. The climate is as good as you will find in the States, and we have instances of renewed vigor and health in persons of weak lungs, notably Mr. I. M. Boorchman, a gentleman of over seventy years of age, who years ago had hemorrhages, and to-day is a vigorous man for his age, and who can give you better information as to the temperature of the city than any one else here, having for thirty years and over kept a record of it.

TEMPERATURE AT MACON, GA., FROM AUGUST, 1884, TO AUGUST, 1885.

	Mean.	Maximum.	Minimum.
August, 1884	76°	90°	61°
September, 1884	75°	92°	52°
October, 1884	69°	91°	34°
November, 1884	53°	78°	27°
December, 1884	50°	74°	18°
January, 1885	45°	72°	18°
February, 1885	44°	72°	18°
March, 1885	51°	74°	15°
April, 1885	65°	87°	35°
May, 1885	70°	88°	44°
June, 1885	79°	95°	60°
July, 1885	81°	95°	60°
August, 1885	79°	94°	64°

From Macon you have easy access to the hunting grounds of the coast and inland. Small game, especially quail (or partridge, as we call them), is abundant near us. Ducks, turkeys, gray squirrels and deer can also be found, the latter more abundantly near the coast, not far from Brunswick, Ga., where fine fishing is also to be found. You can in a day's ride by cars reach the forests and lakes of Southwest Georgia and Florida. Macon is the center of the State, and affords all the comforts and conveniences of the age for your family, from which you can with ease and safety take a day or week's sport at any time

I refer you for other places to E. A. Crawford, Tallahassee, Fla.; M. R. Curtis, Fernandina, Fla; F. C. Randolph, Montgomery, Ala.; Capt. M. G. Cooper, Savannah, Ga.; Thomas Martin, Bluffton, S. C.; I P. Chapman, Americus, Ga.; M. M. Parker, Macon and Albany, Ga., and Mr. Berryman, Brunswick, Ga., all of whom are members of the National Gun Association, and the towns are good locations. I send you copy of Georgia State Fair premium list, and would be glad to see you on that occasion when you will meet a number of sportsmen. Another advantage that these towns have over Florida is that there is here an equally as good climate and I think better, and here you can be accommodated at a moderate price, and not charged every time you ask a question or look at any one.

I can give you all the clay-pigeon shooting you want any fair day on our grounds within ten minutes' walk of the city hall. Extending to you an invitation to make Macon your headquarters with as many others as you can induce to try this climate, I am, yours respectfully,

M. R. FREEMAN.

DAKOTA FIELD DAYS.

Editor Forest and Stream:

The prevalent idea is that it is so cold up here in the Northwest that people freeze to death; but this is a great mistake. The 16th of last December, sixty miles north of this city, in company with four gentlemen, I went for a deer hunt. The weather was so mild that I could not bear an overcoat. On the 20th it set in cold. On the 1st of March it was like May, and continued so all through March and April, beautiful warm, clear weather, with an occasional shower. Then we had just nine weeks of beautiful winter weather with four inches of snow.

I promised in my last that this letter should be devoted to the geese and duck family. I can only give my experience last fall, but later on I hope to tell of the good times I am anticipating next month. Last October I went east of town three and a half miles to a large grain field, and dug a pit. This was my first experience in goose shooting. About 4 o'clock in the afternoon the flight began. The geese came by the hundreds, but I could not keep my head down, and could not understand why they would turn so abruptly to the right and left just before getting within gunshot. Two lone ones ventured too close to my decoys and I got them. A friend told me if I should hold even a finger up and move it I could not get them near me. The next evening I was better schooled and got as many as I could pack home on my Indian pony. Never did any man have better sport. For six weeks I went almost every evening, getting all the shooting I wanted.

The ducks are just as plentiful as the geese. They stay here till cold weather, untold thousands of them. There are large sandbars on the Missouri River, on which they stay during the night and day, going out in the morning and evening on to the grain fields to feed. It is a common occurrence for one man to kill seventy-five in a day. Let some of the Eastern sportsmen gather up their traps and come out, and if they don't write the FOREST AND STREAM that they have had the best time of their life in the hunting line, they are hard to please. We have a gun club of sixty members, and they can do fine work with the gun. The officers are: President, W. B. Bell; Vice President, W. H. Williamson; Secretary, Harry Weatherby. I will tell you something of the deer in my next. W. H. WILLIAMSON.

P. S. I find so many letters in answer to my communication in your paper that I cannot answer all, will you allow me to answer them in one? All Western towns are full of young professional men, and I cannot advise any more to come to this city unless they have money to invest, then the chances are great of accumulating wealth. To go into the farming business a man should have at least $1,500 to build a house, buy stock and have enough to tide him over the first year till he can raise a crop. You can get 320 acres of beautiful land for the taking. The climate is very good especially for lung troubles, not so good for catarrh. There is but little chance for a young man to find employment, but there is any amount of room for all who will make work. There is a certain class of young men who can go into any country and get along. It is no child's play to go into a new country and carve out a future; but to all who are willing to undergo privations, this is the country. For any one having from $3,000 to $5,000 to invest, I can say I have never seen such chances to make a fortune on so small an investment and so certain. Thank you for allowing this to appear in your paper. W. H. WILLIAMSON.

BISMARK, DAKOTA.

THE GAME OF VENTURA.

OUR county seems to be about the least advertised of any county in this State. In one respect I am glad of it, for as yet we have been troubled with the would-be "sportsman tourist" and "trout hog" but seldom. Ventura county is one of the best game counties in the State. We can furnish you with almost anything in that line from a quail to a grizzly bear. Blacktail deer are plentiful, and occasionally a whitetail is killed. Several years ago elk and antelope were seen. Rocky Mountain sheep are sometimes brought in. California lions, coyotes, wildcats, lynxes, and foxes are to be found in some parts of the county. Deer have been killed within two miles of town this year. A grizzly was seen within sixteen miles. A mountain lion was killed one day this week with bird shot. Venison dried in the sun for a few days is brought to Ventura and sold for from twenty-five to thirty cents per pound readily, giving the hunter a good profit. Quail exist in the greatest abundance. In some places they destroy considerable young grain as well as apricots and peaches on the trees. Farmers consider them a pest, and are glad to have any one shoot them. Last year an acquaintance killed twenty-six at one discharge of his gun, (a pot shot), both barrels being fired. There is but little advantage in hunting our California quail with a dog, as they will not lie to a dog but keep running. A number of young ducks have been killed lately—mostly mallard and teal—there being no law against it. In the fall and spring thousands of ducks and geese are to be seen. They destroy large quantities of grain for the farmers.

An exciting pastime our sportsmen sometimes indulge in is a wolf hunt on horseback. It is thrilling to watch the coyote's race for life, but the greyhounds generally overtake him.

In season the numerous trout streams in the county abound in trout. Large creels have been caught in the Ventura River, which empties into the ocean at San Buenaventura.

At present sea fishing is indulged in largely. Large schools of "sea trout" have come in lately. Over a hundred can be caught by one person in an hour. From the wharf a dozen or more varieties of fish can be caught, and occasionally a shark. If you like the excitement of trolling you may get into a small sailboat and sail a mile out into the channel, drop your line astern with nothing but a white rag or piece of polished ablone shell for bait, and you will not wait long until you have hooked a ten-pound bonita or barraconda, or perchance a thirty-pound yellowtail or "sea salmon." You will probably catch twenty-five or thirty in two or three hours' sailing.

Now, don't let any ignoramus imagine that I mean, in regard to the wild animals, that you can go to any place in this county and fall over bears, lions, wildcats, etc., for you can't do it. TYPO.

SAN BUENAVENTURA, CAL.

IOWA PRAIRIE CHICKENS.

Editor Forest and Stream:

I have skirmished about to a reasonable degree in a reasonable time, but never till now, never till '85 did I strike the sportsman's paradise. It is in Northwestern Iowa; and where can you find better? One week ago to-day the chicken season opened, and auspiciously, too, you may believe. I am glad to know that the residents hereabouts are observing the law regulating the hunting season, and woe be it to the outsider who does not do likewise.

Last spring's prairie fires occurred early in the season, hence the birds have had better chances for nesting and increasing than for several years past. The result is lots of chickens. Messrs. Hinsey and McDonald, Chicago, Milwaukee & St. Paul Railroad officials, have been here several days lately. I mention this fact because they come here each year, are enthusiastic sportsmen, and usually meet with as good success as any of the fellows. Their best day resulted in nearly 150 birds, and it was a cold, dreary day when they couldn't bag over a third of that number. Yet the other hunters follow close up to them, and it's a poor hunter that cries for more birds. It would seem that with so many hunters the prairie chickens must soon play out, but the natives say no. This year there are more than last, and last year there were more than the year before. Your prairie chicken seems to be a bird that lives on the edge of civilization, so, I take it, the advance of civilization drives him away faster than the hunter.

The laws of Iowa prohibit quail shooting throughout the entire year and it is a law well in force. Eventide is made joyous with the whistlings of the delicious little Bob Whites, a condition of affairs that would soon play out were the law to be abolished.

The chicken season will scarcely have done ere the geese and ducks will have made their appearance, and they come in such quantities as to make their season quite as enjoyable as that of the chickens. Northwestern Iowa is a section of country particularly adapted to chickens, ducks, geese, and the like. Maybe your finer-haired chap don't enjoy rabbit shooting; but if so, the reason is that he never engaged in it. You see, out here we have in addition to the cotton tail, his elder brother, the jack rabbit. During the winter an occasional deer is run down, and wolves are by no means scarce.

Such is some of the fun allotted to us out here, but I should feel "undone" if I neglected mentioning the fishing. The rivers and ponds do not lack for the finny tribe. The seiners have made havoc, but, thank heaven, we now have a State Commissioner who looks after his business, and without doubt legitimate fishing will always be ours. Pickerel take the lead. The river is filled with little bayous and deep holes, and here is where you find him. Can there be anything more enjoyable than to take a half-holiday, and armed with rod and trolling spoon, repair to these pickerel dens? A pickerel is chuck full of life, and he takes hold of a hook with a will. When once hooked he tries to tear out the bottom of the river; and that's where the fun comes in. It's delicious, especially if it's a twenty-pounder. GRANT.

ROCK VALLEY, IA., Sept. 14.

Hammerless Guns.—Huntington, Tenn., Sept. 8.—*Editor Forest and Stream:* I have read with much satisfaction the excellent article of "Ah-Pe." in Forest and Stream of Sept. 3, on "The Choice of Guns." The writer is evidently familiar with the proper make-up of a good gun; but like a number of other writers he falls (as I conceive) into the error of expressing a preference for low hammers "which are entirely below the line of sight when at full cock." Now how can the hammers be in line of sight when they are fixed to the sides of the barrels, while the line of sight is directly along the rib? And according to my observation, the ordinary sized hammer, standing well up when at full cock, serves as an excellent guide in catching a sight. I regard the low hammers, that stand so far back when at full cock, as inconvenient and dangerous, as they are very liable to slip from the thumb when being drawn back. In purchasing a gun a short time ago I was forced to discard the make of one or two excellent firms on account of the low hammers, and I finally selected the gun I did buy on account of the hammers standing well up. No sportsman in this immediate section of the country prefers a hammerless gun to the old style. I would rather by half use a gun of precisely same quality with hammers than one without; and my judgment is that in a few years the hammerless guns will pass out of common use. "Ah-Pe" is right as to the caliber of guns. For "all works" the 12-bore is the proper size; for ordinary small game the 16 is large enough. On my own responsibility I would say that choking is a fraud; and when the breech-loaders are all made cylinder barrels and 32 to 38 inches in length, the sportsmen of the country will be furnished with guns worthy of their calling.—L. L. H.

To Preserve Dead Game.—*Editor Forest and Stream:* London, England, Aug. 30.—In your paper of the 13th of August "W. L. P." writes: "If there is any way that is simple, cheap, and convenient, for preserving game for only a few days during warm weather, I would like to know what it is." I can recommend the following method for venison: Immediately after a joint is cut from a deer, dust it all over rather thickly with flour, then at once cover it with a piece of perfectly clean calico and sew this on tightly, taking care to leave no part of the meat uncovered, nor the smallest hole through which an insect could penetrate. Hang the joint to a branch round which the air circulates freely and it will remain good for twenty days, even in hot weather. The cloth and flour act by largely excluding the bacteria which cause putrefaction.—J. J. M.

Will Wild Rice Thrive in Mississippi?—Memphis, Tenn., Aug. 31.—A planter in the Mississippi bottom wishes to inquire about wild rice. Where can the seed be procured? What is the proper season for sowing it, and the modus operandi? If you or some of your readers will give the desired information it will be kindly appreciated. My friend has a large shallow lake on his plantation which he thinks would be suitable for growing wild rice as an attraction for ducks and geese. Do you know of any efforts to grow wild rice in the latitude of Mississippi?—Coahoma. [The rice can be obtained from Mr. Gilchrist, as stated elsewhere. It should be sown in early spring or late fall in shallow water. We cannot tell how it would thrive in Mississippi, but probably the experiment would be successful.]

Little Rock, Ark., Sept. 5.—The opening of the season was observed by a great army of hunters. Game is reported plentiful. Prairie chickens are more numerous than for years, but are being hunted too persistently now. We need a law prohibiting the killing of them for five years. Young turkeys are plentiful, and six were killed within two miles of town on the 2nd inst. Newspapers report the killing of an elk near Fordyce, but I think it is a canard. I never heard of elk in this country in its early days. The press of the State is commenting universally on the good effects of the game law this year, and we hope that the time has come when we can have as good game and fish laws as any State. —Casual.

Concerning a Vulpicide.—Conway, Va., Sept. 14.—*Editor Forest and Stream:* "Skeptic" (Groveton, Tex.) states in your issue of the 10th inst. that a man from Virginia told him foxes sometimes climbed trees, and wishes to know if "the fellow is lying." Pray let me inform "Skeptic" that having been a fox hunter since large enough to ride, I state that gray foxes frequently take trees when things get red hot; reds, so far as I know of the matter, never do. Nevertheless I would say to "Skeptic" if the man of whom he writes was born in Virginia, and shot at a fox, it is very well to keep an eye upon him, for he will lie or do anything else.—Richard Moncure Conway.

Philadelphia Notes.—Sept. 12.—The rail have not yet arrived in very great numbers, although during the late easterly winds a good tide came in and some very fine scores were made. The shooting to-day must be good, as there is plenty of water, but no word has come up from below. Many went to Maurice River, N. J., to-day, and the prospects of splendid sport is good. Some snipe have come and are being killed. Some teal have been seen on the Delaware, but none or but very few have been shot. After the next storm and afternoon run of high tide it will be the time to expect excellent river shooting hereabouts.—Homo.

Lehigh Valley, Pa.—During a late trip up the Lehigh Valley I learned that the prospect for pheasant shooting this autumn was very good. Not that the ruffed grouse were very plentiful in this valley direct, but some miles over the hills which border it. Woodcock have begun to drop into the wet spots, but these birds are from the broods that were hatched near by and have returned from their moulting grounds. The fall flight of more northern woodcock will not reach the locality referred to until a sharp frost of more northern sections drives them southward to it. This flight may be looked for in October.—Homo.

The Forestry Commissioners.—Albany, Sept. 14.—Gov. Hill to-day filled the vacancies in the Forestry Commission by appointing Townsend Cox and Sherman W. Knevals, of New York city, in the places of D. Willis James and William Dowd, declined. Mr. Cox was at one time Commissioner of Charities and Correction in New York city. He is a broker and prominent Democrat. Mr. Knevals is of the law firm of Knevals & Ransom, of which President Arthur was a member. He is a Republican and a member of the Union League Club. The appointees are to serve without salary.

Resuming White Shirts.—Perry, Wyoming County, N. Y.—*Editor Forest and Stream:* The yellow and blue came down from the flagstaff to-day. The boats are drawn into the boat house for the last time. The long, lazy summer is past. We must assume again "biled shirts" and conventional manners. That the glimpses of woodland and seashore may be with us during the winter, as they have been during the "rainy days in camp," please change address of my paper to Ann Arbor.—M. D. A.

Mrs. Laughlin's Deer.—Judge H. D. Laughlin has returned from the North in splendid health, and more than satisfied with his sport. During his stay in Wisconsin the judge ran up to the Brule and took some splendid trout. Mrs. Laughlin proved herself a most capable sportswoman, and shot three deer with a rifle at Island Camp.—*St. Louis Republican.*

Wild Rice.—Mr. Chas. Gilchrist, of Harwood, Ontario, writes us that the wild rice crop is very heavy this year. Mr. John L. Cox, of Bridgetown, Nova Scotia, reports that the wild rice obtained from Mr. Gilchrist and sowed in the vicinity of Bridgetown has grown well, and more is to be planted in the same neighborhood.

Massachusetts.—The Massachusetts Fish and Game Protective Association especially desires to obtain the names and addresses of all societies organized for fish and game or fish and game protective interests, in the State. It is hoped that some member of every such association will send its address to Henry J. Thayer, Secretary, 246 Washington street, Boston.

Game Laws of New York.—The Utica Fish and Game Protective Association has published a sheet giving a synopsis of the laws of the State in good shape for posting up. It can be had by sending postage to the Secretary, Mr. John D. Collins, Utica.

Glassville, Mo., Sept. 4.—A solitary pair of blue-winged teal (*Q. discors*) were shot here this morning while passing south. They were the first ducks of the season, and were in fine condition. Quail are very plenty here.—C.

Texas.—Ednaville, Sept. 5.—Chicken shooting in this vicinity is not very good. The wet spring prevented the hatching, and we find but few young birds.—B.

Sea and River Fishing.

SPANISH MACKEREL.

Loveliest of all the tribes that swim
The ocean's salty tides,
The Spanish mackerel sweeps the seas,
And like a meteor glides;
It speeds far off the harbor-bar,
Where tides are cool and deep,
Shunning the shoals that skirt the shore,
Where the swift bluefish leap.

The tenants of the brook and lake
In glories ne'er compare
With these gay rovers of the main,
Painted with colorings rare.
Pompano bright with yellow gold,
Strip'd bass of snowy sheen,
The drumfish blazing with its red,
Bonito splash'd with blue and green,
No rivals have in inland stream,
No peers with such bright gleam.

Symmetric with its rounded form,
Model of speed and grace,
No fairer seafish skims the wave
Or swifter darts in race.
Its sides are azure as the skies,
Beneath melt tender blues,
While golden spots of virgin gold
The shapely forms suffuse.

It is a nomad of the deep,
A pilgrim, migratory host,
In Mediterranean tides first seen,
Now known on every coast.
Off Carolina's reefs they sweep,
Off Barnegat's sand bar;
In Sound and Gulf of Northern shore,
They gather fast and far;
And yachtsmen o'er the billows blue
Their plunging multitudes pursue.

When sounds the gong of grand hotel,
And spread is sumptuous board
Rich with the spoils of sea and land,
Where wit and wine profuse are pour'd,
Where smokes the lordly, crisp sirloin,
Brown haunch of venison too,
The canvasback of Chesapeake,
Salmon from surges blue,
The gourmand finds no daintier dish
Than this delicious mackerel fish.

Greenport, L. I. Isaac McLellan.

CATFISH TAKE THE FLY.

Editor Forest and Stream:

I notice "Ah Look" expresses surprise that he should catch a catfish on the fly. I had a similar experience a year or so ago. I was fishing a lake in Connecticut for bass, and one evening as it grew dusk, I noticed hundreds of small fish rising in all directions. I noticed they were feeding on a vast swarm of a whitish fly, which was falling into the water in every direction. As they did not seem to be perch, I became curious to find out what they were. I had no flies with me, so I took a bit of skin from the belly of a perch, scraped the scales off, and wound it around a small snelled hook, to form a body; another bit made some wings, and the whole was tied at the head, and made quite a fly. I had a fly-rod, and putting this fly on my leader commenced casting, when I saw a rise. I soon caught, to my great surprise, a small catfish about eight inches long. I caught several, and then having satisfied my curiosity, I stopped, but I could have taken any number. Since then, I have noticed them surface feeding on flies quite frequently in this lake, though I never have in any other.

The bass fishing has been very poor during the latter part of the summer in Berkshire county, owing to the great amount of rain having made the lakes extremely roily from surface water. During the early part of the summer, in July, it was phenomenally good, and some wonderful strings were reported.

I had some great sport fly-fishing then, though getting none above three pounds in weight. They are small-mouths in all the lakes around here, and fighters to the last gasp. I found the most taking cast was a grizzly king stretcher and red ibis dropper. One old veteran we took, of three pounds, got into a weed bed, in spite of all efforts, and on rowing to the spot where he was lying (he could not be budged by a steady strain) he was lifted to the top by the line, and came into the net with a great bunch of weeds hanging from his mouth. He had been clinging to these, and even kept hold of them in the boat for a moment after he was on the bottom, till he began to gasp. It was the most bulldog-like procedure I ever saw in a fish. Percyval.

New Marlboro, Mass., Sept. 11, 1885.

HOW I LOST A BIG FISH.

Moosehead Lake, as most people know, is situated in the State of Maine, and there are few better places at which to pass the summer in that or any other State. If I were to consult the peace of mind of my fellow creatures, I should warn them not to go there for the reasons following: After a visit they will inevitably long to go back again, whether they can manage it or not; they will weary their acquaintances with the assertion of its superiority over the Adirondacks, or any other summer resort on this continent, and feel discontented at the idea that any person whose opinion is worth considering should think of going elsewhere for a vacation. No, you are quite wrong; I have no interest in the hotel at Mount Kineo—no such luck. I am, however, free to confess that I am feeling as mad as a March hare that the condition of my health and purse excludes all hope of throwing a fly on Moosehead Lake for this year at least. Still, with all this enthusiasm for that noble lake, I have to associate with my fond recollections of it one great disappointment, one great longing unsatisfied, one realization of the old saying, "there's many a slip, etc.," one prize lost as the hand was stretched to grasp it; in a word, the loss of a big fish and the consequent untimely quenching of an incipient fish story. Worst of all, I did not even see the fish in question, so that I cannot make my boast of his grand proportions; but as I have never heard of any trout having been caught in Moosehead weighing over 5½ pounds, I modestly put him down at that figure, reserving, however, the option of considering him a "laker" of unusual size, and unreasonable reluctance to come to the landing net.

A few years ago I had the good fortune to visit Moosehead for the first time, going there mainly for fishing, but with eyes wide open to its beauties. After a day or two spent in fishing (not very successfully) in the North Bay, under the shadow of Mount Kineo, my guide proposed that we should go and camp for a few days at the mouth of the Socotean River, a few miles further up the lake. Next morning, accordingly, we set off after breakfast by the small steamer that runs from Kineo to the head of the lake—canoe, tent, bedding, provisions, tackle, and last but not least, the Indian guide. I have always admired Cooper's "Leatherstocking" tales, and the gentlemanlike and exceedingly satisfactory Indians he treats of, and therefore was glad to have an opportunity of living for a few days in intimate communion with this swarthy son of the forest, to observe the modifications of character produced by the changed conditions under which the Indian now exists. The costume had changed considerably among other things. The chivalrous scalping tuft was not distinguishable among the numerous locks covered by—must it be said—an old felt hat. The eye may, at a much earlier period, have been quick and unerring, but a little observation showed me that the landing net could be handled to a better advantage by myself than by the ancient warrior, my companion. During the first recorded race for the championship of Lake George, so beautifully reported in "The Last of the Mohicans," "Hawkeye" complimented "Uncas" on his judgment in choosing a canoe. I found that I could not follow that great example with the Sachem under my command. Younger men in better built canoes used to go past us as if we were at anchor, if one may use such a figure of speech about a canoe. On the present occasion, however, we were being conveyed, canoe and all, by a steamer, and were getting along fairly. At the mouth of the Socotcan the steamer stopped and the canoe was got into the water. The various items of our plunder having been put on board, I carefully descended and took my place on the miniature chair in the bow. The chief calmly dropped into the stern and plied his paddle slowly toward the strand. The spot was not quite untenanted; on the contrary a substantial camp of boards was visible above a landing place, near which a guide or two were lounging. The party in temporary occupation was absent, with the exception of one gentleman who seemed to be enjoying a day off in earnest and delightful communion with a pipe. Having left our tent and other fixings at the landing place, the chief suggested that we should go and try for a trout for dinner at the mouth of the river. I didn't see any mouth; in fact there was no very decided appearance of a river. We associate with our ideas of a river, especially a trout or salmon river, living water fretting down the rapids and whirling slowly round the pools; but here it was a lagoon, a canal, an arm of the lake with no life apparent in it. The damming of the lake had done something similar for the river, which, instead of coming, as it must once have done, joyously and noisily foaming into the quiet waters of the lake, made its entrée in the most unassuming manner possible, the mouth being indicated only by a double row of lilypads some four or five feet wide, with a space of clear black water between them, where a most satisfactory cast might be made. There was room enough for half a dozen canoes to have fair fishing without any confusion of interests. The Sagamore cautiously approached the lilypads from the right quarter and shoved the bow of the canoe among them, holding on by a stake to keep the position. Here I cannot describe my cast, except that the hand or upper fly was a brown hackle, the other I have forgotten, but that one I have better cause to recollect, and I may mention that it is not now in my fly-book, for reasons that will appear hereafter.

As I set to work and got two or three fish that on the Neversink or the Beaverkill would have been the pride of the basket, about three-quarters of a pound each. Then I got a larger fish, a little over a pound. I was doing very well I thought. Luck seemed to be in my favor. The chief had

made a very bad shot with the ladle, and instead of getting the fish had thrown one of the flies into the boat, where it stuck in my trousers. Nevertheless I got the hook out and saved the fish too. This was luck. Then I got a really fine fish, over two pounds in weight. All had gone well thus far; the fish had behaved like gentlemen, keeping out in the clear water, and making a fair fight. Such an opening was surely the promise of good luck for the rest of the day. Alas, alas! how little we know of what is before us. We certainly had got a trout for dinner, but when fish are rising well who cares to give up with a whole day before him?

I feel that I have digressed shamefully, and that the big fish should have been introduced long ago; but this is even yet a sore subject, and I suppose that is why I find it hard to come to the point. I had made a cast diagonally down stream, when there was a sudden rush and splash that decidedly woke me up. I have missed lots of small trout, but one seldom misses a heavy fish. I struck instinctively and decidedly. The fish seemed to become at once convinced that I was acting strictly on scientific principles, and that he had to play his best card immediately or lose the trick. He made a deadly rush toward the lilypads, and the reel screamed. I checked him and got back a few feet before his next plunge toward the lilies, out of which I kept him by free application of the butt, the little seven-ounce split bamboo doing its work handsomely. The chief now broke through the lilypads and we were in clear water, the fish going straight toward the lake, some thirty or forty feet ahead of us. A little further on there was a stake to the right of the channel, and our fish went for it as if he lived there and could not pass without calling. Much stress of rod and tackle was necessary to get him away from it. We now got into the lake, and I implored my red brother to keep me in deep water—"only this and nothing more," Alas, alas! White man is said, not without reason, to be "very unsartin." I include one "Injun" in the same category. The camp now came in sight, with the stout party still sitting in the doorway dozing over his pipe. As we came within his range of sight, slowly drifting down before the wind, my rod bent nearly double with something throbbing at the end of the line, and occasionally going slowly around the boat; he sprang up into sudden excitement and activity, dived into the house, whence he emerged immediately, sat down again and leveled a large opera glass at us. Oh! but I was proud. The eyes of my countrymen were upon me. That fish should be sent down to Kineo with the fly and the leader that took him. I should have one of the biggest fish stories to tell. Woe is me, pride goeth before a fall.

Our stout friend gazed at us through his binoculars as long as we were in sight, but a point soon hid us from his view. By this time the fish had given up any attempt at running off the line, or even circling round the canoe, but held on like a bulldog. The knot fastening the leader to the line was visible at the surface; but not another inch could I get him up, and the water was so broken up into ripples by the breeze that I could get no sight of him. Another point loomed up and was passed. I kept urging the chief to keep in deep water; but the traditions of his tribe and his own great experience, no doubt made him deaf to my request. He craftily approached the shore, moved, as he said afterward, by some wretched notion about a sandy beach being a good place to kill a fish. Suddenly my eye caught a clump of lilypads, and looking up I saw that we were considerably inside the last point passed.

A moment afterward the nature of the strain changed. There was life in it no longer. I reeled up slowly and brought up a lot of brush. The upper fly with whatever it had held was gone! I didn't faint, neither did I break forth in wrath and use objectionable language. Not a reproach did I address to the Indian, whose stoicism was hard to contemplate under the circumstances. Wearily I took off my hat and wiped my forehead, feeling as if life was scarcely worth consideration for the time being. Then "hope told a flattering tale," and I said to myself, if not to-day, why then to-morrow, but that to-morrow has not come yet.

Returning to the spot where we had decided to camp, we met the stout man coming cautiously along the lake shore to see the big fish. Sorry to have disappointed him, but man proposes and his guide disposes. I thought bitterly of that Indian until dinner time, when his manner of serving up trout, potatoes and tea, made me take a more cheerful view of his ability. We are all of us good at something. Cooking was his forte, but what he didn't know about fishing might fill a big book. C. H.

YANKING THEM OUT.—Crossing one of the numerous creeks that empty into the Hudson near New York, is a railroad bridge which is a favorite resort for fishermen. One of the many users of the pole who make this bridge their sporting ground is a very excitable fellow who, at the slightest indication of a bite, will yank his pole so as to invariably entangle his line in the telegraph wires which are at this point rather low. No amount of chaff or advice would cure him of this, although often told that he would pull the head off a fish some time. One day having fastened his rod to the bridge and left his line in the water, he had gone off to a little distance to get more bait. Sitting near the rod was a great practical joker, who no sooner saw his chance than he quietly drew the line out of the water and hooked on a large fish head. Then dropping it in he awaited developments. The nervous fisherman, seeing his float drawn somewhat under water, grabbed his rod and swung it over his head, as usual catching his line in the wires. When he saw the fish's head, he imagined he had pulled it off, and tried to get his line down before any one should see him. But the boys were watching him and guyed him unmercifully. He at last had to break his line, leaving his trophy dangling in the air. He was so mad that he did not come to the bridge again for some time, and even then would not go near the spot of his unlucky adventure.—N.

PHILADELPHIA, Sept. 10.—Complaint has been made that the use of dynamite cartridges is being resorted to for the purpose of securing fish in the streams about and above Jenkintown, Pa. This is a matter which should be attended to by the Eastern Pennsylvania Anglers' Association, as the parties who have resorted to this illegal method, I understand, can be readily apprehended. Your correspondent likewise learned from good authority, while at Manch Chunk, Pa., last week, that Pine Creek and other trout streams near there have been "fished" in the same way. It is hoped that action will be taken against these lawbreakers. Fishing at Barnegat and Tuckerton bays has been better during the past week than the week previous. Weakfish are fairly plentiful, but not large.—HOMO.

THE DEAD RIVER REGION.—Boston, Sept. 10.—I have been to the Maine land of trout. The size and numbers of trout in Tim Pond were not exceeded in 1878, the first year I was there, and when the first boat was launched upon its waters. The taking of trout by visiting sportsmen depletes the fish less than did the work of the natives taking them from the spawning beds before the law of protection was in force. And so for the remainder of our fishing days we will visit the Dead River Region, where so many gentlemanly sportsmen wend their way till they number thousands. I did think to send you in a very few lines a record of my late tramp, including a short account of the chain of ponds, through Monmouth, Winthrop, Readfield, Mt. Vernon and Belgrade, which have become a grand black bass resort, the very best in Maine, if not the best in all New England. I had rare sport there for ten days.—J. W. T.

A BIG TROUT.—Sault Ste. Marie, Aug. 30.—The fishing here is very fair and some large trout have been taken. A party of us have been in camp for a few days on Sugar Island, and we killed eleven trout that weighed over three pounds each, one of them scaling 4¼ pounds. On coming in to the Chippewa House on the 27th, we were surprised to see a monster of 6½ pounds, which was killed by Mr. H. M. Garlick, of Youngstown, O. It created great excitement, as it is said to be the next to the largest ever killed here. There is no doubt about its being a genuine brook trout, for its caudal fin and red spots were distinctive marks not to be mistaken.—POKE-O'-MOONSHINE.

THE BLACK PRINCE.—This fly, about which so much has been said, seems to be very killing in the Rocky Mountain region. Our correspondent "Cyrtonyx," who fishes in that country, sends us a specimen to settle the question as to the fly which should bear this name. As he was the first to mention this fly in our columns as being his favorite we may say that the fly sent was made with black wings, body and hackle, the body was wound with silver twist and the tail was red. It was made by James F. Marsters, Brooklyn, and was identical with one before described.

GROG ISLAND POOL.—Major Lawson B. Bell, of New York city, has leased for a term of five years from Mrs. Louisa Aylett, of the parish of Ashington, in the county of Restigouche, Province of New Brunswick, what is known as the Grog Island Pool, northern bank to shore of the Restigouche River, in the township of Metapedia, in the county of Bonaventure and Province of Quebec.

THE CHIEF CHARACTERISTICS OF NORTH AMERICAN FISH FAUNA.

[Read before the American Fisheries Society.]

BY PROF. THEODORE GILL.

I DO not think that I can appropriate the time which I was requested to devote to a communication for your Society more profitably than by inviting your attention to some of the characteristic features of the North American fish fauna.

If we include the marine as well as the fresh-water fishes in our study we would have to consider the constituents of four primary different geographical divisions or realms, and we are therefore compelled by the limits of time to restrict ourselves to the consideration of the fresh-water forms alone. America, north of Mexico, forms a primary terrestrio-aquatic realm which has been variously designated as the North American, Nearctic and Anglogæan region or realm. It is one of the very richest of all in fresh-water types, considerably over six hundred species living exclusively, or nearly so, in the rivers and lakes, and these represent nearly one hundred and fifty genera and about thirty-four families. It is a large exhibit compared with the fauna of any of the other realms.

If we notice the constituents of this North American fauna, we find that they may be segregated into two primary categories. A considerable number of the families are shared with European and Northern Asia, and may be designated as the Arctogean, while an exceptional number of families are peculiar to our continent. Those peculiar are the Amiidæ, Hyodontidæ, Percopsidæ, Amblyopsidæ, Aphredoderidæ, Elassomidæ and Centrarchidæ, and several well-marked sub-families are also limited to the regions. Such are the Campostominæ, Exoglossinæ, Plagopterinæ, Etheostominæ, Haplodinotinæ and Hysterocarpinæ. It is possible that even the Lepidosteidæ are at present peculiar, but Dr. Bleeker has named as such a species, based upon a Chinese drawing of a fish supposed to have been obtained in China. Fifteen families represented chiefly by marine species, but with members also in the fresh water, are the Petromyzontids, Silurids, Clupeids, Dorosomids, Argentinids, Salmonids, Cyprinodontids, Anguillids, Gasterosteids, Atherinids, Labracids, Scienids, Embiotocids, Cottids and Gadids, and among these we find the families which are represented by the same genera in both the old and new worlds.

The fresh-water species and even the genera of most of these families are, however, to a large extent, peculiar to the interior waters; of the others, (1) some are anadromous, like certain of the Salmonids, Clupeids and Labrocids; (2) others inhabit fresh and salt water almost indifferently, as the Dorosomids, many Cyprinodontids, and most Gasterosteids, and (3) one (the eel) perhaps should be considered as a salt-water rather than a fresh-water species, inasmuch as it is catadromous and appears to breed only in the sea. Conversely those fishes which resort to fresh water to spawn and therein spend their early days may be considered to be fresh-water forms. If all species which, to some extent, run up into fresh water were included, the list might be very greatly increased, and it is by this inclusion of these species running up into fresh water that the faunas of other countries have been unduly enhanced.

If now we consider the bearings of the known facts, we may deduce the following conclusions:

(1) The number of family types peculiar or almost peculiar to North America and the very large number of genera also confined to the temperate and cold regions of the continent indicate that the region specified has such characteristics as to entitle it to be considered a primary geographical division of the globe which will appropriately bear the name of the Anglogæan realm, inasmuch as its habitable portions are occupied by the largest portion of the Anglo-Saxon race. Several of the families peculiar to this realm are almost coincident in their range with its limits, and such coincidence is especially manifested in the case of the family of Centrarchids.

(2) If we compare the constituency of our ichthyic fauna with that of the Eurasiatic realm we find several notable contrasts. The North American is distinguished by the great development of Acanthopterygian types, while there are few in the Eurasiatic one. North America has as many as 180 species, while nineteen are all that have been credited to Eurasia. The Centrarchids and certain little fishes related to the perches, which have been distinguished as Etheostomines, are very characteristic for the American fauna, and are among the most prominent features, while those types are entirely wanting in Europe. The catfishes, so abundant in America, and of which there are at least twenty-six species, are represented by only one in Europe, and even that one is of an entirely different type.

Another noteworthy contrast is exhibited by the Cyprinids. The species of Europe and Asia are almost all of large size and are the most conspicuous fresh-water fishes of that region, whereas the American species of the family are almost all small and even of minute size, and (if we except the Pacific slope, which has features in common with Eurasia) there are not more than a couple of what can be called large species of the family in the entire region. It is indeed to a related family, the suckers or Catastomids, (entirely wanting in Europe proper) that we have to look for analogue of the European Cyprinids. Among them we have forms equaling in size the European carp, barbel, and others, and some quite similar in superficial appearance. Summing up all the species we find that Europe has been accredited with 360 fresh-water fishes, while the North American fauna has at least 625.

The number of the genera common to North America and Europe is indeed extremely few, and the idea suggested by some recent authors, that the North American fauna is merely a subdivision of a common Arctogean, Triarctic or Holarctic realm, is entirely traversed and negatived by the fish fauna.

It is also especially noteworthy that a number of the types peculiar to America are distinguished by the care which the parents take of their young; whereas the European forms are generally indifferent to the future progeny, and after spawning, leave the eggs to take care of themselves. In this connection it may be recalled to the American Fisheries Society, that the care of the eggs and young is accompanied by an apparent diminution of the number of eggs, and we have a sort of analogy in this respect to the relation between fishculture and nature. The fishculturists assume the part which, in nature, is exercised by the attentive parent, and the eggs and young being provided for, stand a less danger of destruction, and consequently in such, the ratio between the eggs laid and fertilized and the young matured is very much less than that between the number of eggs of the indifferent parents and that of other progeny matured.

BLACK BASS IN GERMANY.—In a letter to the superintendent of the hatchery at Cold Spring Harbor, N. Y., Herr von dem Borne, the well-known German fishculturist, writes: "Perhaps you remember that you recommended to me the introduction of the black bass, and also that I received some of them when Mr. Eckardt returned from America. I am pleased to say that the fish have multiplied abundantly. We had 1,200 in the fall of 1884, and have caught more than 2,200 fry this season.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Sept. 29, 30 and Oct. 1, 2.—Third Annual Dog Show of the Southern Ohio Fair Association. H. Anderson, Secretary, Dayton, O.

Sept. 29, 30 and Oct. 1.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

Oct. 6, 7, 8 and 9.—Second Annual Dog Show of the Philadelphia Kennel Club, in conjunction with the Pennsylvania State Agricultural Society. E. Comfort, Secretary, Philadelphia, Pa.

Oct. 6, 7, 8 and 9.—Fourth Annual Dog Show of the Danbury Agricultural Society. S. E. Hawley, Secretary, Danbury, Conn.

Oct. 7, 8 and 9.—Dog Show of the York County Agricultural Society. Entries close Sept. 28. A. C. Krueger, Superintendent, Wrightsville, Pa.

Oct. 8 and 9.—Second Annual Dog Show of the Stafford Agricultural Society. R. S. Hicks, Secretary, Stafford Springs, Conn.

FIELD TRIALS.

Nov. 9.—Second Annual Field Trials of the Fisher's Island Club, for members only. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 9.—First Annual Trials of the Western Field Trials Association, at Abilene, Kan. Entries close Oct. 15. A. A. Whipple, Secretary, Kansas City, Mo.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

November.—Fourth Annual Trials of the Robins Island Club, Robins Island, L. I., for members only. Wm. H. Force, Secretary.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2704.**

JUDGES AND REPORTERS.

Editor Forest and Stream:

Apropos of the coming dog shows; now that the "all round" judge, however excellent, has had his day, why may not the "all round" reporter retire into the background also, and let each special judge speak for himself over his own signature, after making his decisions? Then the many who are unable to attend and see for themselves may perhaps acquire some information about the dogs, at present withheld. The reporters have never failed to give us spicy reading, interesting and amusing, disclosing their varying moods. Now their pens are dipped in honey to laud the astuteness of A. in bestowing blue ribbons upon certain dogs, and anon plunged into bitterest gall to blame blundering B. for his stupid failure to decorate others of their canine friends. Meanwhile we who are trying to learn something about the dogs of various breeds are left perishing in our ignorance. One critic tells us—by way of consolation perhaps—that only the good dogs are noticed at all, yet how he ridicules them! We read, for example, that the winner "is not clean enough, leggy, faulty at both ends," or that the first prize animal in Class 1,000 is "faulty all over," or "faulty in head, ears, body, legs, tail," etc., until utterly bewildered and weary we begin to wonder how much worse those poor creatures could be who received no awards and were spared all criticism.

If judges are authority on the classes assigned them, can they not be allowed or persuaded to speak for themselves? Or if they are really incompetent will not their statements as well as their awards convict them? The wise "Lillibulero" to the contrary notwithstanding, the *English Kennel Gazette* reports after any of the leading English shows are instructive and exceedingly interesting, though quite free from personalities. They give us something about the good points of the winners as well as their faults, and moreover we know just who is responsible for each account—a matter of consolation sometimes.

An artist, puzzled by the conflicting statements of reporters and the remarkable fact (?) in natural history that dogs change in quality and proportion with their owners' names, suggested that large paintings of typical dogs of all breeds be made and placed in conspicuous positions at the shows, where all could see and study them, and judge and compare for themselves without following judges or heeding reporters' notebooks.

CONSTANT READER.

THOUGHTS ON MASTIFF BREEDING.

IS the present accepted fashion in mastiffs compatible with perfect health and development: in other words, is it possible to breed dogs to the standard without inviting deformity? This question has frequently recurred to the writer suggested by the crooked limbs of many of the most noted prize winners of the day. To allude to the deformities of the mastiffs of England might seem an unkindness, and to dwell on the defects to be noted in the kennels of American breeders good taste will not sanction. Material to illustrate the theory of the writer is absolutely indispensable, and the mastiffs at the Crystal Palace are chosen, with an apology to their breeders and owners for their selection. A careful analysis shows not a single mastiff in the front ranks that is not, in a measure, defective in the hind parts; being either weak in the loins, narrow in the quarters, cow-hocked or too straight in the stifles, they have slouchy, dragging gaits, or are "stilty" in their movements. The dog considered by many to be the best in the world is badly cow-hocked, weak in the loins, and has narrow hindquarters, which he finds it difficult even to drag after him.

Among the mastiffs at the Palace well-shaped and developed behind, not one was given a first prize. To one was awarded second; in her class there were but two entries. Another received third prize; four were very highly commended, and the remainder unnoticed. Recall the mastiffs of America, and on the fingers of one hand can be counted all the noted winners that are not imperfect in loin or limb. Surely there must be a reason for all this. The one which naturally suggests itself, and in which a ready solution for these deformities is found, is over-eating and insufficient exerise. Were they due to other and constitutional causes the infirmities would be general, that is, the forelegs as well as those behind would be affected. Consider then the origin of the most prominent prize winners in England, were they not bred in London or its suburbs? Was it possible for them while being matured to have had freedom of movement sufficient to develop perfect limbs and symmetrical bodies? Again, do not English breeders generally theorize that mastiffs need but little exercise, and therefore restrain them from active exertion? Answers to these questions must aid in sustaining the theory of the writer. Following out this line of reasoning, would mastiffs if allowed sufficient liberty during the growing stage—permitted to gambol, run and jump in constant activity as their natures prompted them—then have developed into that cart-horse form, with short legs, heavy body, and lazy, waddling gait? In the human experience perfect health and development is born of activity. Exercise does not invite the accumulation of fat, nor in the maturing youth promote low statures and coarse heavy frames; rather does it tend to a symmetrical growth, greater height and slenderer limbs and bodies. Will any one gainsay that the tall, slender, muscular man of quick, active movement is healthier by far than the short, heavy, obese man, with his slow, labored manner and duck-like gait?

It is proper to assume that the representative dogs in England are found in the front ranks; in fact in accepting a type of mastiff demanded by the present fashion, deformity in limb is one of the characteristics. The dog that waddles along with a slouchy gait, who finds a walk laborious, a canter torture, a run impossible, is the one chosen as nearer the standard of to-day. Within the year a mastiff has been imported to this country of which a judge in England, an acknowledged authority on the breed, is reported to have said that he considered him the best specimen for breeding purposes he ever saw. The writer has carefully examined the dog in question and can honestly say that never before has he seen a mastiff so deformed. The muscles of the thighs are wasted, and paralyzed to such a degree that were his hindlegs of wood his movements would be as graceful and unrestrained as now.

Is it possible that specimens like this can be regarded as proper for breeding? Can heads formed even in the most perfect moulds compensate for incomplete development and deformity of limb? If so, why this marked distinction, why are abnormalities considered less important in this breed and fatal faults in others? Had Beaufort, Elcho and Glencho been faulty in the loins and cow-hocked, would they have won their premier positions? True, they are sporting dogs and speed is an essential, but is not perfect symmetry and development as necessary in one breed as in the other? Consider for a moment other animals. In a competitive class of thoroughbred stallions, would not lameness from spavins, curbs, navicular diseases and other abnormalties disqualify, no matter how perfect the horse is in form? In breeding cattle and sheep, is not success dependent in the main upon the selection of perfect sires? The farmer in improving his grains selects only the sound and healthy seeds for planting. The breeders of domestic animals must appreciate the value of a high degree of health in progenitors, for the reason that all signs of defective nutrition or impaired development are transmissible. Dr. Manley Miles has given a case in point: "A mare affected with ringbone that unfitted her for farm work was kept as a breeder for several years. The colts were uniform in color, and as they showed no indications of disease when two or three years old, they found ready buyers at good prices. At the age of five years or six, however, they all had ringbone to a greater or less extent, and several were entirely disabled." The same author has stated: "In horses, strain of the back tendons, swelled legs, grease and roaring are often hereditary." Instances are not wanting showing that even slight defects in animals are inherited.

It is generally believed, and on good evidence, that in man and animals the offspring derive from the father more than the mother, external form and frame, from the latter more than the former, the vital organs, the lungs, stomach and mental nature. Knowing this, should it not be insisted upon that the sires have all the essentials, and especially among them well developed frames and muscles?

This fact was well understood by Bakewell and his successors in the breeding of Leicester sheep; of them Lord Somerville said: "It would seem as if they had at first drawn a perfect form and then given it life." Of the fundamental laws in breeding, Youatt asserted that from passages in the Old Testament bearing on this point, the best principles of breeding were understood at the time it was written.

It must not be forgotten that not only is health in a high degree essential in progenitors, but also harmonious development of the muscular system. Compare the wild boar of the past with the pig of to-day. Wild life and activity developed the former, breeding and want of exercise has made the latter a loathsome thing.

In our bench shows the writer has studied mastiffs, has found there pictures of grace and symmetry, with blood pure, eyes bright, head in proportion, bodies well knit and limbs in harmony; all indicative of active powers, capable of making a run of several miles behind a team, or a jump over a "five-foot" fence.

Those same dogs he has seen enter the ring to be displaced by others, cow-hocked and weak-loined, lame, shuffling specimens. And why! because their heads, as the Almighty had intended, were in keeping with their bodies, and their legs in harmony with all. Of them the criticism made was "deficient in head and leggy." "Leggy!" that term has now become common from its continued application to our mastiffs. And whence comes it? The wild boar had legs and was "leggy;" the pig of the present has the shortest possible. The former was symmetrically developed by activity, the latter is propagated largely by restraint.

The beau ideal of an athlete is a man, tall, muscular, graceful. The short "stubby" boy, by well-appointed exercise and gymnastic training, becomes the ideal. The same boy, if decreed to live a sedentary life, would grow less in height, be gross in frame, lazy by nature, slothful in habits, and possibly fat, short-legged, with a shuffling, slouchy movement. If two puppies are selected, litter brothers, one given perfect liberty to run the fields, jump fences and follow his own promptings; the other kenneled, allowed but a small yard, there to eat, grow fat, occasionally bark and largely doze his time away, who can gainsay the result of this experiment? The first will in nearly all cases be more slender in body and have limbs, at the sight of which in the ring the average judge of to-day will wisely shake his head, say "leggy" and turn to award the prizes to cripples with hydrocephalic heads, and loins unable to bear a firm pressure of the hand.

By their awards, virtually, breeding is directed, at least influenced. The question of health, muscular strength and development, the possibility of transmitting vices, weighs little when compared to better shaped heads and prize-winning records.

Should this be so? Should a race of cripples be encouraged by awards, while dogs having perhaps little longer muzzles, but rich, pure blood, strong, healthy, well-made bodies and powerful limbs, are displaced by those so imperfect in constitutions and structure, they must transmit to their "get" if not absolute weaknesses and deformities, at least a tendency to the same.

Following this subject a step further, a dog is valued no less for his intelligence than his beauty of form. Why can it not be said of him as of man—

"Mens sana in corpore sano."

Infirmities in man warp his nature, propagate eccentricities, rendering him capricious if not morose. Among those of rich pure blood, well developed bodies and limbs, and healthy to a high degree, would more naturally be sought buoyancy of nature, bright, keen intelligence. Might not the same physiological law exist among animals? Certainly it does not seem unreasonable to suppose that not only deformities and infirmities embitter their natures, render them impatient and savage, but inactivity vitiates faculties; lazy, indolent habits blunt perceptions and dull understanding.—"*Ashmont*," *in American Kennel Register.*

DEW CLAWS ON ST. BERNARDS.

Editor Forest and Stream:

The article headed "With the St. Bernards at the Hospice" in your paper dated Sept. 3, interested me very much, as I have lately imported several fine specimens of the race, and among them one nearly two years old that was bred by Heinrich Schuhmacher and by him exhibited at the late dog show at Basle, Switzerland, before being delivered to me. As soon as I get back to New York I will send you a full copy of the dog's pedigree, which runs back to the dog Barry, that was sent to the Hospice by Heinrich Schuhmacher. It is not my object to enter into any controversy on the question of the importance of dew claws as a sign of the genuineness of the breed, but would like to say that Heinrich Schuhmacher, as well as Dr. Künzli, President of the Kennel Club, "Barry" at St. Gall, Switzerland, and other eminent breeders in Switzerland, all agree with the rule adopted by the Swiss Kennel Club (of which I also have the honor of being a member), that as regarding dew claws, "the presence or absence of either single or double dew claws has no significance whatever, as the same cannot be considered as a sign of the race." This can also be read in the German edition of Vero Shaw's "Book on the Dog," page 685. Furthermore, it is a fact that in one and the same litter of pups animals will be found with single, with double and without any dew claws, and this where both parent dogs did have dew claws. W. J. EHRICH.

SARANAC LAKE, N. Y., Sept. 9.

THE ATTLEBORO DOG SHOW.

Editor Forest and Stream:

In passing through Attleboro, Mass., Tuesday, I stopped off to see the dog show of the Attleboro Fair, and there found "Will" Tallman in fine feather and with his hands full, being the "chief cook and bottle-washer" of the kennel department, but he stole time to show me around. On a bench at the end of the room lay champions Plantagenet, Foreman, Flash and Beaufort, for exhibition only, and they were, as usual with dogs under Tallman's care, in first-class condition, although they are being worked all of the time in the field.

In the open English setter class, dogs and bitches, Peck's Bad Girl (Mack B.—Chica), awarded first, is a beautiful little bitch, with good body, legs and feet, but to my idea a trifle faulty in head, of the Gladstone type. Belton II. was awarded second, and is a fair dog. In the Gordons champion Rhoda had a walk-over. Topsy, first in open class, is really a fine bitch and would receive a good place in large shows. The rest of the class was only ordinary. Elcho, Jr., had a walk-over in champion Irish class; Goldstone first and Bess (Glencho—Igune II.) second in open class. H. W. Smith's kennel of greyhounds was represented by Mother Demdike, Mennon, Stealaway and Ben, but had not been judged when I left. A. H. Wakefield & Co. had a fine display of beagles, but I did not have time to take down the awards in that class.

Jewell, a Beaufort pup, took first in pointer class with Jock second. A fair display of pugs was made, but awards had not been made. There was an excellent showing of American foxhounds. After doing the bench show, we visited the Blackstone Kennels, and there found what we expected, "a perfect kennel," a description of which I have not time to make at this writing. Tallman goes South about Oct. 1, with a string of dogs that I doubt have ever been equaled by any one handler in this country, and shows how popular "Billie" is. Just look at it! Champions Plantaganet, Foreman, Flash, Elcho, Jr., Rhoda, Beaufort and Bradford, who won first the only time shown. Good luck go with him. ROSECROFT.

ALBION.—*Editor Forest and Stream:* In regard to the name of Albion, I wish to state that at the time of naming my dog I had no knowledge of its having been claimed by others, nor have I claimed the exclusive right of naming dogs throughout the country. As for "originality," I think that despite Mr. Porter's claim to such, I have heard the name Albion before; in fact history, as taught in our common schools, shows that England was called Albion centuries ago, at a time when the nomenclature of canine pets was not a source of dispute between owners, or a means of revenue to kennel registers.—F. F. DOLE (New Haven, Conn., Sept 14).

THE PHILADELPHIA DOG SHOW.—*Editor Forest and Stream:* Mr. James A. Stovell, of Philadelphia, Pa., has accepted the position of judge for beagles, dachshunde and Bassets. Mr. R. H. Hoffecker, of Middletown, Del., will be the third judge for foxhounds. Mr. J. R. Pierson, of Brooklyn, who is now in England, has accepted for greyhounds, deerhounds and Italian greyhounds. The Pennsylvania Railroad will carry free dogs in kennels when accompanied by their owners. The Philadelphia and Reading Railroad will do so too.

COMPLETE THE RECORDS.—Owners of registered dogs are requested to communicate to the *American Kennel Register* all winnings which have been taken since the registry of the dogs. It is important that the record of each registered dog should be made complete, and this can only be done by the co-operation of owners.

POINTER DOG STOLEN.—A liver and white pointer dog was stolen on August 10. One of his ears is liver and the other ticked, his tail is slightly docked, answers to the name of Spot. A liberal reward will be paid for his return, or information that will lead to his recovery. Address S. S., 86 Beekman street, New York.

FRAUDULENT PEDIGREE.—Collingwood, Ontario, Can., Sept. 7.—*Editor Forest and Stream:* Some two or three months ago I purchased of Mr. H. C. Miller, of Hudson, N. Y., the liver and white pointer bitch called Fancy. Mr. Miller stated that she was about three years old and by champion Croxteth ex Royal Fan. The bitch pleased me very much as she was certainly a very fine animal to look at, and a stylish, fast worker in the field. I kept her until I was ordered to this post to remain for several months, when I sold her to Mr. Percival, of Stanton, Mich., who has just written me that Mr. Dilley, of Wisconsin (who owns Royal Fan), has written him that the bitch Fancy was not from Royal Fan, nor was she by Croxteth; in fact, her pedigree was a fraud from beginning to end, and that it was exposed as a fraud through FOREST AND STREAM long ago. Now that I come to think the matter over, it strikes me that I remember of seeing something in FOREST AND STREAM about a fraudulent pedigree, in which Mr. Miller was interested; but in buying the bitch I never gave the matter a thought, as I considered Mr. Miller a gentleman. Now, can it be possible that Mr. Dilley is mistaken a little in this matter? As I understand it, Mr. W. A. Coster bred and raised the Croxteth ex Royal Fan litter. The bitch Fancy has a head strongly resembling Croxteth's, and I thought it just possible that Mr. Dilly might be mistaken. Will you kindly let me know if FOREST AND STREAM did once contain an article on this bitch's fraudulent pedigree? I have just written to Mr. Miller asking him to please explain.—C. E. LEWIS. We republish from FOREST AND STREAM of July 17, 1884, the letter of Mr. Coster in relation to the matter. We fail to see how Mr. Miller can justify himself in selling the bitch with a proven false pedigree. Following is the letter: "*Editor Forest and Stream:* The pedigree of the pointer bitch Fancy, said to be by Croxteth ex Royal Fan, about three years old, and so advertised by Mr. Miller, is undoubtedly a fraud, from the fact, corroborated by Mr. Dilley's letters on the subject, and my personal knowledge that the only bitch of that breeding was sent to me. This bitch pup was whelped Nov. 27, 1881, at Mr. Dilley's kennels, Rosendale, Wis., was liver and white, and I kept her in my yard till quite large, then I passed her over to a friend, Thomas F. Connolly, of this place, to break and train for me. During that early fall I sent her to a friend in the South, to work her on quail. After some time I received a letter from him stating that she was so gunshy and intensely nervous of every noise that she was worthless. I wrote for her and told my friend Hamilton he could have her under certain conditions, as I did not want to bother with her any more. He disposed of her, and at this present date of writing says he can produce her in New York city in four hours. This bitch is the only one that came East, beyond a doubt. Therefore, the only construction in accordance with the facts in Mr. Miller's explanation, is that ——, —— has been made the victim of a rascally imposition, and in all innocence has transferred with the bitch Fancy this imposition to Mr. Miller. Who the originator of this is deponent saith not, but one thing is sure, whoever it is, all subsequent purchasers have been most shamefully duped, and I feel it my duty to advise Mr. Miller to ferret out this originator. I will cheerfully give and obtain all facts, dates, etc., and personally aid him with my best endeavors. He has my sincere sympathy, as I have suffered some few years ago in the same manner.—W. A. COSTER (Flatbush, L. I.)."

THREE DOG STORIES.—A number of tough fish stories have been told by anglers of this city during the present season, and there seems to be a rivalry between them to see who can spin the biggest yarn and then vouch for the truth of it. Some fair fish stories have been told, but everybody after reading the following will admit that Mr. Augustus H. Drury, the lawyer, of this city, is far ahead of all competitors, and that he certainly deserves a chromo or some other mark of distinction. Mr. Drury has just returned from a trip through a part of New York State, where he had been enjoying his vacation. He stopped for some time near Monticello, where hunting and fishing is supposed to be good. Mr. Drury, according to his statement, one day took a notion to go out after woodcock. He borrowed a gun, a dog, some cartridges and other things that are supposed to be necessary for a successful hunt. The dog was recommended to him as one of the finest woodcock dogs in the vicinity, and he was cautioned to be very careful with him. Mr. Drury was hunting along the banks of a small stream, when the dog suddenly came to a dead point. Mr. Drury looked and saw the dog pointing directly into the water. He wondered what the dog had struck, but as the animal seemed to mean business Mr. Drury investitgated, and found that the dog was pointing a pickerel, which lay partly concealed in the water under some overhanging alder bushes. Mr. Drury was not after pickerel, but he could not resist the temptation; so he blazed away. He hit the pickerel squarely, carrying off nearly the whole of his head. The dog retrieved the fish, and Mr. Drury wondered by what scent or instinct the dog had discovered the presence of the fish. Mr. Drury returned to the place where he was stopping, and subsequently while the cook was preparing the pickerel for supper, the mystery of the dog's pointing was explained. In removing the stomach of the pickerel it was found that that organ was enormously distended. Cutting open the stomach revealed a whole flock of woodcock. The fish had gobbled up the game and the dog, true to his reputation as a good woodcock dog, had pointed to the birds. Mr. Drury will please go up head and stay there. And that he has one prime qualification for a good lawyer no one need doubt.—*Paterson Press, Sept.* 9. Sheriff McKee says that the intelligence or the nose of the dog referred to in yesterday's *Press* does not amount to anything compared to the nose of a dog a friend of his owned. He thinks that any dog with a half way decent nose ought to be able to smell out a flock of woodcock even if the birds are concealed in the stomach of a pickerel. The Sheriff says he had a friend who had a wonderful good dog for coons. If there was a coon within a mile of the dog the coon's doom was sealed, for the dog would certainly smell him out. One day the dog was out with his master after coons. They stopped at a small railroad station just as the train drew up. The dog came to a dead point on the train. The owner of the dog insisted that there must be a coon on board the train or that the train had run over a coon. His dog could not be mistaken. The train was searched, but there was no coon and no gore on the wheels. The man's faith in the dog did not waver for an instant. "Are you sure that there is no coon on board this train?" he inquired of the brakeman. "I am sure there is not. The nearest thing to a coon is the conductor and his name is Coon." "That settles it," said the owner of the dog; "I knew there was coon on this train."—*Paterson Press.* We have heard and read many strange things about dogs from childhood, but we never heard of a more novel or interesting canine freak than one it was our privilege to witness in Bath a few days ago. "Rex," Mr. Samuel S. Seely's handsome, intelligent setter, recently took upon himself the duties and responsibilities of a hen. Mr. H. W. Garnsey, with whom Rex formerly lived, had a brood of chickens hatched, and the old hen not caring for them properly, they were taken from her. Rex's sympathies were evidently touched at seeing the peeping orphans thus cruelly left all alone in the world, and he at once generously adopted them and became as anxious for their comfort and welfare as could the hen herself. Strange to say the chickens did not object in the least to their novel foster parent and it is certainly a rare sight to see them all together. At night Rex crawls into their coop and the grateful chicks nestle in the long hair about his neck and paws. During the day he follows them about the yard and can scarcely be induced to leave his novel protegés a moment. He will lie down and the chicks clamber all over him in great glee and to his evident delight. In order to see how he would

act, some of the chickens were placed on opposite sides of the yard. Rex immediately began running from one lot to the other and was much distressed until he had gathered his little flock together again. Certainly an own mother could not be more solicitous for her little one than Rex is for the motherless chicks he so generously adopted. Should any one doubt this story or any part of it, a visit to the place will convince him that it is true in every detail.—*The Cohocton Valley Times.*

BOBTAIL SHEEPDOGS.—Hulton, Pa.—*Editor Forest and Stream:* Please say that the Glencoe Collie Kennels, East Bethlehem, Pa., have just received from M. B. Lowe, Wednesbury, England, a pair of bobtail sheepdogs, which will be at the coming Pittsburgh show. These are the first of the breed known to have been imported.—W. WADE.

AMERICAN KENNEL REGISTER.—The September number of the *American Kennel Register* contains 115 new entries, making the total number of dogs now registered in the *A. K. R.* 2,704. The other registry departments are also unusually full, giving abundant evidence that the *Register* is growing in the appreciation of breeders.

CRUELTY TO A DOG.—Timothy Shaw, aged sixty-two, dog trainer, Greenwich, Eng., for cruelty to a dog by beating it with a whip was sentenced to a month's hard labor.—*Stock-Keeper.* [Moral; Timothy should have trained his dog by the rules laid down in "Training vs. Breaking."]

IRISH SETTER LOST.—A light built dark red Irish setter dog strayed or was stolen about ten days ago. He has a spot of white on breast. Any one knowing of his whereabouts will confer a favor by addressing his owner, B. F. Callaghan, 973 Broad street, Newark, N. J.

KENNEL NOTES.

KENNEL NOTE BLANKS.

For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." We request that all Kennel Notes be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Load Stone, Grind Stone, Whet Stone, Jack Stone, Curb Stone, Kate Gladstone, Bell Gladstone, Rose Gladstone, Fanny Gladstone and Nelly Gladstone. By J. W. Murnan, Keeling, Tenn., for English setters, four black, white and tan and one lemon and white dog, and two black, white and tan and three lemon and white bitches, whelped Aug. 3, 1885, by champion Gladstone out of Flounce (Druid—Ruby).

Dot Berwyn. By Dr. H. F. Aten, Brooklyn, N. Y., for black, white and tan English setter dog, whelped May 22, 1885, by Dashing Berwyn out of Dryad.

Belle of Dixie. By H. B. Hale, Montgomery, Ala., for black and white English setter bitch, whelped May 3, 1885, by champion Plantagenet out of Matchless (Roderick II.—Jennie).

Genesta. By E. Lever, Philadelphia, Pa., for bull-terrier bitch, whelped Aug. 16, 1885, by Dutch, Jr. (A.K.R. 1887) out of Young Venom.

Moss. By A. W. Griffiths, New Market, N. H., for red Irish setter dog, whelped Feb. 8, 1885, by Dash (Berkley—Tilly) out of Beauty (Rocket—Madge).

Rufus. By Samuel Morgan, Riverton, Va., for red Irish setter dog, whelped July 17, 1885, by Pat (Grouse—Nora) out of Kate (Marquis of Lorne—Gypsy).

Rex. By M. B. Sayre, Baltimore, Md., for red Irish setter dog, whelped July 17, 1885, by Pat (Grouse—Nora) out of Kate (Marquis of Lorne—Gypsy).

BRED.

☞ *See instructions at head of this column.*

Trusty Gladstone—Ted Llewellin. George Jarvis's (New York) English setter bitch Trusty Gladstone (A.K.R. 1550) to Ted Llewellin (A.K.R. 599), Sept. 1.

Diana—Dash Mannering. Samuel Huntington's (Plainfield, N. J.) English setter bitch Diana (A.K.R. 1458) to Dr. C. F. Stillman's Dash Mannering (Dash III.—Lady Mannering), Aug. 4.

Leah—Glen Rock. Geo. F. Clark's (St. George's, Del.) English setter bitch Leah (A.K.R. 1284) to E. W. Jester's Glen Rock (A.K.R. 1616), Sept. 5.

Lit—Sportsman. Wm. A. Ellison's English setter bitch Lit (Gath—Lit) to J. W. Murnan's Sportsman (Gladstone—Sue), Sept. 5.

Zitta—Graphic. Fred F. Harris's (Portland, Me.) pointer bitch Zitta (A.K.R. 1358) to Jas. L. Anthony's champion Graphic (A.K.R. 2411), Sept. 14.

Bessie—Black Knight. P. Cullen's (Salmon Falls, N. H.) cocker spaniel bitch Bessie to his Black Knight, Aug 28.

Judy—Garry. W. F. Reynolds's (Poughkeepsie, N. Y.,) Irish terrier bitch Judy (A.K.R. 2199) to his Garry (A.K.R. 2198), Aug. 4.

Twin Maud—Rebel Wind'em. Memphis & Avent Kennels' (Memphis, Tenn.) English setter bitch Twin Maud (Gladstone—Clip) to their Rebel Wind'em (Count Wind'em—Norma), Aug. 22.

Flaxie—Gladstone. Memphis & Avent Kennels' (Memphis Tenn.) English setter bitch Flaxie (Druid—Ruby) to P. H. Bryson's champion Gladstone, Sept. 13.

WHELPS.

☞ *See instructions at head of this column.*

Judy. John C. Dawes's (Kingston, Mass.) beagle bitch Judy, six (five dogs), by Punch (Blue Boy—Music).

Ruby. Kilmarnock Collie Kennel's (Dorchester, Mass.) imported collie bitch Ruby, Sept. 8, eleven (seven dogs) by their Kilmarnock Bruce (A.K.R. 1422).

Hazelnut II. Dennis Desmond's (Fall River, Mass.) red Irish setter bitch Hazelnut II. (Chief—Hazelnut), Sept. 3, nine (seven dogs), by J. F. Shay's Dick (Von—Floss).

Zell. Thos. F. Morris's (Mott Haven, N. Y.) Gordon setter bitch Zell, Aug. 28, five (three dogs), by H. C. Glover's champion Turk (A.K.R. 717).

Beauty. C. H. Redfield's (New Haven, Conn.) Gordon setter bitch Beauty (Glen II.—Jet), Sept. 7, thirteen (eight dogs), by H. C. Glover's champion Turk (A.K.R. 717).

Darkie. P. Cullen's (Salmon Falls, N. H.) cocker spaniel bitch Darkie (A.K.R. 250), Aug. 29, eight (four dogs), by champion Obo II. (A.K.R. 432).

SALES.

Moss. Red Irish setter dog, whelped Feb. 8, 1885 (Dash—Beauty), by G. H. Gilbert, Boston, Mass., to A. W. Griffiths, Newmarket, N. H.

Larry. Skye terrier dog, whelped Nov. 7, 1884 (Zip—Gyp), by E. H. Higgins, Cohocton, Pa., to Mrs. O. P. Smith, Towanda, Pa.

Planter. Liver, with white markings, pointer dog, whelped Feb. 6, 1880 (Sensation—Black Rose), by Jas. L. Anthony, New York, to Franklin Miller, Lawrence, L. I.

Nellie. Lemon and white pointer bitch, 4½yrs. (Sensation—Lill), by Jas. L. Anthony, New York, to Laurence Drake, Kingsbridge, N. Y.

Planter II. and Wanda. Pointers, liver with white markings, dog, and orange with white markings, bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to Laurence Drake, Kingsbridge, N. Y.

Lorna Doone.—Lemon and white pointer bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to S. R. Welser, Kingsbridge, N. Y.

Flirt. Lemon and white pointer bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to E. Schermerhorn, Riverdale, N. Y.

Lady. Lemon and white pointer bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to A. H. Howard.

Sport. Liver and white pointer dog, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to P. Winters, Kingsbridge, N. Y.

Tennis. Liver and white pointer dog, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to E. W. Anthony, Longwood, Mass.

Norma. Lemon with white markings pointer bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to James Kent.

Don Carlos. Lemon with white markings pointer dog, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to Chas. T. Stagg, Belleport, L. I.

Pattie Lemon with white markings pointer bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to Edward M. Anger, Peekskill, N. Y.

Jack and Jill. Orange with white markings pointer dog and bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Anthony, New York, to A. Pierson Case, Vernon, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

D S., Vicksburg, Miss.—While feeding my setter puppy to day, he suddenly left his dinner, running around the yard and into the house at a furious rate, barking and howling all the while, seemingly in some pain and somewhat frightened. I stood near him while he was eating and am certain that nothing came near to frighten him, and when his dinner was given him he did not seem to be be in any pain. He is about eight or nine months old and has always seemed in perfect health. Ans. We incline to the opinion that the puppy has worms. There are many causes for such fits, the most frequent being worms. You had better satisfy yourself by giving an active purge, such as a tablespoonful of castor oil or a dessertspoonful of oil of buckthorn and watch the passages. If you find worms you must diet on milk and give as little as possible, and as a vermifuge you can give a dram of powdered areca in a pill or ball or ten drops of oil of worm seed on a lump of sugar twice daily. If the trouble is from indigestion or overloading the stomach you must treat accordingly.

BERGEN.—1. There appeared on the ears of my mastiff dog blotches where the skin seemed to thicken and grow hard and dry. After a day or so the entire surface of each blotch peeled off like a scab, taking with it the hair. I kept them well greased, and in a week or so the scars were well healed, and now there appears to be a good skin over them. Will the hair grow on these spots again? 2. The flaps and passages of each ear then became red and inflamed, and the dog began to shake his head. A reddish brown matter appeared in the ear, looking like dried sweat and blood. The shaking of the head has latterly increased with some slight indications of a return of the blotches along the edge of the ear. Ans. 1. The hair will grow again. Use balsam of Peru ointment for any external sores, applying twice daily after washing. 2. Cleanse the ears and drop the following into them twice daily: Of bromo-chloral, one dram, of laudanum, one dram, of water six drams. Mix.

H. B.—A setter dog for 18 months has had, as I supposed, the mange. I gave him Fowler's solution arsenic, 5 drops up to 10, for nearly two weeks. I used Glover's mange cure. He was broken out on his shoulders and between the hips and tail. By treating him as above he was apparently cured, but it only lasted for about a week when he broke out again as bad as ever. He breaks out in spots as large as a half dollar, and there is a watery fluid running from these spots. Ans. Begin again with the arsenic and use it for a month, running the dose up by a drop a day from 3 to 10 drops and then decreasing, and so on. Dust any running sores with calomel powders twice daily, using a camel's hair brush. Report results.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. P.—The name on her stern is Genesta, the g being soft.

H. C., Vermont.—You will find in Batty's "Practical Taxidermy" practical and sufficient instruction.

C. H.—See the letter elsewhere relating to Macon, Ga., as a center for reaching Southern shooting grounds.

M. C. W., Titusville, Pa.—Read Bogardus's "Field, Cover and Trap Shooting," price $2, for sale at this office.

O. H. R., Cleveland.—Write to N. G. Stebbins, 521 Washington street, Boston, for photos of Puritan and Genesta.

C. S. G. A., Pittsfield, Mass.—Puritan's lines have never been published. We hope to publish them shortly.

J. S. R., Erie, Pa.—It is possible that the whipping of guide-ring keepers is done as you say by some rod makers, *i. e.*, with the whipping ending on each side of the ring, leaving a bare place under the ring. Of eleven rods owned by us and made by half a dozen of the best makers, not one is so whipped. The whipping is not discontinued when the duty of the keeper is reached, but is continued under it so that on the upper side of the rod the whipping is continuous, passing under the keeper at the ring, yet the ring does not play upon the silk as you suggest it must, but on the brass keeper. Rings do not usually stand up when the rod is turned over, unless when new and stiff. They flatten down when put in the sack.

FIXTURES.

Oct. 20.—First Georgia State Fair Tournament, under auspices of the National Gun Association. Judge M. R. Freeman, Manager, Macon, Ga. Beginning Oct. 20.

THE TRAJECTORY TEST.

Editor Forest and Stream:

I must commend your very sensible editorial upon your proposed rifle trial, as well as the views of Major Merrill, Mr. Romer and others. The test, as I understand it, is not to be in the interest of rifle makers, but in the interest of science. I am certain that a large number of your readers are quite as much interested in the discovery of general truth as in truth limited by the whims or necessities of manufacturers, or the nervous or muscular endurance of hunters. If any one wishes to use your apparatus to see what can be done by excessive powder charges, light bullets, heavy or long rifles, how does it affect the relative worth of rifles with factory ammunition any more than if such experiments were tried in Europe or next year? For my part I should like very much to see the exact figures of such trajectories as have been made with the old-fashioned sugar loaf cone, not "conical ball," but a short bullet tapering from butt to point and having no more bearing on the barrel than is given by being swaged into it by the "guiding starter." These cannot be shot accurately from the breech, with any system of "fitting" that I have been able to devise. But when carefully loaded from the muzzle they were very accurate, while their extreme lightness and sharp points gave them a very rapid flight for 200yds. and over. With conical balls hollowed from behind to the lightness of a round ball of same diameter—or even lighter—filled up with tallow or wax, and set over a stout wad, a marvelous speed may be obtained, especially if the point be sharp. Why should we not know what can be done with such things, even if we do find them too inconvenient for general use.

Of course the shooting must be accurate, not because an inaccurate rifle is worthless for hunting, but for a far better reason. Erratic balls generally travel in curves that are independent of the curve caused by gravitation. The axis of rotation does not coincide with the axis of the bore, and the ball has a wabbling motion that carries it off the line upon which it issued from the bore. Its line of flight then becomes a curve. And this curve may also be a spiral line, so that a ball that would be well off the mark at 100yds. may be nearer to it, or even in it, at 200 and *vice versa.* A wild ball cuts up such antics at times that there is no certain way of knowing what its trajectory is. Hence all such must be excluded.

Subject to the condition of accuracy, why should not excessive charges of powder be tried? We are not all afraid of a rifle kicking, and with light balls there is no danger of its bursting. The old-time maxim, "Too much powder makes the ball wild," is in a certain sense true, but it is subject to limitations that are very little understood. An increase of powder may easily change the line of flight of the ball driven by it, but upon this new line the balls may be as true as before, so that the rifle needs only resighting. Major Merrill does not express himself clearly when he says that a rifle that "buckles" or springs is worthless. A double rifle well loaded rarely shoots on a line corresponding with the axis of its bore, and few single rifles shooting a long ball ever do so, unless very lightly charged with powder. A rifle may be worthless from springing or "buckling," but not necessarily so. If its spring be regular, it is as good as any rifle. Major Merrill undoubtedly means those that "buckle" irregularly.

This old maxim is also subject to other serious limitations, such as the cut and twist of the rifling, the fit of the ball, the length of its bearing and its hardness. With a rifle of sharp twist and shallow grooves there is a limit to the amount of powder consistent with accuracy, though even this limit may be much extended by hardening the ball to excess. But many of the old muzzleloaders were quite different. If I were back-East at that trial I would guarantee to bring there a score of rifles that would play upon a half-inch bullseye at 20yds. all day with four inches of the quickest and strongest powder obtainable. I would not undertake to do so with the ball in a cartridge. It would doubtless have to be loaded as a muzzleloader. Six fingers of powder used to be my regular load for the best muzzleloader I ever had. Mr. Romer writing to me some years ago about his crack muzzleloader, with which he thought he could then beat any breechloader said, "I never weighed my powder before (that was before something I wrote FOREST AND STREAM upon this subject) but on weighing the charge I find it a little over 200 grains." This was for a rifle of about .46-caliber, as I remember. There have been many like us, though the majority of hunters have undoubtedly thought moderate charges essential for accuracy.

I hope you will follow Major Merrill's advice about taking the trajectory of all hunting rifles at 100 and 150yds. as well as at 200. Of course, these can be computed from the trajectory at 200. But so can the 200 one be computed from the 100 one. As a matter of fact, there are about ten hunters who hunt with their rifles sighted to 100yds. to one who hunts with one sighted to 200; and five who hunt with it sighted to 100 to one who hunts with it sighted to 150. That is, it is sighted for their eyes, though to another not accustomed to those sights or to rifle shooting, it might appear to be sighted 40 or 50yds. further: with practice the eye catches a finer sight than at first. This is because of the practical recognition in one form or another of the statement made by Major Merrill that nearly all game is killed inside of 150yds. and most of it inside of 100. Most of the long-shot braggarts tacitly or unconsciously follow this principle, have their rifles sighted to a short trajectory, kill nearly all their game by holding the same constant amount of sight on it, and make their long shots by fancy's aid. No man but an expert has any business hunting with a rifle sighted to a rise of more than one inch. Even an expert, unless in practice, is, with a rifle sighted to a rise of over three inches, liable to miss more game inside of 125yds. than he will kill beyond that point by virtue of the increased rise. And with a rifle sighted to a rise of over four inches even an expert in quite constant practice is very liable to miss if he lays the rifle aside for a week or two, or shoots down hill or toward the sun or in dim light or at anything running. For no hunting in woods or rough, broken ground should a rifle be sighted for 200yds. Such a point blank is needed only on open plains where the breaks are long and low. And even there it should be given by a raised sight which can be lowered in a moment if necessary to a point blank of 100yds. Nearly all shots beyond 100yds., where the distance is unknown, involve more good fortune in guessing distance than skill in shooting. And it is almost as hard to hit a mark at 110 yds. with a ball rising ten or twelve inches at that point as to hit one at 200yds. with a ball falling fifteen or twenty inches, as when the rifle is sighted for 100yds. Either of these guesses are bad enough, but as most chances to kill fall inside of 125yds., the first guess is the worst. Both should be avoided as far as possible by the utmost speed of bullet consistent with other qualities.

Permit me to ask that, either by experiment or computation, you will, besides the regular form of a curve, put your results in the following form: The greatest distance at which a rifle will hit the regulation bullseye for that distance without rising above the regulation bullseye for any intermediate distance. The regulation bullseye for any point corresponds to the size of game that one could reasonably expect to hit.

If I know any person in this world, it is the average hunter with the rifle. You naturally want to reach the thoughtless and unscientific as well as the more intelligent riflemen. If ever I have written a true sentence in this paper it is this: "When you talk to the average hunter of short range curves and trajectories and rises above the line of sight, etc., you babble an unknown tongue." Some will take you for an idiot, others for an ignoramus, others for a bungler who don't know how to shoot. Of course all know that the ball rises for a long flight, but for a short one the majority know nothing of any rise. They have the old-time "hold up" notion firm in their heads, and the only result of trying to get it out is to make yourself pass for an ass. But talk to them of a point to which a rifle will hit every mark of reasonable size along the line, provided the same sight be held on it, and they are with you at once. Talk of the importance of extending this point as far as possible, and they take your idea before half expressed and forestall your wisdom with their quick, hearty approval. There is no wisdom below or than that which, in fighting ignorance, descends to its level and uses its own weapons. I will take my results in curves; but I believe the majority of those who need enlightening on this point can be far more quickly convinced by a tabulation of results in the other form. Moreover, a 200yd. curve does not show the great advantage of short swift balls over long and slow ones, especially the effectiveness of round balls at short range. To see the faults of slow bullets, trajectories should be taken at 100, 125 and 150 yards. T. S. VAN DYKE.

SAN DIEGO, Cal.

HOLYOKE, Sept. 12.—The first tournament of the Paper City Rifle Club, recently organized, took place at the Willimanset range to-day. The attendance was very large, the sport opening at 7:30 and continuing until nearly dark. There were 62 entries. The range was 200yds., and Massachusetts targets were used. The best individual scores are as follows: H. K. Cooley, Springfield, 107; Hiram Engle, Chicopee Falls, 106; G. E. Day, Springfield, 103; C. L. Newcomb 97, W. Beeching 95, J. E. Harris 95, J. P. Blaisdell 91, H. Whitney 84, C. Stacey 83, E. M. Adams 79, F. W. Burris 74, Frank Barber 72. W. B. Stacey 66, M. Whalan 75, W. P. Cutter 63, C. Abrams 60, all of Holyoke. Sixty-two per cent. of the entries were divided for prizes, as follows: Cooley 15 per cent., Day 10, Newcomb 10, Harris 8, Blaisdell 5, C. Stacey 4, W. B. Stacey 2. Frank Barber is President and M. N. Snow Secretary and Treasurer of the club.

WALTHAM, Mass., Sept. 12.—The fourth weekly telegraphic match between the Hillside Rifle Club of Waltham and the Jamestown, N. Y., club was shot yesterday. The first of the four contests was won by the Jamestowns by two points, the second by the Hillside by one point and the third was a tie. Following is a score of the Hillsides in the fourth contest shot yesterday, Creedmoor target, 200yds., off-hand: E. A. Emerson 46, W. H. Stone 44, W. A. Caughey 43, J. R. Monroe 43, John Logan 42, W. W. Greene 42, L. O. Dennison 41, G. W. Strickland 41; total 342. The above is the best total score made on the range, the weather and other conditions being extremely favorable. The arrangement is that the best seven scores shall be counted in the matches, so that the total score which counts will really be 301. Practice will be continued each week, but no more matches will be shot at present. The score of the Jamestown Club was 298.

CLEARFIELD, Pa.—A prize shooting tournament under the auspices of the Clearfield Rifle Club will be held on the grounds of the grounds of the Clearfield Park Association during the fair, on Sept. 29 and 30, and Oct. 1 and 2. Eight prizes, aggregating $580 in value have been presented. The rules provide for shooting over a distance of 100yds. at the Dennison ring target, off hand, open sights, any kind of triggers, each contestant to shoot 5 shots consecutively while at the trigger. Range open for contest from 9 A. M. to 5 P. M. of each day. Each board to consist of five shots. No call shots. No person to receive more than one prize. Contestants may shoot for any one who desires them to do so. Entrance fee $2, which entitles the person to one board, and four more at $1 each. When these are shot out, the contestant, if he so desires, may re-enter on the same terms. The Association has a fine range, with ample protection from the weather. The committee consists of J. E. Harder, D. R. Fullerton and Ashley Thorn. W. C. Cardon is Gen'l Superintendent, J. R. Bixler, Secretary.

NEWARK, N. J.—The secretary of the Newark Rifle Association, on the 6th inst., published the following card: *To the New Jersey Riflemen:* The need of a standard short-range target is apparent to all American riflemen. Recognizing the necessity of concerted action upon the subject, we would request that each organized club give this matter its early attention, and after obtaining the vote of their club fill up a blank and return the same to the secretary of the Newark Rifle Association at its earliest convenience. Each club will be entitled to as many votes as it has members. Blanks will be furnished to each club this week.—A. C. NEUMAN, Sec'y N. R. A.

ARMY PRACTICE.—The several departments in the regular army are closing up the practice for the year and the reports are coming in. Many of them show that the men are taking capital advantage of the opportunities for range work offered them. The recent changes of target and the new orders render it impossible to do much in the way of comparison with civilian scores on the old targets. It is to be regretted that the members of the army do not take more kindly to all-comers matches and assist in building up rifle shooting outside of professional ranks.

MUZZLELOADERS TO THE FRONT.—I.

130GRS. POWDER TO 130GRS. LEAD—RATIO 1 TO 1—ROUND BALL—WONDERFUL VELOCITY—FLAT TRAJECTORY AND STEADY SHOOTING.

Editor Forest and Stream:

In my previous articles in your columns I have squarely asserted that

First—The muzzleloading hunting rifle will shoot more powder, make a flatter curve, and at the same time shoot steadier than the hunting breechloader when using its appropriate fixed ammunition, and when the bullet is shot from the shell.

Second—That the round ball is the lightest bullet which can be shot with accuracy from the rifle, and is therefore susceptible of the greatest velocity, and of making the flattest curve of any bullet for short ranges. Short ranges here include those beyond which it is very unwise, as a rule, for the hunter to shoot at game animals, and 100yds. may be safely set down as the general limit for success in hunting large game, and 50yds. and under for small game.

Third—That the conical bullet of the muzzleloader is the next lightest bullet, for the same caliber in use, and has its great merits also. But in this article I will treat of the round ball only.

While none of the breechloader supporters have, to my knowledge, squarely come out and denied my propositions, yet none have come forward and plainly acknowledged them to be true. In reply some have resorted to low ridicule, which is the staple "argument" used against the muzzleloader by this class of men. Sometimes they call for "proof," when this is given they call it "theory," "science," "mathematis," or "book larnin'," and in which they "do not believe." Hence comes up the question: Are my propositions true or false? Let us examine and see. The truth should be known.

Rifle Trial.—On Feb. 12, 1884, Mr. G. J. Romer, a sound and honest rifle expert, at my request made over his range at Peekskill, N. Y., a most careful trial test of a muzzleloading rifle, .42-cal. The main object was to learn how it would shoot the round ball, weight 130grs., with 130grs. of Hazard's FG rifle powder—*ratio 1 to 1.*

Neither Mr. Romer nor myself had ever made this test, and we could not say in advance just what the results would be, and I will here add that this was the first and only trial we have ever made under the same circumstances with this load, so that the results stand on their own bottom. Of course the targets for steadiness of shooting may be much improved on a calm day, but we deem them good enough as they stand in this article, and until they are beaten by the breechloader under like circumstances of charge, 1 to 1, etc.

Rest.—A machine rest was used, the same for all the shots, and after one sighting shot all the others were made in the same way. In other words, no changes were made so as to bring the shots around the center of the target, but only the group of shots was sought for. A good telescopic sight was used (an excellent thing) to carefully align the line of sight at the muzzle with the center of the screen at 50yds. and target center at 100yds.

Measurements.—The measurements from the center of bullet holes to the line of sight have been measured by us to .01 of an inch as nearly as possible, and we hold the screen and targets on hand for any one to inspect and verify who may wish to do so. We prefer, and for good reasons, aligning on the line of sight and then reducing our work, as if aligning on the axis of bore.

Shots Computed.—Each shot has been individually computed to the third decimal point, and the hundredths preserved in all cases; this should always be done, especially where a mean curve is sought and where accuracy is desirable. We present the results of this trial as in every way reliable from beginning to end, nor have we designedly concealed anything. The trial was one for our own private information, but we deem the results so full of fact and interest to the public that we ought not to withhold them any longer. We hold the work to be correct throughout, and fully believe no error of importance can be found in it. We pronounce it authoritative not only for today, but for all future time. We are now prepared to enter upon the work itself.

The shooting was in three parts, as follows:

First—Six consecutive shots at 100yds. and then an interval to replace the screens, etc.

Second—Five consecutive shots at 100yds. and then an interval as before.

Third—Seven consecutive shots at the screen at 50yds.

During the last two trials the wind, though not heavy, was gusty, and it affected some of the shots, as the target (Fig. 2) clearly shows. Previous to this trial we had found that shooting through a screen of ordinary wrapping paper at 50yds. deflected the ball a little, and thus affected the target slightly at 100yds. This is the reason why the shots at 50yds. were made separately from those at 100yds. That the shooting at 50yds. was correctly made is proven by the curve itself. It is a beauty and not forced in any way .01 of an inch—the decimals to the third degree enter into all the work, none are lost, nor any added to square the work.

Trial No. 1.—I will now present the results in the order of the shooting, and by the aid of diagrams, everything can be seen at a glance and comprehended.

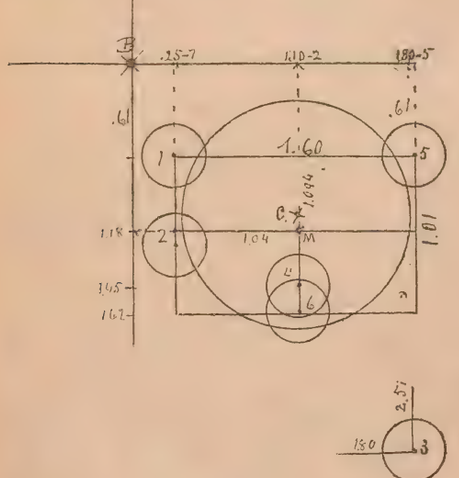

Fig. 1.

TARGET AT 100 YARDS. SCALE FULL SIZE.

HEIGHT OF MEAN CURVE, 1.232 INCHES AT 50 YARDS.

Explanations.—B represents the bullseye, and is the point where the line of sight intersects the diagram or target at right angles. M, the mean center of the 5 shots, which is the size of a silver dollar.

Shot No. 3 you will see is evidently not a normal one vertically; its evident true place is up among the other representative shots within the parallelogram. Hence in getting the data for the true (approximate) height of the mean curve of the 17 shots, its fall is left out, since to use it would lead to error in getting the true height of the trajectory. The 5 shots under the machine (constant) pointing of the rifle, average as seen in the plot 1.04 inches to the right of, and 1.094in. below B. With a correct elevation of the rifle, M would have been as high as B in the plot. From M the steadiness in shooting is shown and legitimately proven.

Height of Curve.—The height of the mean curve at 50yds. for these 5 shots is 1.232in. Of this more hereafter.

Proof No. 1.—This diagram proves beyond the hope of successful cavil, that the much-abused muzzleloader shoots the light round ball with wonderful steadiness and great accuracy for 100yds., and this too with a heavy powder charge and the lightest of all bullets (same caliber) in the ratio of 1 to 1. This fact now clearly demonstrated, prove my statements which were made to your readers before this test was made or even thought of by me, to be exactly true. Here we could stop, the point is actually proven.

I learned my facts in relation to the round and elongated bullets in 1843 in some experiments I then made at Fort Washita, in the Choctaw and Chickasaw Nation, adjoining Texas. As facts never change or die, they are the same now as forty-two years ago, and so they will remain.

And now for the "string." Let us see how it looks. The muzzleloader loves string measurements because it can shoot close.

MEASUREMENTS IN INCHES FROM C, THE CENTRE OF CIRCLE.

Six shots.....	1	2	3	4	5	6	String.	Av.	Remarks.
Measurem'ts.	.90	.80	1.70	.48	.87	.62	5.37	.89	No. 3 abnormal
Five shots....	.90	.80	....	.48	.87	.62	3.67	.73	5 normal shots.

Thus the six shots average .89 of an inch from the center, while the five normal shots average but .73 of an inch. Take your choice, it is immaterial which. Measured from M instead of C, the give approximately the same results.

Proof No. 2.—When five out of the six shots hit the size of a silver dollar at 100yds., with considerable space to spare at that, and when the string and average is as small as shown above, this is again proof positive that my propositions were and are true and not false, and that I well knew what I was writing about when I made them. And I think all I have hitherto written about the rifle (though not infallible in accuracy) is as true as my propositions and as susceptible of positive proof. Perhaps a few might be benefited by looking my articles over. They well know who I mean.

Beat It Who Can.—I offer this trial to any breechloader in the world to equal or beat, (1) in steadiness of shooting, (2) in as flat a mean curve and to be made with the same five successive shots at the same time. This is to be done by using the fixed hunting ammunition of our stores, and the bullets must be shot from the shell.

Trial No. 2.—I will now present the second test, made under greater disadvantages than the first from a rise in the wind.

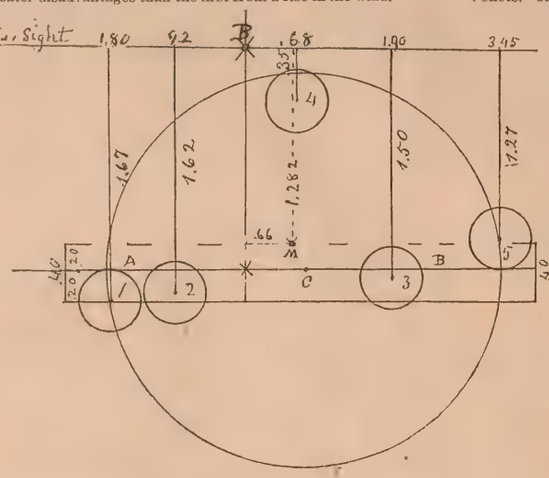

Fig. 2.

TARGET AT 100 YARDS, 5 SHOTS. VERT. SEC., FULL SIZE; HORIZ. SEC., HALF SIZE. HEIGHT OF MEAN CURVE AT 50 YARDS, 1.32 INCHES.

Explanations.—B denotes the bullseye, M the mean center of the 5 consecutive shots; it is 1.282 inches lower than B because the rifle was not sighted point blank, and .66 of an inch to the right of it. See Fig. C represents the center of the large circle which we have drawn. The 3 parallel lines at the bottom of Fig. show how very steady vertically 4 of the bullets went. It is plainly evident from the plot that shot No. 4 should be down among the others. The charge was probably a little defective, or a gust of head wind may have caused it.

Explanation.—I here present a correct plot of the 7 shots. L. S. represents the trace of a horizontal plane, including the line of sight, which cuts the diagram at right angles. B shows the position of the

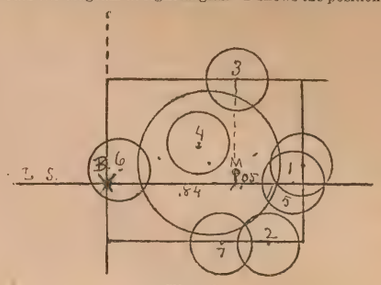

Fig. 3.

TARGET OF 7 SHOTS AT 50 YARDS. SCALE FULL SIZE.

bullseye on the aligned screen. M represents the mean center of the 7 shots. The average distance above the line of sight or bullseye is .05 of an inch—the use of this decimal will appear hereafter in determining the mean height of trajectory into which it enters. The large circle represents a 25-cent piece.

Proof No. 4. When the size of a 25-cent piece at 50yds. is struck by 7 successive shots and its center knocked out, this is proof positive (against all ridicule) that the ever true muzzleloader shoots with wonderful steadiness, and this too with a heavy load of powder—in ratio 1 to 1. Thus my propositions are again proven to be true; and this trial was made with gusty wind at that; flags were used but no wind gauge; the rifle remained unchanged from its 100yds. position. Mr. Romer stopped shooting after 7 shots.

Modern disbelievers ridicule the idea of the old-time shooters with the muzzleloader, taking off the heads of squirrels 8, 10 or 12 times in succession. These are generally shot at about 35yds. This target will serve, I hope, to teach them a wholesome lesson. Now let them repent of their unbelief. From this hasty example of a target, they can see how the muzzleloader shoots. Next let us produce the string:

MEASUREMENTS FROM M TO THE CENTER OF THE BALL HOLES.

50yds., 7 shots	1	2	3	4	5	6	7	Stri'g	Av
Measurements	.42	.49	.60	.30	.37	.45	.48	3.39	.48

Proof 5.—Thus this string, 3.39in., and the average .48in., again proves the muzzleloader with the round ball to shoot as before stated, and that my propositions are true. Then let the facts be openly confessed and "let a clean breast be made of it." Look upon the plot; ask yourself what chance a squirrel's head has among these shots, and it may strengthen you in making the confession. Can the breechloader ever hope to beat this shooting and yet make as flat a curve? I more than fear never! never! Until it is squarely done please to cease ridiculing the muzzleloader and the telling little round ball, none has ever equalled it for short ranges in close shooting day in and day out.

Trials Nos. 1 *and* 2 *combined*, 100*yds.*—I will next present a correct plot of trial Nos. 1 and 2, at 100yds. The main object of this is to show the 11 shots in one group, also to find M, the mean center of all the shots in order to use it in finding the height of the mean curve for 17 shots.

Explanations.—B denotes the bullseye, M the mean center of im-

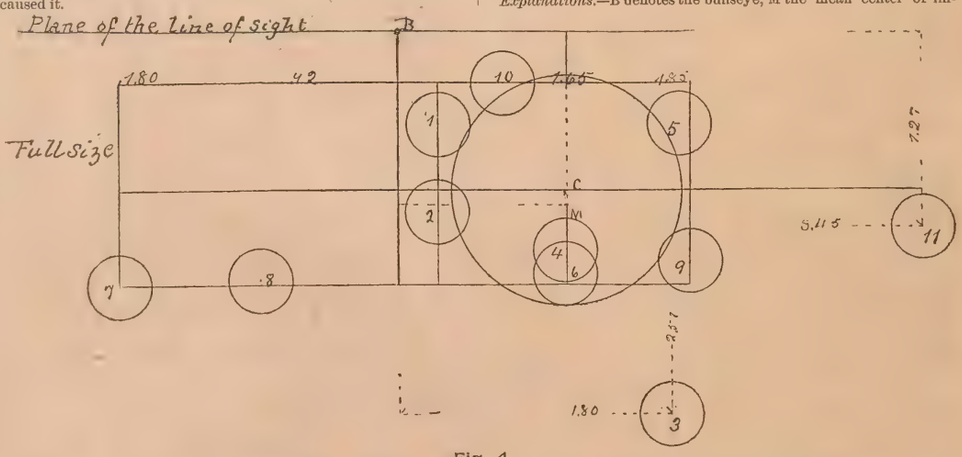

Fig. 4.

TARGET OF 11 SUCCESSIVE SHOTS AT 100 YARDS. HEIGHT OF MEAN CURVE AT 50 YARDS, 1.27 INCHES.

A Point.—A rifle naturally shoots more steady horizontally than vertically, because in the latter case more causes combine to scatter the bullets. Among these are hollowness and variations in size of the bullets, change in powder charge, light, dirty barrels, etc. These causes affect the velocity of the ball, and this tends to a vertical spread of them on the target. The main cause of horizontal spread is the wind, and a constant aim, as in this case, cannot prevent it. The plot shows this effect quite strikingly in the horizontal spread of the bullets; this spread is evidentally not natural.

Proof No. 3.—Thus 4 of the shots differ in their fall or vertical spread less than the diameter of the ball, .42 of an inch. Proof—the centers of shots Nos. 1 and 5 are embraced by the upper and lower lines of the parallelogram, and the middle line H K cuts all the bullet holes. Thus is our proposition in reference to the round ball (so often sneered at) again proven to be true, and this too, while shooting powder and lead in the ratio of 1 to 1. Equal or beat this shooting who can with the breechloader and yet make as flat a curve. Next comes the string.

MEASUREMENTS FROM C, THE CENTER OF CIRCLE.

Five Shots.....	1	2	3	4	5	String.	Average.
Measurements.....	2.63	1.72	1.08	.62	2.63	8.68	1.73
Four Shots.....	1	2	3	4	..	5.87	1.47

These measurements are made from a plot, full size, and are correct. We have no apologies to make for this string, the wind, as the plot shows, mainly caused the horizontal spread.

Trial No. 3.—I now present the next trial at 50yds., 7 consecutive shots.

MEASUREMENTS FOR VERTICAL DATA FROM THE LINE OF SIGHT.

7 Shots.....	1	2	3	4	5	6	7	
Measurements..	.11	....	.68	.22	0	.609	....	Above L.S. Sum 1.10
Measurements..	....	.38	....	....	0	....	.38	Below L.S. Sum .76

Dif. .34 ÷ 7 = .0485 = .05M. above L. S.

pact, C the center of a dollar circle, L S is already explained. Thus 7 shots out of 11 cut the dollar circle at 100yds.; 3 are driven a little way off by wind and 1 is a little low from a defective charge I think.

Proof No. 6.—The 7 normal shots furnish conclusive proof that the muzzleloader shoots steady, as before stated, at 100yds. with powder and ball in ratio as 1 to 1. And this again proves my former proposition to be true. 10 of the 11 shots fall within the size of a squirrel, and 7 would hit the size of his head. Tell me then what chance a squirrel or his head has within 100yds. when a good muzzleloader is used? Ans. His body virtually none, and his head but little. I am speaking of its normal or steady natural shooting. Ordinary practical results will not accomplish this of course. Next pass to the string.

MEASUREMENTS FROM C, THE CENTER OF A DOLLAR CIRCLE.

7 shots.....	1	2	4	5	6	9	10	String.	Average.
Measurements.	.94	.81	.36	.87	.54	.84	.81	5.17	.75 { normal shots.

The average of the 11 shots is 1.20in. But the average of the 7 normal shots is .75in. Either is good enough for one trial, so take your choice, you who do not believe in either the muzzleloader or round ball.

Challenge. 1.—Now, as a stimulant to action, I add, let any one in the world who can, beat this shooting with a breechloader and yet make as flat a curve at the same time, and this while shooting the store fixed ammunition from the shell.

2. And beat, if you can, in target and curve, while shooting powder and lead in the ratio of 1 to 1—the trial work to be as full as I give for the muzzleloader. If this show is ever beaten we will try again.

Proof No. 7.—Thus the strings and averages of the combined shots again prove that the muzzleloader with a round ball shoots magnificently at 100yds., and this too with powder and lead in the ratio of 1 to 1. No breechloader has ever done this and yet made so flat a curve, so that my propositions stand true and not false.

Beauty of it.—Now slip the hand into the other pocket and take out the light conical bullet, press it in a moment smoothly down the same barrel and you are prepared to shoot accurately up to 200yds. and over and this is 100yds. too far to shoot at game, unless it is actually necessary to do so; and when you have shot your bullets all away, then go to camp or home, take down your wood or "iron ladle," and cast all you want, and so sleep soundly. "But Oh!" says some one, "I can't shoot the muzzleloader quick enough, nor the single breech-

loader either, and I must have a repeater." And now comes a wide and wild bombardment of the "whole planation." Wild animals after the first volley neither sleep nor rest within about—yes a little less than—five miles around. All right, and then the game is so abundant, you know, "can't load quick enough."

And now if you wish to shoot squirrels and the like with the muzzle-loader, just slip in a small charge of powder, get a 50yds. point blank and it will yet make a curve so flat that a humming bird cannot escape its normal accuracy within 60yds. Here the round ball is the best of all others, by far. Beyond 80 or 100yds. use the conical ball, for it is heavier and has more sustaining power and offers less air resistance. The little round ball is nearly worthless after about 150yds.

I will now present a correct plot, a new picture in fact, which goes

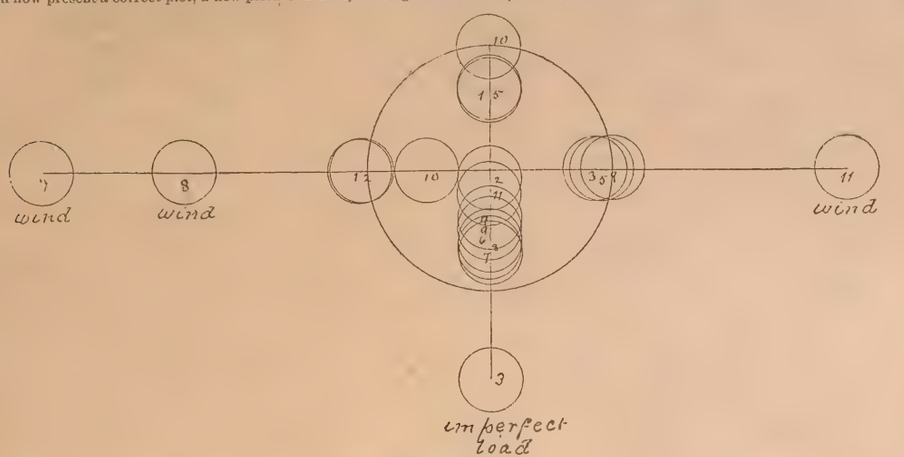

Fig. 4a.

far to explain the plots under Fig. 1, Fig. 2 and Fig. 4. See them. I cannot refrain from calling it a cross since it calls that figure to mind.

Explanations.—This plot is designed to show at a glance the spread of the 11 shots both vertically and horizontally at 100yds. It is full size. The two straight lines at right angles pass through M, Fig. 4, the bullet holes being projected on these vertically or horizontally. Thus is shown at a glance just how the bullets spread, and I believe your readers will enjoy this plot very much.

Proof No. 8.—The vertical spread (even including No. 3 shot) is simply magnificent, and the horizontal spread should naturally be less than the vertical. Another trial or two in a day of calm will accomplish this doubt. How systematic the shooting is! The result is truly wonderful to me, and I think it will be to all who look upon this beautiful plot. I cannot call it less than beautiful indeed. Well, the muzzleloader—a good one I mean—has always been regarded as a wonder for its superb shooting qualities, and here among wonders I must cut the matter off and proceed.

Height of Trajectory.—Having eight times proven that the muzzle-loader shoots the light round ball steady up to 100yds., it now remains only to prove that it makes the flattest of all rifle curves, under its superior powder force. From the beginning to the end of this trial we have aimed to have everything as correct as possible. To do this I will next present its approximate trajectory. I say approximate, because the exact curve can never be constricted any more than we can survey and present an exact plot of an acre of ground. But with much ease in both cases we can arrive at very close approximate

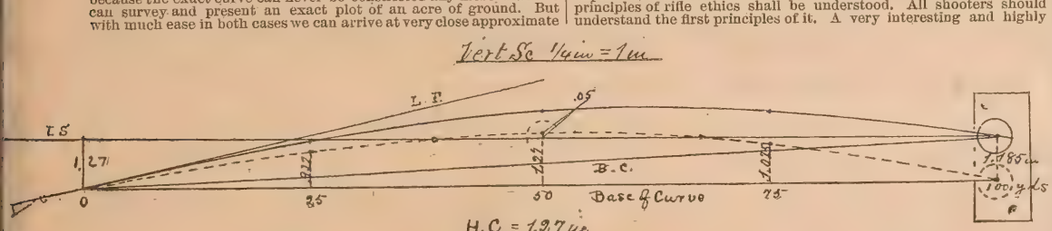

Fig. 5.

results, and we believe .05 of an inch will cover the error in the height of the curve in this case at 50yds.

Explanation.—B denotes the bullseye. L F means the line of fire.

Definition.—The line of fire is the imaginary prolongation of the axis of the bore. It indicates the pointing of the barrel, etc. L S denotes the line of sight, 1.27 is the distance between the axis of bore and the line of sight at the muzzle. The sights were telescopic, and hence high. 1.185in. show the mean fall of the 10 shots (No. 3 rejected) at 100yds below the bullseye. .05 shows the mean height of the 7 seven shots above the line of sight at 50yds. See Fig. 3 for this. As seen in the figure the height of the curve at 25yds.=.922in.; at 50yds., 1.27.; at 75yds., 1.02, as in the figure.

The height of curve at 50yds. for 5 shots, Fig. 1=1.33in; the height of curve at 50yds., 5 shots, Fig. 2=1.23in; the average of these is 1.27in., which is the mean of the 10 shots at 100yds., and of 7 shots at 50yds., total 17 shots, as in the plot. Time and space do not allow us to fully explain this here, so we pass on.

Proof 9.—The height of the mean trajectory is thus found to be 1.27in. at 50yds. This is an extremely flat curve, and it calls for a higher velocity of ball than any we have an authentic account of anywhere. Why should it not be so? We presume it is the only test of the kind ever made. It is certain that if this light ball received the full powder force of 130 grains, its velocity must have been terrific.

This extremely flat curve proves my proposition to be true on this point, and this ends the matter. I found this to be so with the muzzleloader to my entire satisfaction forty-two years ago, for I then found the round ball with a very heavy charge of powder made (contrary to my expectation) a little flatter curve up to 100yds. than the light "sugar loaf" shaped bullet.

On the strength of my former practical experience I have based my propositions, and this careful test proves them to be true. Be it remembered my propositions were made as against the breechloaders, which use a light powder charge, and comparatively a ponderous bullet. This article points to the necessity of a complete revolution in these respects.

We will now present another very interesting and instructive plot. It exhibits the same curve, but continued up to 125yds., and it shows how very close this rifle shoots for this distance.

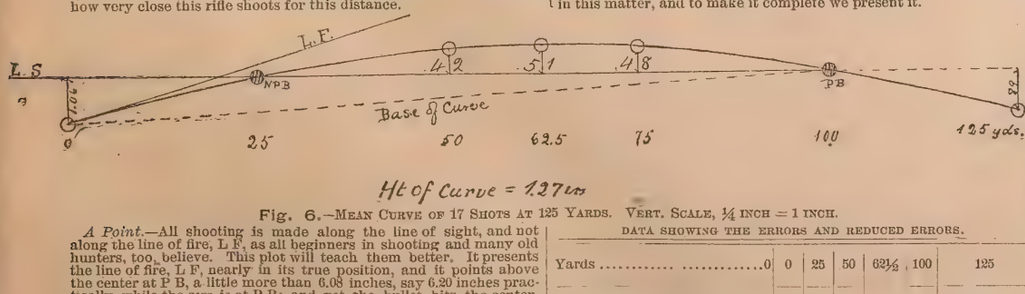

Fig. 6.—MEAN CURVE OF 17 SHOTS AT 125 YARDS. VERT. SCALE, ¼ INCH = 1 INCH.

A Point.—All shooting is made along the line of sight, and not along the line of fire, L F, as all beginners in shooting and many old hunters, too, believe. This plot will teach them better. It presents the line of fire, L F, nearly in its true position, and it points above the center at P B, a little more than 6.08 inches, say 6.20 inches practically, while the aim is at P B; and yet the bullet hits the center, P B, which you see is 6.20 inches below where the barrel points on the target, and yet with this fall of the bullet from the line of fire, see how very flat the curve is, and, therefore, how very closely this rifle shoots all along the line of sight for 125yds. This makes this plot valuable, and the very close shooting pointed out in it will astonish nearly every one; but so it is, and I have neither space nor time to explain it more fully. P B means point blank (proper).

Definition.—Point blank means the second intersection of the line of sight by the trajectory. See the Fig. and you will understand the definition. Some five years ago it took me some time in your columns to establish the definition; many believed it is made along the line of fire, and not along the line of sight; they were classed among "the straight shooters," and most of them now see their error.

You see that when the aim is on the center, and the center of the bullet hits it, this constitutes a point blank shot, or, as they generally say, "the bullet holds right up to the center."

In all practical shooting the barrel points above the object aimed at and struck, it points "blank," we do not know where, unless previously computed. The average breechloader points above P B about 10.50 inches in a range of 100yds. and about 44 inches in a range of 200yds. Some of them point much higher than this and some lower. You will see from the plot why a high curve indicates poor shooting, and a flat curve good shooting. It is only within the last two years

DATA SHOWING THE ERRORS AND REDUCED ERRORS.

Yards	0	25	50	62½	100	125
Error of rifle	1.27	0	.63	.72	0	.89 nearly.
Semi-diameter of ball	.21	....	.21	.21	....	.21 subtract.
Reduced errors	1.06	0	.42	.51	0	.68

Look at the plot and you will see only the reduced errors in it, the lowest column in the table. At a glance you can see how little this

that rifle shooters have begun to see into this very important matter. For years and years it has been studiously concealed, but now, thank God, through the efforts of but a few, and amid strong opposition in some quarters, the light of fact prevails and this is destined to effect a complete revolution in the manufacture of rifles in this country, a thing so long desired by old hunters everywhere. But I must not tarry.

New Definitions.—N. P. B. means the Near Point Blank.

Near point blank is the first intersection of the line of sight by the trajectory.

Now see N P B in the Fig. and you will understand the definition. Practically it means a center shot at 25yds., and this too, with the same aim that makes another center shot to wit, the point blank shot proper, at 100yds. You now see why the rifle shoots exact near the piece, and again a good way off.

A definition for this important intersection is very much needed (for many good reasons) and I hope all your rifle correspondents and other writers on the rifle will use it when they can well do it, this will bring it into public notice, and finally into the nomenclature of scientific as well as the practical shooting.

Near point blank is always found to be near the muzzle, say within 30yds. of it at most, so that the definition is a very proper one. The very name of it will serve to invite inquiry as to its meaning, and an explanation will lead to other questions, and so on until the first principles of rifle ethics shall be understood. All shooters should understand the first principles of it. A very interesting and highly instructive chapter could be written on near point blank alone. It presents some very nice points indeed.

New Definition.—The error of the rifle at any point of the range we define to be the vertical distance of the trajectory, or center of the bullet hole from the line of sight. Now see the Fig. and the definition stands explained. At N P B, the near point blank, and again at P B, the point blank proper, there is no theoretical or practical error under the definition, because the same shot (and under the same aim) makes a center at these two points, while at all other points in the range there is an error either above or below, however great or minutely small it may be. Thus error refers to the curve or bullet hole center.

New Definition.—The reduced error of the rifle at any point of the range we define to be the vertical distance of the inner edge of the bullet or bullet hole, from the line of sight. See the Fig.

Thus reduced error refers to the inner edge of the bullet or bullet hole, and error to the curve or center of bullet hole.

Point 1.—The highest point of the curve practically is so near mid-range up to 200yds. that we may regard it to be there, and this is the best distance at which to place the tissue-paper screen in finding the height of a curve.

2. The height of the curve must be measured from its base, and not from the line of aim, as most rifle shooters believe. See Figs. 5 and 6.

3. The distance in the range for the highest point of the curve above the line of sight or aim and the highest point of the curve (above its base) are never (or very rarely) the same. See Fig. 6, where, in this case, they differ 12½yds.

4. The highest point of the curve above the line of sight is virtually equi-distant from the two point blanks. See Fig. 6.

5. Hence the strike of the bullet or the center of the bullet hole in practice above the line of sight, or the center of the bullseye, does not show the height of the curve at this point of the range as the majority of shooters now believe.

My diagrams 5 and 6 will make all these matters plain. These definitions and the plot will enable the beginner with the rifle—the boys for whom we mostly write—to understand these things, as well as the table of data we now present. This table forms a part of the history in this matter, and to make it complete we present it.

rifle in a mean curve of 17 shots misses the smallest object anywhere within 125yds. With such a record can the muzzleloader die? We do not believe it.

Proof No. 10.—Aiming on the center (mark center) of a half-dollar circle (diameter 1.20in.) at 115yds., it hits it for 100yds. within this range, and only missed it for the first 10yds.

Challenge.—1. It now being our right, we challenge any breech-loader in the world, when using powder and bullet in the ratio of 1 to 1, to equal or beat this curve and yet to make with the same shots as good a target at 100yds. as is shown in Fig. 1 for 5 in 6 successive shots.

2. To equal or beat both of the same in the same trial while using the store-fixed hunting ammunition and shooting the bullet from the shell.

3. To beat both of the same without any restriction except the bullet must be shot from the shell and not from the barrel in imitation of the muzzleloader.

4. To equal or beat both of the same without any restriction whatever.

As full an exhibit of the trial as we make for the muzzleloader must be made to substantiate any claim laid under this challenge, else not entitled to a hearing.

As a military weapon, the breechloader is splendid.

To recapitulate.—At the muzzle, the rifle shoots 1.06in. too low.

At 25yds. N.P.B. it makes a center.

At 50yds. it shoots .42in. too high.

At 62½yds. it shoots .51in. too high.

At 100yds. P.B. it makes another center.

At 125yds. it shoots about .68in. too low.

Now if this mean curve, the result of 17 careful shots, as well as of computation, does not tell a very pleasing and instructive tale, then is our gratuitous labor lost. We do not believe it or begin to believe it—we believe it will be for many good reasons most happily received (by most), and this will be our rich reward.

As to the muzzleloader, it tells its own tale. To us it is a pleasing one, because this rifle is a very fine and steady shooter, therefore it makes a splendid hunting rifle, and I would wish no better.

Its performance is certainly worthy of imitation by the breechloader, and the result of this trial by the muzzleloader and round ball are now placed on record for the breechloader to equal or beat it:

1. In steadiness of shooting and a good target.
2. In making a flat curve at the same time.
3. In little recoil; this is very light in this rifle, even with the heaviest charge of powder, because its bullets are so light—round or conical.

These three essential qualities must combine in the same rifle in order to make it a "good all round" gun, and no one of much experience in hunting will pretend to deny this; and here I will drop the subject for the present.

MAJ. H. W. MERRILL.

NEW YORK CITY.

[There is evidently a mistake in computation of the four shots in the second table.]

RANGE AND GALLERY.

WORCESTER, Mass., Sept. 12.—To-day has been the annual field day of the Worcester Division of the Grand Army of the Republic. They met some 300 strong at Woodlawn Grove, Lake Quinngamond. During the day there was a rifle shooting match, distance 200yds., shooting off-hand. The scores were in the following order and the score as follows:

O. Devens Post No. 27, Oxford.		Ammidon Post 168, Southbridge.	
O B Chaffee	53400—12	Frank Jacobs	34043—14
G H Keith	22300— 7	Theo Place	30003— 6
L E Thayer	22400— 8	Benj Dandridge	30000— 3
J E Nichols	00000— 0	Frank Hoffner	30000— 3
Samuel Francis	22200— 6—33	Charles Lombard	30033— 9—35
Ward Post No. 10, Worcester.		G. A. Curtis Post No. 70. Millbury.	
C L Macomber	43433—17	A H Batchelor	43234—15
H W Pepper	43443—18	S C Spooner	20040— 6
J B Willard	42343—16	S L Chapman	25424—17
E R Shumway	44444—20	C Tyler	00304— 7
L A Taylor	49344—15—86	T Tourtellotte	00202— 4—49

WALNUT HILL, Mass., Sept. 12.—The promise of a fine day brought out a large number of riflemen to the Saturday shoot at Walnut Hill. The weather conditions were nearly perfect, and fine shooting was done. The military match was opened and good shooting done by Messrs. Perkins, Bateman, Parker and others. Following are the best scores of the day, all at 200yds.:

Practice Match.

F W Perkins (mil)	4 5 5 5 4 4 5 5 5 5—47
A Miller	5 5 5 5 4 4 5 5 5 4—47

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NATIONAL GUN ASSOCIATION.

Editor Forest and Stream:

About Aug. 8 Mr. H. W. Du Bray—elected General Manager, and for which position he duly qualified by taking the oath of office—sent his resignation to this office as such, without having accomplished aught for the benefit of the Association.

The position was then tendered to Judge M. R. Freeman, of Macon, Ga., with the suggestion that if he saw fit to accept he should designate two other Macon sportsmen who would serve as directors, so that the three would form an executive committee of the Association provided for in the constitution and by-laws. In reply the following letter was received:

"MACON, Ga., Aug. 31, 1885.

"*Mr. J. E. Bloom, Cincinnati, O.:*

"Dear Sir—Your esteemed favor of 26th before me, and in reply would say, that while I am very much interested in the success of the National Gun Association and would at all times render any assistance in that direction in my power, I fear the result attending my assuming the position you refer to.

"I can understand the apparent necessity for having the management in the hands of persons entirely disconnected with the sale and manufacture of supplies of every character used by the Association in order to prevent any charge (groundless though it may be) from being made that the Association is being run in the interest of any particular manufacturer, also the removal of the main office from the immediate centers of such manufactories for the same reason; but in doing this would not the Association suffer a loss in the services of good and true men who are connected with these various enterprises, and would such a move prevent unscrupulous persons from making such charges if such a change was made? I think not.

"If the sportsmen of our country who are the consumers will only put their shoulders to the wheel by joining our rank in mass we can very soon remedy all defects and enact a code of laws with the assistance of our legislators that will not only protect us in preserve privi-

leges, the protection of fish and game, but will also enable us by this concert of action to secure our supplies at a reasonable compensation to manufacturers.

"I also believe that in cases where manufacturers manifest an interest in our Association and assist in its good work by a good subscription to its capital stock, should be given the preference when ever it can be done consistent with the good government of the same.

"The city of Macon, Ga., offers extraordinary inducements in the way of permanent grounds as a place for the main office, having a public park unsurpassed in the United States in its natural beauty and convenience, affording ample accommodation for both rifle and shotgun shooting, buildings for the storage of property, and accommodation of contestants and visitors, which can be had free of charge, and policed whenever occasion requires it.

"There is also within a few hours' ride of the city any quantity of fine land preserves in every direction which can also be had for the asking, the only condition required that the Association will accept it and enforce the game laws.

"Having given you my views if I can serve you use me, and I would suggest W. W. Parker and F. C. Ethridge, the latter for secretary, when it becomes necessary, MATT R. FREEMAN.

Thereupon, by the affirmative vote of Directors Russell, Coster, Stark and Bloom, the following resolutions were adopted by the Board of Directors:

Resolved, That Judge M R. Freeman, of Macon, Ga., be elected general manager, vice Du Bray, resigned, and that he be also elected vice president, vice Bloom, and treasurer, vice Bishop.

Resolved, That Messrs. W. W. Parker and E. C. Ethridge, of Macon, Ga., be elected directors, vice Du Bray and Bishop, resigned.

Resolved, That F. C. Ethridge be elected secretary, vice Bishop, resigned.

Resolved, That Messrs. Freeman, Parker and Ethridge constitute the executive committee of the Association.

Resolved, That the main office of the Association be removed to Macon, Ga., together with all books, etc.

J. E. BLOOM, late V. P., N. G. A.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest*

MOBILE GUN CLUB.—Last monthly handicap shoot, 15 balls, 3 traps, 5yds. apart for the medal:

Finch, 27yds	111111111111111—15
Stewart, 21yds	101111111111111—14
McDonnell, 24yds	00 111111101111—12
Boltz, 27yds	1101101001011111—11
Pritchard, 21yds	0010100101011110— 7
Sartore, 24yds	1011100010100000— 6

Mr. R. A. Finch won the medal two months in succession.

Match at 5 single balls, class shooting, 24yds. rise:

Finch	11111—5	Wagner	00111—3
Vass	11111—5	Pritchard	10011—3
Stewart	11110—4	Custa	11001—3
C Burch	11101—4	McDonnell	10001—2
Boltz	01101—3	J Burch	10001—2
Sartore	01011—3	Bones	00010—1

Finch and Vass divided first, Stewart second, and Boltz and Wagner third.

Match at 6 single American clay birds, 18yds. rise, class shooting.

Finch	111111—6	Sartore	010111—4
Pritchard	111111—6	Wagner	110110—4
Vass	111111—6	McDonnell	110110—4
Boltz	011111—5	Burch	100101—3
Custa	011111—5	Bones	010000—1
Stewart	100111—4		

Finch, Pritchard and Vass divide first; Boltz and Custa second; Sartore wins third. Match at 6 single American clay birds, 18yds. rise, class shooting.

Boltz	111111—6	Vass	011111—5
McDonnell	111111—6	Sartore	110011—4
Stewart	111101—5	Wagner	111100—4
Finch	111110—5	Custa	010111—4
Burch	101111—5	Pritchard	101010—3

Boltz and McDonnell divide first, Stewart second, Sartore Wagner and Custa divided third.

LOCKPORT, N. Y., Sept. 10.—Notwithstanding the inclemency of the weather, probably the best trap-shooting ever done in Niagara county took place yesterday. The target used was the bat, concealed traps, 18yds. At 10 bats, 3 angles:

Geo Moody	1111011111— 9	Ed Moody	0011111110— 7
H C Howard	1111111111—10	W Gombert	1011110111— 8
J H Jewett	1101111111— 9	Geo Barker	1111111111—10

First and second were divided. At 10 bats, 3 angles.

E Moody	1101111111— 9	Howard	1111011101— 8
Jewett	1111101111— 9	Barker	1111111111—10
G Moody	1111001111— 8	Gombert	1111111111—10

First, second and third divided. At 10 bats, straightaway.

Gombert	1111111111—10	G Moody	0111111111— 9
Barker	1111111101— 9	Jewett	1101101011— 7
Howard	0110111110— 7	E Moody	1111111111—10

First, second and third divided. At 5 bats and 5 balls, double rise.

Gombert	11 10 11 10 11—8	Jewett	11 11 01 11 11—9
Barker	10 11 00 11 11—7	E Moody	11 10 11 11 01—8
Howard	11 11 01 11 11—9	C Moss	10 00 11 11 01—6
G Moody	01 11 10 00 11—6	M Bailey	00 11 10 11 00—5

First and second divided. At 10 bats, 3 angles.

Gombert	1111110111— 9	Jewett	1111111110—9
Barker	1111111111—10	E Moody	1100111111—8
Howard	0100110011— 5	Moss	1110001101—6
G Moody	1101111111— 9		

Gombert won ties for second. At 10 balls.

Gombert	1011111101— 8	Jewett	1111111011—9
Barker	0111011110— 7	E Moody	0111111110—8
Howard	0110100100— 4	Bailey	0010110010—4
G Moody	1111111101— 9	Moss	1110110100—6

First and second divided.

BOSTON GUN CLUB.—The prize shoots that have been held at Wellington the past few weeks, under the auspices of the Boston Gun Club, closed on the 12th. B. A. Ward won the first prize with a score of 100 out of 105 birds, and carried off a fine breechloading champion gun; J. Snow won second with 99 out of 105, and won 500 paper shells; A. S. Spencer took the third prize, 1,000 Wesson primers, with 93; J. Philbrick won the fourth prize, 200 paper shells, with 90, and H. C. Warren fifth, 1,000 wads, with 90. The leaders of the several sweeps were as follows: First event, 7 single birds—Ward first. Second event, 7 birds—Warren first. Third event, 7 birds—Warren first. Fifth event, 7 birds—Ward first. Sixth event, 7 birds—Warren first. Seventh event, 7 birds—Snow first. Eighth event, 7 birds—Snow and Warren divided first. Ninth event, 7 birds—Ward first. Tenth event, 7 birds—Snow first.

WELLINGTON, Mass., Sept. 12.—The Malden Gun Club held its regular weekly shoot this afternoon. Following is the result of the several sweeps: First event, 5 clay-pigeons—Crosby and Pratt divided first. Second event, 5 clay pigeons—Crosby, Moore and Snow divided first. Third event, 5 blackbirds—Stanton first. Fourth event, 5 clay-pigeons—Swift, Pratt and Loring divided first. Fifth event, 5 blackbirds—Pratt and Pond divided first. Sixth event, 5 blackbirds—Wardwell and Moore divided first. Seventh event, 10 clay-pigeons, medal match—Crosby was first with 8; Snow second with 7, Laborn third with 6. Eighth event, 3 pairs clay-pigeons—Pond first. Ninth event, 5 clay-pigeons—Stanton first. Tenth event, 5 clay-pigeons—Swift first.

NEWARK, N. J.—The Nimrod Club held its monthly glass-ball shoot on its grounds on the afternoon of the 5th for the club medal. It was won by W. I. Beatty, who broke 9 out of 12 balls. The rifle match for the club medal will take place on the third Saturday of the month. At Erb's on the 5th the return match between W. P. Hughes and J. Ryan, both of Montclair, took place. The stake was $100 a side. The conditions were 25 birds each, Hughes giving Ryan two dead birds; 21yds. rise, trap, find and handle, one barrel, ounce and a quarter of shot, 80yds. boundary. The shooting was anything but first-class. W. P. Hughes killed 16 and missed 9; total, 25. J. Ryan killed 17 and missed 8; total, 25.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now.—F. C. BISHOP, Secretary, Box 1292, Cincinnati, O. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

FIXTURES.

Sept. 19—N. Y. C. C. Regatta, off New Brighton.
Sept. 26—Jersey City Y. C., Canoe Race.
Sept. 26—K. C. C. Open Regatta, 155th street, North River.

A CANOE CRUISE WITHOUT A CARRY.

AT 7:30 A. M., on Aug. 1, 1885, Miller and myself passed under the Brooklyn Bridge on the New York side of East River in the canoe Outing, 16ft. long, 30in. beam, and about 8in. draft, bound up Long Island Sound. I paddled and Miller steered; Miller is fond of steering. At the outset we were a bit nervous at the proximity of the numerous craft plying up and down, crossing and recrossing the river; but soon familiarity bred indifference, and we rather enjoyed being the center of attraction to the passing steamers, and dancing up and down to their swells. We passed the Government dispatch boat Dolphin and the cruiser Atlanta, opposite the Navy Yard. At 9 A. M., we paddled through Hell Gate on the flood tide and without trouble; in fact, Hell Gate, so far as its dangers are concerned, is a thing of the past, owing to the submarine excavations and blastings, and the compulsory pilotage under which so excited the wrath of captains of coasting vessels, has been repealed for about two years.

After passing Hell Gate we were favored with a southwest wind, and sailing free we skirted the Long Island coast, making excellent time, and in fact, beating several schooners and a brigantine, heavily loaded, to be sure. Cruising as far as Hempstead Bay, we changed our course and stood up the bay for Sea Cliff, where we arrived about 2 P. M., after making a 30 mile run from New York. Sea Cliff is quite a popular summer resort for New Yorkers, but outside of its social aspect, there seemed to be little of interest, the bathing facilities are poor, as are the situations of the principal hotels. In the evening we walked over to the Sea Cliff House, where a hop was in progress. We rather obtrusive in our canoeing costumes, so we plumed ourselves in a dark corner of the veranda, lit our cigars, and amused ourselves with watching the ladies pass and repass through the halls and corridors.

About 11 A. M. the next day we got under way and laid our course close hauled across the Sound. The wind had veered around to the N. E., was blowing strong and a pretty heavy sea was running, but as the swells were large and even we escaped a wetting. At 2 P. M. we were off Marmaroneck, and as we skirted the shore we saw many beautiful villas owned by wealthy New York parties. Conspicuous among them was the elegant summer residence of Mr. Arnold, of the firm of Arnold, Constable & Co., New York, a very large edifice and built after the style of an English manor house. We spent the night at quaint old Milton, two miles from Marmaroneck, remarkable for nothing except dullness. Monday the 3d we had a regular nor'easter, it blew heavily and rained intermittently, the surf roared in foamy fury on the Scotch Cap rocks off Rye Point, and not a sail could be seen on the Sound. The day, so far as canoeing was concerned, was a blank. We obtained lodging in a house rented for the summer by a New York lady, and amused ourselves as best we could. Miller seemed to have no trouble in killing time. The fact is Miller has a susceptible heart, and the landlady had a daughter; to be sure she was very young and wore short dresses, but Miller did not mind that; he appropriated the lion's share of her society, and told her canoe yarns of goodly proportions. I was under the impression that Miller lacked imagination, I think differently now. That night I turned in early and left Miller sitting on the sofa with Miss Dickey. I had not been abed more than fifteen minutes when I heard the landlady shuffling around down stairs, slamming shutters and blowing out lights, and pretty soon Miller came into the room grumbling; he said, "Confound such early hours, anyway; Miss Dickey and I were enjoying ourselves in the parlor, when the old lady came in, blew out the light and said, 'Tillie, come, come, child, it's bed time,' so I had to vamose."

The next morning it came off bright and warm, with a brisk southwest wind. We got under way about 8 o'clock, and sped merrily along before wind and wave with flowing sheets. We enjoyed a delightful run along a pretty coast as far as Shippan's Point, situated about 5 miles from Stamford; here we put up long enough for dinner and to smoke a cigar. The Shippan's Point House is pleasantly located, commanding a view of Westcott's Cove and the Sound. In the cove a fleet of sloops were dredging for oysters, and a very pretty picture they made as they stood slowly on and off shore with half-filled, snowy sails, on a background of green land slopes, blue sky and dancing, sparkling seas. This section of the Connecticut coast is noted, locally at least, for its fine oysters. The hotel register showed a majority of New York and Brooklyn people. Miller wanted to procure an introduction to a pretty young lady guest. I managed to dissuade him, and taking his arm, led him to the canoe.

Our run among the Norwalk islands was one of the prettiest features of the trip. The islands, with their green slopes and rocky bases, loomed clear and bright in a setting of blue sea and white clouds which were massed upon the horizon. On the higher slopes of the mainland pretty little cottages overlooked this marine view, which was vitalized by the existence of numerous yachts and sailboats standing in and out with gleaming sails among the islands. About 6 o'clock that evening we entered Southport harbor, and as we skirted close to the shore we were saluted by a bevy of young girls with waving handkerchiefs and cries of "Oh, what a cute boat! isn't it just lovely?" We courteously acknowledged their admiration by doffing and waving our caps. Miller wanted to land at once. I dissuaded him. We made the canoe snug at Southport and walked to Fairfield, about 4 miles from Bridgeport, and registered at the Allyn House. We were struck by its pretentious appearance and expected a good supper, though rather late. We didn't get it; the meat was out and the milk had soured. What we lacked for supper we made up by grumbling. After supper "there was a sound of revelry" in a mild form. The guests, all New York and Brooklyn people, were having a dance. We did not dance that evening—not for lack of inclination, but for lack of invitation.

The next morning we left Southport with a light southerly wind and cruised along past Black Rock, Bridgeport, and a less interesting coast than we had seen heretofore. We were off New Haven about 5 P. M. and Branford a little later. While off Branford I performed the rather difficult feat of shooting a diver duck on the water from a dancing canoe with a rifle, the distance was about 75 yards, and the ball passed through his head. At this time a thunder storm was rapidly brewing and we made haste to effect a landing, which we succeeded in doing at the point of Indian Neck, just as the storm burst with fury upon us. On this point there stands "the Ark."

At Indian Neck we registered at the Montowese House, we were fortunate enough to meet friends and were introduced to a number of very agreeable ladies and gentlemen. At this delightful place we spent the best part of two days and, thanks to the courtesy of our friends, we knew not a dull moment. There was an open air roller skating pavilion near by, and in the evening we rolled the fascinating roll to the music of a harp and violin, afterward there were delightful strolls by starlight among the rocks along the shore. There were romantic little nooks among these rocks where one, or rather two, could silently sit and listen to the gentle splashing murmur and the lapping of the sad sea waves upon the beach, and they could remain entranced for hours clasping each other's hands and—well, Miller was just in a whirl of ecstatic bliss. I was under the impression that Miller lacked an appreciation for the romantic and poetic. I think differently since that night. I rather expected that our cruise would end here and was surprised when Miller consented to continue up the coast; anyhow, it was a hard pull for him, poor fellow.

Every good thing has a speedy termination. We left Indian Neck with reluctance and with a twinge of the heart, or at least Miller did. We paddled through the pretty Thimble Islands and reached Madison about 3 P. M. on the 7th. Here we also had friends, who hospitably entertained us for a day. Miller gave the ladies an exhibition of what he called plain and fancy canoe sailing, and they were delighted with the fairy bark, as they styled the Outing, and she did make a pretty sight as she glanced like an arrow through the blue sunlit seas with snowy sails filled and bright bunting fluttering. We left Madison with a head wind and tide, and after a hard paddle succeeded in rounding Hammonasset Point, and clawed along the rocky coast with sails and paddles. As the coast trended away to the westward, we had more water, and soon sailed into Clinton Harbor with a fair wind and tide.

Here we spent Sunday with friends and Monday A. M., set sail with a light S.E. wind and favoring tide for Greenport. On the way across the Sound we were passed by several yachts of the New York Y. C. They swept majestically along through the white capped seas with clouds of snow white canvas set. We also encountered five little stormy petrels or Mother Cary's chickens, lightly resting close together upon the water, rising and falling to the heave of the seas. As we forged ahead they rose and skimmed along the water, their jet black and white plumage clearly marked against the blue sea. These birds are, I believe, not commonly met with on the Sound. About 4 P. M. we were off Plum Gut, the wind hauled around to the S.W. and blew briskly. We made the Gut just as the tide commenced to turn and had considerable difficulty in getting through. There was a nasty snappy sea running, but with sails drawing and paddles plying we passed through without shipping much water. We considered this the most difficult portion of the trip. We did not reach Greenport that night, but laid over at the Orient Point House until 3 P. M.

The next day when we started with a strong head wind, there in Gardiner's Bay we encountered the heaviest sea yet met with and took in considerable water. I was pretty thor ughly wet, but Miller was pretty dry, as he was steering. We found that we were making such slow progress through the heavy seas that we decided to run in for the night at Orient, which we accordingly did, and stopped at the Mt. Pleasant House. There we were well treated and met several nice people from New York and New Jersey. Miller was introduced to a young lady with whose charms he was quite smitten, so that next day I had trouble in persuading him to get under way. We reached Shelter Island about 1 P. M. and took dinner at the Prospect House. This fine large hotel seemed to be nearly full, the guests being mostly New York and Brooklyn people, ladies predominating of course. Their principal amusements seemed to consist of gossiping in little groups on the veranda, waiting, sleeping and bathing.

We also visited the elegant Manhanset House. Situated on a high plot of ground, it commands a beautiful view of Gardiners Bay, and seems to deserve a better patronage than it has received, this year at least. The hotel together with its cottages, has a capacity for about 400 guests—there are hardly 200 there at present. The cottages, seven in number, are charmingly situated among groves of oaks and locust trees and are fitted with every luxury and convenience. We were just in time to witness the bathing that day, and a jolly crowd of bathers they were, the ladies' bathing toilets were simple, but very pretty, dark blue flannel with white or red trimmings predominating. We noticed that quite a number of the ladies were expert divers and swimmers. I understand the art of swimming is growing fashionable with the fair sex; they will certainly learn to swim for fashion sake, where they would not from mere prudential motives.

We spent the last two days of our trip at quaint, old-fashioned Greenport. This port is now the headquarters of a number of steam bunker fishermen. The bunker industry is carried on from Virginia to Rhode Island. Bunkers or bonyfish weigh about one-half pound, and resemble a shad in color and shape. They run in large schools, are caught by being surrounded by nets which can be drawn up at the lower edge, and called in consequence purse nets. These nets are carried in boats towed astern of the steamers; 25,000 fish is an average haul. The oil is extracted from the bunker by the application of steam and hydraulic pressure, and makes an important substitute for linseed oil, being sold as such. The residue or pumace after the oil is extracted from the fish makes a rich fertilizer, and large quantities are shipped South. Thus ended our cruise and we said au revoir to Outing for this year. ALBERT D. CROWELL.

BAYONNE C. C., SEPT. 5.

THE Bayonne C. C. held their fall regatta Saturday, Sept. 5, off their club house, Newark Bay. In the sailing race there were six entries:

Ianthe	George Cox	Ianthe C. C.
Sioux	T. F. Garrett	Bayonne C. C.
Lil B	R. V. Vienot	Bayonne C. C.
Manahatta	R. Peebles	Bayonne C. C.
Mist	F B. Collins	Bayonne C. C.
Gus	L. F. Burke	Bayonne C. C.

Cox won a very close race by two lengths, Garrett second and Vienot third. In the canvas class the following boats entered:

Foam	John L. Collins	Bayonne C. C.
May	William Rumble, Jr	Bayonne C. C.
Windward	Frank Beardsley	Bayonne C. C.

The Foam won easily, with May second. Before the paddling race was started it began to blow very hard, making a heavy sea. The entries were:

Sioux	T. F. Garrett	Bayonne C. C.
Mist	F. B. Collins	Bayonne C. C.
Regina	C. N. Schuyler	Ianthe C. C.
Ianthe	George Cox	Ianthe C. C.

Garrett won by one length, Collins second. The water was so rough and it was raining so hard that the other races had to be given up.

SAILING CANOES.

Editor Forest and Stream:

I am surprised that no canoeists have replied to "Deja's" first letter, in which he attacks the sailing powers of canoes, but I suppose that the more important matters connected with the meet have occupied their time to more advantage. Now that "Deja" has given us his ideas of a boat we can form a better conclusion as to his fitness as a critic of the canoe. That his knowledge of the modern canoe is very limited is evident from his former letter; the Shadow has by no means been acknowledged as the best canoe under sail, as the low freeboard, tumble home and some other features detracted greatly from her powers. Speaking only of sailing canoes, before the Shadow was thought of there was in England a fleet of fast, safe and able sailing canoes, fitted with most efficient rigs, the only objection to them being that they were heavy to paddle. Of these "Deja" has evidently never heard, but they have increased and improved abroad until they are veritable yachts, while still possessed of the *sine qua non* in a canoe, the capability of being easily housed and handled on shore and of allowing the crew to land without a yawl boat, in both of which points "Deja's" boat is lacking. His jibes about a sail like a pocket handkerchief and setting sail in a bathing suit are very funny, or were so once on a time when they were young, but had he seen the little boats that spread their huge sails on Eel Bay in perfect safety, or beat over the course under cruising canvas one stormy Monday, he would have realized how absurd such language is to any practical canoeist. There were some upsets at the last meet, as there always are at the races, but on such occasions there are always plenty who take the risk of an upset in return for the chance of winning a prize while there are always a fair proportion of beginners who are only learning to sail. With a reasonable cruising rig, a modern canoe, not a heavy English one, but such a boat as the Sunbeam, can go to windward in very bad weather, and if handled, sail boats should be with a fair amount of care and skill, is in little danger of upsetting. From a sailing point only, a fairly good canoe could hold "Deja's" proposed boat, unless in very short tacks, and when free would easily out run him. The popularity of the Shadow was due to its general adaptability rather than to its good qualities under sail, and it is in this former point that "Deja's" design fails entirely. A modern canoe can be handled on shore by one man, can be hauled up or launched by him in most places, it will lie perfectly upright or nearly so when in the club house, in a wagon for transportation or on shore for packing and for sleeping in. A man can rest in an ordinary canoe on any boat in smooth water and step ashore from the deck. The boat can be easily and cheaply housed, thus saving the trouble and expense of an anchorage and attendant, the hull is kept clean when not in use, it does not soak water and become heavier, and no rowboat is needed to get under way or to make a landing. In all of these features, which constitute the main advantages of a canoe over a sailboat, "Deja's" cutter is conspicuously lacking. With her great draft a man must use a tender to board her, or he must wade in two feet of water, rather different from the six inches of a canoe. The boat must lie at her moorings, unless a special carriage and ways are built to haul her out. What she would do in a cruise it is hard to conceive, when it is necessary to haul her up extra help must be had, and on shore or in a car or wagon she will need a special set of chocks to hold her. She may be a better boat when under sail; but there are many times when wind fails, though "Deja" writes as if sailing were always possible. The picture of sailing vs. paddling is very pretty, but how about the reverse, when the wind dies out and the tide is ahead and one must get home? The canoeist hauls up his board, stows his sail, and makes three miles or more in an hour. What does the "cutter canoeist" do? Very few canoeists care only for sailing, and not one in ten of these has the facilities for keeping such a boat as the one described; to most of them the great charm of canoeing is its infinite variety, one day sailing on broad, open waters, the next under shady coverts on a quiet river, or among rapids and carrys. For such a purpose no better craft can be devised than the canoe, and "Deja's" cutter would be entirely useless. RON ROY.

NEW YORK C. C.—The fourteenth annual regatta will be held off the club house, at New Brighton, Staten Island, on Sept. 19. The programme is as follows: 1. Sailing—All classes, no limit of sails or ballast. 2. Novices. Sailing—No limit of sails or ballast. 3. Paddling—Classes 3 and 4. 4. Tandem paddling. 5 Paddling—Class 2. 6. Standing paddling. 7. Hand paddling. 8. Performance by the trick canoeist and his trained dogs, Black and Tan. Races 1 and 2 will be sailed together. Novices are those who have never won a sailing race. The first race will be started promptly at 2 o'clock. Courses for all races will be announced on the day of the regatta. Prizes will be given to the winners in each race. Boats leave the Battery for New Brighton at 12:45, 1:45, 2:45, 3:30 and 4 P. M. Returning leave New Brighton at 3:50, 4:35, 5:18, 5:48, 6:40 and 8:35 P. M. Boats leave the Battery for Tompkinsville at 12:30, 1, 2, 3, 3:40 and 4:20 P. M. Returning leave Tompkinsville at 3:32, 4:12, 4:52, 5:32, 6:12 and 7:12 P. M.—C. K. MUNROE, C. B. VAUX, C. J. STEVENS, Regatta Committee.

A CANOE, which has been but little used, is advertised for sale this week by a Philadelphia canoeist. We are informed that the boat is in excellent condition.

Yachting.

FIXTURES.

Sept. 17—N. Y. Y. C., Brenton's Cup Race.
Sept. 19—Beverly Y. C., Nahant.
Sept. 19—Hull Y. C., Champion Race.
Sept. 19—Pentucket Y. C., Union Regatta.
Sept. 22—N. Y. Y. C., Cape May Cup Race.
Sept. 28—Pentucket Y. C., Championship Regatta.
Sep . 28—Newark Y. C., Open Sweepstakes. Newark Bay.
Sept. 30—Knickerbocker Y. C., Fall Regatta.

THE GREAT RACES.

THUS far five attempts have been made to sail the three races for the America's Cup, the result of which, briefly summed up, are as follows:

Monday, Sept. 7.—Outside race, 20 miles to windward and return. Race started in light wind, and failed to finish in time. Puritan leading all day.

Tuesday, Sept. 8.—A fair sailing breeze. Puritan fouled Genesta at start and was ruled out. Genesta declined to sail over and returned to Staten Island for a new bowsprit.

Friday, Sept. 11.—Race started in a good breeze, E. by N. Genesta leads at start but drops astern as the wind falls. Puritan rounds the outer mark but fails to finish.

Saturday, Sept. 12.—Fourth attempt to start the outside race. No wind up to 1:30 P. M. Race postponed.

Monday, Sept. 14.—Race over New York Y. C. course. Wind light and fluky. Water smooth. Puritan beats Genesta 16 minutes 19 seconds.

"OUR weather" has much to answer for; its reputation has been at stake before the entire yachting world, and its performances during the past week have been such that its credit is gone beyond repair. After a whole season of preparation and expectation, two great nations have been disappointed; yachtsmen have been put to endless vexation and expense, the scribes of the press, to the number of two or three score, have run the entire gaunt of "white-winged flyers," "leashed greyhounds," and other terms supposed to be specially applicable to racing yachts, and have entirely exhausted the stock of "opaline tints," "ruddy sunsets," "dull gray masses edged with a golden glory," and the other well-worn "properties" with which the embryo Black prefaces or concludes his allotted "space," and all for the want of a little wind. Each day for a week the types have been set to record in glowing headlines the victory of the Eastern yacht, Boston has been at a red heat of enthusiasm and patriotism, and New York has not been far behind, fireworks are ready, the restless presses wait eagerly to throw off thousands of "extras," tired children, barefooted boys and girls that should have been at home and in bed for hours, sleep in the doorways of Ann street, Park Row and Washington street, ready to start off with their shrill cries, "Full account of the great race," "Puritan ahead at Sandy Hook," "Genesta leads at the turn." Thousands of people neglect business and even the daily routine of pleasure, to spend a dozen hours on a wheezy tug or rolling steamer, and the result of all is summed up in four words each night, "No wind; race postponed."

How the news that will have so eager for is collected and distributed all over the world is in itself an interesting matter. First, on board of the judges' boat, the tug E. Luckenbach, are twenty or thirty reporters from New York, Boston, Philadelphia and other points, the majority from the former two. As it happens that the tug may not return until midnight, and in a quick race little time is given for more than rapid notes, to be elaborated later on, each of the large dailies is represented by two skilled reporters, most of them starting on their "story" by the light of the galley lamp, as soon as the race is fairly over. As the tug reaches Sandy Hook in the morning one or two reporters for the evening papers are set ashore in rowboats, to find their way to New York as quickly as possible. On board the various excursion steamers the rest file, who pick up any funny incidents and odd happenings that can be twisted into half a column, and on board the club steamer is the accomplished gentleman who does the "sassiety" column, and whose intimate acquaintance with the "dong tong" enables him to tell in an airy and graceful manner what Miss McFlimsy was dressed in, and what Col. Sellers said about the race to Sir Thomas Noddy. On an affair of this kind words are not enough, but an artist accompanies the reporters, and a diagram of the course is hurriedly drawn, perhaps with a few sketches, and as rapidly engraved on wood. One reporter carried a coast survey chart, marking down Genesta's course with a blue pencil and Puritan's with a red one, the time of each tack being noted. One carried a similar chart divided into squares of ⅛ mile each, every square being numbered. A duplicate chart was kept in the Boston office, and the numbers being telegraphed, the course of each yacht from point to point was plotted on it. An evening paper had on hand fifty carrier pigeons, from Newark, New York and Keyport, one being sent away at frequent intervals with a message on thin paper wired to its tail feathers. On reaching home the message was at once telegraphed to the paper in New York. Out of thirty-eight pigeons dispatched in a day only four failed to report. So much for the marine corps; they land between 6 P. M. and midnight and quickly make their way to the newspaper and telegraph offices.

Coöperating with them are the land forces, stationed along the beach from the tall tower of the Western Union on the point of Sandy Hook as far south as Deal Beach, all armed with powerful telescopes and ready to note every movement of the yachts and to wire it to the city. It is from this division that the earliest, though least accurate intelligence is obtained. Something definite is usually known by 5 or 6 P. M. Once in New York the news flies everywhere by wire, under the Atlantic and the English Channel, over the Alleghanies and Rocky Mountains; Boston has it by dinner time, London and Paris have it after the theater, and before the new day has begun that part of the world from San Francisco on the West to St. Petersburg on the East knows who has lost and who has won.

Of course, the excitement centers in New York and Boston; Wall street is comparatively quiet, and the "tickers" speak in a new tongue for a time the language of the sea supplants that of the "Street." Bulletins are as plentiful as in election times, every few minutes a new one is posted in front of each newspaper office, "Special by pigeon post," "Latest from Sandy Hook." One bulletin in the Stock Exchange announced that the race was postponed, to be sailed on Central Park Lake, on Saturday, another that the yachts were then crossing the Boulevard. Everywhere that news could be had were groups of people, and as the day closed the centers of excitement moved uptown to the clubrooms and hotels, the spectators who had been on the steamers mingling with the crowd and telling the story to eager listeners. How many people were afloat on Monday would be very difficult to compute, but there never has been such a turn-out of steam and sailing craft before, even on the occasion of the reception to the Isere.

FRIDAY, SEPT. 11.

The many disappointments had compelled a large number of visitors to return home without seeing a race, and many were unable to leave their business for a third time, but still there was quite a display on Friday morning when the Luckenbach steamed out from the Hook at 11 A. M. On Tuesday there was wind enough for a good race, and it could easily have been made within the time if Genesta had not been disabled. Thursday was rainy with a southeaster and a good sea, but the race had been set for Friday to allow time for repairs to Genesta. On Friday there was still some sea outside and a good breeze from the east in the morning, while the sky was clear and bright with warm weather. Off Tompkinsville Genesta and Ileen were met, standing down under headsails before the westerly harbor breeze. On the big cutter the crew were seen mounting aloft and laying hold of the halliards, the big sail rising quickly as the double rows of men descended until it was set, as flat as any one could wish. Aloft at her masthead flew the red cross of the Royal Yacht Squadron, and at the peak of her mainsail the red and black burgee she has made famous in her home waters. The new stick looked no whit inferior to the old one, in spite of its additional weight of 260lbs., and a remeasurement showed no difference in her trim. On Thursday night a dinner was given at the Union Club by Mr. Philip Schuyler to Sir Richard Sutton, at which several gentlemen from the Puritan were present. They were on the tug on Friday morning and it was necessary to set them, as well as Mr. Padelford and Capt. Ellsworth, on board. After towing Genesta from Clifton to the Romer, where the breeze caused her to overrun the tug, the Luckenbach ran outside, where Puritan was under lower sails. The patch in her mainsail had been mended in a very neat manner, and it was none the worse for it. After putting Mr. Lippincott and Steward Olsen on board the small tug Scandinavian, the Luckenbach ran out to where the Hesper, a splendid specimen of a pilot boat, deep, high sided and handsome, one of D. J. Lawlor's finest boats, was flying about under topsails. On being hailed she dropped a boat, which, well handled in the rough sea running, came alongside and took off Messrs. Forbes, Burgess, Padelford and Capt. Ellsworth. About the Hook were the Dauntless, Vixen, Waterwitch, Albatross, America, Electra, Wanda, Venture, the little Madge with topmast housed, and Atalanta with a big British ensign at her foremast head. At 11 o'clock all were at the Scotland Light, and there seemed every prospect of a race. The wind was none too heavy for jibheaders, but was steady, and there was a short ugly roll to the sea that was considered favorable to the narrow boat. The course given was E. by N. 20 miles, and the Scandinavian was soon steaming away with two logs spinning over her counter. As soon as she had a good start the whistle was blown as a signal to come into position, and both boats took their places to the south of the line, which was drawn from the lightship to the Luckenbach, its direction being about S. E. The usual maneuvering for place followed, and when the preparatory whistle blew at 11:30 and five minutes later the start sounded, as on the first day the whistle found Puritan to windward, crossing near the tug, while Genesta cut the line at its middle, both on starboard tack. They were timed: Puritan 11:35:41, Genesta 11:35:47. Close hauled on starboard tack made the course N. E., both heading evenly. Puritan was trimmed in pretty close, and Genesta too seemed troubled in the same way. The breeze held strong and the sea rolled in heavily, but against them both Genesta stood up and was soon seen to be gaining a little on her opponent. Little difference could be seen in the pointing, but soon a decided difference in speed was visible, and the jet black hull, though still to leeward, was well ahead of the striped one. On they went until near Rockaway, where at 12:40 Genesta went about for a cant off shore, easily weathering Puritan. The latter had slackened sheets and was going faster, but was still some distance astern. Along the beach the sea had gone down greatly and the long roll seemed to trouble her less. Standing across her bows Genesta tacked again at 12:48 and found herself on Puritan's weather bow. At once the latter eased off a little, reaching through her lee and going faster, though falling off of course. At 1 P. M. the water was comparatively smooth save for a long roll, which lasted all day, but bothered the boats much less than the short breaking seas near the Lightship. At 1:16 Genesta went on port tack with Puritan after her. Both crews were seen busy on deck, and soon a club topsail went aloft on the Puritan, set over her jibheader. Genesta, on the contrary, was obliged first to take in her jibheader, afterwards sending up a sprit topsail with her crew on the halliard, but in spite of the lost time her sail was sheeted home more quickly than the Puritan's. After having her own in this tack, Genesta shifted to a balloon foresail at 1:40, but the wind continued to decrease, and as it did so, Puritan gained on her. For an hour the latter continued to improve her position, the conditions being nearly the same as on Monday, light wind and little sea, the roll troubling her but little. At 3:07 she went on starboard tack, being then well ahead and to windward, and at 3:14 Genesta followed her, ¾ miles astern. At 4:10 Puritan tacked off shore again, holding for eleven minutes, when she stood inshore. At 4:50 Genesta parted her topsail sheet, reeving off a new one and changing her sprit for a club topsail, paying off on port tack. The boats were now off the Long Beach Hotel, and a good tide was running in against them, while the lessening wind made their progress very slow. At 4:54 Puritan went on port tack, only holding it for a few minutes. At 5:16 Genesta went on starboard tack, and eight minutes later Puritan tacked again. The wind was now so light that she barely made it, being backed off with her foresail. The mark was now near by, with a group of steamers and yachts waiting near it. The schooner Intrepid was in tow of a tug, having followed the race all day in this fashion. A very strong tide was swinging the buoy homeward and Puritan lay for some minutes barely moving toward it, but at 5:37, with spinnaker boom lowered to port, she turned the mark, in the midst of a horrible din from fifty steam whistles. The spinnaker was at once sent aloft in stops but was badly handled, being taken in once, and over two minutes passed before it was set. Only an hour was left to drift 20 miles and the committee resolved to call the race. Genesta was taken in tow at 6 P. M., and the Scandinavian picked up the mark, passed a hawser to Puritan and the fleet started home, the steam yachts and fast steamers in the van, then the other steamers, and last the two tugs with their tows. Genesta was dropped inside the Hook and Puritan at Stapleton, and at 10:30 P. M. the Luckenbach landed her tired passengers at Pier 3.

SATURDAY, SEPT. 12.

Again the weatherwise attempted to strengthen their reputations with the oft repeated boast, "A fine breeze from the south'ard in the afternoon," but there were no takers. As the Luckenbach passed down on Saturday morning with Genesta in tow there was a flat calm, a smooth sea, and a blue sky with light gray clouds across it, the lightship swinging lazily at anchor, and a group of vessels, smaller now than on Monday, sailing or steaming around. From 11 to 1 the same monotonous game continued, only broken by the incident of a huge steamer, the Assyrian Monarch, going some distance out of her course as she passed out to cheer Genesta three times; a salute which Sir Richard Sutton acknowledged from the stern of the yacht. About 1:30 a light breeze did spring up, and the prophets who had quietly disappeared, again bobbed up serenely with the same old song of "More wind from the south'ard." The Committee decided to call the race and blew the whistle vigorously, but when Genesta came alongside her owner objected that the course given, due south, was not to windward, and also that so late a start in a light wind would make the finish, if at all, late at night. The Committee decided to postpone the race again and a line was passed to Genesta. The decision suited the Puritan's owners as well, as the prospect for a race was very slight. When up by the Hook the schooner Norseman, which had been in tow of a tug all day, was discovered aground on the False Hook. Leaving Genesta for the Scandinavian to pick up, the Luckenbach went to Norseman's assistance. After getting aground herself she finally passed a hawser and towed off the schooner. At Tompkinsville Messrs. Tams, Schuyler and Stebbins boarded the Genesta, and after a consultation with Sir Richard Sutton decided to sail the inside race on Monday, the windward race on Tuesday and the third, if required on Wednesday. Puritan went on to the city, where she hauled out on the screwdock for a new coat of pottead. The wind, after freshening for a time, died down, so that had they started no race would have been made.

MONDAY, SEPT. 14.

At last, after so many delays and disappointments, a race for the Cup has really been decided, the course of 38 miles being made in a little over 8 hours, and well within the limit. After the postponement on Saturday, Sir Richard Sutton agreed to sail the inside race, over the New York course, on Monday, although it had been specially agreed from the first that an outside race should be sailed first. Four attempts to do this failed, as we have recounted, and in the order of things the race naturally went over to Monday; but the club had made all their arrangements in advance, to enable the members and friends to see the inside race, while many who were able to attend but one race had made up parties and engaged boats for Monday also. Under these circumstances, Sir Richard Sutton consented to the change, and it was agreed to start at 10:30 on Monday. After a good scrub on the screw dock on Saturday evening, Puritan was lowered at midnight and towed to her moorings, lying there all day Sunday, Genesta being just above. A fine breeze came in from S. W., mocking with its puffs and flurries the tired yachtsmen who had wooed it in vain for a week. On Monday morning it still blew, but with lessening force, striking over Clifton hills into the Upper Bay, and at times hauling more to the east and coming on end up the Narrows. Of course, the "wind from the south'ard" fiend was on hand again, but he made his suggestions in a mild and deprecating way, with an air of doubt and apology, too, so that he deceived few. Nearly every morning the light harbor airs had given a promise that failed of its fulfillment, as they are often quite fresh inside, with a calm outside the Hook.

The start was ordered for 10:30 opposite Owl's Head, but long before that the entire Bay was crowded with craft of all sorts. There were fewer large steamers than on the Monday previous and those present carried but few passengers. Many of the Boston yachts had gone home, but still there were steam and sailing yachts on every hand, and tugs and small steam craft beyond number. Just below Buoy 18, in charge of Captain Jake Schmidt and Sailor, his big brown dog, was the sloop Alice with the New York Y. C. flag aloft above a gay string of small colors from truck to bowsprit and taffrail and in addition a faded old flag with a history of its own, its dingy yellow or green ground bearing a device, a tiger's head surrounded by a broad band or circle, the flag of the notorious Americus Club, once ruler of New York. Two hundred yards west of the Alice the Luckenbach cast anchor at 10 A. M. and signaled to the yachts. On board of her were Messrs. Tams and Stebbins of the Committee, Mr. Appleton, of the Eastern Y. C., and Mr. Bayard, of the S. C. Y. C., who assisted in timing; Dr. Woodbury, the representative of Genesta, a few members of the N. Y. Y. C. and a number of artists and reporters. On board of Genesta were Sir Richard Sutton and Sir William Levinge, Mr. J. Beavor Webb, Mr. William Krebs, representative of Puritan, Mr. Edward Padelford, Mr. Edward Lapthorne, and Captain Hunter. On board of Puritan were Messrs. Paine, Burgess, Forbes, Welsh, Richards, Busk and M. R. Schuyler, the latter as representative of Genesta, Captain Joe Ellsworth acted as pilot and Captain Crocker was in command.

Both boats left their moorings with jibs in stops, breaking out quickly, and worked up with the tide above the line, moving slowly in the light air. Both carried club topsails and lower sails. It was 10:10 when the call was blown and soon both were maneuvering above the line. Genesta made no special effort for a weather berth but boxed about a little to leeward of Puritan, finally setting a small jibtopsail when near the line. There was hardly wind enough to allow any close maneuvering, and when the starting whistle blew at 10:30 both were some distance above the line. Paying off slowly on the starboard tack they ran down evenly, Genesta a little to leeward, as in all the other starts. Two minutes only was allowed, and it had all but elapsed when they crossed together at 10:32.

With a strong flood on their weather bows they stood on starboard tack until near the Long Island shore, Genesta lowering her jibtopsail, and at 10:37 they made the first tack together, Genesta leading. Standing now across the tide Genesta outran Puritan but was undeniably going to leeward, up the Bay, while the other's course lay straighter, in toward Clifton, and she held to windward better. Again Genesta led the tacking, going about at 10:46 with Puritan directly after. As usual Genesta was about and away instantly, while Puritan was very slow in stays. This leg lay along the Staten Island shore, the wind being very light under the hills. Genesta ran up a large jibtopsail at 10:52, and at once showed an increase of speed, but four minutes later Puritan followed suit and set hers, and again left her rival slowly but surely. Close astern came the motley fleet that had been spread over the bay, now converging to the Narrows. The progress was very slow, but at last Puritan took a free puff from over the hills above the Quarantine grounds and ran away out of the Narrows, passing the forts at 11:05. Genesta had not the wind for some time, and was just five minutes astern when she passed out. Still on the starboard tack they moved slowly down, the distance remaining the same, but when below Dix's Island Puritan caught a flaw from S. E. that set her headsails fluttering, and threatened to throw her aback and on to port tack. Genesta, astern, was now closely pressed by the fleet, a steam yacht running on her weather side and the big steamer H. F. Baya in close proximity to leeward. At 11:40 the wind had left her completely and her sails were shaking, but a few moments later they felt a slight wind on the port side which promised to put her to leeward of the steam fleet, and in a very bad position. The wind dropped entirely, however, and both she and Puritan were nearly motionless until noon, when the morning breeze again came up from the old quarter, S. W.

At 12:08 Puritan went on port tack, standing to the west to clear buoy 14, and at 12:17 Genesta followed her, after standing well down by the buoy. Immediately after, at 12:18 Puritan came on starboard tack again with a long lead to her credit, going about again at 12:32, just as Genesta went on the starboard tack. Another tack by Puritan at 12:40 showed her ahead and well to windward of Genesta. At 12:51 the Boston yacht again went on port tack, going about very slowly, and after holding it for ten minutes, tacked to the east again. At 1:05 Genesta went on starboard tack, and it was seen that she had improved her position greatly since passing the islands, being closer and less to leeward of Puritan. At 1:07 Puritan made her last tack for buoy 10, about which the fleet were grouped, with many new arrivals from the Horseshoe, all greeting her as she turned and fell off a little for buoy 8½. The times at buoy 10 were:

Puritan	1 16 22	Genesta	1 19 25

Thus Puritan was 3min. 3sec. ahead, in place of 5min. at the Narrows. Genesta at once set a balloon foresail, and into it there came a bagful of wind, driving her along, while Puritan now felt it too. Both were timed at buoy 8½:

Puritan	1 19 33	Genesta	1 23 12

Now began the only work that could be called racing in all the five days, the wind came fresh out of the S. W., and both yachts bowled along, Puritan with scuppers awash and Genesta with lee rail down, much in the position shown in the well known photo. Her balloon foresail was sheeted in to the main boom, but she soon found it of little use and shifted to plain foresail again. Outside there was a little tumble, nothing to bother either boat, while the freshening breeze hurried them along at a pace they had not reached before in any of the races, Genesta moving with more life than she has yet shown. The times at buoy 5 were:

Puritan	1 31 00	Genesta	1 35 35

Of the two the wide boat seemed the steadier and less troubled by the slight roll than the narrow one, in marked contrast to the experience with the smaller cutters and the old sloops. Out to the Sandy Hook lightship was a reach, and the course in was the same, a soldier's wind for the seven miles each way. A number of vessels were waiting at the turn, but it was seen that there would not be time to run the full distance, so the Luckenbach stopped half a mile away, in a position to time both boats. On came Puritan, her sails showing a slight yellow as the sun shone through them, in contrast to the darker shades of Genesta's hemp. The white bulwark showed its curve above water, and the white stern stood out in relief from the dull gloss of the sides. Luffing up, she left the lightship on the starboard hand, and was quickly off for home, among an infernal din of whistles that gladdened the heart of every steamboat man, from captain to messboy, on the whole Bay, surpassing as it did even the wildest flights of Wagnerian fancy. The times at the lightship were: Puritan 2:14:54, Genesta 2:19:16, a difference of 4min. 22sec., a gain of 13sec. for Genesta between buoy 5 and the ship. As soon as Genesta rounded the fleet steered for home, such a motley crowd of boats as has never been seen in the harbor before.

The wind held steady but a little more ahead as the boats hurried in, their positions changing little on the reach to buoy 5, where they were timed:

Puritan	3 04 35	Genesta	3 09 13

The difference is 4m. 38s., or a gain of 3s. for Puritan in the 7 miles from the turn. No official times were taken at buoy 5 in either direction, but these times were taken on the judges' tug as the boats hulled at buoy 5 and are quite accurate. They show that the difference in sailing was really nothing. When they reached at buoy 5 the exciting part of the race was over, the wind dropped, and at no time for the rest of the course was there a fair sailing breeze. Outside the Hook, Gracie came out to meet the fleet. Far up in the Horseshoe was a mosquito fleet of catboats and small craft, and at buoy 10 the big boats halted also.

As Puritan came in the wind fell, and the strong ebb tide from the Shrewsbury was met off the point of the Hook. At 3:23 Puritan stood inshore on the starboard tack to weather buoy 8½, tacking again at 3:27. Genesta had held further to windward coming in, but she, too, tacked at 3:27:30 for the Hook, going about again at 3:31:30. Both moved very slowly against the tide, with barely a capful of wind to help them along.

Buoy 8½ was turned:

Puritan	3 33	Genesta	3 42

Puritan now came for buoy 10, taking in jibtopsail as she neared and breaking out a big balloon jibtopsail in its place. Another wild howl from the assembled steam whistles, and she was around and on her last leg for home, with spinnaker boom dropped, but only under mainsail, clubtopsail, foresail and balloon jibtopsail. The wind was still so light that there were fears that she could not cover the last eight miles in the two hours remaining to her. The times at buoy 10 were:

Puritan	3 38 05	Genesta	3 46 05

Genesta had lagged badly in the light airs by the Hook, and now there was no chance of her catching up, as the wind was still very light. Once around she set her spinnaker, but it seemed of less service than Puritan's balloon jibtopsail, and when by the lower island she sent up her big balloonser, soon after taking in her spinnaker.

When Puritan, slowly stemming the ebb tide, came up to the finish, the entire Bay was thick with boats. The Grand Republic, Columbia, Taurus, Baya, Eliza Hancock, Laura M. Starin, and a host of other steamers; tugs by the hundred, and the steam yachts Polynia, with Mr. George L. Schuyler on board; Atalanta, Utowana, Electra, Norma, Cora, Corsair, Stranger, Falcon, Ocean Gem, Adelita of Boston, Tillie Theresa, Ladoga, Radha, Magnolia, Sophia, of New Haven; Wanda, Orienta, Viola, Sentinel, Vision; the schooners Dauntless, Ruth, Montauk, Clytie, Dreadnought, Sylph, Intrepid, Norseman, Wivern, Clio, Estelle, Wanderer; the sloops Gracie, Fanny, Arrow, Vixen, Kelpie, Eclipse, Penguin, Iola, Truant, Venture, Gaviota, Enterprise, Wizard and a whole fleet of smaller ones; and the cutters Bedouin, Ileen, Stranger, Clara, Madge, Muriel, Isis. One steamer, the Meizingah, carried big canvas signs on each side, "Moderation Society." On the forward deck was a field gun and the members indulged in an immoderate amount of noise, besides sending up rockets with paper figures and also balloons. A big tug carried the members of the Produce Exchange, under the sign, "Produce Exchange Yacht Club." One sloop with a party on board, was only half completed, no deck being laid and only part of a bulwark on, but she was rigged and canvassed and her crew saw the race. Right in the course of Genesta on the finish line laid a nondescript with rusty paint and mildewed canvas that ran up an Irish flag as soon as Puritan had finished.

About the line vessels were packed so closely that an active man could leap from one to another for a quarter of a mile. Dirty, smoky little tugs discharged cinders over the decks of stately schooners, pert little catboats bumped against the glossy sides of the yachts, but everywhere good humor prevailed. Inside the buoy was a fleet of rowboats and small craft at anchor, and the heights of Fort Tompkins were black with a crowd of sightseers. A White Star steamer came by in time to have a look at the finish also. Through the mass of vessels a narrow lane was kept open with difficulty, and up it, slowly and grandly, sailed Puritan with barely wind enough to fill her sails, and astern among the fleet Genesta was also visible. Over the line went the Boston boat, greeted first with a cheer, and then, all at once, every whistle opened its brazen throat and howled itself fairly hoarse, while the bells added a discord of their own to the general clamor, and the cannon on all the yachts helped the uproar. Right at her heels the fleet ran on, over the line and regardless of Genesta, and it was with great difficulty that a passage was cleared for her. Slowly and soberly she moved on, crossing the line at last with a welcome only a shade less demonstrative than the victor received. Her balloonser came in and a line was passed to the tug and she went up the Bay to her anchorage. When abreast of Puritan the tug stopped at Sir Richard Sutton's request, and he led his crew in cheering loudly for Puritan. The crew of the latter ranged themselves along-

side and Mr. Forbes led off in a hearty cheer for their plucky antagonist. The times of the finish were:

Puritan ..... 4 38 05 Genesta 4 54 52

The full times were:

	Start.	Finish.	Elapsed	Corrected.
Puritan	10 32	4 38 05	6 06 05	6 06 05
Genesta	10 32	4 54 52	6 22 52	6 22 24

The allowance for the 38-mile course was 28sec., so Puritan wins by 16min. 19sec.

The race confirms the opinions of most of those who have witnessed the previous sails of the yachts, that Puritan is faster and will sail closer in a very light breeze. Inside the Hook, both going out and in the calms and tides made the race very unsatisfactory and uninteresting, the flukes preventing a close race; but taken with the sailing for five days, all in light airs, there is no doubt of Puritan's superiority in such weather. Twice only since the boats have met they have been seen in a breeze that could be called fresh: once on Friday, when Genesta left Puritan easily as long as the wind lasted, and on Monday when outside the Hook. For fourteen miles, seven miles out and back, both yachts had a true wind that drove them at a rate of about ten miles per hour, and served each equally well, the course both ways being a reach. Under these conditions the difference in fourteen miles was measured by a few seconds.

Both boats have been excellently handled, Puritan displaying greater skill at the start, while in setting and shifting sail the odds are rather in favor of Genesta. With the courses sailed there have been but few changes in the canvas from start to finish, no reefing, only two or three times has a spinnaker been set, and the only sails touched have been topsails and jibtopsails. Great as the satisfaction has been thus far over Puritan's victory there is a general desire to see a more conclusive test than has yet been afforded. Good feeling has been apparent everywhere, and even the most obstinate of the sloop men have cheerfully conceded the excellence of the British boat, and unite in admiring the sportsmanlike conduct of her owner, and in wishing him some reward after his long and plucky journey.

Wednesday, Sept. 16.

The postponed ocean race, twenty miles to windward and return, was finally sailed yesterday, Wednesday, Sept. 16, and resulted in a second and the decisive victory for the Puritan.

At length the wishes of yachtsmen have been gratified by a race, in which the qualities of both boats have been really tested; their long and by no means patient waiting has been repaid by a breeze such as both parties desired; a race has been sailed such as has never before been witnessed in America, if in the world; a contest between the picked men and boats of the two nations that place yachting first among their national sports; the question of beam has been fought squarely in a fair breeze and in open water: and the wide boat wins. Not by a large margin, not by any flukes on either hand, but she crosses the line after 50 miles of hard sailing, a winner by less than two minutes. America may well be proud of the victory. But though unsuccessful, England need in no way be ashamed. The spirit and pluck that have brought Genesta 3,000 miles and raced her so generously and so boldly have been appreciated by all Americans, and Genesta and her owner have both won a high place in the opinion of all.

Curiously the issue has really been determined by one race, as that of Monday can hardly be considered conclusive in itself. These races will upset a number of well established ideas, both of sloop and cutter men, as to the relative performances of wide and narrow boats. Had any one said, three weeks ago, that in a run of 20 miles in smooth water and a good sailing breeze, with spinnakers set, a narrow and deep boat would beat a wide and comparatively shoal one, the latter a centerboard, he would have been laughed at by all; and on the other hand, had he asserted that in a heavy wind and sea, with topmast struck, the wide boat would beat the narrow one, he would have been considered as still more foolish. This, however, has been the case in the present race. From the Lightship out 20 miles in a wholesail breeze, so nearly dead aft that one boat carried her spinnaker to starboard and the other hers to port, Genesta beat Puritan 1m. 21s. Home in the teeth of a hard and steady N.W. wind with a lively lop of a sea, two long legs and one short one, Puritan turned the tables on her narrow adversary and beat her 2m. 30s.

After a southwest wind on Tuesday there came a thunder squall in the evening, clearing away before midnight, with a light breeze from the northwest that still held next morning. After a delay of half an hour waiting for Mr. Olsen with a big tin sphere to take the place of the flag on the weather mark, the Luckenbach started for Sandy Hook. Only the Wm. Fletcher, with the Seawanhaka C. Y. C. flag aloft, and the iron steamer Sirius went down with her. Genesta had made temporary repairs to the trestle trees, a lashing being added. On Tuesday morning Puritan's jib had been recut on the foot, the continued dry weather having affected her sails as well as Genesta's. Both yachts sailed down and were off the Hook when the tug ran out.

The day in itself was a perfect one for an excursion on the water, though few were out to enjoy it. The bay was smooth, with a deep green tinge to the water, a light haze whitened the horizon at a distance, merging gradually into the softened blue of an absolutely cloudless sky, while the slight chill of the northerly wind tempered the sun's heat very agreeably, in marked contrast to the hot and close weather of Tuesday. A few schooners were standing in to Sandy Hook Bay and the Shrewsbury, but the anchorage inside the Hook was deserted. A pilot boat, some fishing sloops and a square-rigger out seaward were the only vessels in sight, except the yachts that were under sail outside and near the rendezvous.

Mr. Centre went aboard of Genesta, and Dr. Woodbury joined the Committee on the tug. The course was given, E. S. E. Mr. M. R. Schuyler was sent on board Puritan, and the course given. The tug ran to the line, sounding the first whistle as she anchored, at 10:45. There was wind enough to allow the boats to work nicely, and the maneuvering for place was the neatest yet seen, though this time a weather berth was less important.

Genesta, to windward of the tug, described a semicircle on port tack, from west to east, jibing over, while Puritan on starboard tack made a smaller circle inside. After jibing, Genesta stood on under the tug's stern at gun fire, and crossed the line diagonally at 11:05:16. Puritan held on starboard tack, easing sheet, and crossed at 11:06:01, to windward of Genesta's course. Genesta dropped her spinnaker boom at once to port and set her spinnaker flying. Puritan went over with spinnaker breaking, and instantly her big balloon jibtopsail followed. She steered a course a little to windward of Genesta. Both caried clubtopsails, of course, in addition to lower sails.

The difference in time of crossing was 45sec. in favor of Genesta, which, deducting her allowance of 31sec., made the difference needed at the finish 14sec.

While all were watching the start a fleet had gathered suddenly, until there was quite a respectable flotilla astern, four or five large steamers, the Richmond, Sirius, Fletcher, Grand Republic, H. T. Baya, and a number of tugs, steam and sailing yachts.

Genesta, carrying her largest spinnaker, led by about 250yds., while Puritan carried a small spinnaker. The former's held its hard rounded shape, while the Boston boat's lifted continually with a back draft from the ballooner, which was soon taken in.

At 11:36 Puritan had nearly overhauled the leader, making for her lee from the start, and a little later, when abreast of the Sandy Hook Lightship, she had a slight lead. Both foresail and balloon jibtopsail had been taken in before this, but still her spinnaker was not doing its best; and a hand was sent aloft at 11:35 to clear a few stops yet holding the head. Genesta meanwhile had set a small jibtopsail that was doing good service, in addition to the steady pull of her bellying spinnaker.

The water was smooth, the catamaran Ægir being perfectly at home with the fleet. Both of the boats sailed steadily, standing upright and with no pitching.

By 12 o'clock the boats were nearly even, Genesta about one-quarter mile south of Puritan. While both were steering the same course and with the same wind, at 11:58 Genesta's crew were seen aloft on the topsail halliard, and a minute later her spinnaker came in. It was 12:01 when her boom went over. 12:03:30 when the spinnaker boom dropped to port; and 12:05 when the spinnaker, set flying, was sheeted home, or six minutes from the time halliards were started until the spinnaker was full. At once an improvement was noticeable in her speed, she pulled ahead, while Puritan's sail was helping her much less to starboard.

The great difference in the appearance of the sails was more plainly noticeable, perhaps, than at any other time during the races. Puritan's, with the sun brightly on them, shone out with a very pretty light yellow tint, at times almost a lemon yellow. Genesta's hemp had a rich pearly tinge, with a high gloss, the huge spinnaker standing out hard and solid as an immense billiard ball, looking as smooth as if starched and ironed. While Puritan's spinnaker was fluttering and lifting all the time, Genesta's was towing her like a huge balloon.

The wind eased a trifle to the north, which made the course a trying one for Puritan; but it soon came back again, blowing with about the same force as at the start, and with the water still smooth. Steadily the Genesta forged ahead and was now leading perceptibly. The motions of the boats were very even, neither see-sawing any.

At 12:40 several of Puritan's crew were sent aloft, and at 12:52 her topsail came down. At 12:44 Genesta started her topsail sheet, but it was 12:50 before the sail was on deck. By 12:52:30 the sprit topsail was up and drawing in place of the club.

Both boats were now nearing the mark. Out to leeward was the float with a red ball above a red flag, the tug lying near, with the big steamers and steam yachts waiting for the turn.

Genesta came for the buoy with a good lead, at least ¼ mile. At 1:02:00 the spinnaker came in and the pole was stowed on deck. Now all hands on the mainsheet. "Haul away handsomely," and in comes the boom, going over at 1:05:30. Now she heels until the copper shows on her bilge, and with a beautiful sweep she is around the buoy, closely shaving it, and then she lays off on starboard tack for the first leg of the long way home. The whole maneuver was beautifully done, the distance being calculated with the utmost nicety, and from the time her spinnaker halliards were started until she was down to work again, with all hands under the windward rail save Carter, erect at the stick, nothing could have been bettered.

Puritan had taken in topsail and spinnaker some distance above the mark, running down under lower sails only, which cost her a lit le time. It was not necessary for her to jibe as her boom was already to port. At 1:07:30 she hauled in her mainsheet and started in Genesta's wake.

The times at the turn were:

Genesta ..... 1 05 30 Puritan 1 07 36

Here was something that must astonish all. Down wind, in smooth water, with a strong breeze, the narrow boat had beaten the wide one 1min. 21sec. No great amount, truly, in boats of the same length; but it was expected by all that the result would be greatly the other way. Her easy form and small beam had carried 150 tons displacement quicker and with less sail than beam and shoal draft had carried 105 tons, the odds being in favor of the wide boat with board up.

Somehow, when once around, it was seen that the wind had freshened greatly, and when fairly butting into it there was quite a respectable sea coming up. The tide was going to leeward, cutting the boats back, but with this wind it made little difference. Here at last was the weather that all had been looking for, a lower sail breeze, a tumble of a sea, and a match at windjamming. The opportunity had arrived.

The chance for the wished-for trial has been made, and one side has won. Why and how must be left to a later date to consider. Now time allows us to deal only with the actual facts of the race.

Both were now settled to their work, lee rails down, sheets hardened, booms to port, crew under weather rail. Genesta still carried her sprit topsail over lower sails, while Puritan's upper stick was bare of canvas.

The course lay in toward the Jersey beach, 25 miles away. Genesta was well ahead, Puritan in her wake, and it was very interesting to compare them.

From the first there was a gain in footing on the part of Puritan. She seemed, and as events proved, she did go through the water more rapidly.

In pointing the difference was also in Puritan's favor, as she looked up closer, but Genesta held on much better than in light weather. In the previous sailing, while they were pointing equally, Genesta seemed to slide to leeward; but even though she heeled more on this occasion, she held to windward much better.

The rougher water had little apparent effect on either as yet. As the seas struck the weather bow of the judges' tug, they sent a good shower of spray over the forward deck, but the yachts went along easily to all appearances. Puritan seemed to rise and fall a little more than Genesta, whose motion was very slight.

At 1:23 Puritan went on port tack and stood in toward the Long Island shore, Genesta at once after her. The latter still held a good place to windward, but Puritan had already made up much of the distance between them.

At 1:26 Puritan housed her topmast, for the wind was still rising, and the sea was heavier as they ran into it. Genesta started to shift topsails at 1:35, lowering her sprit topsail, which she had carried thus far, and at 1:41 sheeting home a jibheader. It is doubtful whether this sail aided her much, as it was shaking nearly all the way in, and she would probably have done better with topmast housed.

Puritan was still gaining in the footing more rapidly than to windward, though even here the gain was all on her side. They held the leg in to the Long Island shore, the wind coming harder all the time, while the seas that at first had been only spray over the tug's bitts, were at 1:30 coming in heavy showers over the forward deck, and at 2 P. M. they were throwing spray to the top of the smokestack and a drenching mass of water soaked the lookers on who stood outside the pilot house on the upper deck.

Genesta was now going steadier, while Puritan toed and heeled to the seas, which came over the weather bows of both. At 1:45:00 the Highlands loomed up on the port bow of the tug.

At 2:15 Genesta went on starboard tack, and Puritan followed at once. The course was now W. N. W., on which they could weather the lightship, and Genesta's chances looked better.

Puritan had stood on further than necessary, as it afterward proved. At 2:45:00 she looked to be nearly a mile to windward with Genesta about abeam.

The excitement increased on all of the following steamers, as it was seen that the finish must be very close. As they were now, Puritan stood the better chance, but any error or accident would change the result. When within four miles of the finish the sea was much lighter, and Puritan's speed increased in proportion.

At 3:36:00 she eased off, now being dead to windward of Genesta, coming down on the latter and dropping literally on top of her, less than two lengths on her weather bow.

At 3:46 Genesta made a bold luff for Puritan's weather quarter, but dropped off again, only to try it again a moment later. Puritan met her each time, and Genesta was obliged to fall into her wake.

Now came a beautiful sight, a luffing match between the two flyers, Genesta working sharply out, taking a place on Puritan's weather beam, and holding it for a short time, but finally dropping astern again.

Steadily now the wide boat gained the smoother water favoring her. The line was but a short distance away. The Luckenbach lay a short distance from the lightship, with a fleet in attendance, and at 4:09:15 the whistles greeted her as she went across, winning the fifth series of races for the America's Cup.

Only 1m. 24s. behind her came Genesta, a wonderfully small margin for such a race of 50 miles. The times were:

Puritan ..... 4 09 15 Genesta 4 10 39

This is a difference on the windward work of 3m. 30s. in favor of Puritan, while the difference in time over the entire course is 2m. 9s., which the allowance reduces to 1m. 38s.

The following were the times:

	Start.	Turn.	Finish.	Elapsed.	Corrected.
Puritan	11 06 01	1 07 36	4 09 15	5 03 14	5 03 14
Genesta	11 05 16	1 05 30	4 10 39	5 05 23	5 04 52

The Puritan thus wins by 1m. 38s.

The great race has been won and lost, but the outcome, though disappointing to many, has many features that must be pleasing to all yachtsmen. First of all the races from the first challenge to the ending yesterday have been conducted in a fair and sportsmanlike manner, creditable to both sides. Sir Richard Sutton by his conduct and Genesta by her sailing have done much to change public opinion here in regard to English yachts and yachtsmen, and at the finish yesterday the bulk of the cheering was for Genesta.

Boston has every reason to feel proud both of the spirit that led to the building of Puritan and of the brains and skill that have placed her first among American yachts. Such a victory is in itself a great reward for her designer, but Mr. Burgess may well congratulate himself that he has not only built the first compromise boat that has proved fast but that his boat will take a place second only to America as being the first of a new and better type.

The entire series of races have been most interesting, and many ideas and theories have not stood the test. Even the oldest and wisest have been astonished; facts have been brought out and theories enunciated which will afford ample material for study, both here and abroad, for a long time to come.

The following bulletins give the progress of the race through the day:

9:55 A. M.—Wind is now settling in the southwest, and increasing. The yachts are now nearing the lightship and the Luckenbach is now in the Swash Channel, steaming out. Prospects for a race are good.

10:10 A. M.—The wind is now blowing 14 miles per hour. The judges' boat is passing out to the lightship, where the yachts are already waiting.

11 A. M.—The preparatory signal has just been given. Wind west, 14 miles per hour; sea smooth.

11:05 A. M.—The wind is increasing, and is now blowing 15 miles an hour from the northwest. The start was made from the Scotland lightship, the yachts heading east-southeast.

11:08.—The Genesta crossed the starting line at 11:05:16, the Puritan at 11:06:01.

11:13 A. M.—The Puritan is gaining on the Genesta.

11:23 A. M.—The yachts are now off the Sandy Hook lightship. Their positions remain about the same as at the start. The wind is blowing sixteen miles an hour from the west to northwest. The weather is clear.

11:40 A. M.—The yachts seem to be in the same position. The Genesta leads a little.

11:46 A. M.—The Genesta is leading the Puritan somewhat now.

At noon the wind was blowing 24 miles an hour from W.N.W., and the weather was fair. The Genesta has jibed over and set up her spinnaker on the other side.

12:15 P. M.—The hulls of both yachts are now out of sight. It is therefore impossible at this point to tell which has the lead, but the impression is that the Genesta is ahead. The tide is now against both yachts.

The yachts have now covered about 14 miles of the outward run, and keep well apart with the Genesta still in the lead. The wind is northwest. Weather cloudy.

At 12:35 o'clock the Genesta has jibed over on the port side. The wind is blowing west-northwest, at 24 miles an hour. The boats are getting a thirty-mile-an-hour breeze. Half of the outward course has been sailed.

The Genesta turned the stakeboat at 1:05:30; the Puritan at 1:07:36.

HIGHLANDS, 1:12 P. M.—The Puritan has had her topsails down for some time. The reason is not known.

1:30 P. M.—Both yachts have gone about on the port tack, standing northwest. The Puritan has no topsail set yet. Wind 25 miles per hour.

1:50 P. M.—The Puritan leads the Genesta.

2:15 P. M.—Both yachts still on port tack standing northeast. Puritan about 1 mile ahead.

SANDY HOOK, 2:25.—Both yachts have gone on starboard tack, th Puritan is ahead and has not yet set her topsail.

2:48 P. M.—Wind thirty-seven miles an hour. An unknown cutter yacht has lost her bowsprit and is signaling for a tug.

2:48 P. M.—Both yachts east of Sandy Hook Lightship. The Puritan one mile to windward.

3:05 P. M.—The Genesta has every sail set, but for reasons unknown the Puritan fails to set her topsail. The crew on the latter appear to be engaged in making efforts to that end.

3:10 P. M.—The yachts are now on the last tack and are about even. Wind 29 miles N.N.W.

3:20 P. M.—Both yachts are now about two miles northeast of Sandy Hook Lightship. It is impossible to tell which is ahead, but the Puritan is to windward.

3:22 P. M.—Both yachts are now standing in from eastward, about eight miles out. They are on the wind, two miles apart, the Puritan to norhward and leading apparently. The Genesta carries small topsail. The Puritan under lower sails only; blowing stiff; race will finish in less than an hour.

4:10 P. M.—The Puritan wins, crossing winning line at 4:09:00, the Genesta at 4:10:15.

NEW YORK Y. C.—The races for the Bennett and Douglass cups, over the triangular course, from Sandy Hook lightship, will be sailed to-morrow, Sept. 18.

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

ABBEY & IMBRIE,

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the immediate publication of a magnificent folio volume, bearing the above title. This book is intended to cover the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with numerous illustrations inserted in the text; and there are sixty-three plates as follows:

LIST OF PLATES.

I. The Sloop Yacht Schemer.
II. The Nuckel.
III. The Windward.
IV. A Newport Catboat—Portable Catboat.
V. An Eastern Catboat.

T. H. CHUBB'S

"Henshall" Split Bamboo Bass Rod.

This cut represents our "Henshall" Split Bamboo Bass Rod, length, 8 feet 3 3-10 inches; weight 8 oz. This rod has extra tip, light wood hand-grasp whipped with cane. Metal reel seat, or reel bands, as preferred. Hexagonal cap ferrules, with welt, no dowels, anti-friction tie guides. Three-ring tops, nickel plated trimmings fastened on. These rods are all ready for use, with the exception of winding and varnishing, for $7.50. This rod is made according to the dimensions given us by Dr. Henshall, and is indorsed by him as a "Standard Henshall Rod." Above rod with German silver trimmings, instead of nickel, $9.25. Send for catalogue of Trout and Bass Fly Rods, also Amateur and Rod Makers' Supplies, to

AIR GUNS PRICES: $6, $9, $10, $12, $15, $18 and $20.

FOR PROFIT AND PLEASURE.

The gun shown above is our **NEW COMBINATION AIR GUN.** This is the most complete arrangement ever offered. It combines two pieces in one (a perfect Rifle to shoot a regular .22-100 cartridge, and a superior Air Gun to shoot darts, slugs and shot). It can be instantly changed from one to the other, and has a steel barrel rifled. All the parts extra heavy, and so constructed of best material to stand continuous service, making the most durable gun manufactured, and by far the most practical long-range Air Gun ever made for gallery or field. WE MANUFACTURE A FULL ASSORTMENT OF AIR GUNS SUITED TO MEET THE TASTES AND WANTS OF EVERY ONE. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the United States Navy to place them, with success, on their school ships. Illustrated price lists sent upon application. Address

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

PIEPER

Nos. 586, 588, 589 and DIANA.

There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

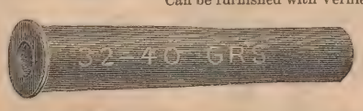
SCHOVERLING, DALY & GALES, Sole Agents.

Wholesale Dealers in Guns and Gun Goods.

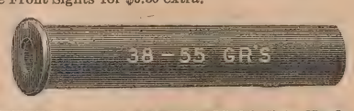
84 & 86 CHAMBERS ST., NEW YORK



The NEW MARLIN .32 and .38 Rifles, 7½lbs., kill twice as far as any other of same calibers. The DALY HAMMERLESS captured the Illinois Diamond Badge again this year.

The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand. It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**



Prices: No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches..... $37 50

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

HUNTING!

This boot will give better satisfaction for all-round work than any covering yet invented for the feet. Double uppers, water-tight tongue at instep, snug adjustment at top, giving symmetrical application to conformation of foot, ankle and calf, and contributing thorough comfort, protection and warmth. Will not chafe the heel or ankle. The seams are rubber cemented before being stitched; the tongue is thoroughly waterproofed; bottoms put on with welt and hand sewed; no screw-nails used as in the cheap imitations. Thorough work and fit guaranteed.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages Price $1.00.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

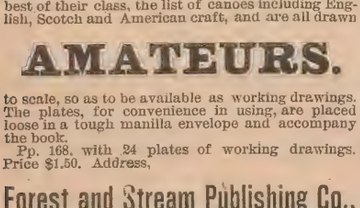
The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn



AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

Prices, from $10 to $15 each if taken before 10 wks of age. Address MAPLE KENNELS, Patterson, N. Y., on Harlem R. R. sept10,2t

BULL TERRIER PUPPIES FOR SALE.—BY Dutch, Jr. out of Young Venom (dam of several prize winners in England, including two Palace winners, and champion Little Maggie in New York.). Price $40 each. Address E. LEVER, 906 Walnut street, Philadelphia, Pa. sept17,2t

FOR SALE OR EXCHANGE — A BROKEN setter 5 yrs. old, retrieves and knows his business. For particulars write RAYMOND RUDD, Glenville, Conn. sept17,3t

FOR SALE.—HAVING RECENTLY ADDED several fine brood bitches to the Landseer Kennels of Scotch deerhounds and greyhounds reduced the price of puppies. Some choice greyhounds now ready to ship. DR. VAN HUMMELL, Denver, Col. apl16,tf

DOGS. DO YOU WANT TO BUY A FINE bred dog of any kind? If so write and name the kind you want. EDMUND MAURER, 464 North Ninth street, Philadelphia, Pa.

FOR SALE. — POINTERS, THOROUGHLY broken: Lady Bang (A.K.R. 693), Nellie (A.K.R. 1789). Also pointer pups, by Donald II. ex Lady Bang, marked liver and white, age 9 wks. old. For price and particulars apply to CLIFTON KENNELS, 75 Clifton Place, Jersey City, N. J. aug27,4t

CHEQUASSET KENNELS.—ST. BERNARDS, smooth and rough-coated, of best strains. Champion **Hermit** in the stud, $50. English pug Young Toby, sire of many prize winners, fee $20. Fine pups on sale. P. O. Box 94, Lancaster, Mass.

FOR SALE.—MASTIFF DOG BITCH AND PUPples; also King Charles and Blenheim spaniels C. H. MASON, Bay Ridge, Long Island.

FOR SALE OR EXCHANGE.—WHITE, BLACK and tan, evenly marked, setter dog puppy, 8 wks. old, choice of litter, very handsome; from a strain that are staunch and intelligent; fine dogs for brush shooting. Price $50. Will exchange for good make double-barrel 10-gauge gun. Address OWNER, P. O. Box 1,327, Boston, Mass. 1t

MY PRICE IS $15 FOR EXTRA FINE BLACK cocker pups, by champion Obo II, ex Althea (A.K.R. 842), and $10 for beautiful chestnut pups, by Young Obo ex Hazel Kirke (imported Shot and imported Finn). Hazel won 1st and special at New Bedford in 1882. Full particulars cheerfully given. HERBERT FLINT, Haverhill, Mass. sept10,3t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 24, 1885.

VOL. XXV.—No. 9. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

THE PURITAN'S VICTORY.

THE ultra sloop men and advocates of the skimming dish who may be inclined to exult over the victory of the Puritan, a victory in which they certainly have no share, will find plenty of food for quiet reflection in the race of Friday last. The Cup has been retained here, not through any effort of New York, not by the aid of a skimming dish, but solely through the venture of a few Boston yachtsmen backed by the skill of a gentleman who has made the English cutter a subject of careful study for some years, and who is known as a successful designer of a number of small cutter yachts of moderate beam. The Puritan is the embodiment of this gentleman's conception of a boat that should be wide and should carry a centerboard, the two conditions entailed on a yacht to defend the Cup. Apart from these two conditions he has exercised his discretion in carefully omitting all those salient features belonging to the old American sloop, and in choosing with equal care and judgment the better points of the English cutter. The experiment has been a bold one and many predictions of failure have been made, not a few from New York, but its justification is found in the fact that the boat was successful.

To the Puritan alone is due the retention of the Cup, and before joining the general exultation over her the sloop men can well pause and consider what their share in this result has been.

From the first the real American sloop, both in its old form and modernized, has been conspicuously absent from the entire races. Of the latter we have had the Priscilla in the trial races, but her trials against the Puritan show plainly that she, without radical changes, which could not be made in time, would have been a very poor opponent for the Genesta. The older boats were represented by only one of their class. In spite of the invitation and urgent requests of the committee that sloop owners would enter their yachts in the trial races in order to afford a comparison of the speed of the new boats, the vaunted fleet of American sloops could not be found; as a body, they were perfectly content to let the entire battle go by default. One only, the Gracie, saw fit to enter in the trial races or that of Friday for the Dougjass Cup, and though defeated in both she comes out with flying colors as the only representative of the American sloop that remains in the field.

When the history of the Cup races of 1885 is written, after the Genesta has returned and the present excitement is over and a calmer judgment can be had, it will be highly amusing to see the small and insignificant part that our great American skimming dish occupies in it. The Genesta came here, a single yacht selected from a fleet and a fitting representative of the prevailing build of English yachts. Our existing fleet proved entirely unfit to meet her. A special boat of the same family was no better, and the retention of the Cup is due to an accident, the advent of a vessel of a new type from an entirely unexpected quarter. Such are the true circumstances of the case, divested of all hurrah and patriotic vaporings, and they will afford ample food for mature reflection for the winter and a long time to come.

The construction of the Puritan marks two great milestones, or perhaps we may more properly say headstones, one on each side of the Atlantic. Here it will put a final quietus to the old theories of shoal draft, high ballast and sloop rig, as well as to the boats built in accordance with them. Abroad it will hasten into its deep and narrow grave the already tottering Thames or Y. R. A. rule, leaving a length and sail area rule to reign in its stead. "We've got them on the list, we don't think they'll be missed." Their obituaries will be short, the flatiron, skimming dish or trap, has many murders to answer for, the less said about it the better; the Y. R. A. rule has served a purpose, it has enforced the construction of safe and seaworthy boats, it has taught yachtsmen and naval architects much about depth and ballast that without it never would have been known; but its day is past, the lesson of depth has been learned, and the school book is no longer necessary; the sooner we can say "The king is dead," the better for English yachts and yachtsmen.

The victory of the Puritan involves too many important points to be passed over hurriedly or carelessly. Marking, as it does, a new departure in American yacht design, it is worthy of a thorough and careful study that must be deferred until the conclusion of the present races. In the meanwhile, it is an excellent occasion for those who have persistently decried the cutter rig, double jib and low ballast, and who have advocated a mean length rule that would have shorn the Puritan of her chief beauty that even they now admire, to follow the sage example of the late "Brer Fox" and "lay low an' keep on sayin' nuffin."

OUR RIFLE TRIAL.

THE trajectory tests preparations are fully completed, and with fair weather the trials will open on Monday next at the Creedmoor range, at 200 yards for the heavier-charged rifles and at 100 yards for all in the trial. The plan is to make everything as simple as possible and yet eliminate every element of error or uncertainty. In the actual manipulation of the trials we shall be assisted by Mr. Henry A. Sinclair, who, as an expert connected with the United States Ordnance-Proving Ground at Sandy Hook, has had abundant experience in this line of work. His careful supervision of every minute detail preliminary to and during the trials will carry to all an assurance that the results announced are beyond question.

Already the guns submitted make up a very formidable battery. Among those already represented are the Remington, Whitney, Maynard, Winchester, Bullard and the Colt. The muzzleloading advocates have not been unmindful of the opportunity afforded them for a direct comparison with the breechloading weapons. The English rifle makers will be represented by a sample from one of the best known private armories.

In the report of the tests the manner of making them will be fully explained with such illustrations as may be necessary to make the matter thoroughly understood, while with the number of rifles in the test almost every possible make or modification of arm will receive attention. It must be understood that if the weather proves unfavorable the test will of necessity be postponed. The test will be open to inspection; the public is cordially invited to be present. The range is reached by the Long Island Railroad (Queens Station).

GAME REPORTS.—As one mission of the FOREST AND STREAM is to furnish in its columns information for the sportsman who is looking for desirable shooting grounds, the other sportsman who has such knowledge is invited to put his information where it will do the most good, namely, in our game columns.

"KINGFISHERS" ARE NOT "JAIL-BIRDS."

SOMETHING more than a year ago, an estimable official of the Michigan Sportsmen's Association, for whom we had the greatest respect, told us that the "Kingfishers"—meaning the party whose camp life in Michigan had been so charmingly described in the FOREST AND STREAM—had been guilty of a gross violation of the law of the land by killing deer out of season. We scouted the suggestion and called for the proofs. Not long after that there came to this office a letter, which read as follows:

FIFE LAKE, Mich., Sept. 3, 1884.—*Editor Forest and Stream:* Have just returned from a trip to Cheboygan and am sorry to inform you of the bad repute of the "Kingfisher" party. Knowing that your paper is always willing to expose violators of the law when found out, I send you the record of the party while at Black Lake last summer, which can be vouched for by *well known merchants of Cheboygan*, as well as the officer who had warrants for the arrest of the party. Charges are as follows: The party paid Merrill five dollars apiece for deer driven into the lake, where a shot could be had at them; and Merrill acknowledges to have received for deer so driven the sum of one hundred and forty dollars from the party. What do you think of such violations of the law? Will you request the party to give an explanation of their conduct? If not, I can find a paper devoted to sports that will. Respectfully—W. E. MINER.

P. S.—I don't propose to go back of my record, as I am well known as a vigorous prosecutor of parties who violate our game laws. You can refer to Cyrus W. Higby, of Jackson, for any information you may require as to my reliability. I merely wish to show the record of the party and have no ill will toward them as private individuals. You are at liberty to use my name, as I am not ashamed of it.—W. E. MINER.

Here was the old charge again, and we determined to investigate it. Not for a moment did we believe that there could be any foundation for such an accusation against the "Kingfishers," whom we knew too well for that; but here was the charge preferred by a man who claimed to have abundant proof, and manifested a most commendable eagerness to produce it. So we first wrote to Mr. Higby, who was known to us as the very efficient "game law missionary" of the Michigan Sportsmen's Association. He replied:

JACKSON, Mich., Sept. 9, 1884.—*Editor Forest and Stream:* Yours of the 6th at hand. In reply, any statement made by W. E. Miner, Fife Lake, I consider entirely reliable regarding violators of the game and fish laws of Michigan.—HIGBY & DENNIS.

We also wrote to Mr. Miner to send us the names of the persons who killed the deer, the number of deer killed, the address of the officer who had the warrant, and the names of the Cheboygan merchants who would vouch for his statements.

In reply we received none of the things asked for, but instead this letter:

FIFE LAKE, Mich., Sept. 15, 1884.—*Editor Forest and Stream:* Yours in regard to the "Kingfisher" matter at hand. In reply will say: *I have no reason to doubt the information I received at Cheboygan*, as it came from a member of the gun club at that place, who is a merchant there. I was at Black Lake at the time of the party being there, and found their totem to the mail carrier, consisting of two pickerel hung on a stick by the side of the road. While referring the matter to him when I met him a few weeks ago, he remarked: "The 'Kingfisher' party are a set of snides." I asked for an explanation, and he then told me that the party paid Merrill $140 for driving deer into the lake for them to shoot. Whether they killed all the deer so driven or not he did not know, but told me that Merrill had given the information after the party had gone. He told me of the officer going after them and finding their camp broken up, as parties had evidently notified them. He volunteered the information that Merrill was a notorious law breaker, but living so far from Cheboygan that no one wanted to go to the expense of prosecuting him. Here the matter ends. You can judge for yourself whether it is fact or not. I have always taken an interest in the description of the "Camp of the Kingfishers," and could hardly credit the story, but coming as direct as it did, I cannot doubt it.—W. E. MINER.

This was not what we wanted; it was by no means sufficient. We wrote to Mr. Miner that we must have some facts to go on. We reminded him again that a newspaper could not publish grave charges against individuals without some evidence in hand to warrant the charges and sustain them. We asked him again for the name of the officer who had the warrant; and urged him to send us the name of his Cheboygan informant, assuring him of our desire to get the bottom facts of the case. Here is what he wrote:

FIFE LAKE, Mich., Sept. 21.—*Editor Forest and Stream:* Yours of Sept. 18 at hand. In reply will say your propositions put me in a delicate position, for this reason. The gentleman from whom I obtained my information has not the least idea that I have written to you on the subject, consequently I do not wish to compromise him in the least. I will do this for you and anything else that I consistently can. I will write to him asking for particulars, name of parties, etc., in fact, will write for all the information that I can get relating to the matter, and at the same time ask him if he is willing I should give you his name. If he refuses the use of his name, or will not take any steps in the matter, I am sure that I am not to blame. I have not the time or means to hunt the thing up, as Cheboygan is over 100 miles from here. Would be glad to do so if possible. As the matter now stands I shall await further developments. If nothing is heard from Cheboygan I will retract my charges and consider it

as an idle rumor, and tender the party an apology for making the charges I did.—W. E. MINER.

P.S.—So little attention is paid to the game laws in this northern country, that I do not think he will put himself out of the way to obtain any information for me in regard to the case in hand. I shall write to him about the facts, in justice to myself as well as the party, and request him to substantiate the charges against them. If not what can I do further?—W. E. M.

That ended the correspondence so far as Mr. Miner is concerned. We wrote him afterward, urging him to send us some satisfactory proof, or to direct us to some one who would furnish evidence, but though we have waited a year, no response has come.

The facts of the case, so far as we have been able to ascertain them, appear to be that a party of men from Cincinnati did hire Merrill to drive deer into the water for them to kill out of season. But these men were not of the "Kingfishers'" party. We have their names as registered at the Spencer House, Cheboygan, Mich., and there is not a "Kingfisher" among them.

The correspondenc will repay study. Here was a man who was quite willing to rush into print himself or to involve us in the blunder of doing so, to accuse a party of respectable, law-abiding gentlemen of having committed a misdemeanor, for which, if they received their deserts, they would be landed in jail. His letter of accusation was accompanied by a threat—not in the best taste—that if the FOREST AND STREAM would not accuse one of its valued correspondents, he could find some other paper that would do it. Most newspaper editors are accustomed to threats of that sort, but we have never heard of an editor who paid any attention to them. Mr. Miner professed to have plenty of evidence. Called upon to furnish the names of the Cheboygan men, he fails to do it. Asked for the name of the officer who had the warrant, he cannot give it. Urged to give us some of his proof, he backs out, step by step, and finally is quite ready to retract and apologize to the men he had accused.

We do not for a moment question the motive which prompted Mr. Miner to write to us as he did in his first communication; but we do confess to an impatience with him and the scores of others just like him, who, while game law violations are going on all about them by their neighbors, will do not the first thing to put an end to the disgraceful condition of affairs, but are always ready to write to a paper a thousand miles away and accuse outsiders without any very particular care whether what they charge can actually be substantiated by the facts in the case.

In conclusion, if any citizen of the State of Michigan, or of any other State, has any evidence to show that "Kingfisher" or any other tried and true correspondent of the FOREST AND STREAM professes one thing in print and practices the reverse in the woods, he is invited to send it in. We are always ready to expose anything of this sort, but we do not propose to take away any man's good name without reason.

The "Kingfishers" are not jail-birds.

ST. LOUIS.

THE St. Louis convention of sportsmen, game dealers and fish commissioners will be held next week, beginning Tuesday. The meeting will be watched with great interest, and it is to be hoped that some practical advance in the methods of efficient game protection will be made. There will be so many diverse interests and opinions to be harmonized, that no immediate result of great moment can reasonably be looked for. The sportsmen and the fish commissioners may agree on most points, but the greatest difficulty will be encountered when any attempt is made to enlist the cooperation of the market dealers in anything like efficient and sufficient restrictions of game killing and selling. The sportsmen who are going to St. Louis will not make a mistake in exercising every precaution to keep the work of the meeting strictly on the line of the interest of proper game protection. There will be, of course, a very enjoyable series of trap-shooting matches. But the persons who are attracted by these matches will not be likely to show themselves equipped with any well-digested schemes of game protection, and the practical results of the convention will not be greatly advanced by them.

THE CREEDMOOR MEET.—We are glad to see that the liberal policy of the Directors of the National Rifle Association in making up the fall meeting programme has been appreciated by the marksmen, and that so far as appearances go the thireenth fall gathering at Creedmoor is a success. The weather has been variable, but on the whole good. In our next issue we shall give full details of the meeting as far as possible, to the time of going to press, noting the conditions of each match and the full scores of winners and other leaders in the competitions.

THE WOODS.—The woods are beginning to change their hue of green for the brighter colors of the autumn, yet how few of the dwellers in town and city ever think of going out to the hills and mountains to behold this autumnal splendor. Why is it that while as a rule men and women care nothing for the charms of nature, as open to them in every neighboring woodland, they will hurry and scurry in indecent haste to those same woods to gaze stupidly at the spot where a murder has been committed?

THE FORESTRY CONGRESS, now in session at Boston, is one of the encouraging signs of the times.

The Sportsman Tourist.

Address all communications to the Forest and Stream Publishing Co.

REFLECTIONS.

I STUMBLED on a woodland pool one day
Deep in the wildwood, 'neath a mighty rock
That overhung as though the tiny shock
Of bird-feet might o'erbalance. One light ray
Shone through the branches bright, and, dazzling, lay
White as a diamond flash upon the loch.
The sleepy trees, nid-nodding, seemed to stand
Upon a narrow ledge, with space below,
Through which more trees grew downward, as would grow
The woodland of some unknown fairyland,
Trees in some strange, far-off antipodes;
While every shade among the leaves above,
From scarlet maple to the breast of dove,
Gleamed from the mirror undisturbed by breeze.

JOHN PRESTON TRUE.

A RECENT EPISODE.

AT THE present time of writing, I confess to a certain degree of fellow feeling with that despised individual, the tramp. I can understand his dislike for active work, his continued tendency toward complete idleness, and disposition to wander listlessly from place to place. And last, but not least, his penchant for wearing shabby clothes, in which, without fear of soilful consequences, he can throw himself down upon mother earth regardless of time or place.

For am I not to a certain degree a sort of maritime tramp in blue shirt and well worn apparel? Do I not take an indolent pleasure in doing nothing with all the inactivity of which I am at present capable? Do not I dawdle listlessly from the bow to the stern of the sailing vessel on which a few of us are taking our vacation trip to far away Labrador, and experience a positive pleasure in casting myself recklessly on the not over clean deck in the sunshine, or in hoisting myself tentatively on the nearest water cask with a view of discovering the most comfortable lounging place?

Wind and fog bound, the Polar Star is lying at anchor in what is locally known as Little Bras d'Or Lake, in contradistinction to Big Bras d'Or, from which the former is divided by a long island called Bouladerie. The Bras d'Or lakes are the wider parts of certain intricate passages or straits which, extending through almost the entire length of Bape Bréton Island, are entered from the Atlantic Ocean on the south and empty into the Gulf of St. Lawrence on the north. Perfectly land-locked, the picturesque scenery on either hand makes the passage through them with a fair wind one of the most charming trips imaginable.

"Why called Bras d'Or (Arm of Gold), Captain?" I inquire, as the swarthy-featured Acadian sailing master of the Polar Star approaches with a wooden pipe between his white teeth and both hands thrust deep in his pockets.

"J'n sais pas," is the brief answer, for Captain Baudét is not only a man of few words, but, moreover, is inwardly chafing at our enforced delay, being in a hurry to complete the voyage and return to his family.

The Student, who, standing at the rail, is catching rock cod as fast as he can pull them in, directs my attention by a brief gesture to the bluffs of red and brown sandstone which rise almost perpendicularly from the water's edge to a height of from two to three hundred feet. Over their rounding summits and in places extending half way adown the sides of the cliffs are patches of intensely green verdure in fine and strong contrast to their reddish-brown background.

The western sun, with its cloud-wreathing of purple and crimson, is preparing for its evening plunge in the waters of the Gulf of St. Lawrence, which lies far-reaching and beautiful before us, and as it gradually touches the rim of the horizon sends forth a wondrous glow which bathes the cliffs of Little Bras d'Or in a flood of tawny gold.

"Some—'er hundreds of years ago," remarks the Student, who, evidently rather lame in his chronology, supplies the lack thereof by a vividness of imagination that is quite remarkable in one so young, "a shallop, manned by a company of hardy voyagers from Brittany, dropped anchor after a long and tempestuous voyage in, well, I—I—think," said the Student, fingering his line rather nervously and glancing about him a little hesitatingly as one who could not locate the precise spot within, say, a fathom or two, "in the immediate vicinity of our present anchorage."

"Here, here," softly remarked the Professor, as he unhooked, not a cod, but a handsome three-pound salt-water trout with an air of affected indifference.

"The sun was setting as they furled their sails," continued the Student, affecting not to hear the Professor, "and as their eyes rested upon a picture similar to that [with a nod shoreward], one of their number, with poetic enthusiasm peculiar to his race, shouted 'Bras d'or!' and this was the origin of the name."

I saw by the play of the Historian's expressive features as he washed his hands in a bucket of salt water that he was preparing to come down, so to speak, on the unfortunate Student with such an array of names, dates and historical facts as would cover him with confusion as with a garment, and felt intensely relieved as the summons to dinner sounded forth from aft.

I lingered a little for a final glance. The golden gleams of sunset gave place to a rosy afterglow, such as one sometimes sees on canvas in De Haas's best moods. On the opposite side of the straits, bathed in the ruddy coloring of the dying day, green fields alternating with forests of stunted fir and pine, slope steeply downward from a range of lofty hills which extending southward blend hazily and are lost in the now fast gathering twilight. The light spots here and there at intervals of a half or three-quarters of a mile, showing dimly against the background of green, are the white-washed farmhouses on the Bouladerie side of the island. Our Celtic pilot, a red-visaged fisherman, wearing a "jersey" and long sea boots into the tops of which are tucked his moleskin trousers, informs me in a vernacular peculiar to the locality that "yon's ta' church, and ta' store be a bit fur'der do'on, but she's she't the no'o for t' man wha' k'eps her have ga'ne t' fishin' banks t' sayson."

On the following morning we all go ashore. Two miles to the post office, which is in effect a corner cupboard in a farmhouse kitchen. It brings vividly to mind an extract from one of John Phœnix's descriptions of a small California town: "There is a post office there, where I once saw a man call for a letter, receive it, and walk away chuckling." The mail in midsummer arrives and leaves twice a month. The rest of the year it may or may not arrive once in two months, according to the severity of the winter and thickness of the ice.

Hospitality among the Cape Breton Islanders begins with the heartiest of welcomes to the stranger, and advancing by easy stages to a liquid form in the shape of huge bowls of rich creamy milk, winds up with the innumerable questioning regarding "the news," peculiar to a people who, to a certain extent, are isolated from the world. Before we left, the Professor (who is somewhat of an invalid) had surrounded seven glasses of the lacteal fluid, and as he afterward said, had answered by actual count, 107 distinct questions. After which, declaring himself too full for further utterance, he gave the signal for departure.

When we reach the Polar Star we find the Sportsman, who has also been ashore but in another direction, sitting on the top of the little "trunk" cabin, overhauling a most comprehensive assortment of rainbow hued flies, silk lines, gut leaders and all the piscatorial paraphernalia so dear to the heart of those who follow—even a long way off—in the footprints of gentle Izaak Walton.

The Sportsman, who is a short thick-set man, with a thick brown beard and a keen gray eye, hath a fashion of clipping his speech as short as may be, and the while speaking as rapidly as Phillips Brooks, though perhaps not quite as eloquently. He looks up as we clamber over the vessel's side.

"Say, fellers," he remarks, with a painful disregard of the proprieties of grammar, and of the respect due to two professors of as many different colleges, a live author, a historian and eke the present writer, "saw the daisiest double 'Greener' 's forenoon ever feller put to 's shoulder."

"Daisiest double Greener," interrogatively echoes the youngest professor with a puzzled look. And as he feebly scratches his head with the point of the pencil which, with his note book, he has drawn from his pocket, I fancy that he vaguely connects the "daisiest, etc.," with some new botanical specimen.

"Yes, sir," continues the Sportsman, carefully examining the tip of his favorite split bamboo rod, "Cap'n of that little forty-tonner just round the point owns it—told me he grappled it up from wreck of ship Lord Duf'rin, that went ashore on No Name Ledges last October—all hands lost, bodies washed up, and all buried in one grave just above high-water mark. Aint much on poetry myself," the Sportsman modestly admits as he pulls a soiled envelope, on the blank side of which are some lines scrawled in pencil, "but some one's stuck up a wooden head board over the grave, and cut this verse, that I thought was—er—mighty pathetic and all that sort of thing."

Clearing his throat, the Sportsman glances at our expectant faces, and reads in the singsong voice peculiar to the youth who attend the country schools as follows:

"Pause, stranger, pause as you are passing by,
And view the place where sixteen bodies lie.
The ship Lord Dufferin with her gallant crew
Struck No-name ledges and was split in two
October twenty-first, in 1883,
They perished all in one tremendous sea.
Weep for their wives and children and for the parents dear,
Whose husbands, sons and brothers at rest lie sleeping here.
Prepare ye too, for death, for come to you it may,
As sudden as to this bold crew, like them ye are but clay."

"What an elocutionist he would have made," remarks the Professor of Natural History at a college in a very audible aside, with evident reference to the Sportsman, who affecting not to hear the remark, looks, nevertheless, immensely gratified as he pockets the crumpled envelope, and with the aid of his fingers and strong white teeth, begins clearing the twists in a badly mixed salmon line, which of course, with what some one has called "the total depravity of inaminate objects," persists in "snarling" worse than ever thereby, establishing a precedent for the Sportsman himself, whose muttered "confound the thing!" draws from the Historian a cruel paraphrase of the words of Cap'n Jack Bunsby: "If knot, whine not," having perpetrated which, he retreats rapidly for'ard followed by abusive epithets and a heavy rubber boot.

"Rum old bird the skipper of that little forty-ton schooner is," again remarks the Sportsman, who, having at last cleared his line, is deftly coiling it in readiness for winding it on his reel. "He and one man run the schooner; they've just now got back from a trip up to the nor'west coast of Greenland."

The Student gives an involuntary sniff; not, be it remembered, as expressive of unbelief in the Sportsman's statement, but by reason of an appetizing odor which is wafted aft from the suddenly opened galley door, where a dozen or more curlew, shot the evening before, are stewing, while at the same time certain slices of an eight-pound salmon (price twenty cents) taken in a set net within half a cable's length of the schooner, are broiling and sputtering over the coals.

"Well," absently asks the Student, stifling a faint sigh as the galley door is pulled suddenly to, "What did they go up to Greenland for—pleasure?"

"Oh, of course," ironically observes the Author before the Sportsman could make a reply, "Twenty odd days among icebergs and white bears and—and things, with the mercury in the thermometer considerably below zero, would be nothing but a pleasure trip for two men in a forty-ton schooner."

"Tradin' voyage with the natives and Indians on the coast," explains the Sportsman, ignoring the Author's mild sarcasm at the Student's expense. "They carried up tobacco and notions, and brought back seal skins and oil, feathers, moccasins and all sorts of truck; 'mong other things they've got nigh a half a hold full of peck baskets that'll hold water; cost 'em in trade 'bout six cents a piece—low enough, eh?"

"Low the poor Indian," murmurs the Historian, who has rejoined our little group, but the equivoque meets with the silent scorn it merits, and, encouraged by the attention given to his remarks, the Sportsman again takes up his parable, and gives us various bits of information derived from his interview with Captain Lechapel.

How the Captain only the day before had "stopped" six wild geese with the right-hand barrel of the Greener and six with the other (whistle of incredulity from three distinct sources); of the condition of the brant in the spring, whereby when shot on the wing and falling on the ice they burst asunder by reason of extreme fatness; of the tame brant used by the sportsmen at Port-à-Pré, which are sent out into the harbor, and, having tolled their wild brethren within gunshot, get themselves rapidly out of range of the death-dealing gun, whose owner lies *perdu* behind a blind on the shore—

"Dinner, gentlemen!"

* * * * * *

"Well," remarks the Professor, surreptitiously wiping his mouth on the sleeve of his blue flannel shirt as we emerge from the cabin half an hour later, "to paraphrase old

what's-his-name's laudation of the strawberry, 'God might have made a more delicious fish than the salmon, but He never did.'" And so said we all of us. But the broiled curlew was one of those culinary triumphs, to express the enjoyment of which the English language is utterly inadequate. Selah. The head wind still continues. No hope of getting under way this afternoon. Far ahead of us the white-capped waves of the Bay of St. Lawrence shone irregularly against the clear, steely blue of the horizon. On the port hand Cape Smoke stretches far out into the bay, its fir-crowned summit wreathed with the vaporous clouds which probably suggested its name. All hands are ennuied. Even codfishing from deck has become monotonous; the fish bite too freely.

All but myself go below. One to write up his journal, another to add a page or two to his week-ago-begun letter to her, a third to some needful mending, and a fourth to peaceful slumber. I stealthily smuggle my seventy-five-cent fish rod with its ten-cent line, two-cent sinker and one-cent hook into the dingey alongside, as Captain Budrot, a swarthy Acadian with glittering black eyes, dilapidated apparel, and small gold hoops in the lobes of his brown ears, comes on deck, glances with a shoulder shrug at the compass, then at the fluttering tell-tale at the masthead, and turns abruptly on his heel, humming a quaint old French tune, of which I only catch the words of the refrain:

"Ayez, ayez, pitié mon chagrin.
Ma pauvre femme et mes enfants,"

by way, as I imagine, of expressing his impatience at our enforced delay. Meanwhile I drop into the dingey, and casting off the painter pull lustily for the pebbly shore, bestrewn with seaweed, fish heads, driftwood and the usual debris that designates high water mark along the coast.

Half an hour later I am digging for worms under the small building called by courtesy a stable appertaining to the nearest house, an unpainted one-story building of spruce logs chinked with moss and banked with turf. It must be a very early bird that could catch a worm in Cape Breton Island, for in vain do I dig and turn over rocks or logs. Good St. Patrick must surely in by-gone days have cast his ban upon the soil in this respect, and I give up in despair.

A small boy in dilapidated shirt and tow trowsers, gives me a "pointer" on the nature of bait to be used in Cape Breton Island streams, and as fortune wills it, a quarter of mutton is hanging in one corner of the one room that comprises the Cape Breton farmer's dwelling house.

Provided with bait I sally forth. One has not far to go to the island to find a trout brook. Not the wide, dark stream, with its steady current and steep falls flowing swiftly but smoothly on to the sea. No, the fisherman must content himself with following up with infinite difficulty, owing to underbrush, overhanging boughs, rotting tree trunks, beds of dwarf spruce and steep banks, a brawling, rollicking, noisy little brook, scarce five feet wide, as it comes laughing and gurgling down from the steep rocky incline on its journey toward some primitive sawmill in the valley below.

I am absent from the Polar Star rather less than two hours, and when once more I stand on deck, I bear in my good right hand about forty trout, the largest thereof weighing nearly half a pound, but the majority less than a quarter. Great is the piscatorial excitement among the ship's company, particularly in the case of the dual professors, who, in company, have for two seasons whipped the Adirondack lakes and streams together, while the Sportsman's lines have been cast in pleasant places throughout the length and breadth of the land. All needful and many needless fishing appurtenances are collected in hot haste, and a few moments later, three fishermen might have been seen rowing vigorously toward a tumble-down pier, where a small dismantled fishing vessel lay moored to the rotten piling.

I am not naturally of a revengeful nature. But I have in mind certain mild jeers and pointed jokes which during the voyage have more than once been directed at my somewhat primitive fishing rod and tackle, not to mention divers invidious comparisons between the same and those of my more scientific *compagnons de voyage*. And a sound not unlike a chuckle escapes my lips as I watch the trio make their way inland after leaving the boat; for the Bouladerie trout have never been educated up to an appreciation of an artificial fly. This I have learned from the oldest inhabitant, whom I happened to meet while on his way to the mill five miles distant, while I myself was on shore.

"They feller's ca'as 'emselves too'rists co'oms 'ere from Baddeck so'omtoimes," remarked the O. I. in acknowledgment of a respectful question and a gift of tobacco, "an' they throshes t' brooks wi' their new-fangled flois me'd o' red fet'hers an' a' tho't, but the tro'ot hereabo'ots bea'nt sich danged fools—they'll to'och naught but baits—a tro'ots eye's t' best bait i' th' warld;" and wishing me good day the sturdy old Yorkshireman, who had lived on Bouladerie thirty-five years without ever having visited the mainland, had gone on his way.

About sundown the boat and its occupants pull alongside, to whom I at once lower a half-bushel basket to receive the afternoon's "catch," and so verbally notify them.

Prof. B. is one of the most gentlemanly and correct spoken of young men, but unless my ears deceive me he alludes to the wicker receptacle as "that blanked" thing and rather peremptorily desires me to get it out of the way, which with a look of injured surprise I proceed to do. Prof. A., who is first on deck, casts a darkling glance at me, but speaks no word. The Sportsman with his hat over his eyes bangs his fishing rod on deck and strides forward, muttering something inaudible under his breath. The professors silently collect their fishing tackle, together with two small trout strung on an alder twig.

The Historian and the Author, paralyzed with astonishment, ply them with many questionings, but their answers are vague and unsatisfactory. Prof. A. declares that he lost his book of flies, and pulled his leaders off in a witch hazel bush. Prof. B. said that he knew all along that he'd taken the wrong colors for his flies, but was in such a hurry, etc. Presently, moody of brow and uttering audible anathemas against the Bras d'Or lakes, Bouladerie Island and its trout streams, together with an emphatic—not to say mildly profane—diatribe directed at matters and things in general, having thus relieved himself the Sportsman cooled off sufficiently to narrate his afternoon's experience, which in substance was this: In climbing the first fence that he encountered on his way to the nearest brook, he managed to fall from the top rail so expeditiously as to break the second joint of his rod, set his nose to bleeding and bruise his shins in an unpleasant manner. Contriving to splice the break, he finally reached the stream which was at the bottom of a steep ravine whose almost perpendicular sides were choked with fallen tree trunks and rotting branches, while the stream itself was thickly bordered with a heavy growth of alder and scrub pines.

The first cast of his fly landed leader and all in the branches of a birch tree with surprising ease.

Too mad to climb the tree, and tortured by several trillions of black flies (for the wind had all died out), he "yanked" at the line so hard as to pull the splice apart. Then, after leaving part of his line in the birch, and finding after further trial that fly fishing was simply an impossibility amid so much underbrush, the Sportsman inserting the tip into the first joint of his rod, and wedging it tightly, found some grubs under a dead log, baited his hook and followed the brook for a mile and a half, and after punching a hole in one rubber boot by stepping on a sharp stick, and plunging knee deep in a quagmire, the Sportsman reached the road. Here he encountered the oldest inhabitant returning from the mill, who, after regarding him with mild astonishment when he learned that the Sportsman had been fishing in McCloskey's brook, casually mentioned the fact that said streamlet had never contained the finny prey he sought, or to use his own phraseology: "Nobody 'n th' island ever know'd of trouts bein' saw in ta' stream yon'." And in great bitterness of spirit the Sportsman had returned to the boat and come on board in what our French (Canadian) cook mentioned afterward as "z'e très mauvais tempaire."

"Look here," turning suddenly to the writer, "Where did you get your trout?"

"Little stream this side of the one where you were fishing," is my answer.

Then from the rest came a shower of questions, did I use the yellow hackle, a brown Bess, or was my success achieved by using bait? If so, did said bait consist of worms, grubs, caddis, rubber helgramites?"

"Gentlemen," I reply, checking the flow of interrogations, "there is no secret in the matter. I learned from the oldest inhabitant that fly fishing has been tried in vain by hundreds of fishermen without the slightest success, therefore, reverting to first principles, I used a bait peculiar to this section of the country."

"And that was—," chorused the trio.

"Sheep's liver," I answered, with unruffled composure, and the hollow groans from the

"Three fishermen who traveled far into the west,
Into the west 'ere the sun went down,"

testified to their several opinions regarding my unsportsmanlike action. But on the following morning all was forgotten when we all sat down to a banquet of crisply browned trout, while the Polar Star with anchor aweigh and an eight-knot breeze on the quarter went bowling over the long blue reaches of water across the Gulf of St. Lawrence, bound for far away, bleak, desolate Labrador. FRANK H. CONVERSE.

UPPER CHATEAUGAY LAKE.

THE summer of 1885 will be famous in the Adirondacks for the number of people who have visited those mountains. No previous year will compare with it. Most of these visitors have entered either by the southern route (the Adirondack Railroad) or by Newport or Port Kent, on Lake Champlain; but how few of these many thousands of visitors passed north of Au Sable Charm. Their knowledge of the Wilderness is confined to the St. Regis, the Upper and Lower Saranacs, Big and Little Tupper, Long, Raquette and Blue Mountain lakes. These waters are without doubt all beautiful, and the mountains surrounding them are the finest in the woods, but the solitude that pervaded them twelve or fifteen years ago is gone; the hotels and camping parties are too numerous, and the deer and fish are no longer there. If some of the many who are fond of sporting would turn their footsteps northward and visit Loon Lake, and later take in Chazy and the Upper Chateaugay, they would be amply repaid for their trouble. I have for the last two weeks been on the waters of the latter lake. Last summer I spent a month in the Yellowstone country and the Big Horn Cañon, but I have seen more game in the last two weeks than I saw there in a month. One can see deer any day, and bear signs are very plentiful. Snipe, wood ducks and black ducks are quite numerous.

The Southern Inlet drains the W Mountains and the whole country to the north. Through here there are no lumbermen's camps to drive away the deer, and as under the law no dogs are allowed to hound them, accessibility to their feeding grounds is of prime importance. Dick Shutts, who keeps the hotel at Indian Point, Upper Chateaugay, takes great pride in the amount of game that he can show his visitors. The most intelligent man I have ever met in the woods, he is also the most industrious. His salt licks over a large extent of country are kept well supplied with salt and the deer frequent them in large numbers. The writer of this shot a large black bear there a few days ago, at the base of the W Mountains, and bear tracks are very plentiful all through the woods.

The fishing in the spring I am told is excellent. Salmon trout from 12 to 15 pounds are frequently caught, and whitefish are of equal size. The trout up the Southern and Stony inlets are very plentiful.

There is not a prettier lake in the woods than the Upper Chateaugay, and as very few people visit it, so to the sportsman is it by so much the more attractive. I am confident that any of your readers who may visit it will be amply repaid for their trouble. S. C. R.

INDIAN POINT, Upper Chateaugay Lake, Sept. 19.

REED'S BAY.

I WELL know that the FOREST AND STREAM is always willing to give to its readers such information as will enable them to spend a few days or weeks pleasantly and insure them the sport of which they are in quest. If I know a spot where fish and game are abundant it seems but fair to my fellow sportsmen that I should give them a chance to profit by my knowledge. I do know such a spot, and if details do not prove too tiresome, he who takes advantage of the information gained and acts upon it, will I assure him, have a delightful and successful trip.

Leaving New York by the Rome, Watertown & Ogdensburg Railroad, either by the morning or night train, as time permits, the traveler is transferred without change to Cape Vincent, where ends his journey by rail. If he has the time at his disposal the trip may be made by daylight without regret, as the way lies through a fertile country and presents ever changing scenes of which the eye never tires. At the Cape a good and reliable boatman may be engaged, and after a charming row of about twelve miles in one of the trim St. Lawrence skiffs the tourist will find himself at Reed's Bay, and here his journey ends and his sport begins. Mr. J. J. Conley has a house where he can accommodate a goodly number, and to those who fall into his hands he extends a bountiful table and pleasant courtesy.

The bay is a deep indentation into Wolfe Island, Ontario, made by Lake Ontario. There is scarcely any depth of water and the bottom is of rock, making it a resort for great quantities of black bass. In fact it seems a regular summer watering place, where they come and bring their families. The fishing is good in all kinds of weather, and the fish seem to be in a regular state of starvation, morning, noon and night. The usual manner of taking them is by drifting with a minnow, although I found that on the shoals they took the fly well.

In three afternoons I took 128 bass, weighing over 150 pounds. One gentleman and his son, in about five weeks' fishing, captured 990. I have no record of the weight. The beauty of the fishing here is that in the first place you are always in sight of the house, to which one can return for dinner, and thus avoid also a long row to and from the fishing grounds; secondly, one does not feel like a butcher if he has extra good luck. Suppose you get a catch of fifty pounds or more in a day, or even half a day, are the fish wasted? By no means. There is plenty of ice on the premises, and at Cape Vincent is a fish house where every pound that is taken is bought at four cents per pound, making a nice extra for your boatman, and causing him to be as anxious as yourself that you have good luck.

I have made several trips to the place this summer, and not once have I come away dissatisfied. My last expedition I had but a few days to spare and did not try the fishing, but devoted my entire time to shooting. It was the first week in September and I was a little early to get the plover, as the flight had but just begun. I managed, however, to get long shots at three flocks and bagged about a dozen. The best sport, however, was in pushing through the marshes for duck, and in this I was more successful, making a good bag of black and woodducks. I also saw one small flock of green-winged teal, four of them there were, and I thinned it down to two, the remaining pair making a very delicious broil for supper. Later in the season I am told that one gets good decoy shooting, and also that a great many geese come there. But little shooting is indulged in by the inhabitants, as their farming duties do not allow them the time, and besides, there are very few of them as the region is not thickly settled. I am sure that any one who tries Reed's Bay, either for its fishing or shooting, will return from there well satisfied with his success. CYP.

HOW MANY NESTS?

Editor Forest and Stream:

I send you the following notes and queries in the hope that some of your bird-loving readers that know more of ornithology than I do will give me their experience.

I have taken some pains during the past spring and summer, not only to identify the returning birds, but to try and satisfy myself in respect to the number of nests that they build or broods that they raise. Of course my observations have been confined to the narrow limits of the place where I live, and must therefore be taken in a restricted sense.

The first nest that I found this year as usual was a song sparrow's (*Melospiza fasciata*). I had fed some four or five of these birds during the inclement weather of last winter, and expected to have my reward in their lisping songs of the earliest spring. I also wanted to see if instead of allowing them to go further north in the summer time to breed I could not persuade them to remain here. In both of these respects too, I think I have succeeded. I have heard their unpretending song since Feb. 25, and this is now Aug. 4. I think, too, that I have the same birds that I fed during the winter. To be sure, of this one cannot be actually certain, since sparrows of the same species are as much alike as two peas of the same kind. But I will give my observations and your readers must judge of whether my conclusions are correct.

As I have said, the first nest that I found was that of a song sparrow. This was back of my woodshed under a tuft of grass that grew on the side of the bank and perhaps thirty or forty feet from the place where I used to feed the birds in the winter. I found this nest on May 5. It had then five eggs in it, and about a week after the mother hatched out five young birds. No cowbirds had found this nesting place. If they had I would have pitched their egg out or wrung the neck of the interloping young one.

There were two peculiarities that I noticed about this bird. One was that when I came near her nest and she skulked off, she would immediately fly up and light on a twig three or four yards away, and watch me in perfect silence as I peered into her nest. And another singular thing, as I considered it, was the fact that I might take any number of my young friends to the nest and show them her brood, with their long necks and gaping mouths, while she would assume the same position on the twig and never utter a chirp. This I considered most remarkable, as all birds exhibit their alarm when there are young ones in the nest, though the older these are the more alarm they exhibit. To this I might add there was a degree of familiarity in the parent birds as they hunted industriously around the flower beds on the lawn and near me that can hardly be described. It seemed to say, "We know each other."

But a fortnight after these birds were hatched, I saw this same bird (at least I considered it the same) building a nest among the blackberry bushes, only a few yards away from the old nest on the bank. This nest was hatched in due time. And now the same birds (I suppose) are feeding a third brood in the field across the way. The male bird never seems to consider himself so busy even yet that if he sees me sitting on the piazza, he has not time to mount up to the top of a spruce or horse chestnut, and give me a song. But perhaps it is because if I happen to notice him around, I mock his lisping note, and this suggests it to him. The latest that I have ever found a song sparrow's nest was on the 5th of August.

Next in order comes my robin (*Turdus migratoria*). Two pairs of these birds, with their fresh brick-colored breast, were around last year and two are here this. One pair fed more at the side and in the rear of the house, and the other pair in front (that is when they were not engaged in feeding their young and had to go far in their foraging), and so they have fed this summer. I ought to have said before though, that there is neither cat nor dog around this house, except as the pets of our neighbors visit us.

The first I saw of these robins was on the 29th of March, and then only one. It was a few days later when the females arrived, and then I found I had both males here. On the 19th of April one pair of the birds commenced building in the same spruce tree that they occupied last year, and near the place of their old nest. The young of this laying were fledged the 21st of May. I was away from home the last week in May and a part of the first week in June, and on my return I found a second nest in the apple tree that stands about twelve yards from the house. It was up quite high among the thick branches in the crown of the tree. This nest was fledged on the 3d of July, and on the 7th of the same month I saw the pair building again. This time they went just across the road, about ten yards from their second nest. They are feeding this brood now (Aug. 4), and as the young are beginning to peep, I think they will be fledged in less than a week.

Meanwhile, the second pair of robins built their first nest in a little cedar tree that stands back of the shed. Then a second one just across the road, and now they are feeding a third brood (as I suppose) in a nest built in the same tree as number one occupied in their second building, or perhaps number two may be across the road, while number one has a third nest within ten feet of the second that they built. But naturalists must judge of this. I give the facts as they are.

And now my reasons for thinking that these are the same birds that were here last summer and the same birds that have been around the house all this season. Before the female arrived I used to see a fine black-throated male on my lawn and near the spruce tree, where the nest was a year ago and a year before that. He would sing morning and evening, but not very much. It was not until the female arrived that his whole song appeared to come out, and he thought it necessary to call *teve-teve-teve* as he flew from one place to another. But the tree and the lawn seemed especially attractive to this bird and there was a battle at once if any robin presumed to alight on his possessions, as he seemed to esteem them. Indeed many a fight and many a chase have I witnessed in front of the window where I am now writing. And many a "night walker" or angle worm have I seen pulled from the lawn while I stood at the window as Mr. or Mrs. Robin, not five yards away, would turn their heads from side to side and peer at the sod, and then make a dash, when after a few tugs out would come a worm that seemed to me large enough to more than fill a robin's crop. Sometimes the birds appeared almost as though they wanted to show me the science of catching angle worms, and this familiarity has continued during the summer. Though I have thought that since there are more people around the house or they had young ones to feed that the birds were not quite so tame as they were in the early summer. The only time that I can remember them exhibiting any particular fear of me was when I first used the lawn mower. I then came out with a straw hat on, and as I passed near the tree where their young brood was growing they commenced calling in their most distressing notes. I once left the mower and went to looking around by the fence to see if there was a cat or a dog near (for both pair have learned to call me when help is required), and then I looked up the tree thinking that a squirrel might be threatening their young, but no, nothing could I find, while both birds within a few yards of my head looked angry and anxious as their eyes sparkled in the sunshine. Nor was it until a branch touched my hat that I guessed at the correct reason. They were afraid of the hat. It was something new. But all this has passed with them now and we are on the best of terms.

The next bird that I have noticed somewhat particularly is a Baltimore oriole (*Icterus galbula*). One of these bright-plumaged fellows has built for three years at the end of a limb on the apple tree spoken of in connection with the robins. The robins have occupied the crown of the tree, while the end of a branch that hangs over the road has satisfied his wants. I take the pair to be the same birds. They are just as tame as ever they were. We talk and laugh and read not more than twelve yards perhaps from the nest. I saw the young ones climb out of their home and many a time did my best to make the old birds think that I had one in my hand. So I served the robins, too; and although I could make strange birds anxious, I seemed to be incapable of disconcerting these.

The male oriole arrived on the 11th of May, I did not see the female until the next day, and on the 15th the pair commenced to build. The young were fledged on the 7th of July. I have never known orioles to build a second nest, except when the first one was destroyed. This happened this year to a second pair that I have around here. They built their first nest at the end of a pear-tree limb, just opposite my gate on the other side of the road. It was a fine nest and quite conspicuous. The consequence was that, while I was at church one Sunday, some mischievous boys that live near her went up and cut off the branch and took away the nest. The same bird, I take it, then went over in my neighbor's orchard, where boys cannot come, and there built and reared her young. I used to hear the youngsters calling for food during a part of the second and third week in July.

An orchard oriole (*Icterus spurius*) built in a maple by my woodshed. So far as I have learned they only build one nest too. This pair succeeded in rearing their brood. They were fledged the second week in July.

A pair of catbirds (*Galeoscoptes carolinensis*) have been here for three years. I think they are the same ones. They are as tame as the other birds. Their first nest was back of the shed among the blackberry bushes, and there is now another across the way. I do not think they have made more than two nests.

Then a pair of thrushes (*Hylocichla mustelina*) have built near me, but none that I know of this year upon my ground. Their first nest was in the rear of the woodshed over among the cedars, and the second in my neighbor's orchard. They are just through with their second nesting. They seem to regard the ground under my spruce trees as their especial province, and the male during the summer has favored me with his sweetest trills. I was very much pleased to find him the first morning after his arrival, May 6, sitting on a limb of a cherry tree near his old nest, picking and pluming his feathers. Poor fellow, he looked tired, and as I came down the hill and stood within three yards of him and watched his movements, he hardly seemed to notice my presence. I went away without disturbing him. I claim the birds as mine, and think they have made their home here for three years.

Song sparrows and robins are the only ones that it seems to me raise three broods, and this only when they are protected, and not always then, perhaps.

The robins that are feeding their young do no seem to be moulting yet, nor is their plumage much faded. They gave up singing on the 28th of July, very much as Bicknell says, and so did the catbird. I have listened for them in the early morning, and at night and at noonday, but not a song note except once, and that at a distance. Occasionally I hear the song sparrow yet, and sometimes a few notes from the purple finch, but otherwise the trees are silent.

I am not sure but that the robins that have been raised around here are around here still. They frequent the mulberry trees, especially in the early morning, and as these gave out I see they are taking to the wild cherries. Poor things, it is not long that they will enjoy immunity from the shotgun now. A. H. G.

Scarborough, N. Y.

A FLORIDA WHIP-SCORPION.

Editor Forest and Stream:

I send herewith drawings of a remarkable bug which is new to me. The drawings are done in my usual felicitous, saw-horsy style, but not bad as to portraiture. Any naturalist who knows the reptile will recognize the likeness. What is it? It is well known to the cracker farmers here, and the testimony as to its venemous qualities is universal. It has almost as many local names as the helgramite. It is the "scrauncher," "mule-killer," "grampus," and "devil-bull-driver." Its reputation as a killer is as well established as that of the water moccasin, or the diamond rattlesnake.

I have been much interested in this reptile, and have taken some pains to investigate his habits, and learn all I could of him by interviewing old coasters, spongers, hunters, fishermen, etc., men whose lives have been mainly passed in the woods and waters of Florida—men, let me say just here, who do not lie when they talk of what they have seen, men who have no occasion to lie, men who were all through the Indian war, and helped to build and defend the forts in the Everglades, to cut roads through the interminable swamps, and hunt Billy Bowlegs—with no hope of ever catching him—for months on end. Such men have a fund of actual and interesting fact to draw on that relegates the most scientific liar to the back seats of story telling. And most of them have a personal knowledge of incidents confirming the reputation of the "mule-killer" as a deadly reptile, quite as poisonous as the rattlesnake, and infinitely more so than the black scorpion. Of the stories told me about him, I will briefly repeat a few that are true, if evidence proves anything.

A small party of road makers were at work on the Anclote in a cold, wet time in winter. They had a pair of mules, and it became necessary to ride one of them pretty hard in the early morning. Returning to camp the rider hastily dismounted, picked up a damp blanket and buckled it around the sweaty animal. Almost immediately the mule began to plunge and kick frantically, then it lay down and rolled on the ground in agony. The blanket was quickly removed and a large "mule killer" or "scrauncher" was found firmly fastened by its formidable claws to the mule's back, with its sting deeply inserted. It took some force to knock the reptile loose, and the mule died in an hour.

On the same side of the Anclote, a few miles higher up, a horse was blanketed, with a "scrauncher" under the blanket. The horse was stung and lived but a short time.

A well-known cattle buyer of this coast was riding a young mare through the "flat woods" when, in crossing a palmetto bog-head, the mare began to plunge and kick furiously. Thinking she might be snake-bitten, the gentleman dismounted and found a "scrauncher" sticking by sting and claws to the mare's hind leg. Energetic kicking had failed to break his hold, which was just above the hoof, and as in the other cases death resulted in an hour or two.

These cases are all recent and came under the observation of the narrators. There are many others, some of them including the deaths of human beings. But the above will do. I send rough drawings by this mail, and by next mail I will send the veritable "scrauncher" alive and ready for business. Look out for him. I want to know what the savans will say to him. Probably they know all about him, or will say so. They are not going to give themselves away by confessing ignorance to the ignorant. I have had the reptile before me on the table where I write for some days, under a large glass cover, and have almost become attached to him. He is rather an amiable devil. Perfectly tame and quiet when well used (unlike the scorpions I have had, which go restlessly about, with elevated tails and a rabid desire to sting the world in general). Just now he is calmly taking his morning drink from a tin pill-box cover. He has had his breakfast of big horse flies and "man-eater" bugs, and he feeds greedily.

By the way, I will send two or three "man-eaters" in an envelope in this letter. They are the fellows that invade your peaceful Florida couch at night, drawing more blood than you can well spare, and leaving a painful swollen lump that itches and burns for days. I have caught as many as eight about my bedding in the early morning. I think he is of the *Chinch* family. Am I right? Anyhow, it is a satisfaction to catch him in the morning and put him under glass with the "scrauncher." It is quite amusing to see the catlike manner in which the latter goes for him, and the leisurely way he eats him up.

Put the "scrauncher" under a large glass on the table where you write editorials. He is an inspiration. When you are tired and want a little diversion, put a lively cockroach or a big fly under the glass with him. It makes quite a circus. His apparent stupidity arises from the fact that he cannot see by daylight. But he is quick to hear or feel. If you want to handle him, lift him carefully by the end of his long, hair-like tail. Keep his claws clear, and he is harmless. That is how I caught him.

I wanted to say something about the word cahoots, and also a few words to "Kingfisher," whom I would like and be glad to meet in his well found camp. And I have a report to make about cruising among the Florida Keys in dog days, but can only paddle down in time for the mail.

Use the bug well. And if you have any doubts about his poison qualities get a worthless cur from the dog pound and tie a handkerchief around him with the bug under it. That will tell the story. Nessmuk.

Tarpon Springs, Fla., Aug. 10.

I am just getting over a little fever and a good many bites and a few scorpion stings and a trifle too much sun on my back when paddling and—well no matter, I am tough as whipcord yet, and was out a few days ago with the winner of a Lake George paddling race for a forty-mile cruise down the coast, and I loaned him the Bucktail and took the ten-pound Rushton, and he was always going in swimming and showing me his splendid physique and muscle, and being sorry for me because I was old and my muscle seemed so thin, "and how ever did I manage to keep up? and wasn't it phenomenal, an old man 63, to stand it so well, lying on the sand and paddling all day in the hot sun, etc., etc. And how could I paddle without a back rest?" I grew tired of being pitied, and coming up the coast I sort o' got down on to the spruce to go the way I looked. The dominie—for so he was—complained of the heat and his back, and began to cut off sailboats for a tow, but they were all going to the wrong ports, and he finally wilted, ran ashore and spread himself loose on the sand to rest his back. (The mercury that day stood at 102 in the shade.) At the mouth of the river he "caved" and went into camp with a friend, while I paddled on five miles further up the river. "Old man! thin muscle," hey? We, "Tarpon" and I, bit him up pretty well with yellow flies, man-eaters and mosquitoes. But it would take him a week to get home and he had plenty of time to scratch.

I am very sorry the "poison grampus" or "mule killer" failed to reach you. I sent one to August Koch, of Williamsport, Pa., that went all right, I got his answer yesterday. He is a naturalist of ability, and he says: "This most interesting reptile, *Thelyphonus candatus*, or, in plain English, 'woman killer,' arrived in good health. Brehm, the naturalist, says he is found as well in Asia (and Java) as in the warmer parts of America."

I am doubly sorry you did not get the specimen because just now the "poison grampus" is attracting attention here, and a specimen was recently sent to Washington to settle the question as to poisonous qualities. It was sent by Mr. G. W. Davis, of Orange county, and here is part of the answer: "Department of Entomology, Washington, D. C., June 25, 1885. G. W. Davis, Dear Sir: Your 'grampus' is the so-called gigantic whip-scorpion (*Thelyphonus giganteus*). It is found in Mexico as well as Florida. Its poisonous properties are doubtless exaggerated, and I believe there are no authentic cases of fatal poisoning on record. Respectfully, L. O. Howard, assistant." Thereupon the Tavares *Herald*, published at Tavares, Orange county, Fla., adds triumphantly: "Thus another Florida 'bugaboo' has been sent winding." Oh, has it? And how?

With all respect to the authorities of the entomological department at Washington, let me suggest that such expressions as "I believe" and "doubtless" have no place in a question of science. Science is positive knowledge or it is not science. What do you know of the "whip-scorpion," Mr. Howard? And how do you know there are "no authentic cases of fatal poisoning on record?" I have been at pains to hunt up some "authentic cases," and can furnish them with "proofs strong as holy writ," where mules, horses and human beings died in a few hours, through being infected with the poison of the deadly "grampus."

I will send you another as soon as I can capture one, and the true way to test him is to tie a handkerchief with the "grampus" inside around a worthless cur. Or get the Superintendent of Police to capture a member of a "bridge gang" or "short-tailed gang," and drop the "grampus" down the spine of his back.

And now that I am on the reptile question, what can you tell me of that neat little snake, the "ground rattler?" A sub variety, I take it, of my old favorite, *Crotalus horridus*. A little active, bright-colored fellow, with a tiny set of rattles, about as large as the tip of a well-developed match. He shakes his tail precisely like his larger congener, but with so little result that it is not easy to hear him. He has slender and very sharp fangs, and can strike more times in ten seconds than any other poisonous snake in a full minute. He is not usually fatal. Three cases of his bite on human beings have all recovered. One of them was in this neighborhood about three weeks ago. Another at the Springs, a darkey, bitten on the foot, got well in three weeks. Of three dogs, bitten by the same snake and within a half minute, one died.

He is beautifully marked and spangled with coppery and bronzed patches, light ash-gray and yellowish blotches, and is to my eye a beautiful reptile. I sent a very fine skin for mounting to Mr. A. Koch, of Williamsport, Pa.; but like your "grampus," it has failed to reach. Does the natural history man of Forest and Stream recognize the description or know of a specimen in New York? If not I will send one. I go reptile hunting every week, sometimes every day. But decent snakes for specimens are scarcer than hen's teeth. Nessmuk.

Sept. 10.

[We would appreciate a skin of the ground rattler.]

The Colored Patch in the Crown of the Kingbird.—*Editor Forest and Stream:* The theory suggested by Mr. Samuel L. King to Dr. C. Hart Merriam, as to the attracting of bees by the flame-colored patch in the crown of the kingbird (*Tyrannus carolinensis*) is not new. I had heard it before I knew anything of the habits of the bird, but have never yet been able to prove the assertion, although I have watched the bird for years. In the circular issued by the Department of Agriculture in the interest of Economic Ornithology, I could not answer the question "Has any kind of bird been observed to feed upon the honey-bee?" as the circular asks for facts, and I could not give them. During the past August I spent three weeks on Indian River, Jefferson county, this State, and I saw more kingbirds than I ever saw here in a whole year. It was not an unusual sight to see from six to a dozen birds together. I saw five kingbirds and two wood pewees (*Contopus virens*) in a dead treetop that had fallen over the water, and they were all engaged catching flies, and perhaps bees, but I hardly think that the insects were enticed there by the flame-colored patch in the crown of the kingbird; more likely by the many flowers along the bank of the river. As a general thing flycatchers do not wait for insects to come to them, but will go one, two, three and four rods for them. I have seen a kingbird that was sitting in the top of a tree go after a bumble-bee that was enticed within about one hundred feet of the bird, and it had quite a chase before it secured its prey. The kinglets (*Regulus calendula* and *satrapa*) each have the ruby and golden-colored patch in the crown that they can display at will. Do they do so to entice the small insects upon which they feed? I should as soon think so as that the honey-bee is enticed by the colored patch in the crown of the kingbird. —J. L. Davison (Lockport, N. Y., Sept. 19).

Wolves in New Jersey.—Exactly two hundred years ago, on the 4th day of September, according to the town records of Piscataway, Middlesex county, N. J., a bounty of twenty shillings was authorized to be paid to any one killing a wolf in the said township. Who knows when the last wolf was killed in this part of New Jersey?—J. L. K.

Fawn.—A correspondent tells us of a fawn five months old, which can be secured for a pet or some zoölogical garden.

Game Bag and Gun.

Address all communications to the Forest and Stream Publishing Co.

ON THE PLATTE.—II.

THE best of shots have their misses. The best of hunters often make poor bags. One cannot capture game unless the game be there to capture. Such thoughts as these combined no doubt keep the ardent sportsman from taking on a cargo of disgust when he makes a failure on one of his tours, and induce him to try his hand again at the first opportunity and with renewed and redoubled vigor.

The scanty luck attending our first hunt for geese last fall did not discourage us in the least. If possible it made us keener than ever to try it again. So, in the early part of November three of us took cars here at noon and were pulled to Kearney. From thence, that night, we went by the Union Pacific, sixteen miles further on, to the small village of Elm Creek, where we put up at the only hotel in the place, kept by one John Dermody, a pretty clever sort of fellow and who feeds his guests fairly well for that country at $1.50 per day. It was here our two Lincoln friends had stopped the week before, and from which point they radiated to the river Platte for five or six days in making their bag of over one hundred and fifty geese. One of the gentlemen of the present party, Mr. Webster, had been one of the couple on the former occasion and, of course, was pretty well posted about matters and things.

Arranging for a team to carry us down to the river early in the morning and for a breakfast in good time, we soon went to bed; not, however, before learning that geese were quite abundant, and meeting our man Talbot, of Sioux City, who had come up from Foote's with some of his force and his mammoth display of decoys, his dead geese being properly numbered and tagged and shipped by express to his taxidermists in the camp down the river.

Dermody gave us an early breakfast, according to promise, and we reached the river in good time. Selecting places, Houtz and I built a blind together, about one-third across the river, Webster going another third and a little in advance of us, building his blind. In driving down to the river, Houtz took a crack at a sandhill crane about twenty five yards off, with a wire cartridge, missing it a foot or so by shooting to the left. Further on we saw two geese in the edge of the prairie, and as we approached one of them rose and flew a hundred yards or so and came down again. The other was wounded and could not fly. Houtz got out and made for the first one, while Webster and I gave chase in the buggy to the other one. The fowl was simply wing-tipped, and made a most creditable race; but ere long we overhauled and captured it without further wound, and tying its legs, placed it in the bottom of our vehicle. In the meantime, Houtz's goose had taken wing out of range, but swinging around in search of its mate, came too near and was brought to bag.

On looking up the river after being located, what should first meet our eyes, about half a mile distant, but the outfit of our Sioux City slaughterer, his decoys covering a large territory around a low, flat blind, and making a show that was sure to bring in the geese as they should pass up or down the river. We felt pretty certain from the start that this outfit would materially diminish our score, if indeed it did not knock us "out of time" altogether. But as our team had gone back to the house, and it was then out of the question to move that day, we had nothing to do but to remain where we were and see it out. It was not long before we sighted a flock of geese coming up stream. Dropping down in our blinds we began honking at them. At once they showed signs of coming in, and slowly set sail for our decoys, but before coming within range they espied the larger display of Talbot's, and at once sheered off in that direction and made a bee line for them. We had the privilege of standing there and seeing this flock approach apparently within ten feet of Talbot, when two puffs of smoke and two unshapely objects dropping from the startled and confused flock that soon gathered together and went on up stream, told a tale that was repeated during the day till this man in pursuit of hides had brought fifty-four to bag. Our score was only five, including the two captured on land in the morning, none of these falling to my gun. The enjoyment Webster seemed to get out of the fact that I had closed the day without a single feather, would, in my humble opinion, alone have amply compensated him for this trip.

My friend, Jack Lanham, who tried to elicit sympathy by feigning a broken leg when the wagon turned over down at Newark a few days before, dropping in on us at 9 o'clock that night cheered me up considerably, for I had anticipated his coming and had already laid plans for the next day. We had often shot from the same blind and understood each other first rate, although we often had our disputes as to who jumped up before the geese were in range and frightened them away. Jack had taken the noon train at Lincoln, having telephoned to his daughter at Crete, where he lives, to dump his gun and hunting traps upon the cars as he passed there, so he appeared on the scene, as he always does, about half prepared. But the party turned in and helped him load his shells that night and the morning found him in trim and in fine spirits.

The second day after our arrival at Elm Creek we all went further down the river, Webster and Houtz locating about a mile below the blinds of the day before and Jack and I going still two miles further on, where we found a fair blind already erected and a few dead geese in a state of decay, sitting around it. This proving to be a good location, we managed by main strength and awkwardness to kill twenty-four geese during the day. For some reason we did about as miserable as can well be conceived of gentlemen who professed to be shots at all, and on one or two occasions the driver was so disgusted with our work as to yell from shore across to us and ask if he should not bring out a batch of clubs. But for all that we had much fun, and twenty-four geese in one day was an experience so far ahead of anything we had encountered, that we were in no mood to fall out with ourselves or each other, and were taken back to the hotel for a late supper that all hands enjoyed. Webster and Houtz had not done so well as Jack and I, although they had tried the fields in the afternoon during feeding time. They kept their wounded goose which had already become somewhat tame, and had witnessed on this day its capacity for storing away shelled corn by seeing it devour every grain of a large ear. Talbot as usual brought in a large number of geese and tagged and shipped them to his skinners at Wood River. Two days after this he pulled up stakes and took his own departure, having alone killed nearly three hundred geese

On the next day Jack and I went down to our blind of the day before, Houtz and Webster pulling up stakes and going up the river four or five miles above town, where they had exceptionally fine success, Jack and I falling considerably behind the score of the previous day. On meeting at the hotel that night we were informed by Houtz and Webster of their intention to leave for home in the morning, to meet business calls requiring their attention. Jack and I concluded to stay two days longer; and early the next morning, having the night before brought up our decoys and game from below, we were driven up the river to the scene of Houtz and Webster's operations. As we drove up to the bank where we were to take the river, a fine deer—a buck—walked leisurely down the bank and across the sandbar to the long, narrow island running parallel with the main shore, where it disappeared among the plum bushes and high grass. Jack was anxious that we should try and capture this fellow by one of the party taking a stand in the center of the island, while the driver and other party should move him up. But as we had no buckshot, and were hunting for geese, I objected, and the project was abandoned. That afternoon the buck was shot and killed by a Swede woman, who, with her husband, lived on the upper end of the island. During our two days' sojourn in this locality we found the bars in the vicinity literally cut up with deer tracks, where they had apparently been at play, but no other animal put in an appearance.

In addition to our box of sheet iron decoys, we had taken with us up to this place two dozen or more which some Chicago parties had left at the hotel, and these, together with our guns and lunch and ammunition, made quite a load to pack through water and quicksands and across the tangle and jungle on the island. There is scarcely anything so fatiguing as staggering along under a heavy load in water threatening every moment to run in at the top of your waders, with a dash into quicksands here and there, and now and then having to back out on account of too great depths, and to seek another route. The wind was whistling down in a bee line from the north and the weather was growing quite cold. One had to have much faith in his rubber pants before he could muster up the courage to plunge into the stream on that frigid morning. The sandbars were frozen on top and we had to use our pocket knives to make holes for the pins that supported the decoys, and to enable us to stick down the willows that were necessary in repairing the blind.

The flight from the fields that began that morning shortly after 10 o'clock was the largest one I ever saw on the Platte, but the tendency of the geese seemed to be for points further up the river. And another thing that militated greatly against us was the fact that our blind was located too near the northern shore. The wind at that point was blowing directly across the river, and as the clumsy fowls slowly made their way up stream, they naturally drifted toward the southern shore, and generally passed too far from us to be attracted or called in by our decoys, though once in a while a flock made us a visit, to which we paid our best compliments. It was a source of no small annoyance to us to see them alighting by the thousand about two miles further up the river. About the middle of the afternoon Jack took a few decoys and went up, where he had good luck, considering he had a new blind to build under great difficulties, and that the best flights for the day were over. He came back down to me before nightfall, when we waded ashore, climbed into our spring wagon and were hastily driven to the hotel, a distance of some six miles, against a raw wind that chilled me nearly to the bone.

I now begin the doings of the last day, which was a stinging cold one, coming nearly up to the proportions of a blizzard. I waded out to the blind abreast the island, and Jack was driven on up to a point opposite the one he had erected the day before, it being understood that the driver should tie up his team and perambulate between the two and finish by helping us get our traps ashore later in the day. I had about the same experience as on the preceding day, namely, to see the geese pass out of range and out of call to the south of me, and frequently settle down in the vicinity of Jack's blind, he being too far away for me to decide with any certainity if they went to his decoys. The wind was too fierce for me to hear the report of his gun, and the dark lowering clouds made it impossible to see the smoke from its discharge

I retrieved eight geese that day. Two wounded ones that had fallen near the blind had waded about and recovered their health, and when later I went out to gather them in, they took wing for parts unknown and were seen no more. Two others fell not far from the blind of some countrymen a quarter of a mile above me, who waded out and took them in. I think those were the only geese four of them got all day, and I had no disposition to parley with them over the rights of property. Not long after the geese took the afternoon departure for the fields I began to pull up stakes so that I might get ashore before dark. The first thing I did was to gather up and strap together the decoys belonging to the Chicago folks, which I carried out and across the island, where I laid them down on the sand and stuck up some bushes to mark their locality. I then returned to the blind, when I pulled up the other decoys and packed them in their box, which I expected the driver would come and take ashore, the box being too heavy for me to manage. There yet remained a big bag of shells and seventeen dead geese, most of them the large Canada fellows, to be disposed of. Unwinding the cord that had been tied around the blind to hold it in place, I tied my geese around the necks with it, each one separately and so far apart that in dragging them they would follow tandem, and one not pile upon top of another. It was done in this way that they would the more readily float, and not ground in shoal water.

This being done I started ashore, taking everything with me save the box of decoys. I bore down stream, pursuing every little channel that led toward the northern bank, intending to come out below the point of the island, where I would leave them for the more robust Jack and the driver to carry across the dry channel to shore. This undertaking proved to be a most arduous one. In many places I had to drag my big string of geese across little bars in order to keep them in channels leading toward my destination. The quicksands were numerous and deep, and as I struggled along under my burden I fell into a copious perspiration, and took off my gloves, wristlets and neck wrap to get relief. These I put in the pockets of the hunting coat, which I wore outside of the wading pants. On two or three occasions I came near getting into water above the waist of these pants. Finally, after a long and weary pull, and the most violent exercise, I think, of my life, I reached the foot of the island, and dragging my train of geese upon the bar, fell down upon the sands for a moment or so to rest. But this was not for long. It was too fearfully cold. The sky had become overcast, more densely, if possible, with clouds, and it was now about dark. I soon started up the bar along the edge of the island in quest of the decoys I had carried out there early in the afternoon. I did not find them for nearly an hour, having passed them three or four times in my journeying up and down there.

I then went out to shore where I could be picked up by the vehicle as it came down with Jack on the way home. Huddling up in a nook down behind the bank, I tried to keep warm. The wraps I had taken off and put into my coat pockets when wading ashore, had gotten soaked with water by being submerged, and of course could not be used. When I first made this discovery, I think my spirits and my temperature both fell about forty degrees. I was literally wet with perspiration, and my overcoat was in the spring wagon. All at once the subject of a fire flashed upon me, and then it occurred that one of the pockets of my vest was stored with matches put in there three years before. On fishing them out they proved to be all right, and lighting a piece of newspaper I soon had a rousing fire. The territory abreast the river there was newly plowed, leaving a strip of prairie grass about fifteen feet wide between the plowed land and the river bank, and it was this which furnished my fuel. After it had burned a little I got a bunch of brush and whipped the fire out at one end, letting the other burn against the wind partly, and following it up as it slowly crept along, keeping warm and drying my saturated wraps.

It was now about 8 o'clock and as dark as a stack of black cats, with a most cutting wind from the direction of the North Pole. I could not imagine what was detaining Jack and the driver, but directly the latter came down alone, and on being asked where Jack was facetiously queried, "Where are you?" He had not seen Jack since the middle of the afternoon, when he had taken his lunch out to the blind and had returned to shore with a load of dead geese. Of course I sent him back up the river with instructions to stay there until he found Jack or had some definite information concerning him. Not long after he had gone I heard the faint yell of some one I took to be the Swede, on the upper end of the island. This was repeated at intervals apparently closer each time, until at last I distinguished Jack's voice, and on my replying vigorously he asked, "Is that you, Polk?" and upon my answering in the affirmative he yelled in tones of thunder, "Put her out! put her out!" meaning for me to put out my comfortable and harmless fire. Upon learning that plowed land was behind me and the river in front his fears of devastation by a prairie fire that dark and windy night were allayed.

When Jack came up, though a man of herculean strength, he was nearly exhausted. He had started ashore with sixteen or eighteen dead geese on his back, and when about half way over had given out and left these on a bar and had then gone back after another load, some eight or ten, which he carried ashore to find on reaching there that the driver and team had gone. Leaving the geese he went back after those left on the bar, but it had grown so dark he could not find them, besides himself getting lost out in the river. At about this time he descried my miniature prairie fire and made tracks for it, every now and then yelling as he proceeded. His journey took him diagonally across the island, where the bramble and plum bushes came near tearing all the clothes off him. On reaching me he felt a sense of relief at knowing where he was, but I think if he could have laid hands on the driver he would have shaken the life out of him. Satisfying himself that there was no danger of my fire getting beyond control, he at once started up the river bank in quest of the driver. In the time between this and their return I was enabeld to thoroughly dry my wet garments and put them on.

On the return of Jack and the driver a hasty council of war resulted in our deciding to drive at once back to the town and send a team up the next morning after the box of decoys and thirty-five dead geese, which was to be expressed home, as we were to leave early the next morning. This decision being reached we beat out with brush the last vestige of our fire, and in the blackness of a dark night climbed into the open spring wagon, wrapped ourselves up as best we could, and started down the rivrr bank in the direction of home, about the only thing that was visible being the white broncho on the off side, and the dim lights of a few farmhouses scattered about at long distances off on the prairie.

Our route for the first mile or so lay eastward along down the river bank, where we were to bear off in a northeast course to strike a road leading eastwardly to town. The two bronchos we were driving had only the day before been purchased out of a herd brought into the town and of course we could not trust to them to take us home. The course along the river was easily pursued, but when we left that and struck out upon the prairie we were all at sea. The only guide we had was the direction of the wind; and as Jack swore up and down the wind had changed, no basis as to the direction could be derived from that. At the very start Jack and the driver fell into a dispute as to which was the proper way to drive, the former insisting that we were driving directly back to the river. I sided with the driver and urged that we travel so as to keep the stiff unvarying wind on our left cheek. "I tell you," Jack would emphatically reply, "the wind has changed." And when I would look forward and see the little white broncho apparently going the wrong way in a circle I would forbear further comments. At last the driver got out and walked in the hope of falling upon some kind of road, but it appeared to me we took more of a circuit then than at any time before, the wind blowing first and last upon every side of our persons.

Between 9 and 10 o'clock somewhere, we agreed to drive to the light apparently the nearest to us, and there find where we were; and so we headed for one. We had not proceeded far before we came to a plain road. Then a dispute arose between Jack and the driver whether we should turn to the right or to the left. I took no part in this dispute, but on the theory that the wind still came down from the north, I believed the driver to be correct. Jack had become so utterly demoralized I had no faith in him; but he was so persistent in the correctness of his position, that the driver yielded and went his way. Luckily for the party we drove up to a farmhouse whose light had not been visible before, and calling the owner out told him we were lost and wanted to go to Elm Creek. "That being the case," said he, "you must turn and go back the other way." "Are you not mistaken?" asked Jack, as though the man was crazy and did not know the way to town. He must have felt that some such thoughts were passing through Jack's mind, for he held the lantern that was in his hand up to Jack's face to see what manner of man he was. We further learned here that we were less than a mile due north from the point on the river bank where I had started my fire.

Following the directions of the farmer we took the back track, but the fool bronchos did not have sense enough, or were too blind to follow the road, and we soon became aware of the fact that we were off from it and driving through the grass. Jack and the driver got out, and after long search at last found it. Not long thereafter getting off again, and not being able to find it, we drove back to the farmhouse, where the light still served as a beacon, and took another start. Having gone a mile or more we once more got off the road at a point where there was a bad place across a draw, and a temporary road had been worn around it. At this place, which we all remembered well, it was half an hour before we got straightened out again, and even then Jack swore the wind had certainly changed this time, and we were driving away from town. And he kept up this protest till we came to a farmhouse near a bridge, where there was a furious stench from an overcrowded hog pen that none of us could mistake as the place we had already passed three times in our pilgrimage.

There were other landmarks between us and town, and when we did not reach them as soon as Jack thought we ought he would insist that we were on the wrong road. But I continually called his attention to the fact that the cold north wind was blowing on my left cheek, and that our course was eastward—the very direction necessary to [illegible] home. The relief to the party, and especially [illegible] we at last sighted the stream [illegible] will never be [illegible]

[illegible] that day, and Jack's score [illegible] found at the hotel some fresh arrivals [illegible] hunters, but learned in a few days afterward that the cold snap which had set in drove all the geese southward and there was no more shooting that winter. The boys are talking of a big hunt this fall, but have not determined where to go. I very much fear that on account of bad health I will not be able to accompany them. BURR H. POLK.

LINCOLN, Nebraska.

SNIPING.

"HELLO Harry. Say, I've just got a letter from Dave, and he says the birds have come along, and if we start right down we'll have good shooting. What do you say? Can you go?"

This was my welcome greeting to my friend and shooting chum, Harry C., as he entered my office on India Wharf one pleasant morning in August. Dave was our sentinel down at Chatham, on old Cape Cod, and every one but he and we wondered how it was that we were always so lucky in striking a flight of birds. But he knew that twenty-four hours later would see us on hand ready for business and the proofs that we generally brought away usually convinced our friends at home that business had been good and that it had been carefully and properly attended to by us. With us it was a pleasure to do business of that kind.

"Well, my boy, I guess I can get aboard to-morrow morning's train if nothing breaks. All we need is duds, guns and shells, isn't it? Our stools are down there still. I think I've enough shells loaded."

As if I didn't know that the anxious fellow had loaded enough shells in the last month with No 8, and stacked them away to kill pretty nearly all the birds on the Atlantic coast, and it would't have taken very big odds to have got me to bet that his traps were all packed, strapped and down in the front hall even then and had been there for a week past just awaiting for this word to come. If he got impatient of an evening he'd stay off up stairs and load a few more, and get out his old No. 10 and look it over once more; and surround himself with all his paraphernalia; and sit down on his trunk, and with gun in hand, softly whistle up an imaginary "yelper" or "beetle head," until suddenly, as if he had him in range, he'd jump up with "Ha, my pretty, do you think you can get away now." Snap! and "There you are, and now for the next." This is the way he would fill the aching void waiting for the glad tidings that the victims had arrived.

Ready to morrow morning! So nonchanantly, well I should say so, was my unspoken comment, but I added audibly, "All right then. Meet you at the Old Colony 7:15 sharp, and we'll scoot on the 7:30. Now you just skip, will you, for I've lots to do so as to leave everything straight, so we can stay a week if everything holds out." And away he went. Next morning saw us on hand with our traps, and two school boys never welcomed the final start for the circus more than we the ding-dong and puff-puff of the engine that at last got us in motion, while we, snugly ensconced in the smoker, cigars in mouth, rehearsed the ghost stories of former shoots, and enjoyed as much, I do believe, in pleasant anticipations as if our sport had begun and we were actually cutting them down.

To me there is a charm in bay bird shooting. In fact many. Comfortably seated in your blind with the sea breeze gently fanning your face and cooling your pulses and lending you new vigor with every breath you draw, with the grand view of the majestic ocean spreading before you, or the more placid beauty of the land-locked bay, dotted with its white sails, or with occasionally an ocean steamer drawing up gradually and as gradually sinking to the horizon beyond, with the magnificent and ever-changing panorama of sky and sea spread out before you in all its grandeur, inspiring in you thoughts that nature's noblest and most solitary scenery ever bids rise. So with your pipe giving comfort to the soul at ease you scan the clouds. Suddenly something catches your eyes, something moving far away. The sun flashes on it as from the polished surface of a glass, it's the glancing wing of a bird, and as the focus is perfected you see it is a bunch. Down! Down! it's a bunch of yellowlegs! and crouching low and motionless you whistle loud their call; some one or two respond, they waver, whirl and call again. Another call from you; they answer and draw toward you and all the time you're talking to one another until finally they see your stools, and hustling one another they draw to windward and then swing down again, and whirling to leeward they set their wings as head to the wind they bunch and hover to alight. They look a tangled mass of feet and wings, and as you rake them first one barrel and then the other, as they jump, out you throw the old shells and slip in a couple more, whistling all the time, to which the wounded and wing-tipped add their calls and perhaps back the others come again, and another two barrels tell their story. Now hurry and gather them before another bunch draws in. Chase down the wing-tipped and lift the stone dead last. What modest-looking little fellows they are, for such a set of pipes and pair of wings. They look like pigeons almost on the wing, but stripped for the broiler a robin compares favorably in size. But notice that pure white rich fat an eighth of an inch thick. That cooks into the bird as it broils, and no larded quail was ever so rich as these, nor so delicate with gamy flavor. Well, we'll never get to work if we digress or rather anticipate in this way. Our journey was as uneventful as most short ones by rail are, except that as we drew near to Chatham the odor of the pure salt air, fresh from old ocean's breast, was upon us to cap the stronger scents from the salt marshes, along and through which we had traveled, ever on the alert to catch the sight of bunches of birds, as startled by the train they sped away to quieter and more undisturbed feeding grounds, whistling the old familiar notes.

Chatham found Dave awaiting us; thin, wiry, and tanned like a copper cent, his close-twisted curly hair, like his skin and beard, showing exposure without stint to all kinds of weather. His eyes twinkled and snapped, and he saluted us with "Wall, I swon! I was tellin' Cynth this mornin' thet I'd bet ye'd be here; sure and here ye air and lookin' derful well tew. Reckin yeou'll git [illegible] Be gosh, I never [illegible] to [illegible]

[illegible] fried scollops and [illegible] young black-breasted plover stewed up [illegible] and Johnny-cake and coffee. Our appetites needed no urging, and for about fifteen or twenty minutes we were too busy to talk. Then we went off into the shade and lay off on the grass. So for an hour we lay and smoked and dreamed and enjoyed the *dolce far niente* as only the thorough sportsman with good digestion can, when well stuffed and sprawled out on the bosom of mother earth, with the light-blue heavens above him, where the driving clouds chase one another by, and the salt-laden breeze from the ocean fills the lungs with the pure ozone (that Barnum discovered, I believe) and makes him at peace with himself, his neighbors and the world. Care and boiled shirts are forgotten together, and he deliciously anticipates the morrow, and his pulses tingle with excitement as the thought of fast and furious volleys absorb his mind, while he indulges in his happy day dreams. At last Harry heaves a grunt, I can't dignify it by calling it a sigh, and thus holds forth "Come, you lazy runt, get up! we've got to get things in shape for to-morrow. Dave says the tide serves on the flat about 9 o'clock, and we have to be off by six sure." So up we rise and everything is unpacked, until our room looks like a garrison in a state of siege; guns, shell, wiping rods, shooting coats, wading boots, etc., everywhere each lays out his rig and about 100 shells loaded with No. 8s with a few 6s for long shots, and so supper time finds everything fixed. Mrs. N., recollecting our taste for cod fried in with salt pork in the old-fashioned style, has made that the *pièce de résistance*.

"Ugh! What's the matter? What's that?" and I jump up in bed with a sense of wetness. "Come, get up! Jump! Breakfast is ready, and we want to get off if you expect to do any shooting to-day;" and I find that Harry has smashed me plump in the face with my big sponge soaked full of water. He dodges my return volley, and soon we meet below as if nothing of the kind had happened above; his bread is cast on the waters, he knows it will return before many days. We tuck away a hearty breakfast and start for the boat, laden down with traps, provisions and water, for we have about ten miles down the bay to sail to reach the flats, which are interminable beds of sand just above low water level, which extend from Chatham fifteen or twenty miles south into the broad Atlantic to where Chatham Light marks the extreme southern limit of Cape Cod. We sail as far as the beach runs, and then start out on the sands about half a mile until we come to a few slight hummocks in the dead white shining level, sufficiently high to make islands of them until nearly full flood. In each is sunk a big dry goods box, with seats and shelves for shells, etc., and we each take possession of two a short gunshot apart, and after setting our decoys wait for the rising tide to set the birds to trading, gradually driving them toward our islands in the center, where they fondly hope to find security, but, alas, to-day they'll find three yawning pairs of gun barrels and doses of No. 8 shot.

Soon comes a whistle from Harry; all hands duck, and cautiously peeping over the top of our box we see far out over the sands a pair of big birds steadily drawing in to us. They'll come to him first, and we get ready to wipe his eye if he fails to connect. Here they are, the first of the season. Innocently, unsuspiciously they pipe away and swing within easy range and set their wings to light, when up pops Harry like a jack-in-a-box, and bang bang, and a cluster of feathers drifting down wind like the smoke tells they are down—a pair of spot rumps as they call them here; further south they are ring-tailed marline. Fine fellows they, like a fall woodcock in bill, eye and plumage, and rivalling him in delicacy of flesh; but their legs—they make you think there is a mistake somewhere, or else these fellows had a "shanghai" father.

Look out! I heard a beetle-head, and again he whistles. Yes, there he is away up. How dark his black breast looks. He is a youngster, for at first call he responds, and spying the stools, with a swoop he is on the way to us, in he swings, and impatient, I bang away and miss him clean. Like a flash he turns, but the next barrel reaches him. He is only wing-tipped, and sailing down he starts on the run. Unfortunate, but out of the box I jump and after him, slipping in a shell as I run, and on a long shot drop him, and quick as possible am back in the box. None too soon, for see that bunch of robin snipe swinging in, and close and evenly they fly, and right behind see that flock of willet. The red breasts will just about get to Harry and Dave as the willet pass me, so I call quietly to tell them to wait until I shoot, as I'll let the willet get a little by before I pull, so we can surround them and all have a chance. Down close! there go the robins! here are the willet! a napkin would cover the dozen of them! hold steady now! what a volley! and as the smoke blows away, what a prize. We all jump out and gather them in. Harry and Dave have cut their bunch all to pieces, only three get away; and they gather in some sixteen fat fellows with joyful pride. While I, "Oh, tell it not in Gath," have killed my bunch entire, eleven plump willet lie stretched upon the sand; in fact, they were so closely bunched that to shoot for one was to shoot for all, and that's what I did. But back quick, here's something coming. A sickle bill curlew, alone and solitary, by all that's rare, and I have the first chance! As he draws I hold carefully on him and pull, but he keeps on—and again missed clean, by Jove! Harry tries him, but he's moving and drawing away fast and still goes on. Bang again, he wavers, flies a hundred yards or more and drops like a stone. Away rushes Harry, grabs him and scurries back, looks him over and calls out "Hit him with only one pellet, and that took the top of his head off."

A whistle from Dave, and we see them coming in a mingled bunch, from which we can hear curlew, beetle-heads, yelpers, willet and marline calling in turns, and mingling their whistling till it sounds as if they were all talking at once, evidently a squad from some outlying point of bar, that are bound to get where they can enjoy a peaceful and quiet feed for a while, a general clearing out away from the sea, which is now coming over the sands like a race horse, as we can see it far away. So they are coming in to us to be quiet. Whew! how mistaken they'll be. On they come piping away, while six good barrels await them. We crouch low and whistle away to encourage them. Here they are past Dave, and he rises up behind them and cuts loose; the feathers fly; bewildered they scatter and draw together instantly, only to get Harry's shot, while I add to their downfall with two sharp discharges "head on." They [illegible] swing each way, and Dave and Harry whistling [illegible] while the wounded are calling too, one bunch swings [illegible] to hover over them. They are ready; four barrels [illegible] again, and the thinned remnant of the bunch tarries [illegible] ger, it's too hot. Away they go after the others, flying like streaks, while all hands jump out to retrieve until Dave, far out on the sands after an obstinate brant bird that will not be killed quickly and without trouble, suddenly drops flat and lets the bird go and begins whistling. We are up to concert pitch now, and soon see what his sharp eyes, accustomed to scanning the sky and sea far away, has caught at a glance. One solitary big marline coming, away up, and as he passes Dave rises on one knee and shoots. We except to see him drop, but he don't, and he gives it to him again. He is hit, but he mounts straight up, flying in short, sharp circles, while the breeze carries him out and out to sea. We sit and watch him until he is a speck in the clouds, then lost to sight. He is hit, but he will fly until he drops stone-dead into the ocean, food for the fishes. Too bad to lose him, but such is the luck.

Once more on watch; not long to wait; another motley bunch, mostly marline. How handsome they look as the sun shines through their pinions and burnishes their backs of dusky rich brown. What bold, free flyers, they are coming and going like the wind, their long black bills held so proudly out before. We'll count some of those bills this evening. No, some other evening, for Harry has carelessly shown himself and these shy fellows have darted out of range, taking the rest with them. Whistling or stools won't fool those fellows when they see what's behind it; then all hands, including himself, bless Harry for a nice intelligent fellow to go sniping.

Whee-u-u-u-u, whee-u-u-u-u-u. Lay low now, Harry, my boy. These boys won't quit so easy. They are bound to come. A perfect swarm of summer yellowlegs that have wandered from their favorite marshes above. We are ready for them. They circle down and around, and swing and swing and swing, and wheel and whirl, and down they come all talking at once, as thick as a barn door, hustling each other to get to those decoys first. Now wait until they swing in as they wheel and as you catch them right rake them down the line. Whang! what a drop, and once again; but nothing disconcerted they wheel once or twice more and respond to Harry's whistling and try his stools; and poor Dave, not to be denied after Harry has cut a double swathe through them, lets go at about a hundred yards and blamed if two or three don't drop. And so it goes. They come in singles, doubles and bunches, first to one and then to another. The sport grows fast and furious until they are gone, and the sea, rushing in over the sands like a racehorse, begins to invade our territory, and as the birds have all left and will not begin to come back until the ebb, and we are not going to wait for that, we gather our stools in bags, tie them into the boxes, and with guns, birds and traps, start on our wade back to the boat.

The water is knee deep, and gets deeper fast, until we come to a sort of little channel and then it's hard work to keep shells and gun out of water until we reach the boat. She is floating now in three feet of water, where we left her beached high and dry, and we are so engrossed with counting our bag, strung as they are through the bills on some long wing pinions, that we leave Dave to handle both throat and peak halliards alone and "up kellock," too, while we decide that for the first day a sickle bill, ten marline, three jack, fifteen willet and twenty robin snipe, to say nothing of about four dozen beetle-heads, brant birds and yellowlegs together, are not such a bad day's work after all. Ninety-seven big birds; what a glorious looking string they are. How we wish we could show them as they are to the boys to-night.

Dave interrupts our revery with: "Say, yeou! there's some bluefish drails in ther cabin, and ef yeou git um eout, p'reps yeou'll ketch er fish er tew goin' up." That's enough! We jump, and soon two lines are trailing, with a fresh eel skin over each drail, as they call squids down here, and soon a lively jerk and a steady pull shows me that Harry has the first fish as well as the first bird to-day, and in comes a nice four-pounder. But I soon follow suit, and when we make the landing, eight or ten nice blueboys are gasping out their lives in the wooden box that Dave always carries for such emergencies. Staggering under the load of fish and birds and guns, we mount the piazza, tired and hungry mortals, for we had forgotten to eat all day. As we resembled Dave's porcine pets shortly after, on what transpired we'll draw the curtain; but if you enjoyed our story so far, we'll draw it aside and give you more of it.

WESTERN FLORIDA.—Tallahassee, Fla., Sept. 15.—In your paper of Sept. 10, "Special," writing from Boston, Mass., asks where good hunting can be found. Were he in Western Florida he could scarcely speak so despairingly. One can take his gun and dog and find from one to two hundred quail, or partridge, as they call them here, almost any day. Ducks come by thousands a little later than this, and the numerous lakes afford the best of sport in that line. Deer and bear can be found within from ten to twenty miles of this city, and a friend of mine told me to-day he got up a flock of sixty wild turkeys last week and bagged eight of them. Alligator shooting is a novelty to most sportsmen, and it is here to perfection. The climate is mild in winter, accommodations are good in many of the hotels, etc., and it is no trouble to get companions who can guide the hunter to all the sport he desires. I am much interested in the rifle trials you propose making, and think you deserve the thanks and hearty support of every man who shoots a gun.—E. W. D.

THE TRAJECTORY TEST.

Editor Forest and Stream:

In the forthcoming rifle trial you will have done for American sportsmen and military men just what your great collaborateur the London *Field* did for the same class in England three years ago. I fully concur with Major Merrill and Mr. Van Dyke in what they say concerning the muzzle-loading rifle. While I believe that the breechloader has created a new era in modern tactics that could only have been effected by a long-range arm of precision, susceptible of rapid loading, yet as a hunting rifle at ranges of 100 yards and under it can never compare in precision, absolutely faultless, with the best-made muzzleloader. I have owned and carefully tested Sharps, caliber .40 and .45; Remington's .44, Marlin's .40-60, and Ballard's Union Hill .32 and Pacific .40-90. My experience is that Sharps' and Ballard's are the best single-shot breechloaders for field work. But none of them will make the target at, say, 40 to 60 yards (piling the bullets right on top of one another) that can be made by a good shot with the old-time muzzleloading rifle. I witnessed a curious and interesting instance of this which may be worth recording.

I own a flint-lock rifle that is nearly one hundred years old, but in an admirable state of preservation. The caliber is about .46, while the barrel is 39 inches long and weighs 10 pounds. About a year ago I sent this rifle to an excellent practical gunsmith and had it put in order. The lock must have been the work of a master, for to day it is as soft, smooth and silken in its workings as those of one of Purdey's best £80 express rifles. One lovely day last March, I and an officer of the United States Corps of Engineers, who was my guest, concluded to match the centenarian for accuracy against his .40-90 Sharps that had done approved work on elk and blacktail deer in the Rockies, and my new 18-pound, .40-caliber, 90-285 Ballard No. 5 Pacific. The target was 40 yards distant from the firing point, and the shooting was from a dead rest. We took turns in shooting the flint-lock rifle, which was loaded with 90 grains of the strongest quick-burning English rifle powder, and a round bullet that fitted perfectly, patched with strong linen greased with tallow. We shot at a round pasteboard target, 2½ inches in diameter tacked to an oaken plank, which was set up against a brick wall. The flint-lock rifle put one bullet on top of the other with a deadly accuracy that I have never seen excelled. It did not miss fire once in 14 shots. I had fortunately bought some extremely fine gun flints in London ten years ago for this rifle. They gave out abundant sparks, which accounts for its never failing. Every bullet we fired from this rifle was inside the white pasteboard. We had 3 of these 2½-inch discs. The first was cut to pieces by the bullets from the muzzleloader, the second was hit 4 times out of 7 shots with the Ballard, and by 5 shots out of 10 from the Sharps. The sights on all three were the usual notch and long silver front "bead."

Where small game (squirrels and turkeys) is abundant there is no more delightful shooting than with an accurate muzzleloading rifle. Why the modern small-bore breechloader cannot be made to shoot with the deadly certainty of the muzzleloader is beyond comprehension. I have yet to see one that will. Why does not some maker of muzzleloading rifles advertise in your widely read journal and do many sportsmen a real service? I know of many gentlemen who would gladly add a muzzleloading rifle to their batteries if they knew where such a gun could be built.

I live in a far South State, and in the fall and winter reside on a great cotton plantation situated on a lovely tributary of the Mississippi River. Large game of all sorts, such as deer, bear, sometimes panther and wolves, is fairly plentiful. My neighbors number many gentlemen who are ardent sportsmen, and as four-fifths of them have had either a European education or were graduated from Yale or Harvard, the society is of the best. The plantations are large, and run from 1,000 to 15,000 acres, consequently we have no near neighbors. Some of the finest guns in America are owned in this community. One gentleman has a battery of Purdey's consisting of two heavy 10's, a pair of 12's, one 16-bore and a .450 double Express rifle, the total cost of which, not including duty, was £400 sterling. We read the *London Field* and the FOREST AND STREAM and concur in the belief that in literary excellence your journal excels its great British contemporary. I simply intended to say when I commenced what has been so unconsciously spun out, that your rifle trials is precisely what American sportsmen have long desired, and in your hands it will be fairly and intelligently conducted.

I wonder if your contributor, Major Merrill, is the former captain of Dragoons, who in "the roaring forties" was a dashing hard-riding *sabreur* always first to the fore, be it at feast or when the bugle sounded "boots and saddles" for a long hard ride after marauding Comanche or stealthy Lipan? If it be the same man, I am glad to know he is still on this side. What memories are evoked when one begins to call up the ghosts of forty golden years ago!

MISSISSIPPI LOWLANDS.

SEPT. 16.

THE PENALTIES OF CARELESSNESS.

Editor Forest and Stream:

"He that being often reproved hardeneth his neck, shall suddenly be destroyed, and that without remedy."

As several serious accidents (?) have recently been recorded from the careless handling of shells in loading, I will give you several facts that recently came within my observation. Strolling into the store of a friend, I found the proprietor, who is somewhat of a sportsman, engaged in seating primers on loaded shells in this wise: Holding the loaded shell in one hand, driving the primer into its seat with blows from a pound weight in the other hand. When remonstrated with of the danger and utter recklessness of this proceeding, he replied, "I'll be blanked if I pay $4 for a set of reloading tools." If the fool blows out his brains or is maimed for life, I for one can say, served him right.

Only a few days after, I struck a youngster with his newly-purchased single 12-bore, seating primers on loaded shells with blows from a tack hammer. I at once took the liberty of also admonishing and reproving him pretty sharply, at the same time calling the attention of his father (who is too much absorbed in business affairs to pay any attention to either recreation or any of its aids), who at once sent for the proper reloading tools. I took pleasure of course in instructing the youth in their proper use.

Should this strike the eye or ear of any one guilty of like ignorance, or more properly, foolhardy recklessness, let me repeat your old warning, "don't." If you are too poor or too penurious to procure proper tools and fair knowledge of the handling of explosives, better leave them alone, and above all, having obtained such knowledge, exercise the utmost care and circumspection.

True, the breechloader is a safer weapon than a muzzleloader; but beware in the handling of the loaded shells or cartridges. Occasionally a cap or primer will fail to fire from the blow of the firing pin. On your peril, do not "monkey" with it in a perilous attempt to withdraw the primer (which you suppose to be inert) for the purpose of inserting a fresh one. Better throw that cartridge into the river, or if you must preserve the shell, first carefully withdraw the charge without interfering in the least manner with the primer until the charge is withdrawn; the insertion of an expelling needle or other instrument, a de-capping tool, a blow or even pressure will sometimes fire that very primer which failed in the arm in which it was tried.

BACKWOODS.

WEST VIRGINIA.

DIANA ON THE PRAIRIES.

Editor Forest and Stream:

I want to tell you of a hunt I had last evening that pleased me very much, and especially the ladies of our city, and if you have any lady readers it will please them too. After office hours two of my friends, with my wife and myself, went out three miles to a slough. My wife had never fired a gun, but she had prevailed on me to get a single 12-gauge for her to try. We landed safely, and the gentlemen and myself having rubber boots, started in, leaving her in the high grass. It was not long before three mallards came my way. I shot, and two of them answered to the call. The third wended his way on swift wing in the direction where my wife was. I heard the small 12-gauge bark, and saw the duck drop. I could not believe it until I heard her shooting. We all laughed and helped her find her duck, just sixty yards from where she had stood, and as the duck fell at the instant it was shot you will see it was a fine shot. We put it down as a chance shot and intimated the same, which made the young lady indignant, and she declared that she held just a little ahead of the duck as I had told her to do, and would prove it to be no chance shot if another come her way. But the second one she missed, which dampened her ardor very much. The third one came flying very fast, about forty yards away. She took deliberate aim, and the duck came down. This was too much for her, and true to woman nature, she threw the gun into the high grass and ran for the duck. The duck was soon found, but the gun not so easily. It took a long, patient hunt before we came upon it. I will leave you to imagine the lady's feeling at the second success No more ducks came her way. The first one was the handsomest male mallard I ever say, and the largest, weighing almost five pounds. It now hangs on a beautiful black velvet plaque in our dining room. All who have seen it say it is the most handsomely mounted bird they ever saw, and the mounting was accomplished in a few hours by one of the gentlemen of the party. He simply skinned the duck carefully, put plenty of arsenic on the skin, filled it with cotton and shaped it, and I never saw any bird so natural after being mounted. This was all done unknown to the lady, and her delight on seeing it was unbounded. The gentlemen of the party got a few mallards, when the birds all left. But I understood them, and told the boys they would return about dark. So they did; they came by the hundreds, and such a banging for about ten minutes you seldem hear. We must have killed fifty mallards, but some fell in the grass so you could not find them. We came home with thirty-five. I think we could have killed one hundred jack snipe. They are in flocks of twenty. I did kill three at one shot, but we don't bother with small game in this country. These will not stay long as the frosty nights will soon cause them to migrate. W. H. WILLIAMSON.

BISMARCK, Dakoto.

REED BIRDS ON LAKE ERIE.

LARGE flocks of reed birds, great companies of many hundreds each, have been passing over to the southwest against a strong wind, during the entire day, and so low that one bent on slaughter could have made a most respectable bag. Immense numbers of these birds used to frequent the wild rice marshes along the south shore of Lake Erie in the early fall to feed upon this grain, but we have never known any one to make a specialty of shooting them, as is done on the Atlantic coast.

During the first ten or twelve days of this month the well-known *chink chink* call of the reed bird may be heard overhead both day and night, but never before have we seen them migrating in large flocks by day; possibly this is done by night, the large flights seen to-day being an exception, from some cause or other, to the general rule. The reed bird (he is called bobolink and skunk blackbird now) breeds with us the last of May, but in limited numbers; it is only now and then he is seen dancing in his white and black plumage over our meadows in the spring. The swarms that used to haunt the marshes in the fall must have come from breeding places far to the north. DR. E. STERLING.

CLEVELAND, Sept. 8, 1885.

ARKANSAS.—Hot Springs.—Since the 1st of September deer hunting has been the order of the day. During the first few days of the open season deer could be started with dogs almost anywhere in the hilly country north of here, but the woods have been overrun with dogs and hunters until now scarcely a deer can be started. They have been either killed or have left for more secure quarters. I know of about twenty deer being killed within a range of country perhaps six miles across. If the hounds could have been kept out of the woods there would have been fine sport all the fall. Mr. Goza, of this county, has the credit of killing the first deer legally this fall. He went to his peafield at midnight and before 1 o'clock on the morning of the 1st of September had killed a fine buck which had come in to feed on the peas. Quail are fairly plentiful, and there is a promise of good sport with them when the season opens the first of next month. Squirrels are scarce, they nearly all having migrated away from here more than a year ago. Fishing in the Washita has been superb all the summer. Bass are our principal game fish. By the way, I do not know of a stream that would yield finer sport to the canoeist. Beautifully clear water, mountain scenery along its upper waters, rapids enough to make it interesting.—LEW WILLOW.

INDIAN TERRITORY.—Prairie City, I. T., Sept. 7.—The chicken season has been a fair one so far. The continual shooting of them out of season, prairie fires while they are nesting, and an insect call a chicker that destroys them when young, are the causes of their scarcity. Quail are very plenty.—T.

MORE TROUBLE ABOUT STOLEN DOGS.—The St. Louis *Republican* reports: "St. Louis sportsmen have found more than poor sport to grumble at with Southern Minnesota this season. Several dogs seem to have been railroaded out of sight just before the Iowa border was reached by hunters returning southward, and it has even been claimed that a regular business of dog stealing is made at certain railroad crossings, where the animals of south-bound shooters may be easily sent east or west. The most valuable St. Louis dog so lost this year is Grouse, a coal black English setter, which belonged to Dr. J. G. Parrish. The doctor started in company with Mr. John D. Johnson, the eminent attorney, from Minneapolis one day last week, both gentlemen having seen Grouse securely tied in the baggage car by the baggage man, into whose charge they gave the animal. It had a collar with railroad direction tag tacked on and was fastened with quite a stout rope. On arrival at Albert Lea for breakfast, the doctor went to take his dog in company, but found it had disappeared, and on looking at the rope saw that it had clearly been cut. On questioning the baggage man, he stated that the dog had gnawed the rope in two at a station north of Albert Lea. The railroad officials have made inquiry of the man who has since given them the name of a town not quite so far north as being that where the dog escaped. The motive of the change of town is clearly that of preventing his being asked why he did not at the first stoppage of the train acquaint the owner of his loss. This case would seem to be simple enough, but it is indorsed by others. It is not very long since a party of Eastern gentlemen, returning from grouse hunting in Faribault and Martin counties, Minnesota, drove to Winnebago City, to take the Southern Minnesota road to LaCrosse on their way home. They had six very handsome setters along and saw them stabled at the Collins House on the evening of their arrival. Next morning the whole were gone. The gentlemen put off their departure and declared their intention of remaining until their property was returned. The village authorities felt that a practice which was carried on of most years without much of a row to follow had gone a trifle too far this time. Ordinarily the loser of a single dog met with half a dozen sympathizers, who swore to find and ship it next day. An easy enough promise to fulfill if they had chosen to do so, as the animal was pretty sure to be in one of their own barns—but the theft of a whole kennel and the determination of a number of wealthy gentlemen to remain and prosecute might be serious, and certainly would keep away some long-pursed sportsmen. A bargain was struck, and for the sum of $100 a man named Nick Lattin was induced to take a drive out on the prairie, from whence he returned in a couple of hours with all of the truants. Many such instances might be added. Albert Lea is such a main crossing place that if the practice of dog stealing be permitted to go on there unchallenged, Southern sportsmen will have to leave their dogs at home if they propose to take them shooting in Minnesota. Capt. Wm. Mitchell, the head of the Albert Lea police, used to have the town in a good moral condition. It will be well if he uses his powers sufficiently to assist the railroad authorities in securing the return of Dr. Parrish's dog."

AN ALARMING TRANSMOGRIFICATION.—Dannemora, N. Y.—One day last June John and Charles Turner, two fishermen, were catching minnows in one of the bays of Chazy Lake, when one of them called the attention of his partner to some animal swimming across the lake forty rods away. They at once pronounced it a big doe, and having no regard for game laws or fawn, they proceeded to cut a good stout club. After some little delay and discussion as to who would do the clubbing, they launched their frail craft and started in pursuit of their venison. On drawing near they saw that instead of a doe it was a large black bear, and the "tail holt" was too short for them. Being cheated out of broiled venison for supper, they agreed to compromise with bear meat; and silently paddling up behind, the sapling was brought down with terrific force on bruin's head. To say the bear was surprised would be drawing it mild. With a growl and snort that could be heard at least a mile away, he turned and seized the paddle in his teeth and reduced it to splinters in a jiffy, then charged on the boat. Having a light Saranac skiff and oars already shipped, they commenced a race for the shore. The boat reached the shore first and the fishermen leaping out made good time to the nearest cabin. Old bruin came over the stern of the boat, and not finding his enemies, devoured a fine string of salmon trout, and taking a short nap without being disturbed again started and swam the lake in safety.—ROMER.

MARYLAND RAIL SHOOTING.—Rail shooters are now having lots of fun on the Wicomico marshes, at Salisbury, Md., and all along down the river. The game and gunners are also out in force on the Patuxent marshes. The best feeding grounds extend along the river for about twenty-five miles from the bridge which crosses the Patuxent near Upper Marlboro', Prince George's county. In this section of the river one of the largest stretches of marsh land extends along the Prince George's side a little above the village of Nottingham. This is the favorite spot for the game. Sportsmen are now coming here from Baltimore, Washington, Annapolis and all the adjacent sections. Besides visitors that come from almost every direction to see their country cousins at this season of the year and get a shot at the ortolans, the gunners of the border counties are in the marshes at almost every high tide. Standing on one of the high bluffs on the Calvert side, the smoke is seen curling up from countless guns on almost every part of the river, and the quick, sharp report of the breechleader is heard at intervals of a few seconds. At Nottingham, near Croom Station, a little village that is noted only for its antiquity and quaintness, and the rendezvous of gentlemen who are seeking sport on the Upper Patuxent, everything is moving now at quite a lively gait. The hotel has brightened up, and everything is propitious for sportsmen during the ortolan season.

THE WEST JERSEY GAME PROTECTIVE SOCIETY met at 531 Market street, Camden, Sept. 17, and the treasurer's report was read, which showed that the total expenses from April 16 to September 16 were $2,120, and that there was still a balance in the treasury of $1,211. The society during the last six months have distributed 2,006 quail in the counties over which it has jurisdiction. A Board of Directors was elected, and also William Eisenbrown, President, Chas H. Barnard, Secretary and Geo. E. Taylor, Treasurer. The detectives employed by the society are very active in their work of challenging rail and reed bird shooters for their license whenever they can reach them, and there is scarcely a sportsmen from Philadelphia who selects the New Jersey side of the Delaware for his ground but what is accosted.—HOMO.

It Was Not Sportsmanship.—Umatilla, Oregon, Sept. 9.—Elk are more plentiful in the Coos Bay and Umpqua Mountains in Western Oregon this summer than for years, and would-be sportsmen are holding high carnival. One party of three went out and killed six from one band. Two fellows did all the killing, as the third party's gun, a .38-cal., was too small to be effective, but he fired into them until his magazine was empty, and there is no telling how many died a lingering death from his pure wantonness. From all this slaughter they took only two hundred pounds of meat, thus putting themselves far below the skin hunter. Another party killed eight elk, not even going to two of them after they fell. With any kind of care this noble game would thrive in these mountains, and they would be sport for all time to come for the true sportsman; but a few more years and the vandals will have made them a thing of the past. —Rifle.

New Jersey Game and Fish Protective Society.—At the sixth annual meeting in Plainfield, Sept. 16, the following officers were elected for the ensuing year: Directors—Jas. S. Vosseller, William E. Jones, Edward P. Thorn, Wm. L. Force, Martin W. Schenck, Wm. B. Dunn, Israel D. Ten Eyck, J. W. King, Chas. Smith. Vice-Presidents—Percy C. Ohl, R. M. Stelle, Jos. B. Miller. Honorary Vice-Presidents—Fred. Volckman, New York city; Gen. William H. Sterling, Plainfield, N. J.; John I. Holly, Plainfield, N. J.; James R English, Elizabeth, N. J.; William J. Thompson, Gloucester City, N. J. Counsel—George P. Suydam, Plainfield, N. J. The Board of Directors subsequently met and elected the following named officers: President, Jas. S. Vosseller; Secretary, Wm. L. Force: Treasurer, Wm. E. Jones.

"Bob White," "Partridge," "Quail."—*Editor Forest and Stream:* If "Wells," "Coahoma" and "S." are through their discussion on this point, please give us all leave to go on calling the birds by the names we have known them by. They are just as easy (or hard) to shoot by one name as by another. The prolongation of the discussion recalls the speech of a North Carolina colored member of the State Legistature, who rose and said: "Mistah—Spea-kah—I—yah—did not maginate dat de extenuation o' dis line would extenuate unter dis time, sah," and then sat down again.—Meat-Hawk.

A Mother Doe's Strategy.—Umatilla, Oregon.—While hunting last June I was eye witness to a neat piece of strategy played by an old doe. I was bear hunting and my dog, while ranging the woods, started a doe and fawn. They came by at race horse speed, not seeing me as I stood perfectly still, and dashed into a clump of young fir, and, as I thought, passed on. But directly the doe came back without the fawn and retraced her course until she met the dog, when she bounded off up the mountain with him following, thus leading all danger away from her baby.—Rifle.

Ontario.—Paris, Sept. 14.—Fishing and shooting have been rather poor in this neighborhood this year. I seem to have had extra luck in the fishing line, having caught over 100 pickerel, or as I think you would call them, "wall-eyed pike," and about the same number of bass, the average weight of each kind of fish being one and a half pounds. We have literally no game laws here and the result is that our game is nearly a thing of the past. We have a game and fish protective society but I have never joined them, as I consider them pot-hunters.—Xl.

Rail Shooting.—Philadelphia, Sept. 19.—The rail shooting up to two or three days ago has been very poor. A flight of birds arrived, however, on the 16th and 17th, and better scores were reported. The rail are now arriving in good numbers, and can be heard every night passing over the city. A run of afternoon tides will take place next week and good shooting is expected. Snipe are arriving and more teal are seen, but the latter keep well up the unfrequented creeks flowing into the Delaware.—Homo.

A New Georgia Law.—Newton, Ga., Sept. 16.—*Editor Forest and Stream:* Birds plenty this season, thousands of them all over the county, and but few hunters. No market-hunters here, though some in the adjoining county. Under our law parties owning fenced land by posting the same can keep market hunters off their lands. Our Legislature now in session has just passed a law protecting deer, turkeys, squirrels and insectivorous birds till the 1st of October; open season till 1st of April.—Wire Grass.

High Point, N. C., Sept. 19.—The game prospects in this vicinity are better than I have known for many years. Quail were never more plenty within my recollection, there are also plenty of squirrels and rabbits and a fair amount of turkeys. It is very dry here, and the hunting is, of course, poor, but we hope for rain soon when we shall have some capital sport. Those four old gobblers still live. Come down and give them some exercise and get them in condition for the field trials.—Turk.

Stale Goods.—The evening papers inform their readers that canvasbacks, redheads and terrapins are in market. Yes, there are a few last year's ducks in market, that were kept in ice houses all summer, but the pretended epicure who would order them sent home now would probably steal sheep. As for terrapin, they are the sickly pen terrapin, the livers of which taste like rancid oil, even in winter, while in hot weather this objectionable flavor is still more pronounced.—*The Cook, Sept.* 21.

St. Louis Convention.—The arrangements for the St. Louis convention are rapidly approaching completion. The "formulating committee" will meet several prominent gentlemen from other cities, at Mr. J. D. Johnson's office, on Sept. 28, the day before the meeting of the convention, to draw up suggestions for the open meeting. Mr. Gates has been appointed chairman, and Mr. Peck and Dr. Swander of a committee to arrange for grounds and programme of shoots.

Middlebury, Vt., Sept. 21.—Grouse are more plenty with us than they have been in several years. Gray squirrels are not here yet, but as there are plenty of nuts we expect to see them later. Foxes are everywhere, and we look forward to fine sport with them.—Seldom.

Hartford City, Ind.—Ruffed grouse shooting will be excellent with us this season; birds very plentiful.—C.

Canadian Non-Export Law.—Deer, wild turkeys, quail, partridges, prairie fowl and woodcock, are prohibited to be exported from the Dominion of Canada by the customs laws passed last session, and all customs officers have been ordered to be on the alert.—M.

Taken for a Turkey.—A Liberty (Mo.) hunter last Friday shot at what he supposed was a wild turkey, but was in reality his hunting companion. The victim lived about twenty-four hours.

Information Wanted.—Wishing to complete our record of Westley Richards hammerless guns, we desire to obtain the address of the present owner of the highest quality gun, No. 13,289. Any sportsman will confer a favor by sending such address to the undersigned. A. G. Spalding & Bros., 108 Madison street, Chicago. J. Palmer O'Neil & Co., Pittsburgh, Pa.—*Adv.*

Camp Fire Flickerings.

"That reminds me."

168.

I WONDER how many times this old joke has been played on greenhorns, and how many times it will be played. Johnny was night operator at Magnolia and boarded with Mr. H. He was a very green youth from somewhere in New Jersey, and had never before seen so many ducks or heard so much duck talk. He was just crazy to shoot a wild duck or goose, and was generally found wandering around the shore with an old gun he had borrowed. One day he went out without his gun and walked up toward the creek. Here he saw several large white birds moving about among the cattails. He asked Hickey, a curiosity of these parts, what kind of birds they were. Hickey said, "Them's wild swans; why don't you git your gun and shoot one of them?" Johnny did not wait to hear more, but started off for the house on a full run for a gun. Arriving there pretty well blown, he spurted out with his eyes as big as saucers, "Lend me a gun! lend me a gun! the creek is full of swans; Hickey said they were, and I can get close enough to kill one." The gun was loaned him, and off he went. In about fifteen minutes there was a report, and in about an hour Johnny was seen approaching covered with mud from head to foot, and with a large white bird on his back. He marched proudly up to the porch, where all those about the place had congregated to see what he had got, and with a most consequential air threw down his swan and said, "There, now, let's see you fellows beat that." At this moment Mrs. H. appeared upon the scene, and taking one look at the swan, she went for Johnny. "You dratted fool," she said, "don't you know a tame goose from a wild swan? That's my best young gander you have killed, and you have got to pay for it." The shout that went up from us "fellows" caused Johnny to slink away awfully crestfallen. After he had shot the goose he had a terrible time getting it. He cut several poles and lashed them together, and waded out in the mud most up to his neck before he could get it ashore. The boys never let up on him about his "swan," and it was not very long before he applied to be transferred to another station. E. H. R.

Baltimore.

169.

Quail are abundant here; squirrels are found in all of the bottom lands, rabbits are plentiful on the uplands and in the fields, and we have a good sprinkling of wild turkeys, geese, and ducks. The quail shooting here is as fine as there is in the State, and some of our crack shots made some extraordinary bags during the last season. All kinds of game wintered finely. Our game laws are generally respected by the hunters. Two of our local sportsmen are still quite sore over a joke that was perpetrated on them early in the spring. One of their country friends was coming into town late in the afternoon, and in a bottom close to his house he flushed a fine gang of young turkeys. Will and Ed requested him not to tell any one else, as they did not want too many. Great preparations were immediately begun, and long before day the next morning, two men could have been seen with breechloaders on their shoulders and visions of turkey gobblers in their minds, quietly making their way toward the bottom. A brisk walk of twenty minutes found them close to the house of their friend, who was waiting for them. Another short walk of five minutes and a suppressed sh-h-h-h brought the three to a stop. Peeping through the heavy timber, the outlines of several dark objects could be seen high up in the trees. There was a hurried whispering and three guns went up to aim, a low command, and three flashes and three loud reports were followed by the fall of several heavy bodies into the thick underbrush and a loud flapping of wings. There was a quick rush to prevent escape, followed almost immediately by a choice selection of language, with something about buzzards, fools, etc. If any one thinks those men won't fight, just ask what size shot is best to shoot at buzzards. Bob.

Graves County, Ky.

I was waiting for the train at our station a morning or two ago, talking to an old sporting man and the village parson, when the former told us about a fox-terrier he had bred out of a bitch from the Fitzwilliam Kennels by a dog belonging to a colonel near here, who never had a bad one. The pup is about six or seven months old. Late in the seasons a fox was chopped in the gorse and left by the hounds, which went away with another fox. The master ordered the watcher to get him out, which he did next day, finding a very good head on him. This was stuffed and found its way to a spot a foot or so over the narrator's mantelpiece in the dining-room. The terrier, coming in shortly afterwards, began sniffing about until he caught sight of the head To spring on to the seat of an easy-chair and from the back of that to the mantelpiece, was an instant's work. His owner, coming in, attracted by the smashing of glass the dog had upset in his rush at the head, found him worrying it right merrily. A very gentle chiding was all he got, and the head was put up, as was thought, out of his reach, 2ft. higher. Shortly after this, as the family sat at dinner, an unaccountable scratching noise was heard, and all calls for Gyp proved unavailing, but a search discovered him up the chimney scotching himself on a disused pot-hook, and tearing with all his little might at the brickwork where the brush ought to be, as the head he no doubt reasoned was coming out of a hole on the other side, and the mounting of the head gave color to this, and must have a body and brush behind it. So, no doubt, thought Gyp, who, being baulked in his wish to worry the head, thought he would have a go at the other end, but had to bolt up the chimney to do it.—*J. L. W. in the Stock-Keeper.*

Sea and River Fishing.

Address all communications to the Forest and Stream Publishing Co.

SALMON IN THE COLUMBIA.

Editor Forest and Stream:

This scrap, cut from an old copy of *Land and Water*, gives some idea of the great numbers of salmon once found in the Columbia River, and now in a fair way to be exterminated:

"I take the liberty of writing to communicate to you a fact respecting the vast increase of salmon in their native rivers when unmolested, and thereby showing that if the poor things had but the chance of getting past the nets at the mouth of our rivers, and of avoiding those horrid small mesh nets along the Kentish coast, which inclose many tons of fry of the smallest and most valuable fish, which are used merely as manure, what an immense increase of valuable food might be procured from the waters for our population; but I am induced to send you these facts about salmon also because I have never seen them mentioned in any work on ichthyology, so that they may possibly be new even to you. I have never heard here of salmon being caught in the sea, or in any of our harbors at the mouths of salmon rivers, but in the year 1845 I was a lieutenant in H. M. S. Modeste on the N. W. coast of America, and when lying in the inlet of Puget Sound, a branch of the Straits of Juan de Fuca, the Indians used to catch salmon of thirty and forty pounds weight almost alongside the ship, by trolling for them in their canoes, using as bait a fish about the size and appearance of a four ounce roach.

"In the Willamette River, about thirty miles from its junction with the Columbia River, there are falls which, when the waters are high, are about fifteen feet deep; the river being half a mile broad, at the bottom of the falls is a very deep pool; when the salmon are going up the river they leap these falls, and get over them by the aid of a natural ledge of rock that is about half way up their perpendicular face, but though numbers succeed in getting up them, a vast number also fail, and these are so bruised with their fall that they die in the pool at the bottom, and such great quantities die there as, when the water gets low in August and September, to cause an abominable stench, and to make the river water putrid and undrinkable for a long distance down.

"In the same year on this N.W. coast, in about lat. 56°, we went in a man-of-war's gig, drawing about eighteen inches water, up a small stream about as large as the River Adur above Shoreham Bridge; there was a depth of water of about four feet; it was in August, and the fish were returning to the sea after spawning; the whole stream was full of them, and so full that they were swimming, or rather floating, on the top of each other, for they were in so very weakly a condition that they could scarcely move a fin or wag a tail; many were dead, and we lifted several out of the water so as to be able to say that we had caught live salmon with our hands, which if in condition would have been 30-pound or 40-pound fish; some were hooked by the gills and lifted out with the boathook, so as to be able to say that we had done such a thing, but of course they were quite unfit to eat. The stench from the dead fish that had been left on the bank by the tide was abominable, but we tried to get on to see what the river was like, but after forcing the boat through salmon for about a quarter of a mile we had to give it up, the boat in four feet of water having fairly stuck fast upon the salmon.

"I am afraid of relating this story, for it seems so incredible that it may be thought to be a 'Traveler's Story,' but I assure you that it is a fact, and the present Admiral Baillie and Captain Maitland Rodney, who were with me in the boat, would tell you the same thing.

"Thomas George Drake, Captain R.N. (July 16, 1870)."

I thought this worth sending in these days of annihilation of all animal life. During 1856 I visited most of this region, and I assure you Capt. Drake has not drawn too long a bow. It will not be long before the Columbia will be as depleted of salmon as our Eastern rivers. Dr. E. Sterling.

Cleveland, O.

THE PIKE FAMILY.

At a recent meeting of the Toledo (O.) Fishing Club, Hon. Emory D. Potter, the veteran angler and former Fish Commissioner, gave the following description of the members of the *Esocidæ:*

Mr. President, without taking up your time I would say that I have always been on intimate terms with the pike. Without further preliminary remarks I will give you a short history of the pikes (family of *Esocidæ*). This family of fishes is known by the long cylindrical body, large elongated jaws, armed with strong, sharp hooked teeth, one genus and six or seven species. The species most abundant in Lake Erie and tributaries is the muskalonge (*Esox nobilior*) the great lake pike, (*Esox lucius*) the green pike, (*Esox reticulatus*) or Eastern pickerel. We do not propose to enter into a minute scientific description of the varieties of this fish, our aim being to give such description as will enable the fisherman to recognize them at once, with some account of their habits and the best modes for their capture.

First—The muskalonge breeds in the latter part of May, seeking the shoal waters of rivers and bays, when they pair (they are not polygamous), the pair running side by side, in water so shallow that their dorsal and caudal fins are seen above the water. Here the spawn is fertilized and dropped upon the sand or gravel. Nature does not seem to have endowed them with much wisdom, for their eggs, laid at high water in the spring on these shoals, dry or become food for the birds. This fish seldom takes the bait in the upper waters of Lake Erie. In Buffalo Creek, New York, he is a vigorous biter, and Esquire Slade and George Clinton have captured many in that stream. In the St. Lawrence and the tributaries of Lake Ontario they take the bait or the spoon readily.

In the streams in Southeastern Ohio and Western Pennsylvania, they are ravenous biters and are known as the Ohio river pike. They were formerly abundant in the Mahoning and Coshocton in Ohio, and the Beaver and Alleghany in Pennsylvania. Without question they are the best table fish, next to whitefish, that is taken in our waters. They grow to a large size, sometimes as high as sixty pounds, and are very rapid growers. At one year of age they will average one pound; at two years, three to five pounds; three to four years, twenty to thirty five pounds.

Second—The Great lake pike (*Esox lucius*) is the most numerous of the species in our waters and the one with which our fishermen are most acquainted. They are found in March and April as soon as the ice is out of the shallow

streams and swamps contiguous to the lake and rivers, depositing their spawn. They are the earliest spawners we have. By the time the ice is fairly out of the larger rivers and the lake, they have deposited their spawn and returned to the deep waters. They never feed during the spawning season, when they become much emaciated, in which condition they remain till late in the summer. They are in their best condition from the middle of September to the middle of February. They have been known to weigh twenty-five or thirty pounds. They will take a trolling bait or spoon, a live minnow in deep fishing, a frog, a young duck and have been known to swallow a gosling a week old. When in season they are esteemed by many as a very fair table fish. The largest should be boiled, the smaller broiled. They are also rapid growers; at one year they will weigh six ounces; at two years, one pound; at three years three to four pounds; five to six years they attain their growth.

Third—The common Eastern pickerel or green pike (*Esox reticulatus*) has the same habits as the great lake pike, and is fished for in the same way. They are not often seen in the great lakes, and seldom weigh more than five or six pounds. They are much darker colored than the lake pike; the bars on the sides are more marked and distinct.

Fourth—The hump-back pickerel (*Esox cypho*) resembles *Esox salmoneus*, only he is rounded or swollen in the dorsal region.

Fifth—The banded or trout pickerel (*Esox americanus*), dark green, the sides covered with twenty curved bars.

Sixth—The little pickerel or trout pickerel (*Esox salmoneus*), olive color, green above and white below, with streaks on the side instead of black bars. These three last never grow to be a foot long, and are considered of very little account by fishermen. Their habits and mode of life are very much like the other species of the family to which they belong.

FAIRLEE LAKE.

Editor Forest and Stream:

A few days since I was in the village of Post Mills, Vt., enjoying the genial hospitality of Captain Thos. H. Chubb's home. A copy of the FOREST AND STREAM was placed in my hand and my attention called to an article bearing the signature of "S." and entitled "Auld Lang Syne," which carried me at once, in imagination, to scenes of my childhood, which, I believe, must have transpired in the same town of which "S." writes. I am sure the description answers perfectly to the town of R——h, where I was born, and the Uncle Lisha must have been Uncle Isaac R—d, of whom I have heard many most laughable anecdotes besides those related by "S." Uncle Isaac was a man who, besides being universal "Uncle," was universally liked. But he had one bad habit; he would partake too freely of the "ardent," and when exhilarated he got the "cart before the horse" more than ever, and then the boys—some, and, in fact, most of them "boys" of a larger and older growth—delighted to congregate in the village store and hear the old gentleman talk.

It was on one of these occasions that he said he "wanted to get a good board to come and boy with me and go to thcool thith winter." Also on such an occasion he told a story of a wonderful field of pumpkins in these words: "Onth I had the nitheth field of pigths that ever wath, and the neighborth's dam punkinth kept getting into them pigths. I got tired of it, and I juth called the houth out of the dog, and they went through the devil ath though the very bruth fenth wath after them." And I wonder if it was an exaggerated version of the story that "S." relates that I heard, or if "S." did not quite remember it all. To "tell the story as 'twas told me," he once borrowed a sleigh called a cutter in those days, of a man named Tucker, and in the course of the evening he stepped into Mr. Tucker's house, saying, "Well, Mithter Cutter, I run your tucker under the thed and put your harneth in the thtable and hung your horth up in the barn, and I gueth you will find it right."

But alas! the trout fishing of which "S." speaks is now no more. Like most of the towns in Vermont, the brooks of R——h are tenantless, and the hills once clothed in verdure are disrobed. Many of our beautiful forest trees have been "cut off as cumberers of the ground," and are now no more. Tree planting will soon be as necessary with us as at the West.

But the hunting and fishing laws of Vermont are beginning to have a beneficial effect. Game and fish are more abundant than they were five years ago. It is well that there were a few men far-sighted enough to realize that game and fish must be protected by law and cultivated, and a happy illustration of this foresight may be seen in the case of Fairlee Lake, which lies partly in Port Mills village. The waters of this lake had formerly contained a great variety and seemingly an inexhaustible supply of the finny tribe, but fifteen or twenty years ago they only lived in the memory of the people. However, about that time there came to Post Mills, from the Lone Star State, a gentleman who was passionately fond of hunting and fishing, especially the latter. He was at once struck with the beauty and healthfulness of this locality, and he decided that this was the place for him, consequently he brought his family and settled here, and as it was now to all interests and purposes his home, being an active energetic man, he set about making improvements. He interested himself in the law for protecting game and fish, and stocked the beautiful lake that is so like an emerald gem, with a variety of fish, and established a manufactory of all kinds of fishing implements, and has kept the place alive generally. His is a history which, were it only written, is well worth the reading. R. A. T.

VERMONT.

GEORGIA BASS FISHING.—Macon, Ga., Sept. 15.—My friend and partner (H. B. D.) owns an interest in a large mill pond three and a half miles from Macon. In this are a great many small bass. Some years ago the supply was almost exhausted by the largest ones destroying the smallest and then being taken by the fishermen. H. B. D. had the pond restocked, and now the fishing is improving. He and I caught over twenty fish one day in June, most of them bass, and we also had some bream fishing. Together with a friend one morning in June I caught twenty of these, the finest perch fish in the world. Three miles beyond this pond is one owned by Dr. McC., of Macon, which is well supplied with bass, and several parties have caught some big weights there recently. I give you weights of ten, 2, 2, 2, 3, 4, 4, 5½, 8½, 9 and 9 pounds respectively. These are private ponds and well protected. We anticipate some fine sport in November, as H. B. D. will let off most of the water in his pond to have some repairs done. The fish will then be in a small compass of water, and will bite freely. Will report to you if we have much success.—I. H. J.

A SECOND COURTSHIP.

A YOUNG lawyer friend of mine, H. H., has lately married. His wife is a good Catholic of an old Virginia family, and on Fridays and Wednesdays H. has to eat fish or dine with the heretics. These circumstances have been fortunate for your esteemed correspondent, who, by pretended or true interest in the cause of churchly fasts, was invited to "try the trout some Thursday." So last Thursday I asked H. if he thought his folks would take kindly to *Salmo fontinalis, or salvelinus*, whichever be correct. His reply was favorable, so I meditated another bold stroke, namely, to persuade my own wife to walk to the stream and participate in the prospective sport. Leaving directions to a colored citizen to follow with lunch, my wife and I set out. The Big Spring is about two miles or more from our humble dwelling. We "walked in the middle o' the road," to avoid climbing too many fences. We wanted the trip to be inconspicuous, but every acquaintance we have seemed that evening to be on that particular road. My wife, however, behaved well under fire, and trudged along admiring the beautiful landscape on each side of the way, and enjoying the fresh air and exhilarating exercise as much as her fisherman escort, who was feeding on prospective pleasures yet to be drawn from the clear running brook, odorous with fragrant mint and sweet-smelling plants—pleasures of tangible shape and beauteous form—flame-colored fish sprinkled with sparkles of the finest jewelry. In fine, he was thinking of the trout and she of the landscape.

The trout stream runs through a beautiful grassy meadow. Its waters, clear, swift and sparkling, glide over enameled pavements of multifarious mosaic, many-formed and many-colored, all colors represented in its pebbles and clays—reds, whites, yellows, bluish-grays, and lead-shaded tints changing their hues with the movement of water, sky or cloud, outshining the products of man's poor looms.

One of our sons with the colored contingent had arrived and the rods were jointed, the narrowness of the stream precluding the fly, we began to try the swift stream with the festive grasshopper, who was out in force and tumbling from everything but "sweet tater vines" into the stream and being gulped up by the agile and scaly citizens of the water. Rob caught the first and largest fish, more than a foot long and as broad as my palm, in fact the rascal, notwithstanding the commandment, "Honor thy father," etc., beat me in size of catch, though not in numbers. Or to put the matter as Henry Powell, the colored aide, did: "Mr. W., if your fish were two or three inches longer you would beat Rob all to pieces, I tell you this for a fac'."

We fished the stream to the river, about half a mile, caught a dozen fish, eight trout, nearly all plump and sizable, and after lunch and a pleasant walk home, ate trout for supper with the fragrance of mint still clinging to them, besides turning over to our friends enough for their Friday meal.

My wife had such a color, was so pleased and excited by the pleasure of the trip that I only was kept from courting her over again by the presence of the children, and by the consideration that "discipline must be maintained." If ladies only knew how much prettier a complexion may be gotten on a trout stream than from a drug store they would take more exercise and less powder. T. W.

LEESBURG, Va., Aug. 31.

RHODE ISLAND BASS.—I took with the rod the week ending Sept. 16, striped bass, the largest weighing 22 pounds; smallest 3½ pounds. Two rods that I baited during the week ending Sept. 12 took respectively: Rod No. 1.—Sept. 7, five, of 12, 9, 4½, 5 and 4½ pounds respectively; Sept. 8, two, of 17 and 8¾ pounds; Sept. 9, six, of 10, 7, 5½, 5, 2½ and 2 pounds. Rod No. 2.—Sept. 10, one, of 22½ pounds; Sept. 12, four, of 12½, 10, 7½ and 5 pounds; and Sept. 12 another rod took six, of 6, 5½, 4¾, 4, 3 and 2½ pounds. Seven bluefish were also taken during the week, weights, 10¾, 10, 8½, 8, 6, 5½, 3 pounds. I think from the indications that there is going to be the best fishing this month there has been for some years. For the past month the menhaden steamers have been in other parts and the menhaden have struck into the rivers and along this part of the coast, which in this locality means good bass and bluefishing. The gill-netters and trap-fishermen have had very poor fishing most of the season and it looks as if there would be less of them the next season. If there should be less and should the steamers also make themselves scarce, it would be of great benefit to the hook fishermen who depend on the line for their daily bread. I was much pleased with your editorial on the menhaden question, also with Mr. Clapham's notice, and could it be made as plain to the United States Government as it is to most fishermen that the steam fishing, pound and gill-netting destroys our fishing and fish supply, they would either be restricted or wiped out.—W. M. HUGHES (Newport, R. I., Sept. 13).

FIGHTING BASS.—New York, Sept. 22.—*Editor Forest and Stream:* A friend of mine, recently from Florida, has just told me an absolutely true fish story, as follows: A friend of his with his wife were out rowing on Lake Nettie, near Lake Eustis, Orange county, Fla., when, noticing a commotion in the water at some distance, they approached and found two black bass in deadly combat. The water boiled. The fish attacked and retreated after the approved style of the arena. Finally one of them seized the other by the upper and lower jaw, and shook him as a dog shakes his prey. So exhausted were they that the gentlemen reached down and drew them both into the boat. One of them weighed 9 pounds and the other 9½ pounds. Verily Florida waters are the ones in which to go fishing, without either rod, line, hook or sinkers.—GEO. SHEPARD PAGE.

RAINBOW TROUT IN THE ADIRONDACKS.—Number Four, Lewis County, N. Y., Sept. 20.—*Editor Forest and Stream:* During the spring of 1882, while I was in this region, Mr. Fenton was hatching 300 eggs of the rainbow trout. About the first of this month Rev. Dr. Shipman, of New York city, caught one of these fish in the rapids of Beaver River, which weighed ten ounces. A day or two afterward one of the same size was caught by a gentleman from Albany. I found that they fed on green worms gathered from the rock bottom. —SPENCER M. NASH.

BRITTLE HOOKS.—Redditch, Eng., Sept. 10.—*Editor Forest and Stream:* We notice that one of your correspondents complains of the quality of the sproat hooks of one of the manufacturers in this town. We take the liberty of sending you 100 of our manufacture, and shall be obliged if you will try them and report on them. Yours truly—S. ALLCOCK & Co. [We have tested the hooks sent and find them of most excellent quality, and have sent some to our correspondent Mr. E. A. Leopold.]

LONG ISLAND SEA FISHERY.—Springs, Long Island.—The fishing of September here has been better than before, but the fresh winds and rough sea have been unfavorable for the bunker steamers and the pound-fishermen. The cooler weather and water have brought in the fish from the ocean tides in greater abundance, but the water has been too rough to allow the pound boats to "lift" their nets. One party here (Fireplace Point) who have five pounds at Fort Pond (Montauk) have been able to visit them but once this week, viz., on Monday. On that day (7th) we had fresh easterly winds here, when the racing yachts were prevented by calms off Sandy Hook from completing their struggle. The fish chiefly taken in the pounds of Block Island, Gardiner's Bay and Peconic Bay waters are weakfish, bluefish, porgies, shiners and flatfish, these five pounds taking from two boxes of fish to twenty. The average prices they receive for them in New York vary from $2 to $12 each, according to the demand for them in city markets. The dealers tax the fishermen about 12 per cent. for sales, which is a fair sum and is not objected to here. Once each day a cartload of worthless fish is taken, such as sharks, dogfish, skates, bunkers, etc., and these are used to manure the land.—I. MCLELLAN.

SNAKE AND BETHABARA WOODS.—Snake or letterwood is a tree of the genus *Piratinera*, growing in Guiana, South America, and used by the natives for making bows and arrows, for which reason it should be an excellent wood for fishing rods, but has not entered into general use owing to its being very heavy and expensive, costing twenty-five cents per pound in the log in Guiana. Greenheart is a variety of the genus *Laurus*, found in the West Indies and South America. That in Jamaica and Guiana is the *Nectandra rodiæi*, called also "cogwood" in the former and "sipieri" in the latter locality. Lancewood is a tree found also in the West Indies, called in botany *Guatteria virgata*, and is *par excellence* the best wood for fishing rods. It will be difficult to find bethabara wood in the botanical list, it is only found in the catalogues of some fishing rod makers who have enshrouded it in mystery, otherwise it is nothing but a fancy name for greenheart.—M.

FLY-FISHING FOR PERCH.—Salisbury, Md., Sept. 14.—My colleague and myself were red fishing on the Urcomico River, two miles below this place, and at my suggestion, Mr. D. put on a leader containing three flies. On the third cast he took a white perch, and on the fifth or sixth cast took a large yellow perch, twelve or fourteen inches long. Handing his rod to me, he went into the yacht's cabin to put a leader on another line, when upon the first or second cast, I took a large yellow perch. This was on a narrow mud flat, shelving up toward a marsh in fresh, or perhaps a little brackish water. The tide had been flowing perhaps an hour, and was in a short time too high upon the flat to fish. We will try it again. Fly-fishing for perch is something new to both of us.—E. W. HUMPHREYS.

FISHING WITH A PADDLEWHEEL.—Hornellsville, N. Y.—I see it reported that the other day the steamer Moulton struck and stunned a thirty-five pound pickerel with her wheel, in the lake off Chautauqua. A fisherman named Rew killed it with his oar and sold it to the Chautauqua meat market for four dollars. It was more of an object of interest than the pin machine, for the time being. I do not think this fish was a pickerel, but a muscalonge (*Esox nobilior*). I have caught them in Chautauqua Lake, but could see no difference in them and the Niagara and St. Lawrence muscalonge except in color. True this is some years ago and I did not at that time know that the true muscalonge had naked gill covers.—J. OTIS FELLOWS.

BASS FISHING ON THE SCHUYLKILL.—Philadelphia, Sept. 19.—Bass fishing is now excellent in the Upper Schuylkill, above Phœnixville, and the fish take the fly freely. Two friends waded the river at or near this turn a few days since and took twenty or twenty-five fine bass with the artificial lure. September and October with us are the season *par excellence* for this fish, and our anglers are finding it out gradually and many put up their bass rods for July and August and never think of jointing them until autumn opens.—HOMO.

PICKLING CLAMS, MUSSELS AND EELS.—Can any of your readers give me directions for pickling clams, mussels and eels, for use on a long cruise?—A. W. R.

THE BIENNIAL SPAWNING OF SALMON.

THE BUCKSPORT EXPERIMENTS.

[Read before the American Fisheries Society.]

BY CHARLES G. ATKINS.

AFTER the organization of the establishment for the collection of eggs of sea-going salmon at Bucksport, on the Penobscot River, in 1872, it was one of the earliest suggestions of Professor Baird that we should attempt, as occasion might offer, to obtain evidence bearing on the frequency and duration of the salmon's migrations and its rate of growth.

To carry out these suggestions it seemed requisite that observations should be made on individual fishes at successive periods in their lives; yet, whatever means should be taken to secure and identify them must, it was evident, not prevent free movement in the open river to and from the sea, or interfere in any way with the development of their functions or their regular growth. They must be distinctly and durably marked, yet in such a way as to do them no injury. The cutting of the fins would answer the purpose only in part, since it would not afford a sufficient variety in form to enable us to distinguish a great number of individuals. Branding upon the side of the fish was thought of and even tried, but the serious mutilation that befel the first fish operated on, and the extreme probability that those marks that were so lightly impressed as to do no injury to the fish would soon become illegible, or so nearly so as to be overlooked by fishermen, caused that method to be abandoned. A metallic tag, stamped with a recorded number, appeared to offer the greatest promise of success. The first tag tried was of thin aluminum plate, cut about a half inch long and a quarter wide, and attached to a rubber band which encircled the tail of the fish. It is probable that most of the bands slipped off, and that those which were tight enough to stay on cut through the skin and produced wounds that destroyed the fish. At any rate, no salmon thus marked were ever recovered.

The next method employed was the attachment of an aluminum tag by means of a platinum wire to the rear mar

gin of the first dorsal fin. This place of attachment was chosen, because, being near the middle of the fish, it has less lateral motion when the fish is swimming than any point nearer the head or tail, and because the tag, lying thus in the wake of the fin and close to the back, would be better protected from contact with foreign objects than elsewhere. The attachment was effected by placing the fish upon a narrow table, confining it by straps, and piercing the thin membrane of the fin between the last and next to the last ray by means of a needle, into the eye of which was threaded the wire already connected with the tag, the ends of the wire were then twisted together, so as to form a loop, and neatly trimmed with scissors. The tags were stamped with dies. This mode of marking has been adhered to in all subsequent experiments of the kind with no change except that the aluminum tag has been replaced by one of platinum.

The marking was always done in the fall, after the fish had been relieved of their spawn. They were then liberated either in tide water or in fresh water whence egress to the sea was easy.

Of the salmon marked with rubber bands in 1872, as has been said, none were recovered. In November, 1873, there were marked 391 salmon. In the ensuing year rewards were offered to the fishermen for the return of any marked specimens. In response, there were sent in to the station twenty salmon, the first in January (taken in a smelt net) and all the others in April and May. All of the twenty retained the wire, by which they were with certainty recognized as having been marked in the preceding autumn. Sixteen of them still retained the tags. One of them was found to have lost eight ounces in weight, eight others had lost from one to two pounds each; all had fallen away in flesh since November. The males had faded in color; the hooks on their lower jaws were still present, but had decreased much in size. The females had regained their bright silvery color to a great extent; in their ovaries were the germs of the next litter of eggs, but they were very small. No food could be found in the stomachs of either sex. It was quite evident from their condition that these fishes could not have been to their feeding grounds during the winter. Twelve out of the twenty were taken in the Penobscot above Bucksport, and nine of these were taken at Veazie, twenty-five miles above Bucksport, in close proximity to the first serious obstacle they would encounter in ascending the river. Salmon in their condition should be bound toward the sea, and had they, as may have been the case with some, reached the upper waters it is quite impossible that they could have became breeders the same year. That all these loiterers dropped down to the sea before the first of June we may conclude from the fact that after that date no more were captured. During the whole year not a single marked fish was recovered or reported that had in any degree mended from the condition in which it was released the preceding autumn.

In 1875 the offer of a reward was renewed and this time resulted in the recovery, in May and June, of eight specimens, and among our breeding fish there was found in the autumn another whose mark had escaped observation at the time of capture. Of these nine fish, four were females, three males, and two not determined. They were all of good size, weighing from 16 to 24¼ pounds, and measuring 34½ to 40½ inches in length, and were all fat and apparently healthy. One of the females was placed alive in our inclosure and yielded in the fall about 11,500 eggs. Unfortunately the tags, supposed to have been good aluminum plate, proved deficient in durable properties, became (as we learned by direct observation) weak and brittle after a short time in water. All of them had fallen off from these specimens, and we could not therefore trace the record of the individual salmon, but the wire remained and proved beyond question that these salmon were marked and released in November, 1873, as none others had up to this time been marked in the same manner, and none at all marked in 1874. They had thus been absent eighteen or nineteen months, and had (we cannot doubt) passed the intervening months, including the summer of 1874, mainly on their feeding grounds in the sea. The experiment was repeated in 1875 and in 1880, with platinum tags, which proved durable.

In 1875 there were marked and released in tide water, at Bucksport, 357 salmon. In the spring of 1876 a considerable number of these were taken in the river; but without exception they were, as in 1874, all poor. In 1877 three specimens were recovered, all in good condition and of larger size than when released. The first, No. 1,019, was caught on Cape Gelison in April. This was a female fish; before spawning it weighed 21 pounds 6 ounces, and at time of release 16 pounds. When retaken, seventeen months later, it weighed 33½ pounds. The second individual, No. 1,010, was also a female; weighed before spawning 18 pounds 2 ounces, after spawning 13 pounds 8 ounces, and on recapture in Lincolnville, nineteen months later, 30 pounds 8 ounces. The third individual was also a female; weighed 20 pounds 7 ounces before spawning, 15 pounds on release, and 26 pounds on recapture in Lincolnville nineteen months later. The results of this second experiment supported the conclusions drawn from those of the first in every particular.

The salmon marked in 1880, numbering 252, were released in the fresh waters of Eastern River, a small branch of the Penobscot. The distance from the point of liberation to tide-water was two miles, and the only impediment a dam over which they could easily go down in the spring, or at any high water when the river was not very low, but which during the winter must have constituted a serious impediment. There is reason for thinking that the larger part of these salmon remained above the dam until the spring floods. A small reward was offered for the return of fish or tags taken the next spring, and twelve tags were received. Nine of the fish bearing them were weighed and found in every instance to have fallen away in weight since marking. No fully or partially mended fish were obtained or heard of that year. But in June, 1882, five prime salmon were recovered bearing the tags affixed in October and November, 1880. The following statement shows the date for each individual:

RECORD OF MARKING.

No.	Date. 1880.	Sex.	Length inches.	Weight before spawning. lbs.	oz.	Weight of eggs. lbs.	oz.	Weight on release. lbs.	oz.
1135	Oct. 28	F.	30	9	7	1	15	7	8
1136	Oct. 28	F.	30	9	5	2	1	7	4
1239	Nov. 5	F.	36	17	12	3	8	14	8
1248	Nov. 5	F.	32	10	5	2	5	8	0
1247	Nov. 12	M.	30½					8	8

RECORD OF RECAPTURE.

No.	Date. 1882.	Place.	Length inches.	Weight lbs.	oz.
1135	June 20	Bucksport Center.	34½	16	8
1136	June —	Searsport.	35½	17	4
1239	June 22	Sandy Point.	39¾	21	0
1248	June 27	North Bucksport.	30	21	0
1274	June 23	Frankfort.	—	14	12

The results of this third experiment coincide, it will be seen, with those of the other two, and they leave little room for doubt that it is the normal habit of the Penobscot salmon to spawn every second year. Had any considerable number of them recovered condition in season to return to the river for spawning the year after their first capture, they would hardly have escaped detection altogether, indeed, they would have been much more likely to retain their tags, since they would have borne them only six or seven months, instead of eighteen or nineteen. This view is further supported by what we know of the reduced condition in which the end of the spawning season finds the salmon, the short time, only six months, that intervenes between the spawning season and the time for the next "run" up the river, the low temperature then prevailing in the river and bay, and the fact, which is pretty well established, that a large part, perhaps nearly all the salmon, instead of proceeding at once to sea after spawing, linger in the fresh water all the winter and descend only with the spring floods.

BUCKSPORT, Me.

THE TEXAS COMMISSION.—The last Legislature of Texas has abolished the Fish Commission of the State. The late Commissioner, Mr. John B. Lubbock, of Austin, has leased the State carp ponds, and is now supplying customers with young carp at from eight to ten cents each, according to quantity. Mr. Lubbock was an active Commissioner, and the Legislature has done an unwise thing in abolishing the office.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Sept. 29, 30 and Oct. 1, 2.—Third Annual Dog Show of the Southern Ohio Fair Association. H. Anderson, Secretary, Dayton, O.

——— ——— ———Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

Oct. 6, 7, 8 and 9.—Second Annual Dog Show of the Philadelphia Kennel Club, in conjunction with the Pennsylvania State Agricultural Society. E. Comfort, Secretary, Philadelphia, Pa.

Oct. 6, 7, 8 and 9.—Fourth Annual Dog Show of the Danbury Agricultural Society. S. E. Hawley, Secretary, Danbury, Conn.

Oct. 7, 8 and 9.—Dog Show of the York County Agricultural Society. Entries close Sept. 28. A. C. Krueger, Superintendent, Wrightsville, Pa.

Oct. 8 and 9.—Second Annual Dog Show of the Stafford Agricultural Society. R. S. Hicks, Secretary, Stafford Springs, Conn.

FIELD TRIALS.

Nov 9.—Second Annual Field Trials of the Fisher's Island Club, for members only. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 9.—First Annual Trials of the Western Field Trials Association, at Abilene, Kan. Entries close Oct. 15. A. A. Whipple, Secretary, Kansas City, Mo.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

November.—Fourth Annual Trials of the Robins Island Club, Robins Island, L. I., for members only. Wm. H. Force, Secretary.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2704.**

THE EASTERN FIELD TRIALS.

Editor Forest and Stream:

Owing to the want of timely advertisement the closing of the puolic stakes of the Eastern Field Trials Club, viz., the All-Aged setter and pointer stakes, is postponed from Oct. 1 to Nov. 1, the Members' stake to the evening of Nov. 11 and the Champion stakes to the evening after the finish of the two all-aged stakes. The dates of running remain as advertised last spring, viz., the Members' stake on Thursday, Nov. 12, and the All-Aged Setter stake on Monday, Nov. 16, followed on its finish by the All-Aged Pointer stake, the Champion stake, if it fills, and ending with the Eastern Field Trials Derby.

WASHINGTON A. COSTER, Secretary.

NEW YORK, Sept. 22.

THE AMERICAN KENNEL CLUB.

Editor Forest and Stream:

I think we have all been somewhat cranky this summer. How could it be helped? The A. K. C. was such a sore, so constantly breaking out in new places, that we all got to be cranks in our magnifying of our pet grievances, and our adulation of our pet remedy.

Now that there is to be another attempt to put the A. K. C. on a firm and respectable basis, let us all try to clear our minds of crotchets and illusions, and bring a sober, unprejudiced reason to our aid. We will doubtless make some mistakes that cannot be helped, but let us build so that we will be respectable and not the laughing stock we have been in the past.

To my good friend Osborn I extend my hand. I will fight by his side in a mutiny till the ship sinks. Now after the above prosy sermonizing, for an application, to wit, the "standard committee" business. It is really incomprehensible to me how so many clear-headed men have gone wrong in this. Except Mr. Osborn. I do not know of one that has expressed himself in public to the real point on this matter. Granting that the mainspring that moved the machine was the desire to enact a setter standard to fit the Gladstone dog (there is no use beating round the bush), there is nothing inherently wrong in that. If certain parties want a standard enacted to fit a certain dog or strain of dogs, that is legitimate enough, and all that is required is to let all shades of opinion be heard, and decide the question fairly. If the majority want the Gladstone type, so be it; if not, then down with it. Granted that it was the intention to smuggle it through in Pennsylvania Legislature fashion, that is now balked, and in fighting that, don't charge around like a bull in fly time, tail in air, eyes ablaze, charging every cornstalk in the field (this especially applies to "Porcupine").

The mischief is that these excellent but excited bovines seem to be possessed with the idea that these standard committees would upset all existing standards, and set up creations of their own. Now, no such chimera can be evolved from the mode of appointment or construction of any of the committees except that on setters. How many breeds are there for which there is no standard? Take mastiffs. Who ever judges them by the sacred "Stonehenge," that so many have made a fetish of? "Stonehenge" gives thirty-five points for head, Mr. Wynn's scale, prepared for the late mastiff club, gives forty-two, and the practical lesson derived from the judgings of the O. E. Mastiff Club is about seventy-five! Is it not about the same in many other breeds? For instance, take the illustration of Governor in "Dogs of the British Islands." Can any one imagine him a good mastiff if the wretched beasts the English craze has recently sent over here are good type? Imagine old champion Turk, with the mien of a chief justice of the United States, led out and beaten, as he surely would be, by such a beast as Lady Clare, as short-faced and turn-up nosed as any pug, with quarters as lank as a starved wolf. Here we have got clear away from "Stonehenge," and have set up a shadowy fancy of our own, each judge giving us his own particular views as to high art.

In such a case (and I assume that there are a dozen more), would it not be well for it to be positively laid down that "Stonehenge" is the standard?

Then this "standard" business has brought out blasts from "Porcupine" and even from the level-headed editor of the *A. K. R.* about "a good judge that knows his work," not needing any standard. Now this is sheer nonsense. How is any judge to know what is the correct type, or what are the relative values of various merits or demerits in the specimens being judged? In fact, no judge can act without consciously or unconsciously following a standard, and on this no advice can be sounder or clearer than that of "Zoilus" that lately appeared in FOREST AND STREAM, especially when it is known that "Zoilus" is himself one of the oldest and most weighty of English judges. So much for an airing of my pet crank. Another thing. The "constitution" (there really is such a thing, construction, skylark appointment of committees, etc., notwithstanding) provides that the officers of the A. K. C. have no vote. Now, is not this wrong? If we have sufficient confidence in any one to elect him an officer should we not trust him with a vote? The change was brought about by the president casting one vote as such, one as a delegate and "x" as proxy; but cannot all this be obviated by providing that the officers shall not be delegates, and that none shall hold more than one proxy? I am not blind to the enormous difficulty we will have in securing respect for any set of rules that may be enacted. The farces of "construction," "Pickwickian" appointment of committees, Jack Bunsby opinions, and the unavoidable necessity of deliberately setting rules aside has honeycombed the idea of a duty to observe rules, but with the evidence of a sincere determination to look solely to the general good, and an executive and committee on discipline, determined to enforce rules, with the single purpose of protection to canine interests in general, these difficulties will gradually vanish. W. WADE.

HULTON, Pa., Sept. 12, 1885.

THE PHILADELPHIA DOG SHOW.

Editor Forest and Stream:

At a meeting of bench show committee of Philadelphia Kennel Club Sept. 15, 1885, it was decided to separate the dog and bitch mastiff puppy class and make a class for each; also in the fox-terrier dog and bitch class in October show. The numbers therefore of mastiff dog puppy class will be 579 and that of the bitches 579½, of the fox-terrier dog puppy class 608 and the bitches 608½. E. COMFORT, Secretary.

Editor Forest and Stream:

There is every prospect that this show will be as large in entries as any yet given by the Philadelphia Kennel Club. The attendance at the State Fair will be double that of last year, and room enough has been given the Kennel Club to do away with all possibility of a jam, as occurred last season. Fully 50,000 people will visit the fair daily. Last year there was an average of 39,000 each day, so it can be readily observed the coming show will be just the place to sell and advertise dogs. A number of entries have already been made for the collie trials, and quite a number of valuable specials have been presented to the club for distribution. These will be apportioned to the several classes at next meeting of the committee, and sent to you for publication. HOMO.

THE BLACK AND TAN COLLIE.

Editor Forest and Stream:

I desire to call you attention to a matter and hope to be able to enlist your aid in accomplishing what I think would be a benefit to breeders of shepherd dogs, as well as to the future of the breed in this country.

To come at once to the point, I am anxious to see the black and tan collie a separate class at the bench shows. I think this dog has distinct characteristics which entitle him to be separated from the general collie class. There is no other collie with such distinct markings, reverting from sire to progeny (when carefully bred). By black and tan collie I mean a black dog with tan (or bluish black) undercoat, tan spots over the eyes, tan under the chin and on neck, and a very beautiful tan triangular point down on the breast, tan on the legs, principally the forelegs, and sometimes a ring around the neck. This is a beautifully marked animal, and as I said before, properly bred will throw the markings at every point to the offspring. There is no other one-color collie which will do this as certainly as the black and tan.

Besides the obvious advantage of perpetuating this beautiful collie by encouraging his separate breeding, the division of collies into two classes would do much to smooth away the growls of exhibitors at bench shows, when the rulings of the judges seem (?) to favor one color more than another.

I am not foolish enough to imagine that the mere insertion of this letter in your columns, signed as it is by a young and comparatively unknown breeder, would have much effect. And it is for this reason I beg the FOREST AND STREAM to actively take up the matter and solicit the opinions of the larger and better known breeders on the subject. I believe if such an expression of opinion could be had, the majority at least of those favoring the black and tan in their kennels would favor the movement, and those breeding other colors certainly have nothing to lose and perhaps something to gain by lessening the competition. That I may not be accused of studying only my own interest, I would state that I am breeding black and tans, and also tawny and white, and my kennels have as many of one kind as the other. I trust you will give this matter your consideration and attention.

B. A. R. OTTOLENGUI.

SUCCESS IN TRAINING.

Editor Forest and Stream:

My father and uncles were sportsmen of the old school, in the good days when Manton guns and pointer dogs were used in the fields, and I have been accustomed to dogs from my childhood. Years of observation had taught me that training was better than breaking, and I had so found it in my own experience. When, therefore, Hammond's book, "Training vs. Breaking," made its appearance, I was attracted by its title and bought a copy, and have taken it as my guide, for I there found systematized and reduced to an art the principles which I knew to be correct. By the aid of this little manual, I trained a dog in the season of 1883 as thoroughly as I ever saw so young a dog broken. He would do anything that any dog broken by a professional would do and do it cheerfully, and he was of a disposition which made it likely that he would have been spoiled had he been broken instead of being trained. As a retriever (the thing of all others that its advocates say force is necessary to make) he was one of the best that I ever saw. This dog I sold to a gentleman in Georgia, and I have no doubt his training sticks to him.

I now have a couple of puppies five months old; one of them by San Roy (Count Noble—Spark) out of Drane's Cora (Mark—Jennie; Mark, by Rob Roy out of Juno; Jennie, by Leicester out of Dart), and the other by San Roy out of Queen Bess (Gladstone—Donna J.); and if I can find time, I shall train these puppies according to Hammond's rules in preference to placing them in the hands of a breaker. Already they point, back and drop, and readily retrieve a ball or glove. One of them showed a good deal of inclination to gunshyness (although there is no gunshyness in his ancestry), but I effectually cured him by following Hammond's directions.

No matter what may be one's views as to the proper mode of breaking or handling dogs, no bird dog owner can afford to do without this little book of Hammond's. It should be in the hands of every sportsman; and the Society for the Prevention of Cruelty to Animals would be doing God's service if it would raise a fund for the gratuitous distribution of this book. It teaches the best code of morals yet devised for the regulation of the relation of sportsman and dog. It shows that kindness will more effectively do the work of preparing the dog for field use than brutality. It raises from a most disagreeable task—a task involving beatings innumerable for the poor dog

—to a pleasant recreation the education of this animal. It makes your dog your cheerful friend instead of your fearful, crouching slave. If a man will read and follow the precepts of this little book he will be a better master to his dog and, therefore, a better man, and his dog will be a better and happier one. Instead of being willing to pay a breaker $100 for his services, a man who reads this little book and has the time, will train his own dog and will get $100 worth of pleasure in doing so.

I will rejoice to see the day when the evil force system is abolished, and I know of no better or surer way of bringing this speedily about than the general circulation of this little book. AH-PE.

FANCIERS' FALLACIES.

UNDER the heading of "Fanciers' Fallacies," the *Stock-Keeper*, London, Eng., is publishing a very interesting series of articles. "Hakim," who started the ball, has undertaken the task of pointing out some of the fallacies and old women's whims that to a greater extent, we fear, than any one would believe, govern the actions of very many fanciers. The subject is an interesting one, and well-known writers are adding their mite. Our readers we hope will profit by a perusal of the articles.

You truly remark in your paragraph of last week's *Stock-Keeper* that the subject, namely, "Fanciers' Fallacies," which we have often discussed, is of vast dimensions. When one sits down to grapple the matter, one's thoughts are tossed about in a whirlpool, of which there is no beginning and no end. Therefore I have been doubtful in attempting to carry out our proposed scheme; but—

Our doubts are traitors.
And make us lose the good we oft might win
By fearing to attempt.

One of the commonest fallacies I have heard is that the gloss on a dog's coat depends on the presence or absence of oil. Now, frugal nature never meant that a dog should be a nuisance to himself or man, nor his coat a receptacle for all the dirt with which it comes into contact. I therefore propose to give a short physiological description of the coat or hair, and some of its uses.

The hair is simply a modification of the outer layer of skin or cuticle, as also are the nails. Each individual hair is composed of an outer layer of scales overlapping one another like tiles on a house, with an inner layer of horny cells; this sometimes incloses a small cavity containing fat and pigment granules. The hair itself fits into a tubular depression of the skin, called the hair follicle, which is deep down in the true skin. In close connection with the hairs are small glands, containing an oily sebaceous matter, whose outlets are either into the hair follicles themselves, or on the surface of the skin very near the hair. This oily matter keeps the skin moist and supple by preventing evaporation, and also protecting the skin (not hair) from too long continued action of moisture. To preserve a healthy coat, it is therefore very necessary that these glands should be in good working order, and it is a useful expedient when dogs are unwell and the skin dry, "not diseased," to rub vaseline into the skin, and thus prevent the hair coming off. The glossiness and fineness or hardness of a coat depends on the thickness and density of the horny scales in each individual hair, as above alluded to.

The undercoat is generally short, fine, and very close, protecting the skin from wet and keeping the body warm by preventing the cold getting to the body and loss of heat from the body. The long coat is especially useful to those dogs who are much exposed in their work, and have to lie down on damp ground; it really acts as a greatcoat, and should be hard and coarse, so as not to be so liable to get entangled and matted by the wet, as otherwise it would be on account of its length. Dogs not much exposed, and especially small dogs kept indoors who have long coats, have fine long hair; but they obviously only require the coat for warmth, and the careful grooming they get makes the coat perhaps finer than otherwise it would be. HAKIM.

THE EAR.

I have heard so many theories put forward regarding the ear, and especially as to the reason of the half-prick ear, many of them as absurd as fallacious, that I do not think I can do better than discuss this knotty question. I was told that a well known judge even asserted that the flap of a half-prick ear vibrating conveyed the sonorous undulations to the auditory canal. I only state this to show what ridiculous ideas exist.

The most plausible theory accepted and believed in by most doggie men is that the useful function of the flap is to protect the ears from wet, dirt, etc., and consequently is an objective point in breeding in certain classes. Now I hold that the flap has no use whatever; by flap I mean that part of the half-prick or pendant ear which hangs down.

Doubtless the external ear, or pinna, as it is technically called, whether prick, half-prick or pendant, does to a certain extent protect the internal ear or true auditory organ from insects, dirt, wet, etc.; but nature has provided several efficient means, which are of themselves perfectly capable of affording the necessary safeguards: Firstly, by the distance of the internal ear from the surface of the body, and secondly by the external canal, called the external auditory canal, being itself protected by the hairs at the entrance and by the wax poured out by the cells along its extent. A well-known method to prevent cats poaching "from the knowledge that pussy has a strong objection to dew, etc. getting into her ears," is to cut her ears off; but this is by no means sufficient to keep her from predatory habits, unless the hairs also at the entrance to the canal are snipped away. Now, this does not alter the opinion stated above, "that the flap is useless to the dog," and, I expect, if he were again metamorphosed to the wild state, he would find one of his chief supporters of existence taken from him, the prick ear being essential for quick hearing. For instance, take the rabbit in its wild state, or the Dutch earth-hog, both of which burrow in the ground, and whose large ears are much exposed to wet grass on account of the size of the animal. Surely, if the above theory is correct, we should expect them to have pendant or half-prick ears! No; their life depends on the acuteness of their hearing, and the ears can be pricked at once and readily turned about by muscles in connection with them. Take, again, the rabbit in its domesticated state. No longer requiring the use of these muscles, the ears become lopped in every variety, and by care you obtain a breed with both ears constantly lopped. I cannot do better here than to quote Professor Darwin, who says: "Not one of our domestic animals can be named which has not in some country drooping ears, and the view which has been suggested that the drooping is due to the disuse of the muscles of the ear from the animals being seldom much alarmed, seems probable." To sum up, then, the half-prick or pendant ear is due to domestication of the dog, and provides no protection to the ear when dogs are swimming, burrowing underground, etc., and each variety has its own special form perpetuated by careful breeding, according to the fancy of the fancier. An ear being placed on each side of the head allows animals to detect the direction of the sound by the intensity of its action on either. HAKIM.

SIR—If I may, without trespassing on "Hakim's" ground, I will point to a few fanciers' fallacies, drawing from what is considered, or would like to be considered, the well of canine knowledge undefiled, the sole source of wisdom as of honor. Of course I mean that guide book, the oracle of Cleveland row.

In a leading article on the, or rather headed the, "Mental Capacity of Dogs," the greatest authority in the world gives expression to the following "fallacies," errors so crude and stupid that a kennel boy should be whipped for whispering them.

This head of the "fancy"—its Dux Lux Lex—writes of "what constitutes a substitute for reasoning powers in dogs," but is careful not to say what he means. There may be leading and law in the Kennel Club organ, but there is precious little light.

The fair inference is that the editor quoted thinks that dogs do not reason, but arrive at conclusions by some other process. Manifestly absurd. Put that down, Fanciers' Fallacy No. 1.

The same authority says: "It is difficult to account for all the characteristics of a breed—why, for instance, a collie puppy instinctively runs after sheep." Well, as collie puppies do not instinctively run after sheep, I call that Fanciers' Fallacy No. 2.

Further it is said that "St. Bernard puppies like digging in the snow." Of course this is instanced as contra to the liking for digging in snow of puppies of other breeds, for it is added, "these are the qualities that show aptitude for certain uses," and, as the statement evidences gross ignorance, I call it Fanciers' Fallacy No. 3—a very fair number of fallicies to be crammed into a quarter of a small column of large type in the mouthpiece of a club that assumes to teach the world all about dogs.

I will conclude by pointing out a very common fallacy, namely, that a dog fancier is a dog lover, and necessarily possessed of a profound knowledge of dogs, but the quotations given from the head of the "fancy" disprove this, so I shall fall back on the rendering of the term given in my dictionary. "Dog fancier—one who has a taste for dogs, and keeps them for sale." May I ask, are you and all of your readers dog fanciers, Mr. Editor? Say, do tell INQUISITIVE.

SIR—When a man hears that which is new to him, or contradictory of some old opinion which he has held, probably without examination, but just because he has found it generally accepted, and is afraid to admit that he may be ignorant on the point, he takes the certain course to remain ignorant.

As I think that course a foolish one, I shall admit frankly that I for years have enterterained the "fancier's fallacy" that the softness, flexibilty, and to some extent the glossiness of the hair, was dependent on the presence of an unctuous substance.

I am not a physiologist as "Hakim" is, and therefore I trust he will understand that anything I ask or say I do as a scholar willing to learn, and I take upon myself to add, he will also be teaching new ideas to many other old fanciers equally willing to adopt them when convinced of their truth.

The description of the structure of the hair, the outer layer or epidermis having smaller scales imbricated like the tiles of a house, covering the cortical substance which forms the bulk of the hair, and inclosing the medullary substance occupying the cavity or tube which extends from the root of the hair to its point, and having at its root cells containing fat granulations, we must all accept.

"Hakim" says: "In close connection with the hair are small glands, containing an oily sebaceous matter, whose outlets are either into the hair follicles themselves, or on the surface of the skin, very near the hair. This oily matter keeps the skin moist and supple by preventing evaporation, and also protecting the skin (not hair) from too long action of moisture."

Now, this is the part of "Hakim's" article I cannot understand. On what grounds does he assert that the oily matter does not protect the hair as well as the skin?

As I understand the matter, the visible part of the hair, the shaft, fits into a follicle or sac containing the hair bulb or root from which the hair is furnished with the elements of growth. Annexed to this follicle are two sebaceous glands, which, says Chauveau, "open into the sheath of the hair by a small excretory canal." Now, I ask, does not the excretion of oily or fatty matter from these glands keep the hair soft and pliable, and as a consequence, aid in the appearance called glossiness, which is usually applied to the look of a dog's coat in health?

It appears to me as if "Hakim" had assumed that fanciers were guilty of the fallacy of supposing that oil was deposited outside the hair in order to give it a gloss, as some young men anoint their locks with Rowland's Macassar, but I have not met with a fancier I have had any suspicion of holding such an opinion.

But the hair being, as "Hakim" says, "simply a modification [and I suppose I may add extension] of the outer layer of the skin," it is difficult to see how the skin can benefit by the excretion from the sebaceous glands, and the hair not participate.

In some cases of skin disease it is dry, and the hair is then harsh and dry to the touch, and when the skin contracts the hair is erected more or less, producing what is called "a standing coat." Is not the harsh feel of the hair due to the absence of the sebaceous matter with which it is usually supplied?

I take it that, though in a greater degree, the "yelk" or greasy substance which makes the wool of the sheep so soft corresponds with the sebaceous substance excreted into the sheath of the dog's hair alluded to. Now flockmasters do not wash their sheep one day and shear them the next, but wait some days until, to use the common phrase, "the yelk rises."

Here, then, comes the practical question which your readers who have had experience in washing dogs can throw light upon, and I hope they will.

Is it not a fact that the coat of a dog that has been washed, and especially if washed with strong soap, is, after thorough drying, harsh to the feel, and wanting for a time both in flexibility and gloss? If that is so, as I believe it is, then I think we shall be free from the charge included in "Hakim's" "one the commonest" of fanciers' fallacies. CORSINCON.

P. S.—I object to "Hakim" calling Dame Nature frugal, because she does not anoint her dogs with hair oil; she is not an old woman who deals exclusively in candle-ends and cheese-parings, but is mostly generous, and often prodigal, of her gifts. I equally object to her supposed parsimony in the pomatum supply being attributable to her desire that the dog should not "be a nuisance to himself or man, nor his coat a receptacle for all the dirt with which it comes into contact."

As a matter of fact, the dog left to nature is an intolerable nuisance; and not content with collecting in his coat all the dirt that comes to it in ordinary course, and that will stick, he goes out of his way to seek it, rolls himself with delight in the utterest of abominations, reducing himself to a state to which the term nuisance is immeasurably too mild to apply. If I thought the old lady had withheld the macassar of Mr. Rowland from our dogs from parsimonious reasons, or the futile vices imparted by "Hakim," I would not entertain for her the respect—amounting to adoration—which I do.

CORSINCON.

SIR—My articles to you as to Fanciers' Fallacies are written to invite discussion, so as to get breeders of dogs, as you say, to inquire intelligently into the reason for the many rules in breeding that have become hallowed by time. I cannot therefore but feel greatly gratified when so well-known a writer and keen observer of dogs as "Corsincon" takes up the subject, as I know then I have not failed in my object. In dealing with his remarks on my article on the coat, I hope he will not think I am doing it in a captious spirit, but simply in the hope of arriving at the truth. Will he allow me first of all to correct one or two physiological errors in his letter? The medullary canal to which he refers does not run up the center of the hair in the dog's coat from root to point, but is confined to the bulb of the hair, the shaft of the hair being solid. Again, the sebaceous matter is excreted into the sheath or lining membrane of the follicle, not hair. Now, this oily matter thence gets on to the surface of the skin and surface of the hairs to a certain extent, but not into the hairs, as "Corsincon" would imply, for he says, "It appears to me as if 'Hakim' had assumed that oil was deposited outside the hair in order to give it a gloss, some as young men anoint their locks with Rowland's macassar, but I have not met with a fancier I have had any suspicion of holding such an opinion." I certainly gave doggie men the credit of believing this; but those to whom I have spoken gave me to understand that they thought the glossiness of the coat entirely depended on this oily matter; and it is this statement to which I demur in my article. I am quite at one with "Corsincon" in believing that this sebaceous matter protects the hair, and, in fact, recommend vaseline to be rubbed into the skin for that purpose under certain circumstances, but it is essentially those parts of the hair below the surface of the epidermis, namely, the follicle and bulb. Some of this matter is also on the surface of the hair, but dogs and cats' are peculiary dry, which can be easily demonstrated by rubbing them, when you get the crackling, electrical sounds. I understand the glossiness to be due to reflection of light from the dog's coat, the essentials for this being that the hairs should be cylindrical, and lie more or less in parallel planes; and it was for this reason I stated that the glossiness depends chiefly on the fineness of the hair, as in this case the hair lying closer to one another, you get the necessary conditions best fulfilled. The doggie man shows his appreciation of this, without perhaps always knowing the reason why, by rubbing the coat down before he takes him into the show ring. In the mole, which has a peculiarly glossy coat, each hair is of different thickness throughout its extent, thus allowing the hairs to fit closely one against the other. If "Corsincon" will take some hair, oil one portion and deprive the other of any oily matter in connection with it, and place both portions in equally good conditions for reflecting light, I do not think he will find much difference in their glossiness. In fact, much oil would be more likely to refract light, and give a play of colors. No doubt it is partly the loss of this oily matter which causes the coat to be harsh and dry after the use of soap and water, but it is also due to the loss of elasticity of hair through absorption of water, and the small muscles in connection with the hair causing the hairs to become more or less erect by contraction from cold or irritability. These muscles also cause the staring coat referred to. "Corsincon" objects to nature being called frugal; he certainly cannot claim to be so in his PS., but I conjecture it was writen for "humor." HAKIM.

SIR—The articles by "Hakim" promise to be of wide and deep interest, and should prove to be of great practical use, and powerfully corrective of fanciers' fallacies, the name of which is Legion. I feel confident "Hakim" will not be offended with me saying that I fear he scarcely comes down to the level of us poor fanciers, and in dealing with the case I cannot but think he has missed a good opportunity of delivering a severe rebuke to one of the most cruel and vulgar of fanciers' fallacies.

I confess I never before heard of the ridiculous opinion, held by a well-known judge, that the drooping part of a half-pricked ear by vibration helped the dog to hear better.

That judge is an instance of matter out of place. His opinion shows he has had little experience, or is unobservant of dogs, or he would know that every dog, whether with the falling ears of a hound, the half falling of a collie, or the prick ears of a sky-terrier, erect the outer ear to the best of their ability when listening attentively, and even turn round the ear to some extent, to present the trumpet like opening to the direction from which the sound seems to come.

I cannot attempt to explain by what set of muscles this is done, but perhaps "Hakim" will be so good as to do so.

I was not prepared for such a strong opinion as "Hakim" expresses when he says, "I hold that the flap [that part which hangs down] is of no use whatever;" and this opinion he strengthens by a quotation from our great naturalist, Darwin.

The theory that drooping ears are the result of disease, atrophy, or loss of power of the muscles from disease, may be absolutely correct, although it makes a heavy demand on the unlearned to believe that the immensely long falling ears of the Irish spaniel represent the result of a disease of the normally prick-ear dog. Still, so far I am aware, every one of the *Canidæ* in a state of nature has erect ears; and we still have some of our domesticated breeds—the Skye terrier and Pomeranian for instance—wherein that form is retained, and in many breeds in which the drooping or half-drop ear is usual, well-bred specimens crop up with erect or tulip ears, as in the bull-dog, greyhound, fox-terrier, etc. Will "Hakim" explain why the Skye, Pomeranian, and other breeds long domesticated have ears as erect as the domesticated *Surinam aguara* dog, or the dhole, dingo, jackal, or the wolf?

Again, as to the flap being useless to protect the ears from wet, dirt, etc., I should be inclined to differ from "Hakim" for, whatever the cause of the alteration in position and form of the external ear, it seems to me absurd to say that the flap covering the orifice does not serve the purpose of keeping out dirt.

Dogs burrowing after vermin in light dry soil would surely be more likely to get fine particles of dirt intruding if the entrance to the meatus was only protected by the soft hairs that guard it, than if, in addition, they have an outer bulwark of skin folded loosely over it. Then, as to the protection afforded against the penetration of wet by the flap, has "Hakim" ever been out with prick-eared dogs in very wet weather, and, if so, has he observed how they depress the pinna as much as they can to protect the ear?

I find I have not been myself so closely observant of this as I ought to have been, and therefore I appeal to readers to give result of their observations.

Had "Hakim" thought well to go into detail he would have told us what a wonderful set of muscles the ear is furnished with, and I wish he had, for then he must have referred to, and that to condemn, a fanciers' fallacy that is a disgrace to the age. I mean the vile fashion that insists on artificially pricked ears, necessitating the cutting and hacking of skin and muscles by those ignorant of their position.

I hope "Hakim" will revert to this, and also to the refined cruelty which is its accompaniment.

The long soft hairs which nature provides for the protection of the auditory canal against the intrusion of extraneous matter, and also, I presume, against the effects of cold, for naturally prick-eared dogs are most liberally provided with them, are removed by fanciers of bull-terriers, or some other breeds, thereby, I contend, exposing a delicate organ to inflammation and its consequences. These practices represent more serious fanciers' fallacies than the silly opinion of a judge respecting the vibrations of the turned-down end of a semi-erect ear conveying the sonorous undulations to the auditory canal, and I hope that "Hakim" as a medical man will not spare such vulgar follies. CORSINCON.

THE STAFFORD SPRINGS DOG SHOW.—We have received the premium list of the second annual dog show of the Stafford Kennel Club, to be held at Stafford Springs, Conn., in connection with the Stafford Agricultural Society's fair Oct. 8 and 9. The entry fee will be fifty cents, to which the club will add an equal amount, the total in each class to be divided into three prizes, 50 per cent. to first, 30 per cent. to second, and 20 per cent. to third. Dr. George Walton, Boston, Mass., will judge all the classes. There will be special cash prizes of $5 each or silver medal awarded in the champion classes. Entries close Oct. 3. David Bissett, superintendent, Stafford Springs, Conn.

THE DAYTON (O.) DOG SHOW.—*Editor Forest and Stream:* The Directors of the Southern Ohio Fair Association inform me that if the classes fill well this fall they expect to make the bench show of dogs a regular fixture as part of their annual fair. This association is incorporated under the laws of the State, and always pay their premiums in full. The prize list, both regular and special, is liberal and valuable.—S. H. & S.

THE NEW DOG SHOW RULES.

Editor Forest and Stream:

Some months ago you were kind enough to give publicity to an article upon the first sample of dog show rules issued by the American Kennel Club for the guidance of its members. Subsequently the club delegates met at Philadelphia, where a new set of rules were framed, and are, I understand, to be brought before the Pittsburgh meeeting for final adoption. With your permission I will comment upon these rules, which I will premise by saying are a vastly superior set to the old "shake bag" lot. Nearly all of the suggestions offered in my former criticism have been adopted, but I think the rules can yet be improved.

2. All dogs entered for competition or exhibition only shall be entered in the name of the *bona fide* owner. Such entry must be identified by the name of the dog, its date of birth, and, if known, the name of its sire, dam and breeder, otherwise it must be entered "pedigree unknown." If the name of a dog which has won a first prize has changed, its name at time of winning any and every such prize, and the place thereof, must be given.

For "shall be entered," it would be better to make it "must be entered." The words "and, if known" should precede "its date of birth." There should also be a correction made in "otherwise it must be entered 'pedigree unknown.'" The pedigree may be known, but its date of birth or the breeder's name may be unknown or forgotten, and in such a case "pedigree unknown" does not apply. The word "been" is required in the sentence "If the name * * * has changed." Then a limit should be specified as to how many times the repetition of the old name and record must be given. The presumption is that this applies only to the first entry made after the change, and if such is the case it should be so stated.

3. If a dog is entered without being identified, as directed in Rule 2, it shall be disqualified from competition.

The words "from competition" had better be omitted.

4. Puppies may be entered in the grown classes in addition to the puppy class by the payment of an extra entrance fee.

In this rule it would be well to clearly specify when a puppys eligibility to the class ceases. For instance, if a dog's date of birth is May 1, 1885, and a dog show is held beginning on May 1, 1886, with the entries closing on April 29, some may consider that it is eligible because it was under a year on the date of closing the entries. Then again, is it or is it not over the age on the recurrent date? It is a point that ought to be made clear and it seems to fit on to this rule better than any other.

6. Dogs to be eligible for special prizes must in all cases be entered in their regular classes, and no dog eligible for special prizes can be withdrawn from competition, unless it has been stated on entry blanks, "Will not compete for special prizes." Stud dogs and brood bitches with their progeny, may compete for such special prizes as may be offered, but the progeny must be entered in regular classes.

The opening of this rule is a relic of the old one. It is not necessary at all, as it would be extremely difficult to see how a dog could compete at all unless entered, and how can he be entered in any other way than in the regular class. Let the committee, by all means, cut out all useless verbiage, and in this rule all purposes are served by making it begin, "No dog eligible for special prizes, etc." "Entry blanks" should be "entry blank," as the rule refers to a dog. I fail to see the object of the addenda respecting stud dog and brood bitch prizes. It is purely a matter within the province of the show committee and will be fully covered by the wording of the premium list. It would be equally proper to say, "Dogs competing for a kennel prize must be entered in the regular classes." There is no necessity for that and neither is there for the clause as given in the rule.

The wording of Rule 8 is very crude, "Any dog * * * must have stated on its entry blank, etc."

9. In estimating the number of prizes a dog has won, with reference to whether it should compete in champion class or not, the number of prizes won shall be calculated up to 12 o'clock noon of the day previous to the day of closing entries for the show.

I fail to see the object of eligibility being calculated up to noon of the day previous to the day of closing entries for the show. An exhibitor filling out an entry blank on the date of closing entries puts down three first prizes, one of which does not count for a champion class because it was awarded on the afternoon of the preceding day. That is decidedly wrong. In England, entries close with the secretary on the announced date, not as with us by mailing a letter on that day, and the limit is noon of the day previous. With us all prizes won on the day of closing should be included in estimating eligibility to champion class.

10. Dogs that have won in a champion class shall be continued in said class.

This has been characterized as a legacy of "construction." Possibly the framer of this rule meant to say "a champion class under these rules," and that is quite proper. After a dog had won three prizes at associate club shows, and then a champion prize, two of the clubs might resign and this would give the dog only two prizes, one of which is a champion, and throws it back into the open class.

14. Dogs that have been erroneously entered may be transferred by the judge to their proper classes. If such classes have been judged they shall not be reopened.

If we are to understand that exhibitors are all to be treated alike, it is difficult to see how such can be the case under such a rule. A member of the Executive Committee informs me that the rule was suggested by a case which occurred at the late Philadelphia show, in which a pointer was entered in the wrong class through the owner not being aware of his increased weight putting him in the large size class. If the attempt is to be made to provide rules for every special circumstance that may arise at a dog show, we will soon be in a worse plight than we were before. Take two cases: Mr. A. enters a dog in the bitch class by mistake, and Mr. B. gets his bitch in the dog class. Manifestly, if it is proper to correct Mr. B.'s error, Mr. A. should be equally favored; but it so happens that Mr. A. cannot be placed on the same footing as Mr. B., because the class in which his dog should have been entered has been judged. The principle is entirely wrong; both exhibitors should be treated alike. This can only be done by throwing the responsibility of the error on the person who made it, and let the entry form govern in all cases. In other words, the rule should be that errors in making entries cannot be corrected by the managers.

15. The decision of the judges shall be final in all cases, except where mistake, fraud, misrepresentation or collusion can be shown. In such cases the managers, or such referee as they may appoint, must decide all cases, and the dog must be rejudged.

A little Lindley Murray would improve the last sentence "In such cases the managers * * * must decide all cases, and the dog must be rejudged."

17. Any person guilty of misconduct, or has been guilty of misconduct, in any way in connection with dogs, dog shows or field trials, may, in the discretion of the managers, be disqualified from exhibition or competition at these shows. Such disqualification shall be recognized by all the members of this association, until the person or persons disqualified shall appeal to, and the case has been decided by the executive committee. The disqualification of the owners will apply to all dogs connected in the perpetration of the fraud.

If the wording of this rule ran something like this it would read smoother: The managers of any club may suspend or disqualify any person proved to their satisfaction to have been guilty of discreditable conduct in connection with dogs, dog shows or field trials. Such suspension or disqualification shall be recognized by all the members of the association and can only be revoked by the executive committee, to whom appeal may be made. The penalty shall extend to any dog connected with the perpetration of a fraud.

There is a question as to how much the phrase "in connection with dogs" may be made to cover. It would seem to go far enough to cover a case of willful deceit in a dog trade.

18. A castrated dog or spayed bitch shall be disqualified from competing, or from receiving a prize if awarded. Total or partial blindness shall have great weight against a dog.

I should like to know how a totally blind dog can be recognized at all by any judge.

19. All clubs shall reserve the right to exclude or remove from the show such dogs as it may deem proper or necessary.

A better reading would be, "The right is reserved to exclude or remove from the show any dog the managers may deem proper or necessary."

20. Each member of the association shall appoint their judges, arrange prize lists, form of catalogues, assume its own financial responsibility, and arrange such other details as may properly come under its individual management.

This is entirely out of place as a dog show rule. Its proper sphere is in the rules appertaining to the association itself, either in the constitution or by-laws.

EDITOR AMERICAN KENNEL REGISTER.

THE ATTLEBORO DOG SHOW.

Editor Forest and Stream:

The dog show of the Attleboro Farmers' and Mechanics' Association Fair, held at this place Sept. 15, 16 and 17, was quite a success so far as attracting the attention of the many visitors was concerned. The number of dogs exhibited was not large, but many of those present are well-known prize-winners. The display of New England foxhounds was very fine. The beagles and greyhounds were also good. Among the latter was the bitch Stealaway, recently imported by Mr. H. W. Smith. She is very good indeed, except that she might be better in head. There was a good class of English setters. Tallman's string was not for competition. Peck's Bad Girl won first in the open class. She is a very well-built one, but weak in head; otherwise she is fit for any company. There was a fair collection of Gordons. Trim, winner of first in the puppy class, was the best of the lot. He is good all over, with an excellent coat, and will be heard from again. Altogether there were about 100 dogs present, and the manager informed me that as many more had been refused. Mr. W. Tallman managed the show very successfully, and I understand that the society will make the dog show a permanent fixture of their annual fair. The judges were Messrs. A. H. Wakefield, Jacob Klebes, Wm. Tallman, W. P. Medbury and Luke White. Following is a full list of the

AWARDS.

FOXHOUNDS.—CHAMPION—Pike & Fuller's Captain.—OPEN—*Dogs:* 1st and 2d, Bank Street Kennels' Jumbo and Dublin. Diploma, Pike & Fuller's Ben II. Very high com. and high com., Bank Street Kennels' Drive and Rome. Com., John Shepardson's Towser. *Bitches:* 1st and 2d, Bank Street Kennels' Faunie and Belle.—PUPPIES—*Dogs:* 1st and 2d, Bank Street Kennels' Wideaway and Boy. *Bitches:* 1st, Bank Street Kennels' Guide.

BEAGLES.—CHAMPION—A. H. Wakefield & Co.'s Bush.—OPEN—*Dogs:* 1st and 2d, A. H. Wakefield & Co.'s Little Duke and Star; 3d, A. Chatterton's Joe. *Bitches:* 1st and 3d, A. H. Wakefield & Co.'s Chase and Vixen; 2d, E. E. Jillson's Victress. High com., C. A. Chatterton's Fanny. *Puppies:* 1st, P. McCusker's Spot; 2d, Owen Leary's Ferret. Very high com., E. E. Jillson's Bugle.

ENGLISH SETTERS.—OPEN—1st and very high com., Menomoit Kennels' Peck's Bad Girl and Shot; 2d, B. F. Gage's Belton II. High com., C. J. Renn's Zipp and Henry Green's Gipp. *Puppies:* 1st, F. D. Freeman's Fern; 2d, C. F. Carpenter's Oberman.

IRISH SETTERS.—CHAMPION—Dr. Wm. Jarvis's Elcho, Jr.—OPEN—1st, G. F. Peckham's Goldstone; 2d, F. Leonard's Bess. Very high com., J. E. Stern's Belva. High com., W. D. Farrell's Coffee II. *Puppies:* 1st, Edward Bent's Garnet; 2d, T. McAlpine's Red Dan. Very high com., Blackstone Kennels' Red Prince.

GORDON SETTERS.—CHAMPION—C. R. Taylor's Rhoda.—OPEN—1st and 2d, C. W. Tuttle's Topsey and Dan. Very high com., D. McMurray's Bessie B. High com., C. R. Taylor's Gypsie. *Puppies:* 1st, Geo. R. Reed's Trim; 2d, Mrs. Carrie Graves's Jerry. Com., C. W. Tuttle's Chris and M. T. Leary's Captain.

POINTERS.—OPEN—1st, W. Smith's Jule; 2d, C. F. Carpenter's Jack. Very high com., W. H. Renn's Biz.

MASTIFFS.—1st, Dr. O. F. Coe's Leo II.

GREYHOUNDS.—CHAMPION—H. W. Smith's Mother Demdike.—OPEN—1st, H. W. Smith's Stealing Away; 2d, Dr. O. F. Coe's Paris.

COLLIES—1st, B. D. Curtis's Rover; 2d, J. McNally's Daisy.

SPANIELS.—1st, C. P. Keeler's Jeff.

BULL TERRIERS.—1st, B. M. Jackson's Reel; 2d, M. Barstow's Bogus. Very high com., E. J. Cox's Victor.

FOX TERRIERS.—1st, Miss A. Potter's Quickstep; 2d, N. A. Sanford's Ned.

YORKSHIRE TERRIERS.—1st, M. A. McDonald's Prince; 2d, Miss Annie Draper's Prince.

PUGS.—1st, Enos Pratt's Dido; 2d, Mrs. F. E. Crawford's Harry Montague. Very high com., Enos Pratt's Dandy and S. H. Burns's Fansy. High com., F. E. Crawford's Jip. *Puppies:* 1st, S. B. Bosworth's Victoria; 2d, L. H. Green's Daisy.

MISCELLANEOUS.—Equal 1st, N. B. & W. E. Richardson's coach dogs Sport and Rhoda, and F. King's Mexican hairless Jerry.

SPECIAL PRIZES.

Best kennel foxhounds, Bank Street Kennel. Best couple foxhounds, Bank Street Kennels' Jumbo and Dublin. Best foxhound dog, Bank Street Kennels' Jumbo. Best foxhound bitch, Bank Street Kennels' Fanny. Best kennel of beagles, A. H. Wakefield & Co. Best beagle dog and best beagle bitch, A. H. Wakefield & Co.'s Little Duke and Bush. Best setter dog, Dr. Wm. Jarvis's Elcho, Jr. Best setter bitch, C. R. Taylor's Rhoda. Best brace of setters, C. W. Tuttle's Dan and Topsey. Best pointer, W. Smith's Jule. Best kennel of greyhounds, H. W. Smith. Best greyhound dog, H. W. Smith's Memnon. Best greyhound bitch, H. W. Smith's Mother Demdike. Best collie, B. D. Curtis's Rover. Best fox-terrier, Miss A. Potter's Quickstep. Best bulldog, F. Gerry's Beeswax. Best terrier, Miss A. Potter's Quickstep. Best collection of pugs, F. E. Crawford. Best litter of puppies—setters, pointers or hounds—Bank Street Kennels. Best litter, any other breed, A. H. Wakefield & Co. Best trick dog, C. B. Keeler's Jeff. Best setter puppy, F. D. Freeman's Fern. Best mastiff, Dr. O. F. Coe's Leo II. Best Mexican hairless, F. King's Jerry. Best collie bitch, J. McNally's Daisy. Largest dog, Dr. O. F. Coe's Leo II. Smallest dog, M. A. McDonald's Prince. Handsomest dog, Mrs. F. E. Crawford's Harry Montague.

***

JUMBO, Barnum's great elephant, which was killed last week, was ruled by the principles of Hammond's "Training vs. Breaking." Mr. Barnum said of him: "He had known Scott since he was three years old, and was very fond of him. Our other men thought at first that they could manage Jumbo, but they had to give it up. Scott ruled him by kindness. Our American trainers think that the prod is necessary, but Scott says not. He declares that he never used a prod on Jumbo, and never governed him except by kindness. It was wonderful how fond Jumbo was of him."

EASTERN FIELD TRIALS.—*Editor Forest and Stream:* The entries for the Members' and All-Aged stakes of the Eastern Field Trials Club will close Nov. 15. Blanks can be obtained by addressing W. A. Coster, Box 30, Flatbush, Kings county, N. Y.

THE GOODSELL KENNEL.—Mr. E. I. Martin, of Wilmington, Del., writes us that he has purchased from Mr. J. H. Goodsell, of New York, his entire kennel of pure Laverack setters.

THE PITTSBURGH SHOW has been postponed indefinitely. We are informed that the setter and pointer classes filled poorly and the non-sporting classes fairly well.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

C. F. C., Hartford City, Ind. My dog sheds his hair all the time. He eats nothing but fresh meat. His nose is hot and he is very poor in flesh. Ans. When your dog has fever as indicated by hot nose and skin and rapid pulse, give him three drops of aconite tincture every two hours. Stop feeding raw meat and give cold Indian meal mush which has been cooked with a few bits of lean meat, also give plenty of milk and broths of beef or chicken. The dog may be simply out of condition or may suffer from chronic indigestion or liver trouble We cannot make a diagnosis from the meagre facts you give.

W. S P., New York.—Your dog has canker in the ear. Take of bromo chloralium and laudanum equal parts and dilute with three times their bulk of water, fill the ear and gently knead with fingers for a short time. Repeat in twenty-four hours. Two or three applications will be sufficient.

F. W. W., Worcester.—A pointer dog, a year and a half old, seems perfectly well in every respect, is lively in the field, and is a hard worker, but he is very poor and I cannot succeed in getting flesh on him. Of course I don't expect him to be fat while hunting, but within the last three weeks he has had no appetite, and what he has eaten has been coaxed into him. Have tried two grain pills of reduced iron, but with no better results. He is fed on Indian cake, oatmeal, wheat bread, beef chopped fine, potatoes and milk. He is constipated and to relieve him gave a dose of salts two or three times, which had the desired effect for a short time only. Ans. Keep your dog's bowels in condition by giving teaspoonful doses of syrup of buckthorn, given once or twice daily, according to the result obtained. Have your druggist make you some small pills, each to contain one-quarter of a grain of extract of nux vomica, one-sixth of a grain of calomel, and one grain of sulphate of quinine, and give one pill three times daily, hidden in a small bit of raw or slightly cooked meat. Report results.

KENNEL NOTES.

KENNEL NOTE BLANKS.

For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." We request that all Kennel Notes be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Vanguard. By Floyd Vail, Jersey City, N. J., for lemon and white pointer dog, whelped July 17, 1885, by Fritz (A.K.R. 268) out of Bird (A.K.R. 1658).

Montilla. By J. M. Fronefield, Jr., Wayne, Pa., for black, white and tan English setter dog, whelped June 14, 1885, by Prince (Pride of the Border—Petrel) out of Clio (Gladstone—Belle).

Minnetonka. By J. W. Fronefield, Jr., Wayne, Pa., for black, white and tan English setter bitch, whelped July 10, 1885, by Don Juan (Tam O'Shanter—La Reine) out of Petrel III. (Carlowitz—Petrel).

Puritan. By M. F. Odell, Peekskill, N. Y., for black and white collie dog, whelped July 30, 1885, by Argyle (Brack—Dora) out of Jean (A.K.R. 538).

Lady Lola. By Dr. B. A. R. Ottolengui, Brooklyn, N. Y., for black and tan collie bitch, whelped June, 1884, by Lord Lorne out of Nancy (Sandy—Sandy's Mate).

La Duchesse, Fleur de Lis, Jeanne d'Arc and Dame Blanche. By Hospice Kennels, Newark, N. J., for rough-coated St. Bernard bitches, whelped July 29, 1885, by Duke of Leeds (A.K.R. 1535) out of Sheila (A.K.R. 796).

BRED.

Nellie Grey—Ben Nevis. F. W. Kaye's (St. Johns, N. B.) collie bitch Nellie Grey (Rex—Jennie Nettles) to Ben Nevis (A.K.R. 2391), Sept. 10.

Glen—Count Gladsome. Theodore Potter's (Glendale, O.) English setter bitch Glen (A.K.R. 1953) to John Overman's Count Gladsome (Gladstone—Lelia), Aug. 18.

Judith—Bob. Glencoe Collie Kennels' (East Bethlehem, Pa.) bobtailed sheepdog bitch Judith to their Bob. Sept.

Music—Trailer. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Music (A.K.R. 1411) to his Trailer (A.K.R. 2325), Sept. 20.

Floss—Gaffa II. B. Holmes, Jr.'s (Mountainville, N. Y.) collie bitch Floss (A.K.R. 2457) to his Gaffa II. (A.K.R. 2323), Sept. 20.

Blue Belle—Dashing Monarch. Rancocas Kennels' (Jobstown, N. J.) English setter bitch Blue Belle (A.K.R. 99) to their Dashing Monarch (A.K.R. 2348), Sept. 18.

Nancy Rake—Stormy Petrel. Rancocas Kennels' (Jobstown, N. J.) English setter bitch Nancy Rake (Rake—Phyllis) to their Stormy Petrel (A.K.R. 2427), Sept. 21.

Daphne—Brahmin. Chas. S. Fitch's (New York) cocker spaniel spaniel bitch Daphne (A.K.R. 1632) to Compton Grove Kennels' Brahmin, Aug. 3.

Dora Gordon—Phil. Chas. S. Fitch's (New York) Gordon setter bitch Dora Gordon to R. M. Johnson's Phil, Sept. 8.

Lady May—Rockingham. H. Pape's (Hoboken, N. J.) English setter bitch Lady May (A.K.R. 1371) to F. Windholz's Rockingham (Belthus—Bess), Sept. 10.

WHELPS.

Beauty III. W. S. Powers's (St. Louis, Mo.) collie bitch Beauty III. (A.K.R. 2598), Sept. 13, eight (five dogs), by champion Ben Nevis (A.K.R. 2391).

Nettle. W. H. Cookson's (Hudson, N. Y.) fox-terrier bitch Nettle (A.K.R. 1704), Aug. 19, four (two dogs), by J. E. Thayer's Mixture (A.K.R. 2697).

Flame. John G. Tod's (Harrisburg, Tex.) red Irish setter bitch Flame (Von—Floss), Sept. 10, ten (two dogs), by champion Glencho.

Gladys. Mr. Garguilo's cocker spaniel bitch Gladys (Black Prince—Princess), Sept. 15, five (three dogs), by A. G. Rendle's Brahmin.

Mistress Mary. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Mistress Mary (A.K.R. 2703), Aug. 28, three (one dog), by his Tug (A.K.R. 2704).

Zona. W. H. Moseley's (New Haven, Conn.) cocker spaniel bitch Zona (A.K.R. 2301), Sept. 17, six (four dogs), by Obo, Jr. (A.R.R. 1481); five black and one liver.

Kate. Geo. Snyder's (Pataha City, W. T.) red Irish setter bitch Kate (A.K.R. 1849), Sept. 9, three (two dogs), by his Ralph II. (A.K.R. 636).

Lady Bess. J. A. Cathcart's (Atlantic City, N. J.) red Irish setter bitch Lady Bess (A.K.R. 2178), Sept. 11, eleven (seven dogs), by Max Wenzel's Chief (A.K.R. 231); three bitches and one dog since dead.

Blackie III. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel bitch Blackie III. (A.K.R. 428), Sept. 7, seven (three dogs), by champion Obo II. (A.K.R. 432); all black.

Jet. J. P. Willey's (Salmon Falls, N. H.) cocker spaniel bitch Jet (A.K.R. 851), July 16, seven (three dogs), by Black Pedro (A.K.R. 1474); all black.

Princess II. George G. Barker's (Wilmington, Del.) black pointer bitch Princess II., Sept. 14, fifteen (seven dogs), by E. I. Martin's Bangor (Bang—Jean).

Gussie. Rancocas Kennels' (Jobstown, N. J.) English setter bitch Gussie (Lord Percy—Nettie), Sept. 15, ten (seven dogs), by their Dashing Monarch (A.K.R. 2348).

SALES.

Buckeller (A.K.R. 30)—Brimstone (A.K.R. 29) whelps. Orange and white English setters, whelped June 25, 1885, by W. A. Coster, Flatbush, L. I., a dog to Wm. S. Smith, same place; a dog to John W. Frye, South Oil City, Pa.; a dog to H. L. Kyles, Oxford, O., and a bitch to T. W. Stoutenburg, St. Louis, Mo.

Dandy. Pug dog, whelped July 11, 1885 (Prince—Pet), by H. C. Burdick, Springfield, Mass., to Miss Emma L. Work, same place.

Beau. Black spaniel dog, whelped Oct. 1, 1877 (Rolf—Belle), by J. F. Kirk, Toronto, Can., to Chas. W. Nutting, Lynn, Mass.

Julien I. St. Bernard dog (A.K.R. 1600), by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Puritan. Black and white collie dog, whelped July 30, 1885 (Argyle—Jean), by W. H. Pierce, Peekskill, N. Y., to M. F. Odell, same place.

Tony Weller. White, black and tan beagle dog, whelped March 24, 1885 (Keno—Fly), by J. Satterthwaite, Jenkintown, Pa., to Wm. H. Child, Germantown, Pa.

Don Juan—Petrel III. whelp. Lemon belton English setter bitch, whelped July 10, 1885, by E. I. Martin, Wilmington, Del., to A. J. Ward, Boston, Mass.

Flyaway II. Black, tan and white collie bitch (A.K.R. 2458), by W. E. Moore, Mattawan, N. Y., to B. Holmes, Jr., Mountainville, N. Y.

Countess May. White, black and tan English setter bitch, whelped July, 1885 (Foreman—Jolly Nell), by A. J. Callahan, New Haven, Conn., to Rancocas Kennels, Jobstown, N. J.

Glendale. White, black and tan English setter bitch, whelped July, 1885 (Foreman—Jolly Nell), by A. J. Callahan, New Haven, Conn., to Rancocas Kennels, Jobstown, N. J.

PRESENTATIONS.

Lady. Lemon and white pointer bitch, whelped June 11, 1885 (Planter—Nellie), by Jas. L. Authony, New York, to A. H. Heward, same place.

Prince Al—Maiden whelp. English setter bitch puppy, by E. S. Wanmaker, Elmwood, N. C., to Geo. Fox, Philadelphia, Pa.

IMPORTATIONS.

St. Triphon. Light tawny, with white markings, rough-coated St. Bernard dog, 4mos. old (Barry—Belline), by Hospice Kennels, Newark, N. J., from Switzerland, Aug. 7.

Thuna. White, with orange markings, smooth-coated St. Bernard bitch, 6mos. old, by Parthos out of Sabah (Apollo—Bernice), by Hospice Kennels, Newark, N. J., from Switzerland, Aug. 7.

DEATHS.

Rockingham II. Blue belton English setter dog (A.K.R. 2497) owned by L. E. Wilkes, Lehighton, Pa., from dysentery.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Publishing Co.

FIXTURES.

Oct. 20.—First Georgia State Fair Tournament, under auspices of the National Gun Association. Judge M. R. Freeman, Manager, Macon, Ga. Beginning Oct. 20.

THE TRAJECTORY TEST.

Editor Forest and Stream:

Although I can hardly hope to witness any part of the contemplated test, my interest in it will be none the less, and I shall await the result with no little anxiety. In earlier life, the rifle was my favorite weapon for partridge and squirrel hunting, and many a mile and many a step up mountain side have I tramped over in pursuit of game, and called it pleasure, and so it was. Even now, though more than fifty years have passed, it is pleasant to recall scenes and events that claimed my thoughts and efforts in those long passed days.

The facts that are to be brought out by the trajectory test are the very things that rifle shooters want to know. With the true trajectory of a hunter's rifle established, an important point in shooting is gained; all else depends in a great measure on the skill of the one using it.

So don't waver in any degree from your first proposition, no matter how many advisory communications the mail may bring you. If others wish to test light rifles or heavy rifles, hair triggers or ten pound pulls, naked balls or covered balls, open or covered sights, or any other of the many questions that are being discussed, let them get up tests for those purposes, trajectory, and only that, is now on trial. J. H. D.

POUGHKEEPSIE, N. Y.

Editor Forest and Stream:

There never was a more sensible proposition made than your scheme on the trajectory of rifles, and I am satisfied the test will be square. I have unbounded confidence in the promoters of the test. No doubt there will be some disappointed rifle manufacturers and agents growling after the decision is given, but never the less I am going to stand by the FOREST AND STREAM. CABERFEIGH.

PARRY SOUND, Ontario.

THE CREEDMOOR MEETING.

SEPT. 16.—The 13th annual meeting of the National Rifle Association of America began to day at Creedmoor. The attendance was much larger than it has been for several years, for besides the usual number of riflemen from the National Guard of New York, there were more than 100 United States regulars in attendance, and a number of officers and men from the Pennsylvania and Massachusetts militia. The visiting riflemen camped on the range, in the long lines of white tents. Gen. Charles F. Robbins was executive officer, assisted by Colonels Bridge and Bodine, Lieut Col. Roullier, Major Brown, Capt. Charles Smith and Lieut. E. L. Zalinski. Capt. G. Henry Witthaus was statistical officer, and Colonel Rodney C. Ward, as treasurer, received the money for entrance fees. Notwithstanding the high wind, the shooting proved unusually good. No matches were finished during the day, but all the open contests began with good spirit and with prospect of good work before the end of the meeting.

Sept. 17.—The shooting at the Creedmoor range to-day was excellent. The weather was perfect and some very high scores were made. This was especially the case in the Judd and *Army and Navy Journal* matches. Firing commenced in the matches at 7 A. M. and continued until 5:30 P. M. This allowed the riflemen an hour and a half longer in which to shoot, and great satisfaction was expressed at the new arrangement. In the extra hour before breakfast some of the best shooting of the day was done. The morning was enlivened by a beautifully executed skirmish match, participated in by the members of the regular army at present on the ground, of whom there are quite a large number. This match was under the direction of the military authorities, and had nothing whatever to do with the National Rifle Association. The soldiers in their handsomé uniforms presented a striking appearance, and the evolutions were carried out perfectly. The matches shot were the Directors', the Judd All Comers' and Marksmen's Badge, *Army and Navy Journal*, Chambers Street, Governor's, and Short-Range Team. None of these were finished with the exception of the Judd match, which is won by Lieut. H. R. Anderson, of the Fourth United States Artillery, with a score of 63 out of a possible 70.

Sept. 18.—Great enthusiasm prevailed at Creedmoor to-day, being the third day of the fall meeting of the National Rifle Association, and moreover the day on which those matches were to be shot that are of the most interest to members of the National Guard. Consequently there was a large attendance, the 23d, 12th, 14th and 7th Regiments being especially well represented. When the boys of the gallant 23d found that teams from their regiment were the winners of all the competitions which they had entered, their delight had no bounds, and they made the woods around the range ring and ring again with their hearty cheers. The officers of the day were: Surgeon, Major N. H. Henry, 12th Regiment; range officers, Major G. L. Fox, 4th Brigade; Major Edward Duffy, 69th Regiment; Captain H. S. Steele, 7th; Captain J. L. Le Count, 47th; Lieutenant J. F. Long, 7th; Lieutenant F. T. Morgan, 9th, and Lieutenant J. B. Christofel, 47th. The matches to day were the Directors', Continuous, Governors', All Comers and Marksmen's Badge, Brooklyn Furniture Co., Short Range Team, New York State National Guard, First Division National Guard, Second Division National Guard, *The Army and Navy Journal* and Chambers Street. The shooting on the whole was good, but in the early part of the forenoon the weather was not favorable for making high scores. The 23d Regiment team took the State match with a score as follows:

	200yds.	500yds.	Total.
Twenty-third Regiment	208	219	487
Fourteenth Regiment	224	245	469
Twelfth Regiment	227	240	467
Seventh Regiment	219	447	466

In the First Division the Twelfth Regiment won, making 448 to 436 by the Seventh Regiment, and in the Second Division match the Twenty-third beat the Fourteenth Regiment with a score of 478 to 457. The Brooklyn Furniture Co.'s match went to the Twenty-third Regiment Team B, with 233 against a score of 232 by a team of the same regiment. In the final competition of the Regular Army skirmish match, held under the direction of the War Department, Corporal Nihil is first with a score of 159, and wins a medal, Sergeant Powell is second with 134, Sergeant Free third, 98, and Lieutenant Brown fourth, 63.

Sept. 19.—The weather favored the riflemen at Creedmoor again to-day, although a tricky southwest wind rendered it impossible to obtain any remarkably fine scores. The attendance was about the same as during the former days of the National Rifle Association meeting, and the competition among the marksmen very keen. The officers of the day were as follows: Executive officer, Gen. Charles F. Robbins; Assistant, Lieut. E. L. Zalinski; Statistical Officer, Capt. G. H. Witthaus, of the Ninth Regiment; Surgeons, Major A. W. Brown and Capt. A. W. Doty. In the early morning Gen. Sheridan's skirmishers' match was shot for and won by the Fourth Artillery's team. The international match occupied the remainder of the morning hours, and brought out teams from Philadelphia, Massachusetts and New York, the first team being the winners last year. The Pennsylvanians left the 200yds. range with a lead over their nearest competitors, which they increased at the larger distance, and again carried off the prize. The afternoon was devoted to the Shorkley match, the entries comprising all the noted long-range experts present on the ground. The first prize was won by George Joiner with a score of 133 points out of a possible 150. The leading scores were:

Gen. Sheridan's Skirmishers' Match.

	First Run.	Second Run.	Third Run.	Penalties.	Total
Fourth Artillery	291	208	210	..	709
Third Artillery	267	224	247	..	738
Fifth Artillery	255	203	169	..	630
Twenty third Infantry	190	177	246	1	613
Fifth Battalion Engineers	170	164	203	3	537
Second Art llery	141	148	203	1	447
Twelfth Infantry	160	163	140	1	463

Inter-State Military Match.

First Pennsylvania	1,014

Third New York	948

The Shorkley Match.

Geo Joiner, 23d Regt	133
C W Hinman, 1st Mass	129
James McNevin	129
W W DeForrest	128
John S Shepherd, 23d Regt	124
C H Gans, 10th Batt., Albany	123
H R Anderson, 4th Bat. U.S.A.	120
H B Ogden	119
T J Dolan, 12th Regt	109
Walter Scott, 3d Separate Co.	108
Frank Stuart, 69th Regt	107
M D Hinds, 20th Separate Co.	105

Sept. 20.—To-day was the fifth day of the National Rifle Association's fall meeting at Creedmoor, and in point of interest and attendance was no exception to the preceding days. When it was announced that the "regulars" had captured the Hilton trophy by outshooting the New York and Pennsylvania State teams, the boys in blue made the old hotel resound with their cheers. The Pennsylvania State team took its defeat gracefully, and the New York team was pleased at getting second place. Out of a possible 1,260 points the regulars scored 997, the New Yorkers 968, and the Pennsylvanians 957. The match was at 200, 500, and 600yds., 7 shots at each distance, standing position at the first distance, and any at the latter two. The score of the United States Army team was:

	200yds.	500yds.	600yds.
Lieut. Anderson	30	31	28
Sergt Barrett	25	30	31
Private Crist	31	31	27
Corp Scouce	29	29	25
Sergt Petit	27	27	23
Private Cranley	31	28	21
Lieut Dunn	28	30	31
Corp Lockwood	28	27	27
Sergt Harrell	32	27	26
Corp Yates	28	30	23
Sergt Driscoll	30	26	24
Lieut Smith	29	27	25
Aggregate	343	343	311—977

The Pennsylvania team held the trophy in 1882, and the following year it was won by the Michigan team. In 1884, the Division of the Atlantic, United States Army, succeeded in putting up the highest score and carrying off the prize. A gold medal is also given to each member of the winning team. None of the other matches of the day were decided.

FALL OF ROUND BALL.

Editor Forest and Stream:

The following table shows the fall of the round ball (Peekskill trial) for each yard up to 10yds. from the muzzle. To many the information would be new and interesting no doubt. Four years ago to-day in FOREST AND STREAM you will see puolished the drops for the long range rifle.

The drops of the ball, under the law of gravity, are as the squares of the times. Making 1yd.=1 time, we have 10 times in 10yds. and they stand thus!

Muzzle—0, 1, 4, 9, 16, 25, 36, 49, 64, 81, 100, squares times.

TABLE OF THE DROP FROM THE LINE OF FIRE FROM 1 TO 10YDS. (IN DECIMALS OF INCHES).

Yds..	0	1	2	3	4	5	6	7	8	9	10
Drops	0	00061	.00244	.00549	.00976	.01525	.02196	02989	.03904	.04941	061

Fall at 10yds. is .061in. or about 1-16in. The average fall of the long range rifle is .0973in., or about 1-10in. The ratio then (.0973÷.061 which is 1.60), is 1 to 1.60.

Velocity.—The velocity of the long-range rifle is 1380ft. per second. Then assuming the velocities of the two kinds of bullets to be as the ratio of their drops we have 1,380ft. velocity×1.6 ratio=2,208ft. velocity for the round ball, which I think is very nearly correct. The height of the 10yds. curve at 5yds, equals under gravity ¼ of the drop at 10yds. Hence, .061÷4=.015 height of curve at 5yds. Any one of the drops is, to any other drop, as the squares of times, for the drops.

Example—.00244 : .00976 :: 4 : 16, which is proof.

It was my article of Sept. 8, 1881, in your columns that killed off the "dead level shooters" MAJ. H. W. MERRILL.

RANGE AND GALLERY.

THE ARMY COMPETITIONS.—The general gathering of the Regular Army marksmen at Fort Snelling, Minn., during the past fortnight was declared by those present as most satisfactory in every respect. Gen. Terry did the honors of presenting the medals. The division of the Missouri team showed capital scores, the leading twelve standing:

	Department.	Known distances.	As skirmishers.	Total
Prof F Ebrenfried, 18th Inf	Missouri	328	418	746
Lieut B F Handforth, 11th Inf	Dakota	302	416	718
Lieut W H Sage, 5th Inf	Dakota	805	405	710
Pvt R George, 25th Inf	Dakota	299	391	690
Lieut J E Bell, 7th Inf	Dakota	326	345	671
Sergt J W Weeks, 6th Inf	Platte	319	350	669
Sergt J Pederson, 7th Inf	Platte	319	348	667
Sergt B F Morrison, 6th Cav	Missouri	306	360	666
Sergt G N King, 20th Inf	Dakota	305	360	665
Sergt J F Crawford, 19th Inf	Texas	326	328	654
Sergt G Zobel, 3d Inf	Dakota	313	335	648
Corp S M Greene, 8th Cav	Texas	306	335	641

The first twelve of the division of the Atlantic stood:

	Known distances.	As skirmishers.	Total.
Sergt W Driscoll, 23d Inf	332	296	628
Corp H W Stamford, 4th Art	360	347	616
Lieut B W Dunn, 3d Art	326	276	602
Sergt W D Harrell, 23d Inf	340	259	599
Corp J Nihill, 5th Art	316	281	597
Lieut J Garrard, 4th Art	337	257	594
Corp C W Lockwood, 3d Art	324	269	593
Private C Bickers, 12th Inf	284	304	588
Sergt J A Richardson, 3d Art	307	272	579
Sergt J Hansen, 3d Art	336	252	578
Private J Grime, 4th Art	323	254	577
Sergt R C Powell, 5th Art	315	259	574

BOSTON, Sept. 17.—There was a slim attendance at Walnut Hill today, most of the riflemen having gone to Creedmoor to compete in the annual matches at that place. The records made yesterday are appended:

Long Range Match.

	800yds.	900yds.	1,000yds.
S Wilder	5554555555554455	4554555555545542	5555245545555544—208

S Winchester	10 10 9 10 10 10 10 10 10 9—98

Sept. 19.—There was a further slim attendance at Walnut Hill today and but few scores were completed, owing to the high wind. The fall meeting of the Association will be held Oct. 8, 9 and 10. At this meeting an off-hand match on the decimal target, 200yds., will be shot, 50 prizes being offered; also a 200yds. rest match and a carton match at 600yds. for mid and long-range rifles. To-day's scores were:

Decimal Match.

R Reed, D	8 6 9 8 8 9 8 9 10 8—83
J B Fellows, C	10 9 7 5 10 3 8 7 9 8—76

Williamson	3455434444—40	Schaeffnauer	3335434534—39
		Ward	4243444433—35

THE GENESIS OF A RIFLE.—A pistol of decidedly clumsy appearance, and with fully as much brass as steel in its composition, was left for a few minutes last evening at Klock's drug store, with several other articles, by a gentleman who had some errands to do before taking a horse car from the corner, and who asked permission to temporarily relieve himself of the load. During his absence several visitors in the store handled the weapon, which, although it was not loaded, did no damage. The peculiar make was the subject for conjecture for some time, until the pistol was shown to a leading military man, who immediately recognized it as one of the Tyler Henry patent. "This pistol," said he, "works on the same principle as the Winchester magazine gun. Of course many improvements have been made since this pistol was manufactured, but the principal features are the same. Thousands upon thousands of dollars have been made from the invention, but the inventor received little benefit from it. The late O. F. Winchester began the shirt business many years ago on a very small scale, cutting out the garments which his wife and other women put together. The business gradually increased until Winchester & Davies built for shirt manufacturing the large factory on Court street. The firm prospered, and when Tyler Henry produced his magazine pistol, he went to Mr. Winchester, as a leading capitalist and manufacturer, and proposed to sell him the patent for $75,000. Mr. Winchester offered him $50,000, but the offer was refused. Henry afterward offered to sell for $40,000 and Winchester offered him $25,000. No sale was made then; nor later when the invention was offered for $20,000 to the capitalist, who then reduced his figures to $10,000. Finally, Winchester bought the patent, paying Henry, I think, only $7,500. The first guns were made on the model known as 1866. Other models have been made since, but all conform very nearly to the original Henry model."—*New Haven Palladium.*

RICHMOND, Ind., Sept. 13.—Here is a score I made with a .32-cal. 26in. rifle, with 20grs. powder. I think it is a good score, and will set small caliber shooters to thinking. I shot three strings of 10 shots, 200yds., off-hand, Massachusetts target:

First	11	10	11	10	9	6	9	11	11	12—101
Second	12	7	10	8	10	10	11	11	11	11—101
Third	11	9	9	12	10	10	9	9	11	11—101—303

C. A. JACKSON.

JAMESTOWN, N. Y., Sept. 18.—Scores of Jamestown club in match with Waltham last Friday and Saturday, Creedmoor target, 200yds., off-hand:

J R Moore	4354444444—40	H D DeLisle	4444434444—39
S N Ayres	5454544555—46	O H Lilly	4344455444—41
F K Dowler	4544455445—44	R H Burns	5445544555—46—298
A F Ward	4435545552—42		

The Waltham score was given in last issue.

MANCHESTER, N. H.—The Manchester Rifle Association hold their annual fall meeting Oct. 6, 7 and 8. They will offer two events, in the principal one of which they will give a sporting Bullard repeating rifle valued at $50 as first prize, as well as twenty-nine other prizes, the first six aggregating $175, which ought to give us a good attendance from the marksmen of the East The shoots will be on the Massachusetts decimal target, and under the majority of Creedmoor rules.—RIFLE.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRENTON, N. J., Sept. 17.—Trenton Gun Club, 20 glass balls, Card's rotary trap, 18yds rise, trap screened.

WORCESTER, Mass., Sept. 18.—The following gentlemen from this city went to Manchester, N H., to-day: W. S. Perry, E. T. Smith, H. W. Webber, W. R. Jones, C. B. Holden, M. D. Gilman, J. B. Goodell, W. L. Davis, L. G. White, L. R. Hudson and H. W. Eager, members of the Worcester Sportsmen's Club. There were eight events of trap shooting under the auspices of the Manchester Club. The principal event was a match between W. S. Perry, of this city, and C. M. Stark, of Dunbarton, N. H., for $250 a side. The match was for 100 clay-pigeons, 50 single, 50 double. The judges were Dr. C. H. Gerrish, of Exeter, N. H., and Major L. G. White, of Worcester. A. F. Cooper, of Exeter, N. H., was referee, and H. W. Eager, of Marlborough, Mass., held the $500. Stark used his light 7¾ pound 12-gauge Scott gun and wood powder. Perry used a 11-pound, 10 gauge Daily gun and black powder. This gave Stark under the rules an advantage of 2yds. The detail of the work will be seen by the following score:

Perry.

Singles	01111111111111111111101100111111111101011111111111—43
Doubles	11111110101011101111100011101111111111111111101110—40

—83

Stark.

Singles	11111111110111101011111011111111111111101111111111—44
Doubles	11111011100101111111111011100000110111010101111110—35

—79

The result of the contest pleased Perry and his associates, and upon their arrival in this city they were met by members of the club, who did not go to Manchester and were at once escorted to the Bay State Hotel, where a game supper was awaiting them. Major L. G. White presided at the table. After dinner speeches were made by Alderman John R. Thayer, E. S. Knowles, Gen A. B. R. Sprague, Col. J. A. Titus, N. S. Harrington, Deputy Sheriff Capt. David M. Earle and Webster Thayer, Esq.

THE LOUISVILLE SPORTSMEN'S ASSOCIATION will hold a tournament, targets of all kinds, Oct. 1-3, open to all. J. B. Griffith, Secretary, Louisville, Ky.

OCCIDENTAL WING-SHOOTING CLUB.—Final shoot of the Occidental Wing-Shooting Club, San Francisco. The shooting was excellent, despite the usual sharp wind. At 15 clay-pigeons, 18yds. rise, 5 screened traps, 4th notch:

E Funcke	111111111111111—15	T Healy	001101110011010—9
E Dunshee	111111111111011—14	J Healy	011001110110100—9
P J Walsh	111111110111101—13	H Blanken	111100011010110—9
W Dunshee	101111101111011—12	B Rowan	110011010010110—8
P Funcke	111110011101101—11		

Sweepstake, at 10 clay-pigeons, same conditions:

E Funcke	1111111111—10	P Funcke	1111010111—8
E Dunshee	1111111101— 9		

The club held three rich gold medals to be won by those making the three highest scores during the season. E. Dunshee won first prize, with 76 breaks: Ed. W. Funcke second prize, with 74, and P. J. Walsh third, with 71. The Occidental has 19 members.

At San Bruno Messrs. Messrs Edward A. Funcke and Will A. Jenke shot for the amateur championship of California cup, at 50 birds each, 20 at 30yds., ground traps, 20 at 21yds., plunge traps, one barrel, and 5 pairs, plunge traps:

	At 30yds.	At 21yds.
Funcke	11110011101111111101—16	11111111111111111110—19
Jenke	11100100111051101110—12	01110101111111001111—15

At 5 Pairs.

Funcke	11 01 11 11 00—7
Jenke	01 withdrawn

RYE BEACH, N. Y., Sept. 18.—Match at clay-pigeons for silver badge:

W D Beck	1010111111— 8	T Ward	1101111111— 9
D Stuber	0000000000— 0	Theal, Sr	0001101011— 5
Genung	1111010001— 6	Theal, Jr	0001110110— 5
G W Bassford	1111111111—10		

Bassford defeated Ward 5 to 4 in a possible 5 after the regular contest, and Ward had his feelings soothed by shooting 4 to Genung's 3 in a like match.

GIRARD MANOR, Pa.—A clay-pigeon match was shot Sept. 18 at the Ringtown fair. At 9 clay-birds, revolving screened traps, 4yds. rise, use of one barrel. First prize $35, second prize $25, third prize $5. Score as follows: M. Cooper 9, MacMillan 8, P. Cooper 7, J. Lorah 7, Kleckner 7, Fuhrman 7, Ready 7, Clayburger 7, G. W. Lorah 6, P Dresher 6, Burnhard 5, Curry 5, Morgan 4, Goodman 3, Jones 4, Dresher 4, Stauffer 2. M. Cooper first prize, MacMillan second, third divided between P. Cooper, J. Lorah, Kleckner, Fuhrman, Ready and Clayburger.—X.

PATERSON, N. J., Sept. 15.—Match between J. Welcher and E. Perry, at 6 pigeons a side, being our first attempt at pigeon shooting; E. Perry, 1 0 1 1 0 1—4; J. Welcher, 1 1 0 1 1 1—5. Welcher's second bird fell dead out of bounds.

CLEVELAND, O.—The gun club will hold a clay-pigeon and blackbird shooting tournament, Oct. 7 and 8, open to all, N. G. C. rules. D. C. Powers, Secretary, No. 4 South Waters street.

CAVANAUGH VS. MILLER.—Jersey City Heights Gun Club grounds, Sept. 16. Match at 30 birds, 30yds., 1 barrel, 80yds. boundary. John Cavanaugh (Madison) scored 24, Enoch Miller (Springfield) 16.

NATIONAL GUN ASSOCIATION TOURNAMENTS.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now.—F. C. BISHOP, Secretary, Box 1292, Cincinnati, O. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. STARK, April 18, 1885.—*Adv.*

Yachting.

FIXTURES.

Sept. 28—Pentucket Y. C., Championship Regatta.
Sept. 28—Newark Y. C., Open Sweepstakes, Newark Bay.
Sept. 30—Knickerbocker Y. C., Fall Regatta.

THE BENNETT-DOUGLAS CUPS.

EVERY one knows what the American navy amounts to—a long string of names on the navy list and a lot of old hulks and unfortunate experiments, mostly tied up permanently to the docks. Merchantmen of American build are found in all ports and dot every sea, but unfortunately they sail under all flags but the Stars and Stripes. At least we may be proud of our pleasure fleet; schooners, sloops, steamers, from the largest size downward are listed to the number of 2,000 in Olsen's; and yet a great race, not merely for valuable prizes, but for a question of national supremacy, sailed from the first yachting port in the Union in the height of the yachting season, brings out three schooners and one sloop, the latter twenty years old, to represent this great fleet, a proud showing truly. For three weeks our harbor has been crowded with the pick of American yachts in racing trim. Our cabins, it must be understood, are not racing machines, but are used for cruising; nevertheless they are the fastest craft in the world and always in racing order. Now after three weeks' idle looking on at a race they could not participate in, at the first symptoms of an open contest they all scuttle through Hell Gate as fast as tugs can tow them, and air their sails at Newport, leaving four of their number to represent them against the British yacht.

However, there is one thing to be said in favor of this proceeding, it's not "Quite English, you know," but in marked contrast to the action of Genesta's owner is entering all the races open to him. Nearly all the boats famous in our yachting annals have been seen on New York Bay this month. America, Dauntless, Dreadnaught, Comet, Columbia, Viking, Ruth, Intrepid, Mountauk, Clytie, Foam, Phantom, Cleo, Fortuna, Estelle, Norada, Nirvana, Tidal-Wave, Vamoose, Gitana, Nokomis, Wanderer, Harbinger, Albatross, Mohican, Speranza, Grayling, Vesta, Norseman, a fleet of thirty large schooners, most of which claim to be fast yachts. The sloops of course were fewer in number, Gracie, Mischief, Fanny, Hildegarde, Priscilla, Arrow, but on them more especially devolved the duty of meeting the visitor from across the seas. Out of this fleet of nearly forty boats we might expect a decent showing, but the starting whistle found exactly four, three schooners and one sloop at the line. We do not include the smaller craft, as they had no possible chance of saving time from Genesta, but entered for a handicap of their own. On Monday's race the showing was even worse, as only one yacht started, though the long course and absence of allowance give excuses that were not valid on Friday. For the final race around Cape May Lightship, only Dauntless and the bold little Athlon, 50ft. long, have therefore entered against the cutter.

While Genesta has failed to win the Cup she has been defeated by a very different sort of antagonist from that which it was expected here and abroad would meet her, and she has really had no opportunity to measure her power with the typical American boats. In this race the chance was offered to the sloop men either to defeat her or to be beaten squarely on their merits, and with one exception only they have backed out of the contest. The one boat that entered was beaten badly and conclusively, but it is far more to her credit than to have stayed at anchor, as Sandy Narrows; and such a defeat, the only one making a good fight to the last, is worth half a dozen such victories as that of the Long Island race last year. There is really no excuse to be urged for the boats which in perfect condition and manned by racing crews, lay at anchor on a light weather day in September, after a fortnight of calm weather and smooth water, while an important race for a valuable prize and in face of a direct challenge from a boat of a type whose powers they hold inferior to their own, was being sailed within 15 miles. The white ensign with its red cross that has waved at the masthead and taffrail of Genesta was a silent challenge that should have sent aloft every racing flag in the fleet, but it waved almost unanswered.

Though far less exciting and important than the great Cup races, the race of Friday possessed a feature of special interest that the other did not, as it was in reality a race between sloops and cutters. Gracie, Athlon and Daphne are all sloops, though with some modifications of rig or fittings, and Genesta and Clara are cutters of the most extreme type. The results are conclusive, and such as to make ample amends for the previous defeat of narrow beam and great depth by large beam and moderate length. Gracie was beaten 22m. over her allowance on a course of 35 miles in sloop weather, only saving her time by 9m. from little Clara, a boat 18ft. shorter and less than half of her beam. Clara went over the course easily and in good time, while Athlon and Daphne were so far astern at the end of the windward work that the stakeboat had taken up the mark and started home, so that Athlon withdrew, and it is uncertain just where Daphne rounded. The two cups, valued at $1,000 each, were presented by Commodore James Gordon Bennett and Vice-Commodore Wm. B. Douglass, for schooners and single-stick yachts respectively, to be sailed for over a triangular course from the Scotland Lightship, under the New York Y. C. rules and allowance. The four smaller boats—Athlon, Clara, Isis and Daphne—sailed also for a sweepstakes of $150 each.

The entries were: Schooners—Dauntless, Fortuna, Grayling. Sloops and cutters—Genesta, Gracie, Ileen, Clara, Athlon, Isis, Daphne.

A triangular course is usually understood to imply an equilateral triangle when it is specially laid out in open water, but in this case something had evidently fouled the headgear of the mathematico-geodetic department of the regatta committee, with peculiar results. The first leg of the 40-mile course was given as E. by N. 13½ miles from Scotland Lightship, the second leg was S.W. by W. ¾ W. 13½ miles, and the third was supposed to be of the same length. Any one who will take the trouble to consider the bearings will see that the second leg ran back nearly to the starting point, the last leg being only 6 miles, making the entire distance under 35 miles; in short, the course as laid out would have done credit to that eminent navigator, the mate of the clipper Guyascutas, who goes down in history as reporting that "She heads to the east, sou'west by no'th; and the binnacle lies abaft." As all the allowances had been calculated for a course of 40 miles the committee were obliged to reduce them for the shorter course of 35 miles, which took some time. The Luckenbach steamed down in the morning with the usual party on board, passing Genesta and Ileen in tow of the same tug. Ileen had replaced her broken bowsprit, but Stranger had not repaired damages in time to start. Bedouin was entered, but as Commodore Rogers is in the West on a business trip, she did not start.

Outside the Hook Gracie, Grayling, Dauntless, Fortuna, Daphne, Isis and Clara were flying about with topsails set, before a fine S.W. wind. A few steamers and yachts were at the start, and the tug Ocean King with Mr. Olsen and the two big floats on board was ready as a markboat. The Ocean King started off E. by N. with her logs towing, while the Luckenbach dropped her anchor a short distance north of the Lightship at 10:20. When the whistle blew at 11 A. M. the yachts were to windward of the line, all with club topsails except Ileen and Clara with jib headers and Genesta with a sprit. At 11:10 the start sounded and the fleet came for the line in three chance divisions. To leeward, close aboard the Luckenbach, went Clara with Ileen not 10ft. astern to windward. Still nearer the middle of the line was Genesta, while Grayling, setting big maintopmast staysail, and Fortuna after her with balloon jib flying, completed the first division. Lagging a little astern came a second lot headed by Athlon, with staysail down and spinnaker adrift as it went up. Dauntless under her lee, had all hands on the halliards as a great maintopmast staysail and balloon jib went up, while between the two was Gracie with spinnaker hanging in stops. Still another lot now came down from far astern, Daphne breaking her spinnaker very prettily on the line, and well astern Isis, already under spinnaker. The times were:

Ileen	11 11 03	Athlon	11 13 59
Clara	11 11 09	Gracie	11 14 48
Genesta	11 11 30	Dauntless	11 14 48
Fortuna	11 11 47	Daphne	11 16 14
Grayling	11 11 59	Isis	11 17 30

Daphne and Isis were handicapped, the limit being at 11:15.

By the time the last whistle had blown the fleet were settled down to work, spinnakers drawing to starboard and kites on the schooners. The water was perfectly smooth and continued so almost to the first mark, by which time there was some sea on. The wind held steady on the run out, hauling near the mark to S. S. W. and later on to W. S. W. near the second mark. At 11:39 it was a fresh breeze, all carrying sprit or clubtopsails easily. The order then was Grayling, with Genesta 250yds. to windward on her beam, Ileen and Fortuna nearly even with the leaders, then a short space between them and Clara, then Gracie astern of Clara a few hundred yards and just abeam of Sandy Hook lightship, then Athlon a short distance astern, Dauntless in her wake, Daphne ¼ mile or less astern of the schooner, and Isis as rear guard. At 11:45 Clara had pulled up, leaving Ileen in fifth place, and soon after Gracie also passed her. Grayling's big staysail was drawing, but still she could not hold the cutter, and at 11:50 Genesta headed her, while Fortuna was even with her. Five minutes more and Fortuna's jibboom was even with Genesta's archboard, while a clear length of water opened between Fortuna and Grayling. The tug was steering a parallel course with the yachts, and was even with the leaders, so a line across her showed their positions very accurately. Genesta lowered her jib, but still continued to gain on both, while little Clara was still leaving Gracie.

At 12:01 Genesta's big jib went up in stops, but it was 12:07 before it was broken out, the stops near the head holding for a time. A few minutes before Grayling had made a sudden start, but a 12:10 Genesta had dropped Fortuna, and the latter in turn was leaving Grayling. Genesta had taken in her topsail, but was still holding a good pace. The boats were in a string, Genesta, Fortuna, Grayling, Clara, Gracie, Athlon, Ileen, Dauntless, Daphne and Isis. At 12:20 Fortuna set her jibtopsail, and at 12:30 Genesta sent up her cloud topsail. The wind came nearer now to the end of the spinnaker booms, and Fortuna first slacked hers well forward and at 12:30 lowered it entirely, Grayling doing the same. Fortuna lowered her jib for a time, while Grayling's balloon jib was helping her greatly now her spinnaker was in. Her staysail was also drawing. Between 12:30 and 12:40 there was some lively shifting of headsails and topsails on all the yachts and spinnakers all came in. Gracie was now leading Clara, as she could lay a better course with fore and aft sails only, while Clara held on to her spinnaker until 12:45, at which time Daphne, Isis and Athlon lowered theirs also. At 12:45 Fortuna took in her maintopmast staysail, and at 12:48 Genesta lowered her jibtopsail, luffing around the mark, shaking for a moment in the wind, and then filling away on starboard tack. Next came up Fortuna, but Grayling cut inside of her very nicely and turned with her. Clara was jumping into the seas as she luffed, but soon settled down to an easy, regular swing. Athlon was unlucky in being covered by Dauntless at the turn. All took starboard tack after rounding except Ileen and Daphne. The times were:

Genesta	12 49 14	Ileen	12 54 38
Fortuna	12 50 23	Athlon	12 56 33
Grayling	12 50 55	Dauntless	12 56 48
Gracie	12 53 23	Daphne	1 03 30
Clara	12 54 33	Isis	1 04 30

Genesta had gained nearly 3min. on Gracie in 13½ miles before a fair breeze, while Gracie had gained nearly 5min. on Clara in the same time. Gracie is 11ft. shorter than Genesta, and 16ft. longer than Clara.

Once away there was a sea outside that tumbled the small ones about. Gracie's jibtopsail came in at 12:51, and her clubtopsail followed at 12:57, leaving her jibheader aloft. Dauntless took in her big jibtopsail and Athlon her club at 1 P. M. Genesta walked rapidly to windward and away from the schooners, holding the starboard tack until 1:18. At 1:05 Ileen had gone on starboard tack, at 1:14 Isis went on port tack, and at 1:24 Gracie, and 1:30 Athlon followed. Grayling went on port tack at 1:31, Fortuna 1:34, Dauntless 1:35, Ileen 1:38. At 1:42 Genesta went on starboard tack, standing toward the south. About 1:45 Genesta was far ahead to windward. Grayling and Fortuna were close by each other but well astern, Clara and Gracie were well to leeward of a line joining Genesta and Gracie. Ileen and Athlon were some distance astern of the fleet, while far down to leeward, in smoother water, were Daphne and Isis, the latter now ahead. Dauntless was astern of the other schooners and gave up before the second mark was reached. Genesta was carrying jibheader and going along grandly, while Clara, under same sail, was rushing through the seas very steadily with little bobbyhorsing. She slid along over the waves taking a wash along her lee channels and now and again a splurge of water over the weather bow, but her motions were very easy and regular and her after deck shone out perfectly dry as the tug passed to leeward.

At 1:44 Genesta shifted to a jibheader and at 1:47 she went on port tack again. Ileen lost her topsail sheet by its chafing off and soon after her halliards parted, so she gave up and started home. About 2 o'clock Isis and Daphne essayed topsails again, the wind dropping and the water growing smoother as the second mark, under the lee of the Jersey hills, was reached. At 2:26 Gracie set her jibheader that had been clewed down for some time. The two schooners were still making a close fight of it in the distance, Grayling still being ahead. At 3 P. M. Genesta came steaming along on port tack for the buoy, but could not weather it by half a mile. At 3:03 she went on starboard tack and at 3:07 she tacked again, breaking out her jibtopsail as she turned at 3:07:55. No other boats were near, the schooners were all astern, Gracie and Clara far to leeward. Athlon, Daphne, and Isis a long way off, and Ileen and Dauntless withdrawn. Slowly the sloop and cutter turned to windward for the mark, while Genesta, coming home fast, passed by them. The wind and sea were both lighter and Gracie began to pick up. Only four boats were timed at the second mark:

Gracie	3 07 55	Fortuna	3 20 06
Grayling	3 19 55	Gracie	3 35 45

Clara rounded the mark and was not timed, Isis rounded the markboat after the buoy had been taken in, Athlon found no mark and Daphne turned where she supposed the mark had been, but both buoy and tug had departed. Genesta came in flying, then came the two schooners, Gracie, Clara, Isis, and finally Daphne. The times were:

SCHOONERS.	Start.	Finish.	Elapsed.	Corrected.
Dauntless	11 14 48	.....	.....	.....
Grayling	11 11 59	3 53 32	4 41 33	4 35 38
Fortuna	11 11 47	3 54 16	4 42 29	4 42 29
SLOOPS AND CUTTERS.				
Genesta	11 11 30	3 41 10	4 29 40	4 29 40
Gracie	11 14 48	4 13 56	4 59 08	4 51 32
Ileen	11 11 03	.....	.....	.....
Athlon	11 13 59	.....	.....	.....
Clara	11 11 09	4 33 34	5 22 25	5 00 57
Isis	11 15 00	4 51 46	5 33 46	5 13 50
Daphne	11 15 00	4 48 37	5 33 37	5 07 16

Grayling beats Fortuna 6.31 and wins the Bennett Cup, Genesta beats Gracie 29.52 even and 21.52 corrected time. Gracie beats Clara 23.17 even and 9.23 corrected time. Genesta wins the Douglas Cup and Clara the $60 sweepstakes put up by her with Athlon, Isis and Daphne.

ENGLISH YACHTSMEN AT COWES.

COWES during yachting week presents a sight entirely novel to an American. English fashionable life all goes yachting this week, just as it went to the Goodwood races last, and will go shooting on the Scotch moors next week. The Prince of Wales came down last Saturday and joined his yacht. All the royal yachts are here, four in number, and all great, clumsy, old-fashioned side-wheelers with a large amount of gilt on them. There are about a hundred of the royal family on them and an indefinite number of German princes, including Prince Louis of Battenberg, the husband of the Princess Beatrice. Prince Louis is a fine, soldierly-looking young man; but what or where Battenberg is no one seems to know. The German princes do not take any active interest in sailing and are transported to and from the royal yacht in a little glass case built on the deck of the Queen's steam launch. The Prince of Wales, however, does not come in the glass case category. He is a thorough and energetic sailor. He is commodore of the Royal Yacht Squadron, takes a lively interest in all the races, and on any race day for schooners may be seen on the Aline holding her tiller or hauling at a rope, side by side with his men. The popularity of yachting here is no doubt largely due to the good natured and plucky commodore of the squadron.

We have nothing like a yachting week in America and we have nothing like Cowes. It is distinctively a yachting town. Of the five or six thousand inhabitants, there is probably not one who does not gain his livelihood from yachting patronage. Up the river are the shipyards where a hundred old worn-out racers are lying beside the frames of new boats not yet launched into life. Here is the famous old Sappho, which once saved the Queen's Cup for America, lying rotting in the mud. Every business which caters to the wants of a yacht, and there are not many which do not, is represented by excellent shops, from the fashionable yachting tailor and an establishment of Redfern's down to the bumboat woman and her stock of sailors' knick-knacks. To live at Cowes one would think that yachting was the only real business of the world. A yachting atmosphere pervades the whole place. Butchers and grocers wear boating jerseys, and to-day I saw a girl scrubbing the sidewalk with a yachting cap on. The club house of the Royal Squadron is situated on a rising slope right on the edge of the water and commands a view of the Solent for ten miles east and west. The house itself is a picturesque castle of the time of Henry VIII., the battlements now being armed with spy glasses instead of guns, and the white club signal flying on the tower in the place of the flag of England.

It is the proper thing to sit on the lawn of the club house, and here may be seen on any pleasant afternoon the Princess of Wales and her daughters and all the faces seen at a party at Marlborough House or in the royal enclosure at the Ascot races. In the harbor a hundred little steam launches and cutters with crews of big, broad-backed sailors in blue jerseys and bright colored caps are flying about, and with the bright yachting costumes of the ladies, on shore and on the water, the whole place has put on holiday dress. You see no gaudy costumes, however. They are generally of white or blue serge, or flannel, simply made, but fitting exquisitely. This applies only to the younger ladies. The old ladies, of whom quite a number take part in the sport, are generally dressed in a faded black dress and bonnet, and an aged shawl, following in this, perhaps, the fashion set by their Queen, and presenting about the same appearance as a respectable Irish widow who takes in washing. But they are all good sailors, young and old. You may see a young girl steering a six-oared gig, giving her men orders and bringing her boat up to the landing steps as scientifically as a naval officer, and you may see a lady of sixty or seventy popped up on the windward side of the schooner, with the spray flying in her face from every wave. They all know the history and merits of the famous racing yachts, and take the liveliest interest in their struggle—for this, too, is fashionable—and it is not rare to see a couple of ladies sitting on the deck of a cutter taking part in a hot race, and knowing how to keep out of the way—something by no means easy to do when jibing around a stakeboat or setting a big spinnaker.—*C. K. Halsey, in Brooklyn Eagle.*

ATLANTIC Y. C., PENNANT RACE.

A PENNANT race between Class E boats of the Atlantic Y. C. was sailed on Sept. 8 over a course from the club house to Scotland Lightship and return, 32 miles. The schooner Agnes, with Com. Hogins and his wife, and the judges, Messrs. T. P. Fiske and L. H. Cress, sailed over the course with the yachts

The start was given at 10:16:28, five minutes after the first signal. The wind was fresh from S.W., and Romeyn housed her topmast above the line, while her only competitor, Ilderan, essayed a jib-header. Romeyn stood over before the signal and was obliged to recross. Ilderan was far above the line, and in spite of Romeyn's blunder the former was astern at the start, the times being: Romeyn 10:16:00, Ilderan 10:16:50. Romeyn held a lead to windward, and Ilderan soon doused her topsail but still fell astern. Below the islands she set it again—11:45, Romeyn being far to windward. The latter now sent up topmast and jibtopsail, and soon after her jib-header, while Ilderan followed with a balloon jib instead of a jibtopsail.

Romeyn led around Buoy 8 at 11:37:10, with Ilderan at 12:00:05. Ilderan took in balloon jib and set jibtopsail again, losing some time in the change. The times at the Scotland Lightship were: Romeyn 12:39:22, Ilderan 12:49. Both came in free with booms to starboard. Romeyn lowered her jibtopsail for a time, but set it again, while up the bay Ilderan set her balloon jib. Both finished under spinnakers, Romeyn still having a good lead. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Romeyn	10 16 00	2 29 55	4 13 55	4 17 14
Ilderan	10 16 50	2 36 47	4 19 57	4 19 57

THE REPRESENTATIVE AMERICAN SLOOP.

Editor Forest and Stream:

In your issue of Sept. 3 I notice under the above heading an article signed "Loyalty," from which I quote as follows: "I think it would have been more fitting for the committee having the matter in hand to have selected as a contestant for honors in the trial races a full-blooded American sloop, without making a concession at the start, which I claim the Puritan to be." I take the liberty of anticipating the "committee that had the matter in hand" and built the Puritan to enter in the trial races, in extending their thanks to "Loyalty" for his kind suggestion, and have no doubt that if he had communicated with them personally and been just a trifle more previous, as it were, they would have taken great pleasure in building him a sloop after his own ideas, no matter how antiquated, provided he would simply furnish the draft. They might possible want the draft made payable on demand, with the autograph of say Jay Gould, just to show his acceptance and approval of the drawing. Under the existing circumstances, I hope "Loyalty" will not be too hard on the committee, although their only excuse is they were paying all the bills and were under the impression that they knew what they wanted. Trusting "Loyalty" will accept this apology, I quote again: "I do not believe in meeting the Englishman with anything that has any English in it. I do not believe in shining with a borrowed light, which a defeat of Genesta by Puritan would virtually be." Now, as a rule, I never interfere with any one's belief. It is sure to lead to an argument, and an argument, especially on the sloop cutter question, makes me weary. For my part, provided the Puritan wins, "Loyalty" may pay his money and take his choice—call her sloop or call her cutter. If the former, the American sloop is faster than the English cutter; if the latter, then an American designer, an American builder and an American sailmaker have turned out an American cutter, to order, on six months' notice, that outsails the best cutter England has produced after years devoted to the improvement of that special type. *Viva la America.* YANKEE DOODLE.

Editor Forest and Stream:

In your last issue I read a communication from Mr. Clapham in reply to my communication of the 3d inst. In it he either shows ignorance of what he talks about or an intention to mislead instead of enlighten others. He evidently does not know the difference between a sloop with a double head rig and a cutter, and does not know the difference between a one-masted yacht with long mainmast well forward, short bowsprit, short topmast, and headsails running on stays, ballast all inside and short overhang with house on deck (Gracie), and a one-masted yacht with short mainmast well amidships, long topmast, long bowsprit, two headsails on stays, one set flying, deep keel with lead on it, long overhang to stern with flush deck (Puritan). When he talks about the likeness of the one to the other, in regard to the stern and big jib, his concessions are all I claim. In regard to ballast, location and not quantity is my argument. As to discarding this low weight he evidently is unaware of the location of the ballast of Fortuna, which did so well at Newport. The likeness of the Shadow to the Puritan shows how he jumps at conclusions. The shallow keel, short bowsprit, short topmast, and headsails running on stays, ballast all inside and short overhang with house on deck, short topmast, short bowsprit; in fact an ideal American sloop (no mongrel). Judge for yourself as to likeness. You will find more of it in Fortuna's stern and after part. Evidently twelve years of yacht-sailing has been of no benefit to Mr. Clapham or else he has moved about with his eyes shut, as shown by his argument, which is as shoal as his shardie. LOYALTY.

LYNN, Sept. 14.

Editor Forest and Stream:

Our yachting friends would now be glad to hear from your late yachting editor, Mr. K. We would like some nautical lore from him regarding cutters soaking out to windward and centerboard traps falling off in a sea way; also about sloop yachts having to lay at anchor when cutters are carrying full sail. Anything of that kind would be very interesting at the present time from such high authority, from one who knew so much and furnished so much wisdom free of cost to yachtsmen of America. DEEP CENTERBOARD SLOOP.

NEW YORK, Sept. 17.

[Our correspondent will hear from Mr. Kuhardt as soon as he returns from a short cruise. What the FOREST AND STREAM has asserted in regard to the weatherly powers of the cutter compared with the shoal centerboard boats is as true now as when first written. Witness the performance of Genesta and Clara with Gracie, Athlon and Daphne on Friday; and the question is in no way affected by the performance of a radically different type of boat from the "centerboard trap" our correspondent mentions. Of sloop yachts at anchor there have been plenty of late. Where were Mischief, Fanny, Arrow, Hildegarde, Priscilla on last Friday? All have backed out and left to old Gracie and little but plucky Athlon the difficult task of upholding the prestige of the real American centerboard sloop. Where was the American sloop in the Goelet Cup races, what part has she played in the work of this season, and where would the Cup have been now if Boston brains and enterprise had not made the cutter rig and lead keel a controlling factor in the fight? We have heard a good deal about the American sloop of late years and there has been a deal of boasting over our racing fleet. Now, in the finest racing weather, on a clear pleasant day, an important race for a valuable prize brings out three sloops, two of small size, and one of these fails to sail the course. A splendid showing for our fleet, and not the only one. The Goelet Cup races did not fill, only three large sloops, one from Boston, have shown up in the year's races, and now their friends and defenders seek a tardy salvation by hanging on to the white counter of the Boston centerboard cutter. It's too late now. Oh! centerboard sloop men; the mere prefixing of the word "deep" will not bring you in to share in Puritan's victory. What you have said about cutter rig hits her as hard as it does Genesta; your scoffs at lead ballast low down apply to both boats, if you have been right for years Mr. Burgess is wrong now. Genesta's defeat by Puritan, a matter of a hundred seconds in a five hour race is nothing; the great disaster was to the real Simon pure American sloop when Puritan was chosen to meet Genesta.]

The result of the races for the America's Cup must be satisfactory to every patriotic American, but it is doubly sweet to the advocate of the sloop-built boat as opposed to the cutter. Yet it behooves them to be moderate in their rejoicing, for the "white horse of the billows," as some enthusiast has called the Puritan, is far from being a typical American sloop. Her comparatively great depth, her lead ballast on the keel and her long, overhanging stern make her at least first cousin to the English cutter, and if she does belong to the family of American sloops, she cannot be said to resemble the rest of the family very much. Nor does the rig help to identify her. The divided headsails are copied from English models, while the mainsail is American in being stopped to the boom along its whole length, instead of being attached at the corners only. The main point of national difference (and it must be admitted to be an important one) is the moulding of the sides, which in the English cutter are straight and high, tumbling in suddenly toward the keel, while in the American sloop they flare broadly out amidships and taper gradually toward the stern. The centerboard of the Puritan is also peculiarly American, and the deep keel, although rarely found in such development in the centerboard yachts of our Southern waters, is a characteristic feature of the stanch little fishing boats of the Maine coast.

In them the keel deepens rapidly from the bow, some boats drawing hardly two inches of water at the bow and more than four feet at the stern. Half way down the keel the centerboard is inserted. This deep portion of the keel aft, which is technically called the drag, is highly prized by the fishermen for holding the boat up to the wind and increasing her speed in working to windward. The Puritan is, in a high degree, an "occasional" boat, built with a special purpose, which she has admirably fulfilled, and combining all the best results of modern experiments in the science of boat building, whether English or American.—*Boston Advertiser.*

THE AMERICA'S RACES IN ENGLAND.

THE London *Field* of Sept. 12 gives the following account of the America's races in her visit to England:

Thirty-five years have passed away since the yacht America added to the sensation of the "Great Exhibition" year, and it is not surprising that many wrong impressions should exist as to what this celebrated yacht actually accomplished. It was in 1850 that Commodore Stevens and some others decided to commission George Steers (who, by the way, was the son of a West of England man, but who left with his father for the United States before he was out of his teens) to build the America, in order that everything American, even to yachts, should be represented at the International Fair. She was built somewhat on the model of the New York pilot boats, but was longer in the bow and shorter in the run than those famous vessels, the best known of which on this side of the Atlantic was the Mary Taylor, built by George Steers in 1848. The dimensions of the America yacht were: Length on waterline, 87 3ft.; beam ditto, 22 2ft.; beam extreme, 23 4ft.; draft of water aft, 11ft. 6in.; area of L.W.L., 1,253 square feet; area of midsection, 102 8 square feet; displacement, 146.6 tons; area of vertical longitudinal section, 860 square feet; center of buoyancy aft center of length of L.W.L., 4 3ft.; ballast, 45 tons; area of lower sails, 5,263 square feet.

During June and July, 1851, the America, under jury rig, crossed the Atlantic to Havre, where she took on board her big spars and bent racing sails. She left for Cowes July 30, and when she got inside the Isle of Wight, it being thick, she let go her anchor when five or six miles distant from Cowes. On the following morning, July 30, the cutter Lavrock, 72 tons, built by J. White, came down from Cowes to have a look at the Yankee and measure her speed, and was soon gratified, as the latter got her anchor at once. Reaching for Cowes the America soaked out across the wake of Lavrock in the most wonderful manner, and, of course, headreached too. The matter was thus put at once, and the most extraordinary stories were propagated to account for the close windedness of the Yankee, the common story being that she had "a screw in her," a means of propulsion just then being introduced, and as yet regarded as something uncanny. However, all these forecastle yarns were soon dispelled; but the serious matter was, that Commodore Stevens, having so openly showed his hand, could get no match on. He, by consent of the committee, posted a notice in the R. Y. S. house that he would sail any British yacht for a stake of from 1,000 to 10,000 guineas; but this offer went begging, and it seemed that there would be no match. The R. Y. S. regatta commenced Aug. 18, with the match for the Queen's Cup, and this was thrown open "to all the world," with the line that the America would compete. However, as there was to be a time allowance, "half Ackers' scale," Commodore Stevens declined to enter, and the Queen's Cup was won by the cutter Bacchante. Meanwhile, Mr. Stephenson, owner of the 100-ton schooner Titania, built by Mr. Scott Russell on the "wave-line" principle, offered to sail the America for £100, and the offer was accepted, the match to take place Aug. 28. The members of the R. Y. S., not liking to risk the possible reproach that they had not given the stranger a fair chance of entering, decided that the match to be sailed round the Isle of Wight, Aug. 22, should be without time allowance. The America was then promptly entered, although such a contest was not what the owners of the yacht sought. They desired to meet a thoroughly representative British vessel in single combat, and sail for a good stake. The entries for this, the match round the Isle of Wight, were as follows:

Yacht.	Tons O. M.	Rig.	Owner.
Beatrice	161	Schooner	Sir W. P Carew.
Volante	48	Cutter	Mr. J. L. Craige.
Arrow	84	Cutter	Mr. T. Chamberlayne.
Wivern	205	Schooner	Duke of Marlborough.
Ione	75	Cutter	Mr. Almon Hill.
Constance	218	Schooner	Marquis of Conyngham.
Titania	100	Schooner	Mr. R. Stephenson.
Gipsy Queen	160	Schooner	Sir H. P. Hoghton.
Alarm	193	Cutter	Mr. Joseph Weld.
Mona	82	Cutter	Lord Alfred Paget.
Brilliant	393	Bark	Mr. G. Holland Ackers.
America	300	Schooner	Mr. J. C. Stevens.
Bacchante	80	Cutter	Mr. B. H. Jones.
Freak	60	Cutter	Mr. Wm. Curling.
Stella	65	Cutter	Mr. R. Frankland.
Eclipse	50	Cutter	Mr. R. S. Fearon.
Fernande	127	Cutter	Major M. Martyn.
Aurora	58	Cutter	Mr. Le Marchant Thomas

The Titania, Stella and Fernande did not start, but the others got away before a light westerly wind at 10 o'clock. The Volante—the most advanced in model of the cutter type among the entries—led the fleet out to the Noman Buoy, when they hauled up a bit, and the Yankee at once began to march up to her. The America continued to haul her wind, but Volante and the others reached along for the Nab Light, that being a usual mark to clear in sailing round the Isle of Wight. However, in the instructions given to the yachts, nothing was said about the Nab Light, and the America hauled up to a "full and bye" as she scraped round Bembridge Ledge. This at once put her to windward of the whole fleet. They worked up along shore across Sandown Bay to Dunnose in a nice breeze and slight head sea, the America holding her place to windward. However, the wind fell lighter, and the latter tried her flying jib, but the jibboom broke, and she had to get the sail in. All the cutters were beating the English schooners very badly, Volante, Freak, Arrow and Alarm leading, but it should be said that the cutter Wildfire, 49 tons (not in the match), which had stuck to the America all the way round, was keeping the weather gauge of the whole fleet, including the America. The cutters were now working the shore very close to shun the flood tide, and Volante and Freak by these means had got to windward of the America; the latter not liking risking such shrimper's casts, had reached off into the tide two or three times. Near Ventnor the Arrow, when close up to Volante, went ashore, and Alarm, outer, and some of the schooners went to her aid. It was dreadfully slow work beating up against the torrent of tide pouring round the headlands, and the cutters were working in very close quarters in shore, so close that at 3 o'clock off St. Lawrence, Freak, in crossing Volante, carried away the former's bowsprit, thus three of the most formidable of the competitors were disposed of. The Wildfire weathered St. Catherines at 3:45 and the America 3:59 and one of the English cutters at 4:10. The America now made a long cast off on starboard tack, the tide being easier, and when she stood in again she weathered the Wildfire at 5:25 in Freshwater Bay, and the nearest of the other yachts was the Aurora, about seven miles distant. The America bore away around the Needles at 5:47, pretty well an hour before Aurora got there. However, the wind fell light, and running up the west channel in the evening the sternmost division brought up the young flood and closed up a great deal. They drifted past Cowes and ended the match at:

America	8 37 00	Bacchante	9 30 00
Aurora	8 55 00	Eclipse	9 45 00
Brilliant	1 20 00		

The Brilliant, square-rigged on her three masts, finished after midnight, and was the first of the English schooners, but, as before explained, several went to help tow Arrow off. The owner of the Brilliant objected to the prize being awarded to the America, on the ground that she did not go outside the Nab; but the objection was overruled, as the Nab was not mentioned in the instructions.

In the match with the Titania, in a fresh breeze twenty miles to leeward and beat back, the America won by 52min. She was then sold to Lord de Blaquiere for £4,000, and she spent the winter in the Mediterranean. With an English crew in 1852 she beat the Swedish yacht Svering, but in a match round the island was beaten by the Arrow and Mosquito, the finish being very close, as follows:

Arrow	8 33 00	Mosquito	8 58 41
America	7 08 05		

The America sailed no more matches until 1860, when she was brought out with shortened masts and lengthened gaffs. In 1861 she sailed a memorable match with the Alarm schooner, and was beaten half an hour; but as she had a scratch crew on board, her defeat was by no means conclusive.

THE SALE OF THE PURITAN.—As the Puritan was built only to compete in the Cup races, and as she was the property of a dozen owners, it was decided to sell her at once in order to settle up the business. She had been advertised for a week past, and on yesterday morning Draper's large auction room on Front street, New York, was crowded with yachtsmen, most of them actuated, as it proved, merely by curiosity. About noon Mr. Edward Burgess and Mr. Draper mounted the auctioneer's stand and the latter read an inventory of the Puritan's outfit, her ballast being given at 17 tons inside and 27 tons outside. The first bid was $8,000, going to $10,000, from which it rose to $12,000, hanging there a long time, and then reaching $13,000. Two more bids brought the price to $13,500, at which sum she was knocked down to Mr. Burgess for a Boston yachtsman, whose name was withheld. The Puritan will be taken at once to Boston.

THE BRENTON'S REEF RACE.

THE fourth race for the Brenton's Reef Cup, the first since Idler won it in 1876, was started on Monday last at 4:47 P. M., the only competitors being the American keel schooner Dauntless and the British cutter Genesta. The cup was first offered by Com. Bennett in 1872, as a perpetual challenge cup to be sailed for over a course from Sandy Hook Lightship to Brenton's Reef Lightship and return; or over the same course, starting from Brenton's Reef, the entire distance being about 275 miles. If won by a foreign yacht it must be sailed for over a course from the Needles, Isle of Wight, to Cherbourg, France, and return.

The first race was sailed in 1872 and was won by Rambler, owned by Mr. J. M. Forbes, and Madeleine, owned by Jacob Voorhis, Jr. Madeleine giving up and running into New London. Madileine challenged again, and on Sept. 19 both boats started, this time from Brenton's Reef Lightship. Rambler won by four hours. When she changed owners the cup reverted to the New York Y. C. and was not sailed for until 1876. On July 27, Idler, Mr. S. J. Colgate; America, Mr. B. F. Butler; Wanderer, Mr. James Stillman and Tidal Wave, Mr. Wm. Voorhis, started from Sandy Hook, the Countess of Dufferin sailing with them but not in the race. Idler won, beating the others badly. Since then yachtsmen have been content to leave the cup in the club lockers until Genesta stirred them up.

Messrs. Busk and Tams went down on the tug Scandinavian on Monday afternoon, while on the big iron tug Ocean King were a number of reporters from the New York papers who had chartered her to carry them over the course. The tug Luckenbach was down the Bay with a tow, but she was met coming in and the passengers were transferred from the Scandinavian to the Luckenbach. Taking Dauntless in tow they proceded down, while the Ocean King took Genesta. The first whistle blew at 4:50 and the start at 5 P. M. There was no wind at the time and it was 5:15 before Genesta crossed with jibtopsail and clubtopsail set. At 5:23 Dauntless went over with main clubtopsail and maintopmast staysail set in addition to all lower sail.

Genesta rounded Brenton's Reef lightship about 9:30 P. M. on Tuesday, Dauntless not being reported. At 8:45 A. M., Wednesday, Genesta passed Quogue with topmast housed, and at noon was off Fire Island, beating against a westerly gale. At 2:30 P. M. Dauntless passed Quogue. No news of the finish had been received in the city up to our time of going to press (5:30 P. M.), but Genesta must win by a large margin.

BEVERLY Y. C.

THE 106th regatta, open to N. E. Y. R. Association, was sailed at Nahant, Sept. 19. The day opened with a strong W. by N. breeze, constantly increasing in force, till at noon, the starting time, it was blowing very hard, and the small boats were all busy reefing.

Race was sailed under the rules of the N. E. Y. R. Association, and the preparatory gun was fired promptly at 11, the gun for first class following five minutes later.

Witch and Seabird were off on the flash for the Graves whistling buoy with the wind way aft on starboard quarter, Witch with topmast housed, Seabird "reaking" out a small jibtopsail. They were closely followed by Atalanta, breaking out balloon jibtopsail on the line; then the catboat Posy reefed but carrying a jib; Erin and Nellie under small topsa ls, and Gem apparently overpowered by her jib topsail.

The little cutter Otter was close on Gem's heels swinging her light kites handily; then Secret reefed down, while Bessie brought up the rear.

The latter's big rig seemed too much for her; under lower sails and working topsail she heeled way over and moved very slowly.

In the second class the 10 boats started well together and followed the larger boats, nearly all of them were reefed.

The two third class boats had a beat to start with, their course being round Sunk Rock and the fish weir to Lobster Rock Buoy, and back round Flip Ledge Buoy, 4 6-10 miles.

Flora Lee, double-reefed, was almost on the line at the starting signal, and was off at once, closely followed by Guenn, Flirt, Psyche and Undine. Beating up the Nahant shore, Flora Lee increased her lead. Psyche, single-reefed, a good second, closely pressed by Flirt under whole sail, the others single-reefed not far behind. In Lynn Bay they got it very heavy. Undine was overpowered and had to withdraw, while Psyche had to lay to and pump out, falling back to last place, and Guenn went to second but could not catch the little slabsider. In second class Thisbe was just able to fetch back, the rest all had to make a hitch, and by the time they neared Nahant the puffs were very severe and several of the boats were overpowered and withdrew. Nettle got within a quarter of a mile of the finish, and seeing she was beaten, went back for home. Pet ran in to leeward of the line and evidently started to anchor and clue reef, but was caught in a heavy puff just to windward of a boat at anchor; her sheet being eased off the end of her boom grazed the mast of the other boat, and in an instant she upset and gradually sank, but so slowly that she was first towed into shallow water. First class had a hard beat to Winthrop Bar and a run home. Atalanta spun out a big lead and came home under jib and mainsail. After a while came Gem with jibtopsail up, then Sea Bird and Bessie and the others straggling after. Secret with an additional reef in and only Otter carrying light kites. Nellie parted jib sheets and withdrew. Summary:

FIRST CLASS.

	Length.	Actual.	Corrected.
Atalanta, c. b. sip., I. R. Thomas	27.00	2 14 13	2 03 53
Gem, k. slp., H. W. Savage	25.11	2 29 15	2 17 46
Seabird, c. b. slp., C. L. Joy	22.08	2 30 19	2 14 57
Bessie, k. slp., C. P. Curtis	28.02	2 30 28	2 20 49
Witch, k. cutter, R. B. Crowninshield	22.10	2 33 56	2 18 48
Otter, k. cutter, P. Chase	22.06	2 34 33	2 18 57
Erin, c. b. slp., H. J. Cavanagh	26.06	2 41 04	2 30 13
Posy, c. b. cat, R. G. Hunt	22.00	2 41 47	2 25 32
Secret, c. b. cat, E. F. Linton	22.06	2 53 00	2 37 34
Nellie, k. slp., A. J. O'Leary	25.08	Withdrew.	

SECOND CLASS.

Thisbe, cat, S. O. Freeman	20.10	1 27 12	1 15 16
Zantho, slp, H. M. Sears	20.08	1 31 02	1 18 56
Niobe, cat, J. R. Chadwick	20.01	1 32 15	1 19 34
Comus, cat, J. Newcomb	19 01	1 37 08	1 23 23
Crusader, cat, A. Wilson	19.01	1 37 12	1 23 27
Nettle, cat, W. M. Mayberry	20.04	Withdrew.	
Cosey, cat, Bumpus & Cane	20.01	Withdrew.	
Joker, cat, Geo. Coffin	20.02	Withdrew.	
Scamp, cat, H. Gray	18.04½	Withdrew.	
Pet, cat, J. W. McFarlane	19.08	Withdrew.	

THIRD CLASS.

Flora Lee, cat, D. H. Lincoln	16.09	0 59 16	0 48 24
Guenn, cat, W. L. Dearborn	17.06	1 00 49	0 50 34
Flirt, cat, J. W. Hildreth	15.06	1 01 00	0 49 00
Psyche, cat, P. S. Sears	17.05	1 01 56	0 51 37
Undine, cat, H. French	17.02	Withdrew.	

Atalanta, Thisbe and Flora Lee take first prizes. Seabird, Zantho and Flirt second prizes.

First class keels had a race for a flag among themselves, Gem winning. Judges, W. Lloyd Jeffries, Ellerlry Lodge, Geo. B. Inches. Judges' boat, B.

LADIES AT THE HELM.—Races have been sailed in this country in which ladies have formed part of the crew; but the first race on record in which ladies have steered the boats has lately been sailed in England. We copy the following account from the London *Morning Post*: "One of the most interesting races sailed for some time came off at Portsmouth on Saturday in connection with the Royal Portsmouth Corinthian Y. C. It was a match for service yachts steered by ladies, the first prize being the Grace Darling Bangle, presented by Mr. Julian, Sr.; the second prize, a handsome Norwegian belt, presented by the club; and the third prize, a silver bangle, presented by Mr. J. C. Curtiss. Although there was a very strong wind and a heavy sea running, five boats started, and the start was one of the best this season, as far as service boats are concerned, the Chip and Duchess being over the line a very few seconds after the gun, closely followed by Asia Minor and Ariadne, the Elma being the only boat which got a bad start. The course was from the Club Signal Station round the Spit Buoy, East Measured Mile Buoy, back round the Spit and Fairway Buoy, twice round, but as the wind was so strong and the sea running so high the committee decided to shorten the course to once round. The result of the race was as follows: Asia Minor, steered by Mrs. Carre (wife of Lieut. Carre, H.M.S. Asia), 3h. 17m. 11s.; Duchess, steered by Mrs. Hume (wife of Lieut. Hume, H.M.S. Duke of Wellington), 3h. 19m. 31s.; Ariadne, steered by Miss Scott, 3h. 28m. 3s.; Chip, steered by Mrs. Watson (wife of Commander Watson, H.M.S. St. Vincent), 3h. 30m. 1s., and Elma, steered by Mrs. Burney (wife of Lieut. Burney, H.M.S. Excellent), 3h. 54m. 32s. The way the ladies handled the boats was the admiration of many yachtsmen and others, and it is to be hoped that this is the beginning of a series of races of the kind, as no doubt the ladies can show as good sport in yachting as many of them do in lawn tennis and other sports. Next week there is another very interesting race to be sailed in this club, viz.: For 20-tonners, a purely Corinthian race. No paid hands allowed—not even a pilot. It is for a valuable cup, presented by the naval officers of the port, as well as a £5 sweepstakes, and prizes for the winning crew presented by the club. The boats going are Euterpe (Mr. Gritton), Quickstep (Mr. Curtis), Penelope (Admiral Byng), and Vanessa (Mr. Wilson)."

CORINTHIAN Y. C., FALL MATCHES.—The annual fall matches of the Corinthian Y. C. were sailed at Marblehead Sept. 12.

FIRST CLASS CENTERBOARDS.

	Length.	Actual.	Corrected.
Atalanta, Isaac Thomas	28.08	1 45 13	1 44 02
Leona, Louis Malin	27.07	1 56 20	1 54 09

FIRST CLASS KEELS.

Bessie, C. P. Curtis	28.06	1 53 04	1 51 44
Mavis, J. H. Proctor	27.03	2 16 24	2 18 54
Aeolus, J. C. Mills	28.03	Did not return.	

SECOND CLASS CENTERBOARDS.

Expert, Lawrence Whitcomb	23.03	2 05 45	1 58 54

SECOND CLASS KEELS.

Thelga, A. P. Thayer	22.01	1 59 52	1 51 33
Witch, B. B. Crowninshield	22 10	Disabled.	

THIRD CLASS CENTERBOARDS.

Joker, George Coffin	20.03	1 03 53	0 57 56
Peri, Henry Parkman	19 00	1 05 21	0 58 22
Dash, A. S. Browne	19.03	1 04 51	0 58 44
Comus, John Newcomb	19.01	1 05 36	0 58 41
Helen, D. C. Holder, Jr.		1 11 09	

THIRD CLASS KEELS.

Carmita, C. H. W. Foster	20.11	1 09 25	1 03 59
Vera, Everett Paine	19.09	1 11 16	1 04 55
Mona, Herman Parker	18.10	1 13 26	1 06 18
Alma, George Allen		1 26 30	

The Bessie collided with the Witch at the start, tearing the latter's mainsail and breaking her mainboom. The wind was southeast, and was quite fresh at the finish.

THE STEAM YACHT MOHICAN.—We republish from the London *Field* the following account of the first cruise of the new steam yacht Mohican, which, it was reported, was built to come to America: "The Mohican, launched for Mr. John Clark, of Curling Hall, Largs, commodore of the Royal Largs Club, which was fully dealt with in these columns a few weeks ago, completed a very successful cruise to Norway on the afternoon of Wednesday, the 2d inst. She was away three weeks, and in that time she steamed exactly 2,600 knots, at an average rate of 12½ knots per hour. The highest rate taken out of her was 14½ knots per hour. The engines worked beautifully, and the unpleasant vioration, so common even in many finely appointed steam yachts, has almost been annihilated in the Mohican. Very little bad weather was experienced, and only for four or five hours one day in the North Sea had she to be slowed on account of heavy weather. Strange to relate, the only inconvenience encountered through the vagaries of the weather was in Largs on the arrival home. Mohican made her moorings to find a gale blowing off the shore, a gale which made it impossible to get Mr. Clark and his party landed for two hours after the anchorage was made. Three days were spent at Copenhagen, two at Bergen, and one and a half at Lerwick. At one of the stations pleasant exchanges of courtesies took place between the parties in Sunbeam and Mohican, and each was much struck and pleased with the grandly appointed vessel of the other. Mr. Clark's party was composed of a few of his own immediate relations and personal friends, and one and all of them speak highly of the good qualities of the splendid ship which Mr. George Watson and the Messrs. Henderson have supplied him with."

SLOOP RIG VS. CUTTER RIG FOR SINGLE-HANDED SAILING.—I noticed the letter from your correspondent signing himself "Medway," with regard to the relative merits of cutter and sloop rig. For handiness in working when sailing single-handed there is no doubt that one headsail is far preferable to a jib and foresail; however, a single headsail is considered to press a boat more in a seaway than two headsails. I believe, as a rule, broad beamed boats sail better with one headsail than with a jib and foresail; and, as a proof of this, I may mention that the Windermere yachts always carry one headsail. The headsail of a sloop, if laced to boom, could be made to work itself when tacking, by having an iron horse athwartships in front of the mast; however, I am inclined to think that a boom along the foot of such a sail would only tend to pin a boat, except in light winds, when a boom might be used with advantage. If I were fitting a sailing boat with a single headsail, I should set it flying with halliards, not on a stay from bowsprit end. I should further have three sizes of headsail to suit different strengths of wind, instead of having one headsail fitted with reef points. This may seem a needless expenditure in sails, but I believe a boat is all the better for not having a bunch of reefed canvas along her bowsprit. Of course the bowsprit should be made so that it can be reefed, with a fid hole for each size of headsail. As to whether a sloop requires a longer or shorter bowsprit than a cutter, that depends upon the position of the center of lateral resistance, which is regulated by the rounding up of forefoot and rake of sternpost.—*O. O. Ashworth in London Field.*

OSHKOSH Y. C.—The annual regatta of the Oshkosh Y. C. terminated in a victory for the Hattie by 9min. 10sec., with the Carrie Morgan second and the Pinafore of Fond du Lac third. In the third class the first prize was taken by the Mary and the second by the Sylvia of Fond du Lac. The following shows the times made by the boats:

SECOND CLASS.

	Start.	Finish.	Actual.
Hattie	2 10 30	4 27 30	2 11 10
Carrie Morgan	2 19 00	4 40 00	2 21 00
Pinafore	2 17 40	4 50 00	2 32 20

THIRD CLASS.

Mary	2 24 40	3 25 00	1 00 20
Sylvia	2 24 38	3 50 40	1 26 02

The judges were H. H. Dodd, Fond du Lac, H. B. Harshaw and Gen. T. S. Allen of this city. Time keepers, Robert Brand, George Hasbrouck. Saturday evening a meeting was held at the Revere House and the following prizes were awarded: Hattie, champion pennant and $15; Carrie Morgan, $15; Pinafore, $10; Mary, $10; Sylvia $5.—*Oshkosh Northwestern, Sept. 7.*

SOUTH BOSTON Y. C.—The last regatta was sailed on Sept. 12 resulting as follows:

FIRST CLASS KEELS.

	Actual.	Corrected.
Altaire	1 51 51	0 55 19
Dorcas L	1 33 50	1 03 01
Ibex	1 23 20	1 00 22
Breeze	1 14 37	0 54 43

SECOND CLASS KEELS.

Monarch	0 56 43	0 35 15
Diana	0 55 46	0 37 01
Vera	0 57 50	0 36 18

FIRST CLASS CENTERBOARDS.

Awilda	1 18 35	0 55 08
En-Eli-Eye	1 18 14	0 50 29
Thisbe	1 18 26	0 51 52

THE NEWARK Y. C.—A sweepstakes regatta will be sailed on Monday, Sept. 28, over the club course in Newark Bay, 10 miles. The time allowance is one minute to the foot. There will be five classes: First class, cabin sloops; second class, jib and mainsail, over 19ft.; third class, jib and mainsail, 19ft. and under; fourth class, catboats, over 19ft.; fifth class, catboats, 19ft. and under. The start will be made at 11 o'clock, A. M. A special prize will be awarded to the yacht making best actual time over the course. There will be an entrance fee of $3 for each boat, payable on entering, and all entries must be made by 9:30 o'clock on the morning of the race. All entries to be made to the Chairman of the Regatta Committee, Edward Hindenlang, 314 Walnut street, Newark, N. J. E. Hindenlang, Chairman; E. D. Cameron, A. F. Adams, Hardy Bush, Regatta Committee.

A MIZZEN STAYSAIL ON A YAWL.—The little yawl Windward has been fitted this summer with a mizzen staysail, running from the head of the mizzen mast to the foremast at deck. The main boom is disposed of by lashing it to the mizzen shroud, the topping lift and peak halliards being stopped to the mast out of the way. The staysail can also be set when the mainsail is hoisted on a long reach. Mr. Willoughby reports that it works very successfully.

ROYAL CANADIAN Y. C.—The regatta of the R. C. Y. C. was to have been sailed on Sept. 7, but after a drift from 11 A. M. until 5 P. M., in which the sloop Winona led, the race was postponed. On Sept. 11 the race was sailed, only Aileen, Verve and Orlole starting. Aileen won, beating both the others over half an hour, taking the Prince of Wales, Lorne and Anderson cups, all of which were contested for in this one race.

THE WINNING YACHTS IN ENGLAND.—Tara lately arrived at Southampton with 9 flags, 6 of them firsts, flying. Irex came in with 23 flags strung from topmast head to taffrail, and Marguerite, towed in with her mast carried away, showed a string of 11, 5 being firsts.

BEDOUIN.—Com. Rogers has left on a long trip to the West, and Bedouin will not enter any more races this season.

ILEEN-STRANGER.—The private match between these two cutters is off, Mr. Warren having declined to sail.

TORONTO Y. C.—The race for the Cosgrove Cup was sailed on Sept. 5, being won by Gypsy.

Canoeing.

AMERICAN CANOE ASSOCIATION.

A REGULAR meeting of the Executive Committee of the American Canoe Association will be held at the Doolittle House, Oswego, N. Y., on Saturday, Nov. 7, 1885, at 10 o'clock A. M. All members of the A. C. A. are cordially invited to be present either in person or by letter, with any suggestions or ideas for action of the committee that they may deem of benefit to the Association.

The following-named members constitute the Regatta Committee for 1885-6: J. B. McMurrich, Oswego, N. Y., Chairman; S. T. Fairtlough, Kingston, Ont., Reade W. Bailey, Pittsburgh, Pa.

The above Committee will meet at the call of the Chairman, to prepare such matter as it may deem advisable to submit for the action of the Executive Committee. Members are respectfully requested to address all communications relative to matters in the jurisdiction of the Regatta Committee to the Chairman thereof on or before Oct. 15.

By order of the Commodore. CHAS. A. NEIDÉ, Sec'y A.C.A.

DESERONTO, Ont., Sept. 18, 1885.

A MEET ON THE PACIFIC COAST.

C. Bowyer Vaux, Esq., Secretary New York C. C.:

The Grand Army of the Republic will hold their next annual encampment at San Francisco in Tuly next, and to meet the demand for low fares the Northern Pacific Railroad Company has fixed the rate for first class at $60 for round trip, between St. Paul and Tacoma, good for sixty days, with privileges of a stop-off at any point west of Yellowstone Park.

It seems to me that anything like concerted action on the part of the American Canoe Association should be able to secure an extension of the same rates as the G. A. R. get. The Knight Templars in 1883 got a round trip rate to San Francisco for $75, from Chicago. The round trip rates of 1886 will not exceed $60 from New York or any other Atlantic city; but I think it would take a guarantee of at least 150 canoeists to induce the company to extend the same rate to canoe clubs as to the G. A. R.

Owing to the great distance between the two oceans it would be impossible to get canoes carried free. If a round trip rate of $8 from St. Paul, $9 from Chicago, and $10 from New York can be had, it is as good as can be asked.

The idea is to have a fourteen days' bivouac on Puget Sound, the finest and smoothest sheet of salt water in America; and a ten days' encampment at some point on the Willamette River, not far from the city of Portland, with from three to five races per day for souvenir prizes.

Hoping you will bring this matter before your club and instruct your delegates to bring it to notice of the American Canoe Association at its next meeting, I am yours truly,

THOS. B. MERRY, Com. Oneonta C. C.

PORTLAND, Oregon.

BROCKVILLE C. C.

Editor Forest and Stream:

Owing to bad weather the full programme could not be carried out on the dates announced, but the races came off as follows:

Thursday Sept. 10.—Sailing race for skiffs. Distance, 5 miles. Wind N.E. blowing a gale. Seven starters, three finished. First, Moise Sauvé; second, H. B. Coates; third, G. Crawford McClean.

Tuesday Sept. 15.—Reaching race for skiffs, nine starters. First, Jas. Findlay; second, B. W. Richards (canoe Grebe); third, J. E. Chrysler.

Reaching Race for Canoes.—First, B. W. Richards, Grebe; second, G. B. Wilkinson, Swan; third, F. M. Turner, Emily.

Paddling Race.—Single, 1 mile. First, Edward Pitt; second, J. E. Chrysler; third, Mr. Lowe.

Three-paddle Race.—One mile. First, F. M. Turner, G. B. Wilkinson and J. H. Bagg; second, Pitt, Lowe and McCullough; third, Ault, Dresser and Field. This was a very close and interesting race.

Upset Race.—First, G. B. Wilkinson; second, F. M. Turner.

Wednesday Sept 16.—Sailing race for Class B canoes, 5 miles. First, B. W. Richards, Grebe; second, F. M. Turner, Emily; third, G. B. Wilkinson, Swan.

Tandem Paddling Race.—One mile. First, Pitt and Burt; second, F. M. Turner and G. B. Wilkinson; third, McCullough and Dresser. This was the closest and most interesting race on the programme.

Portage Race.—First, Pitt and Burt; second, R. E. and G. B. Wilkinson; third, McCullough and Dresser.

Hurry Scurry, with Swim.—First, G. B. Wilkinson; second, F. M. Turner; third, Edward Pitt. ALLAN TURNER, Sec'y.

NEW YORK C. C.—14TH ANNUAL REGATTA.

NEXT to the A. C. A. meet at Grindstone, the regatta of the New York C. C., held last Saturday afternoon, off their club house at New Brighton, Staten Island, was the canoeing event of the season. Although it was the fourteenth annual regatta of this, the oldest American canoe club, it was in many respects the most notable of them all. In it were met the crack canoes of four crack clubs—the Mohican, Hartford, Knickerbocker and New York. The Mohicans sent R. W. Gibson and his famous Rushton-built canoe Snake. From Hartford came Commodore Jones with the Venture, a canoe built on the Harlem by George Roahr, and formerly owned in the New York club, but now the champion of the Connecticut River and all Eastern waters. She sailed away from all the canoes at the A. C. A. meet of a year ago and has easily beaten St. Lawrence skiffs and New Haven sharpies. The Knickerbockers sent Brown with his Everson-built "Sunbeam" Inertia; and, to meet these, New York sent Vaux with his new Lassie, built by Everson on the "Daniel Webster" model. Besides these came canoes from Brooklyn, Bayonne, Newark, and the Staten Island Athletic Club.

The day was perfect and the upper deck of the floating club house was crowded with fair spectators, who were sufficiently well up in canoeing matters to be thoroughly interested in the races, and their male escorts, most of whom were members of canoe or yacht clubs. Messrs. Munroe, Vaux and C. J. Stevens formed the regatta committee having charge of the races. W. P. Stephens acted as starter and A. C. McMurray as judge at the finish.

The first event of the programme was the sailing race for classes A and B and novices, or those who had never won a sailing race. The starters were Venture, L. Q. Jones, Hartford C. C.; Snake, R. W. Gibson, Mohican C. C.; Inertia, E. W. Brown, Knickerbocker C. C.; Minx, M. V. Brokaw, Brooklyn C. C.; Sea Bee, Gran. Edgar, Newburgh C. C.; Psyche, C. K. Munroe; Lassie, C. B. Vaux; Kittywake, C. L. Norton; Surge, H. O. Bailey; Siren, R. B. Burchard; Tramp, C. J. Stevens, and Sea Urchin, B. H. Nadal, all of the N. Y. C. C.

The wind was light from S.W. in shore, but blowing a good sailing breeze out in the Bay. The course was from a flag off the club house to and around can buoy No. 17, off Robbin's Reef, and return, to be sailed over twice, or three miles in all.

A premonitory toot of the Vice-Commodore's fish horn warned the racers to make ready, and two minutes later a second toot sent them skimming across the line with Psyche first and the others close after her. Psyche held her lead for nearly half a mile, and then was passed by Lassie, Venture and Snake in the order named. The run out was made close-hauled, and the three leaders turned the mark almost in a bunch, Lassie tacking and the others jibing around it. The run in with lifted sheets, was one of the prettiest sights ever seen in a canoe race. Lassie maintained a slight lead, but Venture was close beside her, and Snake not far behind, until the first round was completed. They held the same order on the second outward run, and all three jibing around the buoy, they again went flying home, and had neared the finish before some of the fleet had made the first turn of the outer mark. On this stretch Lassie and Venture took a decided lead of Snake, and most of the way Venture held a slight advantage over her New York rival. She was magnificently handled, and would undoubtedly have scored a victory had not Lassie, at the last moment, shot in under her stern and run her pert little nose over the line less than two feet ahead of the Hartford beauty. Snake was only a few lengths behind, and the whole race was one of the most closely contested ever sailed in New York waters. Lassie thus scored her maiden victory, Inertia came in fourth, Psyche fifth, Minx sixth, Surge seventh, and the rest straggled in after them.

Psyche won in Class A, Lassie in Class B, and Minx the prize for novices. The prizes awarded in these races were, for Class A, an alligator skin lunch case; for Class B, a handsome toilet case of similar material for first, and a canoe compass for second, and for novices a small library of books on canoeing

The paddling race for Classes 3 and 4 brought out as starters Laura, M. G. Foster, Knickerbocker C. C.; Sioux, T. Garret, Bayonne C. C.; Daisy, G. O. Totten, Essex C. C.; Mist, Venos, Bayonne C. C.; Lassie and Psyche, N. Y. C. C. Foster, after a long summer of paddling on Lake George and Hudson waters, was in such prime condition that he was able to lead from the start and finish a safe winner with Totten second. As the distance was not measured, no time was taken. The prize in this race was a plate glass canoe lantern of latest design.

In the tandem paddling race which followed, and which was one of the prettiest and most closely contested events of the regatta, Foster and Vaux in the Laura won, after a hard struggle with Hurd and Collins, of Bayonne, who occupied the Waterwitch, and Wilkn and Brokaw, who in the Minx came in third. The prizes in this race were a handsomely framed canoeing picture by Burns, and a small canoeing library.

The hand paddling race was a novelty in canoeing, and occasioned considerable merriment among the spectators. The starters were the ubiquitous Foster, in the Laura; Totten, in Daisy; Munroe, in Psyche; Stokes, in Clytie; Garret, in Sioux; Paine, in Black Maria; and McMurray, in Lark. Foster won, and as a prize received another lantern, a bullseye. Totten came in second.

Another novelty in the shape of a standing paddling race, was also won by Foster in Laura, with Psyche second and Sea Urchin third. As a momento of this race Foster was presented with a small pocket flask.

The concluding event of the programme was a paddling race for Class II., for which the entries were: Lark, A. McMurray; Daisy, G. O. Totten; Clytie, A. P. Stokes; and Black Maria, H. G. Paine. It was neatly won by McMurray, with Totten, in a Class III. canoe, making a close second. The prize in this race was a book on camp cookery.

After the races were over the guests assembled in the "forecastle" of the club house, and Commodore Munroe, with a few touching remarks to each one, distributed the prizes to the several winners.

The match between Com. Jones in the Venture and Mr. Vaux in the Sea Bee was postponed for want of wind.

SMALL CRUISING YACHTS VS. CANOES.

Editor Forest and Stream:

"Deja" has contributed to your columns the design of a small cruising yacht as a substitute for a canoe, and in your last issue "Rob Roy" finds fault with it on account of a number of evident faults, and lauds the sailing canoe because the latter excels in the points of portability, etc., which "Deja's" craft lacks. Now, I think I have a singlehand cruiser that has all the good points of "Deja's" boat and of the sailing canoe combined, some improvements on both of them, and none of their faults. She was built for me nearly a month ago ago by John D. Gifford, of Tuckerton, N. J., and on a short cruise from which I have just returned, I have had ample opportunity for testing her in all sorts of weather. In all my experience with singlehand cruisers and canoes (I have canoed and cruised since '72) I have never seen a boat so near perfection for open water cruising as my new one. She is of a new design, and is called a "Barnegat cruising boat," being an improvement on the well known Barnegat sneakbox. In shape of hull she follows the sneakbox model except that her lines are shaped to make her a better sailer, and to prevent "pounding" in a chop sea going to windward. She has no storm apron like the sneakbox, but instead a removable washboard running all around gunwales (5in. high at midships, 7in. at bow) which makes it almost or quite impossible for her to take water into her cockpit, her cambered decks assisting also to keep seas out of her inside. Just forward of the well, which is 5ft. long, is a steel hanging centerboard of good area housed in its trunk entirely out of the way. It is only 3/8in. thick, which allows the use of a very thin trunk, and of course there is never any trouble from it's warping, swelling or sticking fast like the ordinary wooden ones. The dimensions are: Length, 14ft.; beam, 53in.; depth (from top of combing to floor in well) 20in. Her mast is stepped in a copper tube 22in. from bow, and I use a balance lug of 112sq. ft., although my next sail will contain 130ft., which she can easily stand. With centerboard up she only draws six inches of water, and can be hauled on shore anywhere.

Now here is a boat that will sail as well as "Deja's" cruiser, and is, I think, less apt to capsize, and which, I give you my word for it, rows easier than a Sunbeam canoe paddles. A canoe that draws six inches can be run ashore, but you have to step into the water to get to dry land from the well, whereas, when my Barnegat cruiser is run ashore her bow, owing to her peculiar shape, is a foot or more on solid ground and you can walk right over the deck and step ashore, something impossible in a sailing canoe or in "Deja's" cruiser. I have greater stowage capacity than "Deja," greater depth inside for sleeping and taking comfort, greater beam for stability under sail and 15in. less draft. I can carry as much sail as he, go as fast either free or to windward, take any weather that he can and keep as dry, and when wind fails I can get along as fast as a canoe and with as much ease. My boat will lie flat when hauled ashore for sleeping, or ride at anchor during a nor'wester with comfort. I carry no ballast except the weight of the centerboard and my stores, and can haul on a boat house easily by using a light snatch block tackle and a single roller. I don't believe there is so safe a boat built as the Barnegat cruiser, and I am sure the most careless man with my boat and my 112-ft. sail couldn't capsize her if he tried except under a combination of adverse circumstances, like a squall from all directions, a tide current bucking the wind waves and the swell from four or five Coney Island steamers all going in different directions at once. With all the above conditions existing at one time a very careless man might get her over. As to cost, my boat is certainly 40 or 50 per cent. cheaper than "Deja's" and will come under the price paid for the best built fully fitted canoes. SENECA.

Editor Forest and Stream:

Modesty is a great charm in a man. If that man knows something and is willing to communicate his knowledge to the interested, how eagerly they will listen to him. But if a man professes to know something, and knocks all other fellows' pins from under them by assertion at the beginning that they know nothing, and that any one who pretends to know anything is all wrong, then I say he fails to get fellowship and listeners.

Somebody calling himself "Deja" wrote a letter which appeared in FOREST AND STREAM of July 9. In this letter he knocks all canoes attempting to sail clean out in one round, and in the highest possible strain looks down with scorn and a drop of pity upon the poor devil that paddles. Then, with some extra exertions at word painting, he sets the pins up in the other alley by asserting that he can "show you a perfect little ship capable of holding on in a gale and riding the seas with the ease and grace of a petrel." Note, he says "perfect," and he also adds: "I have expended considerable time and money experimenting with all of the models now before the public, not only in canoe, but row and sailboats also, and I write advisably when I assert that none of them are satisfactory under canvas. For punting, rowing and paddling they are all right, but to sail well, a vessel, however small, must possess some body, and to exhibit any degree of speed, she requires an application of wave lines, not only in her longitudinal body, but athwartships also. Some degree of concavity therefore becomes indispensable, and the moment these are intelligently applied, she ceases to be a canoe in everything except her size." When a man says he has tried everything and found all wanting, and then goes on to say that he has invented something that is perfect, a modest man may have his doubts about it all, but he quickly holds his tongue till this only bit of perfection the world has ever seen is published.

"Deja" made a mistake in publishing those lines in the Sept. 10 issue. Had he kept them to himself we all would have believed he had reached perfection in a boat—because he said so. Describe heaven and it becomes ridiculous. It is the heaven of but one mind, if it is even that. Had "Deja" but described his boat and left to his hearers or readers the task of supplying adjectives, no fault could be found with him; but when he attempts to cram down the canoeist's throat the only kind of corn this goose "Deja" eats he cannot find fault if the canoeists do rebel against being fed Thanksgiving-turkey fashion. He don't give a man a chance to have any opinion of his own, but states everything as fact, when in reality it is but the opinion of one man of limited experience, as his numerous mistakes show conclusively.

"Canoeing is ruined." Not for some of us—a thousand or two—at least just yet. She has "lines which enable her to stand up and hold her course under sail." Many canoes carry with ease in good strong breezes as much sail as "Deja's" yacht carries, according to the drawings. Is this the pocket handkerchief he alluded to? "Depth, freeboard, where are they?" They are there all the same, and in sufficient quantity to bring a Shadow along the entire Labrador coast in safety, a cruise you would pause before attempting in your perfect ship, Mr. "Deja," if I take it. And yet you sneer at the seaworthiness of a canoe. You don't know her, my boy.

When a tired paddler sees the perfect yacht sail, "Deja" says: "That man is ready to learn. He will see points without much ado. I can teach him something and he will be an apt pupil. Oars and the paddle are too slow and too primitive. No sooner does a fellow learn them than he speculates on making the wind do his work, and the moment he succeeds he leans back to grin at the ease with which the breezes do his blowing. Once educated to that, he never afterward contents himself with a boat which floats on a light dew or voyages on rivulets, for those he can wade; and if he is a genuine sportsman, an inch or two of water doesn't deter him from casting a fly into any of the shady coves 'deep, delicious pools' where trout and salmon tempt the trial of a fisherman's skill." Now turn to the end of "Deja's" letter in the issue of the 10th, where he describes getting upset and nearly losing his life. The canoeist could teach him there that paddles or oars are not too slow and primitive at times, for the wind will not always do all the work. Yes, "Deja," you perhaps can always raise the wind, but even Genesta and Puritan are less fortunate. A man of your kind informed me once he never paddled, he always sailed, and had his boat built accordingly. Three hours later I rescued that man from an all-night outing on the river, with a head tide and wind, no landing place for a mile or more, and no grub on board. The big canoe-cutter-yawl-substitute was anchored out of harm's way and her crew taken on board my own canoe, with all his camping traps, and in less than half an hour we were both comfortably in camp two miles down river and eating a well cooked supper. I will do the same for you some day, Mr. "Deja."

I admit frankly that a boat's lines drawn on paper do not convey to my mind any adequate idea of her speed on water under sail. My education in this line has been neglected. But I will venture to express an opinion that I have arrived at, namely, that my canoe, which is not a Shadow (acknowledged to be the best under sail according to "Deja"), will ride it out in a gale as long as the substiture, and will stand rough water as well. I should only be too delighted to try conclusions in a race on either the upper or lower New York Bay. A canoe well handled could beat your perfect ship round Staten Island, say paddle or sail according to wind, any day over an hour easily. The later sailing canoes do not carry bones in their teeth—"Deja" seems to think a bone something very fascinating—when they are in fast motion, then enter and leave the water with hardly a ripple.

If any poor benighted mortal takes to heart "Deja's" gratis advice about the substitute for a canoe and gets one, may he be fully prepared to find that he has substituted all that makes canoeing enjoyable—some of which points "Rob Roy" touched upon last week—and that he has got all of the worries and bothers of a larger sailboat and none of its advantages. Think of going trout fishing in a boat where oars and paddles are tabooed and with 21in. draft. This casting a fly into shady pools, etc., is only the high light thrown in to give character to the noble picture. It is pretty, very pretty—but absurd—yes, on a par with most of this letter of "Deja's."

When "Deja" talks about a racing rig for his boat he is miserably at sea in his calculations. Thirty-six square yards, indeed, for one square foot of midship section! That is 324sq. ft., and his published rig is but 80sq. ft. If his rules are carried out the sail area would be over 500sq. ft. Now note the length of spars he gives for this spread.

"Deja" cannot have ever seen a good sailing canoe, well rigged, or he would be a little more modest in his statements. Does he know that Com. Jones in Venture easily beat a crack Clayton skiff with two men aboard last year at the meet? The skiff was sailed by an expert. The skiff was 18ft. or over, and had a beam of 40in. to the canoe's 30in.

There is but one skiff at Brockville, on the St. Lawrence, that has succeeded in beating the canoe Grebe. Yet the Grebe was beaten at the meet by some four or five canoes. The relative speed of this substitute and a canoe can easily be tested. "Deja" can't live very far from one of these four places—Pittsburgh, Albany, Hartford and New York. There are canoes in all four places that will be only too glad to get a chance at Mr. Brag and give him every opportunity to substantiate his sweeping statements about speed. DOT.

Editor Forest and Stream:

I am very sorry to have trod upon "Rob Roy's" heels, but I had to step somewhere, and if he will stop swearing in Latin which is bad taste) we will 'cuss the subject in Anglo Saxon. I must plead guilty to never having worked over the eel grass in the bay he mentions, but I have taken many a header in such brooks as the Hudson, the Potomac and the James without finding it necessary to use chocks or tow ashore boat.

Rob Roys were out-built and superseded twenty years ago. I presume I have sailed more of them than the taker of their name in vain ever saw, even if he slips off his gloves and counts up on his thumb hand. The canoe has not been built that can outsail my boat before the wind, especially if it blows. I have never had any difficulty in keeping out of the way of canoes close-hauled either.

The round up both fore and aft in my boat admits of landing as readily as any canoe, and if she heels a little more she has bilge enough to sustain herself without taking water as canoes do upon the slightest provocation.

I cheerfully admit that the canoe "can be handled on shore by one man," and that is where most of them are handled. They are excellent for navigating meadows, one fellow can sit on the fence till he is sure no one is looking, and then boost the thing on his head and tote it. But I am not a porter, and if a carry is necessary find it an advantage to get a cart. However, every man to his taste. The canoe under sail makes me tired. She won't go about, as a rule, without one or two dips of the paddle, while my boat sums round like a top and is off on a new tack before her way is lost. On a long voyage, except in very rare instances, it is unnecessary to house her. She is not a trunk.

The object I attain in her design is: Weatherly qualities, quick runs and protection for her crew, rain or shine. White cedar absorbs very little water, and when she needs overhauling she gets it without a grudge. Two boys, or a boy and a man, can lift her clear of the water dry shod. One man can haul her out or float her without the least risk of breaching himself, as one of my friends did, trying to carry an Irene through underbrush on the Saranac. He says it don't pay to be a snail and carry your house; and quite a number of experienced canoeists whom I know admit that their boats are poor luggers.

"Rob Roy" may like drawing his sled up hill to slide down, just as he seems fond of stowing his sail and paddling home to supper. Perhaps his ma don't allow him to stop out nights and the good old lady is right. He needs maternal care for some time yet. By and by, though, he will "cast off" the home moorings, and find that there are "housen an' housen" in this world, and he can get good accommodations almost anywhere, providing he keeps his tacks aboard and does not splice the main brace too often. What's that about wind failing and having to get home? Well, what's the matter with a haymaker's barn to keep your boat in a week or two till you can sail her home again, and a quiet walk along the shore over the hills through the golden twilight. The exercise of a little good judgment prevents such excursions too often; but when business requires it can be done. So, too, if the distance is greater than he cares to walk, or if, like myself, he owns a Methodist foot and don't care to dance, thank you; railways latticework the land so effectually that he can "ride up" in time to test the quality of the walnuts and the wine and talk the evening out with the girls, as goody boys ought. As a rule, home is much to be preferred instead of a strange bed; but on a cruise my boat admits of "a sleep in" under all conditions of weather, while the little canoe does not. DEJA.

HARTFORD C. C.—The regular fall meeting of the Hartford C. C. was held at the residence of Col. Green, on Tuesday evening, the 15th. After finishing the routine business the question of holding a regatta this fall was talked over in an informal way. It was decided to hold a captains' meeting early next week to talk over with the regatta committee the subject of a proper handicap for the big boats. The idea is to have a series of open paddling and sailing races in addition to the club races for the Commodore's Cup. A nice little lunch was served about 10, after which the talk drifted to reminiscences of vacations just over, and the cruises of Venture, Vision, Oahu and Outing to New York, Water Hill and Sag Harbor were fully discussed and notes compared. Mr. Goodwin brought much welcome news from Grindstone Island, and "takiug one consideration with another" the first camp fire for '85, as it may be called, was quite a jolly one. Last Saturday afternoon several of the club cruised up river, camping over night, and were met Sunday by Messrs. Shedd and Wright, of Springfield. Dinner was served at Scantic, after which the whole party returned to Hartford, where the members of the S. C. C. took the night express home. "How is S. anyway? Oh, he's all right."

THE NAUTILUS AT THE INVENTIONS EXHIBITION.—Mr. W. Baden-Powell has been awarded the silver medal for improvements in sails and rigging applied to canoes and boats. The first rig he exhibited was a new design, combining partly the battened balance, lug, and sliding gunter, the yard being slung in a novel manner, whereby a single halliard acts the part of holsting gear and double, or sling and heel parrel, the reefing gear being of the Nautilus batten reefing kind; and the tack, jackstay and topping lift on the Nautilus lug principle. By this form of rig a short masted, high-peaked rig is obtained, and the sail with its spars is detachable from the mast in quick time, while in working afloat it can be reefed *à la* lug, or lowered as a gaffsail, or topped up and down the mast as in a "sliding gunter," and thereby furled on the mast in a snug manner. The second rig exhibited is that of the Chinese form of balance lug, or battened lug, fitted with Nautilus gear throughout. The canoe is also fitted with the 200 years old idea of a "drop" or center-plate rudder, but of new form or design. The Nautilus, now in the exhibition, is the winner of this season's £50 championship cup, and numerous other Royal C. C. prizes.—*London Field, Sept. 5.*

JERSEY CITY Y. C.—The postponed races for canoes held by the Jersey City Y. C. will be sailed on Saturday next. The entries are: Lassie, C. B. Vaux, 15ft.; Guenn, Wm Whitlock, 15ft.; Minx, M. V. Brokaw, 14ft. 8in.; Tramp, C. J. Stevens, 14ft.; Psyche, C. K. Monroe, 14ft.; Fanny, S. B. Crane, 14ft. Course: From stakeboat, near club house, to and around the Piles, near the S. E. corner of Black Tom, thence to stakeboat, near Ellis Island, and to starting point, around the course twice. Allowance, one minute to the foot. Open to all canoes. Start to be made promptly at 3 P. M. Regatta Committee—Geo. Hawes, T. E. Bailey, I. S. Mettler.

PERSONAL.—Mr. and Mrs. Mix and Mr. Gibson, of Albany; Messrs. Van Dalfsen and Edgar, of Newburg, and Mr. Jones, of Hartford, were at the N. Y. C. C. regatta on Saturday. Messrs. Dodd and Davidson, of Hartford, were also present on Sunday at the house. Mr. Whitlock returned from England on Sunday morning and was with the canoeists in the afternoon.

PASSAIC RIVER.—Newark, Sept. 19.—The canoe race for the championship of the Passaic River, for which the Triton Boat Club offered a handsome prize at their annual regatta, was won by G. B. Hussey, in the Elese, in two straight heats; George Cox, in the Aelius, second.—L. E. LAMM, Sec'y.

CANOE BRASSWORK.—Messrs. Turner, of Albany, have issued a reduced price list of brasswork of all kinds for canoes. They manufacture a large line of canoe fittings of all descriptions.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents. ☜

AMATEUR.—For pigeon shooting use No. 9 shot.

R. H. BURNS.—The Great Eastern has six masts.

H. B. P., Portland, Me.—The ears may possibly come right with age.

B. G., Texas.—Write to Milton P. Peirce, Philadelphia, Pa., for the sight.

T. S., Cheboygan, Mich.—We shall publish a list of photos of Puritan and Genesta shortly.

W. B. B.—The address of the game protector of District No. 10 is Nathan C. Phelps, Remsen, N. Y.

G. S., N. Y.—No permit is required for Long Island shooting, except on inclosed and posted lands.

F. W. D., Dunkirk.—For the liquid write to Zucker & Levett, No. 538 West Sixteenth street, New York city.

W. J.—The open season for robins in New York State opens Oct. 1. For local supervisors' law apply to your supervisor.

F. L., New York.—No vessel has crossed the Atlantic in 12 days, the quickest passage under sail was 13 days 6 hours.

L. C., Iowa.—See the letter from Bismarck, Dakota, in this issue. The prairie chicken season in Dakota is Aug. 15 Jan. 1.

E. A. W., Rome, N. Y.—We hold the opinion that for the gun you want you will not go astray if you buy one of any of the makes advertised in our columns.

MOR EM.—For hunting rifle see our advertising columns. The various makes there noted are all first-class, and any one of them will give you satisfactory work if you know how to use it.

R. BROTHERS, Milwaukee.—What is the difference between a muscalonge and a pickerel? Ans. The most striking point is the coloration. The great lake pike, often called pickerel, is of a grayish color with oval spots which are nearly white. The muscalonge is usually lighter with round black spots, but is occasionally found without spots. The muscalonge has no scales on the lower half of the cheek and gill cover, while the great pike has the cheek scaly.

G. S. L.—Of the two States named you will do well to try Arkansas for bear, deer and turkey shooting. But deer and bear may be had nearer home. See note in another column about the Chateaugay Lake country, of the Adirondacks.

F. W. F.—1. What fish can be found in St. Mary's, Fla., Savannah, Cape Fear, James and Potomac rivers? 2. Is a Great Dane or German mastiff nearly full grown at 8 months? Ans. 1. Black bass, sunfish or bream, chubs, perch, and suckers. 2. No.

C. W. B.—Given a certain result with 4½ drams powder and 1 ounce shot from 10-gauge gun, what will be the proper charge to obtain a similar pattern with same penetration, from 12-gauge gun, distance and shot same as before? Ans. You may do it with 4 drams powder, but 3 drams will give better results.

G. C. H.—1. The "best" goose shooting is to be had in the West, and if you really want to know what goose shooting is go out to Dakota or Nebraska. See current reports in our game columns. 2. In the Lower Peninsula of Michigan you will find deer and quail. It is forbidden to transport game out of the State.

KNOTCH.—1. To decide proper charge for your gun experiment with shot Nos. 6, 7 and 8, with different charges of powder, until you get pattern and penetration which suit you. 2. The fourth notch in the trap is the hardest. Two eyed shooting is better for some persons, while others cannot accustom themselves to it; but it is the best if one can succeed with it.

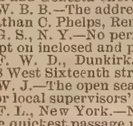
C. E. B., London, Ont.—There are a few rails in this part of Ontario in marshy and wet places, but I have only come across three in as many years. They will fly only about ten yards when flushed, and a dog cannot flush them again. Sportsmen around here claim they are not good to eat. They have a short yellow bill, brown feathers, edged with white, green legs and stand about as high as a snipe. Are these the same bird I read about so often in your journal? Ans. Probably it is. Test the edible qualities and the next time you kill one send us the skin for identification.

E. H. F.—Can you inform me where a good 200yds. rifle range is located other than Creedmoor, either in the suburbs of this city, in Brooklyn, or across the river in Jersey? Ans. Try the Schuetzen Park range, at Union Hill, N. J., reached via Hoboken.

E. W. D., Tallahassee, Fla.—Are there now in this country any fly-fishermen, who, while sitting by the water's edge and observing the particular flies at which the fish are biting, can make then and there this same fly? Ans. There are plenty of such anglers, most of the amateur fly-tyers can do it if the materials are at hand.

S. F. J.—Please tell me of the right treatment of the rose-breasted grosbeak, when kept in a cage. This bird was given to me by a gunner early last spring, he having wounded it. I nursed it until it got well. It sung very sweetly for about a month, when it commenced to moult. Since then it has not sung. I cannot get it to eat any seed except canary, nor any other kind of food so far. This bird seems nocturnal, being more lively at night than through the day. It will not bathe in water, but about 12 o'clock at night it wakes me up, taking a sand bath, it makes the sand fly in all directions. Wilson in his book says this bird sings at night, I have not heard this one yet. Will it stand a cold climate? Ans. Give the bird some raw apples and berries of different kinds. They eat the seeds of weeds and grasses. They have been kept in confinement. We send you a copy of FOREST AND STREAM giving account of their successful treatment. The bird comes to us from the North, and thrives in cold weather.

INFORMATION WANTED.



O. G. L., wants to be told of the grouse and squirrel shooting in Livingston county, N. Y.

S. R. B. wants to be told of the best place in West Virginia to hunt deer, bears, turkeys and grouse.

G. S. wants to know about the grouse and squirrel shooting in country between Owasco and Cayuga lakes, N. Y.

C. A. C. asks if "Ah-Pe" will give his mode of changing the drop of a gun stock that is too straight for the shooter.

304 Washington Street,

BOSTON, MASS.

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers o the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name on any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

T. H. CHUBB'S

"Henshall" Split Bamboo Bass Rod.

This cut represents our "Henshall" Split Bamboo Bass Rod length, 8 feet 3 3-10 inches; weight 8 oz. This rod has extra tip light wood hand-grasp whipped with cane. Metal reel seat, or reel bands, as preferred. Hexagonal cap ferrules, with welt, no dowels, anti-friction tie guides. Three-ring tops, nickel plated trimmings fastened on. These rods are all ready for use, with the exception of winding and varnishing, for $7.50. This rod is made according to the dimensions given us by Dr. Henshall, and is indorsed by him as a "Standard Henshall Rod." Above rod with German silver trimmings, instead of nickel, $9.25. Send for catalogue of Trout and Bass Fly Rods, also Amateur and Rod Makers' Supplies, to

T. H. CHUBB, Post Mills, Orange Co., Vt.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each specie. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Any of the above books can be obtained in London of Davies & Co., 1 Finch Lane, Cornhill.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the immediate publication of a magnificent folio volume, bearing the above title. This book is intended to cover the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates as follows:

LIST OF PLATES.

I. The Sloop Yacht Schemer.
II. The Nuckel.
III. The Windward.
IV. A Newport Catboat—Portable Catboat.

A folio volume (size of page 14¼x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500.

Now Ready. Price, postpaid, $7.00.

New York: FOREST AND STREAM PUBLISHING CO., 39 Park Row. London: SAMSON, LOW, MARSTON & CO., 188 Fleet Street.

PIEPER

Nos. 586, 588, 589 and DIANA.

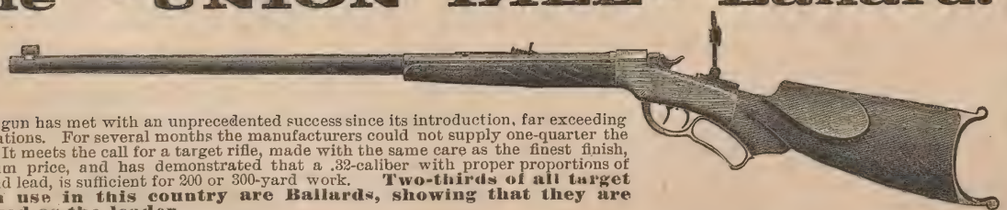
There is Nothing Else in the World Like Them for the Money.

Mr. W. K. Haynie, Chappell Hill, Texas, writes under the date of Aug. 21, 1885:

"I have given the Pieper Diana gun you sent me a thorough trial, and I endorse it in the strongest language. I am satisfied I have the best gun I ever shot, and I have used many of leading fine makes both English and American. I have broken glass balls at 87 yards, and killed ducks with No. 6 shot at 75 to 80 yards. It shoots buckshot equally well; I brought down two deer, one with the right and other with the left barrel. There is no possible shot the gun won't make. The finish is equal to the shooting. I am recommending the Pieper to all my friends."

For Sale by all First-Class Dealers in Arms.

IF YOUR DEALER HAS NONE, DON'T BUY TILL YOU INSPECT THE PIEPER. SEND FOR PIEPER CATALOGUE TO



SCHOVERLING, DALY & GALES, Sole Agents.

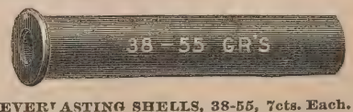
Wholesale Dealers in Guns and Gun Goods.

84 & 86 CHAMBERS ST., NEW YORK.

The NEW MARLIN .32 and .38 Rifles, 7½lbs., kill twice as far as any other of same calibers. The DALY HAMMERLESS captured the Illinois Diamond Badge again this year.

The "UNION HILL" Ballard.

This gun has met with an unprecedented success since its introduction, far exceeding all expectations. For several months the manufacturers could not supply one-quarter the demand. It meets the call for a target rifle, made with the same care as the finest finish, at a medium price, and has demonstrated that a .32-caliber with proper proportions of powder and lead, is sufficient for 200 or 300-yard work. **Two-thirds of all target rifles in use in this country are Ballards, showing that they are recognized as the leader.**



Prices: No. 8.—Half Octagon Barrel, Pistol Grip Stock, Cheek Piece, Nickeled, Off-Hand Butt Plate, Double Set Triggers, Graduated Peep and Globe Sights, 9½lbs., 28 and 30 inches..... $37 50
No. 9.—Same, but with Single Trigger..... 33 00
Can be furnished with Vernier's Mid-Range and Wind Gauge Front Sights for $6.50 extra.

EVERLASTING SHELLS, 32-40, 6cts. Each.

Grooved Bullets, .32-caliber,	165 grains	per 1000,	$7.25
" " "	185 "	"	7.75
Patched " "	185 "	"	9.75

Cartridges loaded with 165 grain grooved bullets, .32-cal ..... per 1000, $37.00
Reloading Tools, $5.00 per set.

EVERLASTING SHELLS, 38-55, 7cts. Each.

Grooved Bullets, .38-caliber,	255 grains	per 1000,	$9.50
" " "	330 "	"	11.00
Patched " "	255 "	"	11.00
" " "	330 "	"	11.50

Cartridges loaded with 255-grain grooved bullets, .38-cal..... per 1000, $33.00

The New Marlin Rifles, .32 and .38-calibers, are meeting with great favor. Twice the range of any other Magazine Rifles of same calibers.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

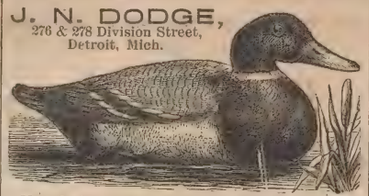
FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.



Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

NEW YORK FISH LAWS.

ON several occasions we have pointed out the necessity of an intelligent supervision over proposed laws relating to the catching of fish, and have suggested that the Commissioners of Fisheries would be, by reason of their long acquaintance and their study of the subject, very proper censors. It is natural that fishing clubs should imagine that they understand all questions which may arise concerning fish and believe themselves competent to frame proper legislation. We recently commented on a case in which the St. Lawrence Anglers' Association procured the passage of a law affecting the sale of striped bass in the markets, while trying to protect another fish locally called by the same name. The club is composed of gentlemen who mean well, but who do not seem to distinguish between *Roccus lineatus* and *Roccus chrysops*, both fishes having the common name of striped bass, the former the large fish of salt and brackish water, and the other a lake fish seldom exceeding fifteen inches in length. In another column we republish an article referring to this matter, in which it will be seen that Mr. Byington has tried to explain the difference between these fishes and has got a trifle mixed in describing one as having "lateral stripes which run around the body." We believe that this striped-bass law was introduced with the best of intentions; but the fact that it is so worded as to be capable of different constructions shows that it was carelessly framed. We also believe that, in order to make such laws clear, the scientific name of the fish should follow its common name, and that to properly do this the advice of some one skilled in modern nomenclature should be followed.

That the legislation relating to the opening of the trout season will have to be revised this winter there is no doubt. This was an instance of hasty legislation which abruptly closed the season after it had been open for two weeks, but its main fault lay in making the season on Long Island open a month earlier than in the rest of the State. Either one of three things will be done. The old date of April 1 throughout the State will be restored; the 1st of May be made the opening day in all counties; or the Adirondack region will be made to open in May and the rest of the State in April. When the last law was passed the date was changed to May 1 after it had been submitted to the Commissioners.

We wish that the laws protecting fish could be entirely separated from those protecting other game, and that they could be intelligently revised and then left alone for a while. It is time that such obsolete and outlandish names as "Oswego bass" departed from our statute books, since the name "black bass" covers both species which are now distinguished by anglers by the size of the mouth, one being as much a "true" black bass as the other. This is of a piece with the legislative orthography which, in the law relating to duck shooting, speaks of a house constructed of the boughs from trees as a "bow house." This has been on the books for years, and looks as if the schoolmaster had gone abroad to stay.

The laws of New York speak of "California trout" and "salmon trout." As there are now recorded by the latest authorities, Jordan and Gilbert, the rainbow trout, *S. irideus;* the steel-head or salmon trout, *S. gairdneri;* the salmon trout of the Columbia, *S. purpuratus;* and the Dolly Varden trout, *S. malma*, all found in parts of California, the name as used in the New York law is too indefinite. No doubt the first species mentioned is the one intended. The fish spawns in early spring, and since its introduction here had developed a habit of spawning earlier than in California, and why its open season should be from Sept. 1 to May 1 is a mystery. Its season should be the same as our native trout, for by May 1 it should be through with its spawning. Its present season, beginning when other trout fishing closes, is not only absurdly late, but is mischievous in giving legality to fishing in trout waters at that time under pretense of fishing for rainbow trout. Regarding the name of "salmon trout" for our lake trout, it is simply a misnomer which, while doing no positive harm, is not to be encouraged. The name is applied to several fishes in different parts, see list of trouts above, and properly belongs to the *Salmo trutta* of Europe. The Adirondack guides have shortened it into "salmon," and talk of taking salmon in their lakes, apparently ignorant that the name properly belongs to another fish. There are several other matters pertaining to fish legislation which need attention; but we have cited cases enough to show that in New York there is need of thorough revision.

THE FOREST AND STREAM TRAJECTORY TEST.

THE FOREST AND STREAM'S tests of hunting rifles as to their trajectory lines, began at the Creedmoor Range on Monday last and are at present in active progress. The fine weather has assisted much in enabling the trials to proceed with despatch. It is, however, a work which will not admit of much hurry, as each step requires the utmost exactness and care that no error may creep into the final result. The base line over which the several shots are fired, was fixed with the utmost exactness by Mr. Chas. H. Haswell, of world-wide fame as an engineer. The several scientific instruments for fixing the atmospheric conditions under which the shots were fired were furnished from the extensive warehouse of Gall & Lembke, Union Square, West; while Mr. Henry A. Sinclair, from the U. S. Proving Ground, has given his personal attention to every detail, sighting and firing for every shot.

There are some thirty weapons under examination, embracing samples of the leading American arms, including the Winchester, Whitney, Remington, Wesson, Bullard, Marlin, Ballard, Colt, Stevens, and Maynard. A foreign double-barreled Express rifle, from the shop of Thos. Bland & Sons, England, was put in competition and with it a muzzleloader of a type of which so much was expected and so much has been written. With such a fine battery of rifles, the finest probably of its sort ever gathered together, the FOREST AND STREAM is desirous of doing its full duty in making these tests the standard for all discussion of hunting arms. In due time the full report will appear in our columns, and until then we hope our readers will exercise due patience, or better still within the next few days take a trip to Creedmoor and see the tests in progress, as many well known experts in the science and art of small arm shooting have already done.

The trajectory tests will probably extend through the week, if the weather continues favorable; and possibly they may be extended into next week.

OCTOBER is, of all the twelve months of the year, permanently the sportsman's month, and when all the reforms we are waiting for have been wrought it will be practicable to leave one's business in October and go shooting.

THE DEER ON LONG ISLAND.

THE open season for deer hounding in Suffolk county, Long Island, N. Y., opens to-day. The sportsmen of Suffolk county and the people of Long Island exerted themselves last winter to secure for their own section immunity from the law forbidding deer hounding. They did this, not so much for their own benefit, as for the convenience of their friends from other parts of the State and from other States. As we have already stated, all persons, whether sportsmen or market hunters, who want to hound deer are cordially invited to visit Long Island, and take part in the fun while it lasts. The season will extend only to Oct. 8, and next Sunday, the 3d, will be a close day. The route is via the Long Island Railroad, and the hounder should go down to the Hamptons. By addressing Mr. Geo. A. Whittaker, the district game protector at Southampton, the intending visitor will obtain specific instructions as to the most desirable localities.

It is the wish of the residents of Suffolk county that their pains to afford this sport may be appreciated and that their warm invitation to deer hounders may be understood to be general and intended for everybody.

THE AMERICAN FORESTRY CONGRESS convention at Boston last week was the most substantial meeting of the kind yet held in this country. The members present, the papers read, and the general character and tone of the meeting unite to give every assurance that the cause of forestry is making real progress in this country. The new United States Commissioner of Agriculture, Mr. Coleman, has a deep and intelligent interest in the subject of forestry, and in him the workers in the cause are likely to find a most valuable aid. The secretary of the Congress is Mr. E. B. Fernow, No. 13 Burling Slip, New York. A proposition which we hope to see put into effect was to secure the appointment of a committee on forest legislation, with ex-Governor Morton, of Nebraska, at its head, to draft suitable laws, both national and state, for forest conservancy. Papers were read on the methods of utilizing the waste of lumbering operations, the private protection of woodland tracts, and the prevention of forest fires.

"THE AMERICAN NIMROD" is the title won by Mr. Winans, of Baltimore, Md., who has astonished and dismayed the sportsmen of Great Britain by his wholesale leasing and protection of Scotch grouse moors. He has fairly beaten the Englishmen at their own game, and the landowners begin to fear that before very long the American millionaire may absorb the entire shooting country of Scotland. He now leases no fewer than fourteen forests and shootings, which he has joined together, and his preserve extends across Scotland from Moray Firth to Loch Duich, and covers at least 250,000 acres, his sporting rental exceeding £14,000 a year.

A GENTLE HINT.—If you have occasion to telegraph to the FOREST AND STREAM on a matter requiring immediate attention, be sure to direct the message to some individual connected with the paper and not to the Forest and Stream Publishing Company. The reason for this is that the individual may happen to be absent, and the telegram will be placed on his desk, where it will lie unopened for a day or a week. This is, of course, just what you desire. If the message were addressed to the Company, it would be opened immediately, but that is not what you want.

DOGS AND SHEEP.—From Tennessee comes word that prominent sheep raisers have determined to abandon that industry because they cannot protect their flocks against the dogs. It is true that the average Tennessee dog does have an abnormal taste for mutton. But instead of surrendering their sheep to the dogs, why do not the farmers organize and put through a law to kill off two or three hundred thousand of the brutes? That would be the correct course to cure the cur curse.

THE ST. LOUIS CONVENTION OF SPORTSMEN convened last Tuesday and is now in session. A report of the proceedings will be given in our next issue.

WILD GEESE.—The southward flights of wild geese are reported. We should be glad to have notes of the migration of the geese as observed by our readers.

GEORGE WILKES, widely known as one of the editors and proprietors of the *Spirit of the Times*, died in this city, Sept. 23.

HUNTING IN THE HIMALAYAS.

Lights and Shadows of an Indian Forester's Life. VI.

DATED my last budget from Hurdwar, where I remained until the 14th of November collecting the deodar ties sent down from the mountains during the summer, and despatching them down country to Delhi and Agra. By that date my young assistant, Charley C., fresh from a three-years' course in Germany, had reported himself for duty. I had collected three hundred pairs of sawyers for the conversion of the season's yield of sal timber—the staple building timber of the region—had been furnished with the Trigonometrical Survey's map of my division, about a thousand square miles in area, with instructions to divide it into blocks, make a rough valuation survey of the timber of each block, outline a general plan of operations based on the standing stock and annually productive capabilities of the forest, submit a well-considered scheme of fire conservancy, report on the feasibility of clearing the Ramgunga Channel for rafting and submit my estimate of costs, to rid the division of a notorious man eating tiger, and offer a hundred dollars for his skin; further, I was called on to thoroughly master the details of the local timber and bamboo sales, which footing up as they do to about eighty thousand rupees (forty thousand dollars), nearly half the estimated revenue of my division, and being exported across a frontier line of fifty miles in length, afford especial facilities for combination between the merchants and my subordinates for defrauding the government. From this you may infer that sport is only incidental to, and not the actual business of, a forest officer's life; but the fact is game is so plentiful in these uninhabited regions that you run across it go where you will, and can turn aside to stalk a fat stag or beat up a likely looking clump of long grass for tiger without any undue interference with the matter in hand, whether it be estimating stock or moving from camp to camp.

So on the morning of the 15th, behold my quiet camp once more a scene of dire confusion. The tents struck, a dozen camels being loaded and bellowing their vain remonstrances, while servants and camel drivers maintained an incessant and more or less disputatious chatter. The elephants were ready by the time we had dispatched our *chota haziri* of coffee and toast and eggs, and impatient to get away from the discordant clatter, we mounted them at once, my native superintendent taking the back seat of my howdah, and Charley C., with his *shikaree* (huntsman)—Ram Buksh—filling the second howdah.

Passing through the city of Hurdwar under the eyes of the troops of monkeys, which regarded us philosophically from the roofs of the houses, we skirted the right bank of the Ganges to a ford about five miles up, where we crossed and entered a vast, almost treeless plain, covered at this season with a coarse grass from four to six feet high, through which ran a beaten road to the southwestern corner of my division, two days' march from Hurdwar. There is more or less game scattered over these plains, and after the December fires, when the grass is reduced to small scattered clumps, there is no difficulty in making a bag; but at this season it is hard to come on it, and still more difficult to shoot it when you do come on it, for the only sign it gives is a ripple in the grass as it moves out of the way. But as it is as easy for the elephants to go through it as along the road, and all of us being more or less keen the first day out, we struck into the grass and followed the line of the road at three or four hundred yards distance. We had not gone far before I saw a ripple in the grass, and moved the elephant down on it. There was a rush for about twenty yards, and all was still again. A hog deer most probably, but there was no chance of sighting him, so we went on our way.

Another couple of miles and a shot on my right, rapidly followed by a second and a third, turned my eyes in the direction of the other elephant, when I saw Charley and Ram Buksh reloading; by the time they were ready the elephant had started the game again and another three shots were fired. This continued for about a quarter of an hour, the elephant continually putting up the game, and following it now this way, then that, and I should think something like thirty shots must have been fired when the yelling of a small pig (an old boar never yells) announced that some stray bullet had found its billet. "How does your mahout like loading a pig?" I asked my superintendent, who being a Hindoo mountaineer had no prejudices against anything eatable. "Oh, he does'nt mind, Sahib," was the reply, "as long as he is not asked to handle it." Coming up we saw the elephant sit down and Charley and his shikaree both dismount, Charley quite excited and Ram Buksh very happy in the anticipation of a good square meal, for he is a Musbi Sikh, and loves wild pork better than anything that runs. With the aid of ropes and pulleys the game was soon secured behind the howdah, and we once more went on our way. In the course of the next two miles we started another sounder of pig, and two or three hog deer, but without a chance for a shot. Charley had several shots at the grass, but without any apparent effect. At length I too was tempted to fire. I caught sight of the tips of a stag's horns, and having set him in motion, I told the mahout to get straight behind him if possible. This little arrangement he was unable to negotiate, and at length I called a halt and bidding Gorind Ram, the superintendent, fire together with me, I tried to locate the shoulder, a rather difficult matter with nothing to guide one but the tips of a pair of horns of unknown length and form, but luck favored us, the beast dropped, and hurrying up to the spot the elephant dropped on his knees, and Gorind Ram drawing his hunting knife, jumped down to inflict the *coup de grace secundum artem*. He plunged his blade in behind the ears, intending to cut the throat, but the next moment there was an earthquake or something like it. Gorind Ram and the stag flew up at the elephant, which sprang to his feet and got away a dozen yards before he could be brought to order and the matter investigated. Gorind Ram meantime had picked himself up more astonished than hurt and reported the stag gone with the knife in his throat. Letting him mount to his seat, a feat which satisfied him that the most important of his bones were still in working order, we began beating our game, Charley joining us on the other elephant. We put him up at length and four or five shots were fired together, but on taking up the elephants there was another rush for a few yards and another broadside. Again we went up to where we had seen him stop, and again the poor beast staggered to his feet, but only to roll over again, and Ram Buksh dismounted and finished the throat cutting. Getting the beast secured behind the howdah, a labor in which all hands joined, we found that the first shot had taken effect, entering the upper jaw below the eye and slashing it all up; this had stunned him, and Gorind Ram's blade plunged into his throat had restored him to consciousness, he had got rid of the knife again in his struggle and bled to death.

Remounting we started for the camping ground on the Ganges, where we dismounted and sent the elephants away for fodder. Charley and I discussed our luncheon and the events of the morning under the shade of an acacia tree, while Ram Buksh skinned the stag. The camels made their appearance about 11 o'clock, and not caring to be in the way while matters were being straightened out, Charley and I took our rods, and calling one of the chuprasses to carry our rifles in case of need, went down to throw a fly on the Ganges. We strolled along about a mile at fifty yards apart without getting a rise, when I struck a fish in some rapids, and after about ten minutes' lively play ran him well up the bank. It was a compact little fish about seven pounds weight. While I was disengaging the fly, Charley, who was fishing in deep water just below me, shouted that he had hooked a whale or a crocodile or something, and looking I saw his line running out at a pace that threatened to exhaust it. It stopped in time, and Charley got a chance to reel in, but before long his fish was away again, down stream this time, so I went on fishing the rapids, and after a time landed another fish nearly the same size as the first. Charley was by this time nearly a quarter of a mile down stream, so I followed him down.

After about half an hour's whipping without a rise, I wound my line up short and set off to see if Charley was still playing his whale. He was now coming up stream, and I saw that he had the fish in tow still. By the time I joined him the fish had gone to the bottom and refused to move; but as he was not more than thirty yards from the bank, I told the chuprasse to put down the fish and rifles and try stoning. This started the fish again, but he was getting played out and soon answered to the rein and allowed himself to be run a dozen feet up the bank, where he was soon disposed of. We had no scales in the camp, but judging from many fish I had weighed I estimated him at twenty-five pounds. These Ganges fish are called *Mahseer*, and are a species of *Salmonidæ;* the flesh is white and very fine, and the head of a big fish a morsel for a *gourmet*. We had now had enough of fishing for one day and returned to camp to find our tents pitched and everything in order, and Ram Buksh with two or three assistants busily occupied in shaving his pig.

The next day's march was through similar country, more or less diversified by clumps of trees with a scrubby undergrowth, and in one of these clumps I bagged a brace of wild bantams. The elephant put up several head of game, but I had had too much experience in shooting in long grass to throw my ammunition away. Charley and his shikaree kept banging away, and between them bowled over a hog deer, and while they were loading it I pushed on to the camp, to get the report of my forester, who had been at his post about a week. The man-eater afforded the first item of intelligence. News had been brought in that morning that he had killed one of three village women who were out grass cutting on the northern skirts of the forest, some fifteen miles up river. There was no news from the eastward, there being no postal communication along the line before my arrival, and the bamboo cutters were only just entering the forest from their villages on the south.

After dinner I held office, the superintendent being present while I heard all applications for timber and bamboos which the forester had received to date. The applications for bamboos were practically mere notifications of intention to cut, but the applications for timber wanted my sanction before felling could commence. Sal timber was cut only by the department for export down country, but among the applications was one for a windfall sal tree lying in a specified water course. On this I passed my orders, "Referred to the superintendent with instructions to sanction the application if it proves a windfall, as reported." I had received a hint from my official chief that, although he believed the superintendent pretty honorable, he thought it very probable that the foresters and merchants worked into each others' hands behind his back. I had a different opinion. I believed the superintendant and sheristidar of my office had hitherto run the division between them, and I felt it necessary to put them completely off their guard before I displayed the slightest want of confidence.

Toward 4 o'clock Charley and I, taking Ram Buksh and a couple of chaprasses to be in waiting with our rifles, strolled into the forest for an hour's ramble. We picked up a peacock and a brace of bantams and saw a herd of spotted deer, but were unable to come up with them.

We had now six days' march to this place where our timber operations are in progress, the road being the boundary line of the forest and grass land the whole way. Postal communication was established, and on reaching the fourth stage I found reports from all the eastern sub-divisions waiting me. Starting in the morning about 6 o'clock, we struck three or four miles into the forest, getting into camp about noon, by which time the tents were generally pitched and breakfast ready, or at least so far forward, that it was on the table by the time we had washed and changed. In these rambles I was acquainting myself with the condition of the forests, classes and available stock of timber, etc., taking copious notes which I committed to paper daily on my arrival in camp; of course the superintendent thought I was looking only for game.

One day he sounded me by pointing out a decayed sal tree and asked me if I did not think it would be better to sell such trees than wait until they fell. I asked if he thought there were any purchasers for such trees, and he assured me that he could sell scores of such dry trees in the season if I would give the order—he was putting his foot in it, but it was my policy to lull him to sleep. In the afternoon I held office hearing and passing my orders on all applications for timber. We got plenty of venison on the way to keep the camp well supplied and generally succeeded in bagging a brace or two of birds, bantam or peafowl. The latter make an excellent mulligatawney, and a young bird, although inferior to a turkey, is by no means a roast to be despised. The bantam is very gamy and I think superior to either pheasant or partridge.

On the sixth day we reached the Ramgunga, and on the seventh entered the little gorge through which it escapes into the plains. The road winds along the hillside on the left bank at two or three hundred feet above the river, the opposite bank is alluvial drift, and rises generally three to five hundred feet perpendicularly from the river, but at about eight miles from the plains the narrow gorge opens into a broad valley nearly a mile wide, through which the Ramgunga winds its devious way. At the opening of the valley there is a small bungalow belonging to the department; it is a ground floor building with a commodious sitting-room, two bed-rooms and bath-rooms within fifty feet of the edge of the river, which at that point is about forty feet below. This will be Charley's headquarters for the season, and as I dismount and look through the building I feel by no means sorry that it will be mine too for the next few weeks.

The camels marched into camp about an hour later, together with the mail runner, who brought the verbal intelligence confirmed by letter that the man-eater had bagged a bamboo cutter about ten miles to the eastward the evening before. This gave me great anxiety, for unless his depredations were put a stop to, a panic would ensue and the forest be deserted. A batch of English correspondence which the runner brought with him occupied me until breakfast, and contained among other matters a suggestion that I determined to act on immediately. This was to apply to the officer commanding the nearest Ghoorka regiment, to place a party of his men at my disposal to hunt up the man-eater.

I was now in full postal communication with all my foresters, nine in number, and with the head office, and after breakfast I disposed of my English correspondence, summoned the sheristadar, heard and passed orders on all vernacular reports and petitions, gave a final audience to the superintendent, told him I should hold him responsible for efficient supervision, and with a few general and detailed instructions as to his duties, bade him take his elephant and prepare for an early start in the morning on his tour of inspection. It was now near 5 o'clock, and Charley, who had sat it out with me, was not sorry to have the office closed, and cast a fly upon the rippled bosom of the Ramgunga.

SHIKAREE.

CAMP BOKSAR, Lower Gusheval, Sewaliks, East Indies.

NOTES FROM ORANGE COUNTY.

A FEW camp and other notes from Orange county, this State, may not be amiss, inasmuch as we do not hear from it often through your columns. That it is so close to us may account for its being overlooked, but there are still attractions there if we look in the right place.

First of our party was Chief, so dubbed because he always proved himself "high boat" when it came to the question of landing the largest and most fish. He is one of New York's leading architects, and was the life of the camp. His original "sermons," effervescing with humor, were our delight, while a few time-honored chestnuts sown occasionally among the natives, never failed of a crop of applause. It was he who feeling somewhat sensitive and discouraged at his great deficiency in adipose matter a while ago, asked a friend of his, an Irish gentlemam, "Tell me, S., did you ever see a thinner man than I?" In a rich brogue, his friend, always ready with a quick repartee, replied, "Well, to tell you the truth, Charley, I have [C. felt encouraged], but I had to pay fifty cents at the museum." The second on our list is John Ayres, who took the part as guide. He hails from Central Valley and is the inventor of summer tobogganing. At the bottom of the list appears the undersigned, who, though one of the clan, *Philo. minor*, hobnobs and freely associates with a noted but cross black spaniel, who has assisted him in bringing many of his own clan to bag.

Our first camp was made on the shores of Lake Mt. Basha, a pretty little sheet of water, near Monroe, on the Erie Railroad. We tempted the small-mouths here for two days and a half, with satisfactory results, though our largest fish weighed only a little over two pounds. Helgramites and crawfish were the baits most freely taken. Fair strings of pickerel are caught at this season by the valley people, who drive over the rough mountain roads in all imaginable rigs to picnic and fish. Some good shooting can be had here a little later on, as this lake seems to be a favorite feeding spot for blue and green winged teal, mallards, redheads, black and, quite often, canvasback ducks. The great drawback is that there are no accommodations for sportsmen; hence it is a case of camp-out, with no alternative. Partridges may be found in the densely wooded sections, while in the swales fall woodcock are already stopping on their flight southward.

Our second camp was located at Summit Lake, two and a half miles back in the mountains from Central Valley station, and about twelve miles from our former encampment. During our stay here of five days we fished Slaughter Pond, Upper and Lower Twin lakes and Summit Lake, with fair scores. The owners of the latter body of water are making well-directed efforts to restock it with bass, having put in a goodly number from the lakes adjacent, and a nice consignment of big ones, ready to spawn, from the State hatchery. Though bass fishing in this lake is prohibited, fishing for pickerel and other fish is permitted. The largest pickerel killed here lately was one of three and a half pounds, by Capt. Jos Luce, of Poughkeepsie. Another gentleman took twenty-one in a few hours.

The sport of tobogganing in summer, as here practiced, is an exhilarating pastime. Much is heard of it as a winter sport for Canadians, but it was left for the fertile mind of John Ayres to originate and introduce it as a fixture for both seasons. The track or slide is made of planking, and is five feet wide. It extends up the mountain back from the lake one hundred yards. The grade is eighty feet, and the descent is made inside of six seconds. The "toboggan" used for summer partakes of the nature of a boat, so that when the descent is made and the lake reached—for the slide runs into the lake—the boat, with flags flying and its human freight shouting, goes skimming for fifty yards or more over the smooth surface of the water as though shot from a gun. A stationary engine draws it up the incline, again and again to go rushing down like a whirlwind. In winter the sport is pursued as in Canada, with toboggans and sleds.

At one time, not long ago, ruffed grouse were comparatively plenty throughout this section of the country, but owing to persistent trapping the coveys have been greatly decimated. Some of the hotels engage to take all the birds the trappers can procure, hence a ready market is at hand. A step in the right direction toward stopping this nefarious business has been taken by two New York gentlemen, who have at heart the interests of game protection. They have engaged two constables, paying them from their private purses, to patrol the adjacent partridge country in search of snares and snarers. This looks like business. All credit to them for their good work.

The Central Valley Shooting Club must be made up of live men too. There is scarcely a farm in the valley but that has one of the club's signs up in some prominent place forbidding shooting thereon, showing that the farmer has become interested, and been taught the value of Bob White. A very commendable resolution has been passed by this club

to the effect that none of its members shall indulge in quail shooting for three years. Many outsiders have joined in the movement.

In an evil moment I started to see a rumored dog show at Newburgh, in connection with the county fair. Before I got through I felt like the supplier of sinews to the succulent fish cake, who figures in the following verse:

"On old Long Island's sea-girt shore,
A cod was caught at break of day.
It never had been there before.
And wished to gosh 't had stayed away."

I was stepped on, jostled, squeezed and finally lost; but I turned up again like the bad cent.

The show contained about eighteen dogs, mostly local celebrities. There was a fair specimen of the red Irish setter, a pair of good mastiff pups, a St. Bernard bitch with a litter, a collie, two beagles labeled "foxhounds," a couple of nice fox-terriers, a pug, an overgrown cocker ticketed as a water spaniel—its pedigree told us that its sire was a King Charles and its dam a water spaniel—and perhaps one or two others. The dogs were comfortably benched in a roomy tent. The management could have added a valuable attraction to their fair by giving a good dog show. To that end a fairly liberal premium list and some advertising would have been of great assistance. TIM. BERDOODLE.

NEW YORK, Sept. 22.

A WEEK IN ICELAND.

Editor Forest and Stream:

I send you by this day's mail an extract from the London *Field*, Sept. 5, entitled "A Week in Iceland," by Mr. Cumming Macdona, whom you probably know as one of the most distinguished sporting men in England. It was my good fortune to travel with him in Iceland, and to spend some little time with him at his home in Cheshire.

T. R. G. P.

From the paper inclosed by our correspondent we make the following excerpts:

"Everything is so different in this remote place to what we are used to in England, and so strange. Most people think that in going to Iceland, as the name would seem to imply, that one was about to travel to a frozen land; but in our case we left the cold in England, and found the warmth and mosquitoes, and other more familiar friends—or acquaintances. I should rather style them—in Iceland. It is a new sensation to find oneself traveling among really honest people. It is a refreshing excitement to await the production of our hotel bill—to note how much below our anticipation it generally is. It is queer to find oneself in a country where there are no vehicles on wheels, not even a cariole, as in Norway, nor a gondola, as in Venice. All traveling from place to place all over the country and all about the towns is done on pony back; so it would be well for those coming out to bring their own saddles and bridles with them. Of course, there are plenty provided on the island, but the English-made tackle is always more comfortable and much safer. The charge for excellent ponies is most moderate—only two kroners a day, or 2s. 2d of our money. Of course, there are no roads in the country. Generally there are bridle tracks, but these at times are hard to find in the boundless lava-fields; so it is an absolute necessity to have a guide, for which a charge of five or six kroners a day is made. It is also necessary to have a relay of ponies, as a change is needed every four hours when riding on a long journey. A pair of ponies is also wanted to carry the pack saddles with the tent-bedding and provisions; fresh ponies are also required for them, and an extra guide. As there are no hotels in the country part, the farmers and the parsons keep open house for the wayfarers, and make a very moderate charge for what accommodation they give. It sounds strange, but for all that it is true—travelers are provided by these farmers and parsons with better coffee and cream than I have tasted on the Boulevards of Paris or among the Arabs in Africa. There are three excellent hotels in Reykjavik, the capital—Hotel Island, Hotel Reykjavik and Hotel Alexandra, called so after the Princess of Wales.

"Most of the men on the island are terrible snuff takers, carrying in their pockets large horn scoops, with which they fill their noses from time to time.

"Any one needing a thorough change of scene should take this trip to Iceland. Here the fisherman will find rivers teeming with salmon and trout, and lakes full of char and every other kind of fish. The moors are full of ptarmigan and golden plover; the rivers and fjords alive with ducks and geese. The air is dry, lambient and light. The ordinary tourist will find many a delightful excursion through and about the island—to the extraordinary sunken valley, formed by cooled lava and riven rocks, over an immense plain, at Thingvellir, then on to that seventh wonder of the world, the Boiling Geysers, and so to Hekla, breathing fire and brimstone beneath its ermine coat of purest snow, and the many extinct volcanoes. It is passing strange traveling over boundless fields of barren and black lava, alongside of crags and peaks of great grandeur and wondrous beauty, along lovely and lonely lakes of immense size, upon whose waters the sound of an oar has never been heard. One can travel hundreds of miles and never see a single tree. Away from the screech of the steam engine, away from telegrams, letters and newspapers, away from toil and turmoil—here the weary find rest. Now and then we come upon habitations of men composed of a pretty and picturesque farmhouse, surrounded by its garden and sheep huts, and near at hand a few of the neighbors' huts, covered with sods, 'in verdure clad.' We were a party of twelve, and with our fifty ponies and six guides, we made quite a sensation among the natives, as we were the largest party, except the King's, that ever visited their island.

"We visited Thingvellir, and were most hospitably entertained by the parish priest there, who showed us his pretty little church.

"We were lucky enough, at the end of our next day's ride, to reach the Geyser in time to see next day a grand eruption of one million and a half gallons of boiling water driven with terrific force up about one hundred feet into the air, shaking the ground all around as it rushed with mighty throes to the surface—seething, splashing, dashing, crashing and roaring with terrible earnestness and grandeur in the calm and silent moonlight."

THE POOR MINERS OF DERBYSHIRE have a curious notion that pulmonary consumption is caused by the upheaving of the lungs, and so they swallow shot to weigh the lungs down into their normal place. The miners are all right in their belief that shot are a preventive for disease, but the way to use shot is not to swallow them, but to shoot them out of a gun.

WILDFOWL IN DOMESTICATION.

SOME years ago my brother and myself conceived the idea of domesticating specimens of our native wildfowl, partly for instruction and amusement, perhaps ultimately with a view to profit. As we were both duck hunters, and frequently captured birds only slightly wounded, we soon had a nucleus to begin with, which by accretion we expected would develop some day into a more than usually interesting collection. By our own efforts and those of our friends, in saving cripples, catching young, purchasing, etc., we gradually increased our flock, in spite of frequent losses by disease, escapes and vermin, until the collection contained a number each of three species of geese and seven or eight of ducks, all in fine condition and as tame as could be expected. Our hope was to eventually obtain specimens of all North American geese, ducks, cranes, etc. The hope was never realized. As breeding time approached in the spring of 1882 we looked forward with high expectations as to the result, for the preceding summer and fall had seen a considerable addition to our flock, when one ill-fated night dogs gained access to the inclosure where they were kept and destroyed nearly the entire flock of ducks. The geese were in another lot and escaped. This mishap so discouraged us that we never undertook the experiment again; but perhaps a few notes of the characteristics of these birds as observed by me would prove interesting.

I discovered that while wild geese and ducks could be tamed, they never became thoroughly domesticated, as the migratory instinct is so strong during the spring and fall that they would leave if not pinioned. At other seasons the geese were as contented as domestic birds, and were generally allowed to run at large; but not so the ducks, which had to be confined at all seasons by a tight fence, and if one of them found an opening, it had no scruples against deserting its companions, and striking out for the nearest watercourse leading to the river, although there might be plenty of water in their own pond. This was in marked contrast to the geese, which were reluctant to separate from each other, even to escape. Neither would the ducks ever become as tame and gentle as the geese, but they were always timid. Mallards, if allowed to run with tame ducks, would not show much fear of a person, but as soon as separated their wild nature returned. Mallards will breed in domestication, and their habits do not differ from tame birds, with which they freely intermix. They are said to also cross with the gadwall and black duck. But of this I know nothing. They are the easiest duck domesticated, and next to them comes the woodduck. Of the latter we had quite a number, mostly young ones captured just before ready to fly, or adults caught while moulting. These beautiful little birds, the most active on land of any, were pugnacious as bantam cocks, and did not hesitate to attack larger ducks, and I have even seen one make a pass at a white-fronted goose, their extreme quickness enabling them to dodge an enemy. I am satisfied that they can be raised in domestication, and perhaps innumerable generations would reduce their timidity and remove the migratory instinct. The only one we ever had which did not seem inclined to stray was one raised almost from the egg The woodduck, with its brilliant plumage, sprightliness and general lack of resemblance to the regulation flat-billed species, is an ornament to any pond, and they are less liable to sickness than any other species, except, perhaps, the mallard.

The pintails were perhaps the wildest, most restless and discontented of any species in the collection, although bearing confinement reasonably well. During the season of migration they were constantly out in the open, with long necks stretched skyward, watching for passing flocks, and every few minutes trying to rise into the air, and turning a somersault in consequence, on account of a pinioned wing—only to get up and try it again. Ducks never seem to learn that they can't fly when pinioned, but keep trying for hours at a time. Geese are different and learn by experience. I believe the pintail will breed in domestication, and they should cross with the mallard, as I know they sometimes do in the wild state.

The "black-jack" or ringneck, although not like the foregoing, was interesting. Reasonably tame at ordinary times, during the migratory period they seemed to become almost irantic, especially in the evening, as all ducks travel more by night. As when in a state of nature they cannot rise directly into the air like most other ducks, so here they would go flapping along the surface of the ground or water to get headway instead of trying to spring directly up like the pintails. Strange to say this movement was to the north in spring and south in the fall. After reaching the other end of the inclosure, instead of repeating the attempt in the other direction, they would return to the starting point on foot and try again. The species is strong in its attachments. I once saw a drake black-jack exhibit the most touching devotion to a sick mate which we were doctoring. He would leave the other ducks and sit for hours at a time by her side, in a corner to which she had retired, manifesting his solicitude unmistakably. In spite of all our medicine the female died, and the drake knew as well as we, who were watching at a little distance, that a change had taken place. He would walk round and round the body, caressing it with his bill, and seemed almost to understand what was the matter; we had to approach very close before he would leave, and it was some time before he seemed to forget the loss.

All ducks are greedy, but the black-jack is insatiable. Although nominally a grain-eating duck, he is exceptionally fond of meat, as I discovered one day when feeding some grebes or "dabchicks" on raw beef. The woodduck will also eat flesh; others may, but I never saw them. I doubt if the black-jack or any other deep-water duck will breed in domestication.

The blue and green-winged teal were quiet, gentle birds, the former especially, and showed no marked characteristics. When ours were killed the bluewing contained eggs, but I think the green would also breed, and I would like to try crossing the two, and also crossing them with the woodduck. If such a hybrid could be obtained it certainly would be a beauty.

Of the gadwall or gray duck we had but one specimen, a fine drake, which was very tame, but it was the only species which we could not teach to eat on land. We were compelled to feed it with something which would float on water, such as oats, as their natural food consists of certain mosses, insects, small seeds, etc. The gadwall would doubtless breed in confinement and is said to cross with the mallard and black duck; if so, then it should also with the pintail and widgeon. Except this bird, all our ducks preferred corn as their steady diet, in preference even to such food as they could obtain when wild, pin-oak acorns for instance. Next to corn, wheat was their choice, oats they did not much like and rye they would scarcely eat. Animal food in some form was occasionally supplied, also fine gravel, charcoal, and at breeding time lime in some shape, preferably in small shells.

But it was to the geese that I gave most attention, they taking to domestication much more kindly than ducks, and becoming very tame, so tame in fact as to be a nuisance. Like some other creatures which are very wild in a state of nature, yet become tamer when captured than other kinds apparently not so wild, geese as soon as they discover there is nothing to fear, seemed to become possessed of a desire for human companionship. I suppose the greater the resemblance the greater the "affinity." Ours were confined part of the time in a small lot at some distance from the house, and along the further side ran a small branch, yet they selected for a roosting place the very extreme corner nearest the house, away from the stream, and there spent most of their time when not feeding. Turn them into the house lot, which was of considerable extent, and they would not stay down to the water without company, but must needs come up about the part of the house where the folks were most likely to be, and if the doors were not closed had no scruples against coming inside.

The common Canada goose is so well-known that I shall content myself with giving two rather remarkable instances of intelligence which came under my notice. Wild geese in domestication do not breed until at least three years old, and are strictly monogamous, some writers even claiming that should one of a pair be lost the remaining one never remates. Of the latter I know nothing, but from their strong attachments I believe it would be true in many cases. The first pair of geese we obtained from Iowa when not quite one year old, fine, large, well-formed, perfect specimens apparently, and to all appearances thoroughly mated and devotedly attached to each other. When these were nearly two years old we secured in this State another gander and two geese, all three years old, and within a week thereafter the Iowa gander deserted his mate, driving her fiercely away whenever she approached him, and formed a union with one of the new arrivals, which lasted until last spring when we sold them. They raised a brood the year after, but his former mate has never dropped even unfertilized eggs, although while in our possession two springs passed after her arrival at breeding age, thus proving that she was barren. Now the question suggests itself, did this gander form the new attachment because of the greater age of his second mate, or was it mere fancy, or, as I think, did he recognize through some subtle sense as yet unknown, that his first mate was barren, though not then of breeding age? If the latter is the true explanation, then was it instinct or reason? I believe that the lower animals reason more or less logically, but they certainly possess another power, call it instinct or what you will, and in a much greater degree than humans.

That the Canada goose sometimes performs acts irrespective of instinct and governed solely by reason, I will now attempt to prove. Canada geese from some cause have a great antipathy toward common barn yard chickens, but soon get accustomed to those they are brought in contact with, and pay no attention to them unless they come in their way. But let a strange chicken come in the yard and away they go to catch it. Or let them find a sitting hen where they can get to her, and off she has to come to make music for them by cackling, and woe to her if she gets caught. Going down to feed them one morning, I saw a lot of strange chickens in a corner of the yard besieged by a pair of geese, who were waking the echoes over their delightful discovery. But they were afraid to make a charge at such long range for fear the chickens would dodge past. I called them down to the branch to get their feed, but they were uneasy and would not eat much, and kept watching the chickens, which were working down toward the branch as if to cross about forty yards above. Presently the geese gobbled together a little, and then struck off up stream, swimming very slowly and cautiously, with necks kept well down below the bank, which was perhaps eighteen inches high, and so timed their speed that they arrived at the point where the chickens were going to cross just as the latter reached it, and with a great outcry sprang out on them. They failed to catch any, but that was no fault of the strategy, which entitled them to rank as generals, but it was due only to their own clumsiness. Then they returned satisfied, and quietly finished their breakfast. Whoever had witnessed the maneuver would have had no doubt that it was intelligently planned and carried into execution. At any rate I have none.

The white-fronted goose looks too much like the domestic bird to make it much of an ornament to a collection, but it is nevertheless quite interesting. They are easily tamed, and are rather disposed to be pugnacious. One old gander in particular always looked as if he were spoiling for a fight, and his mate once followed a horse with the apparent intention of trying it a round. Although these birds arrive here later in the spring and earlier in the fall than the Canada geese, yet they seem to stand more cold and, I believe, go further north to breed. I have seen one of ours sitting on a large cake of ice in one of the coldest days in winter in preference to seeking shelter or even to roosting on the dry leaves and grass close by. Although well contented in domestication, they never bred, nor do I believe they ever do in this latitude even in the wild state. And yet they seem to stand the heat of summer as well as the other species.

But the most interesting variety by far was the goose known to naturalists as the blue-winged, white-headed or blue goose, known to hunters as the bald brant. These names sufficiently describe it so that any one can recognize a specimen. One of our specimens manifested remarkable intelligence in various ways. When it was received from the hunter who shot it, it had been wounded about two weeks, and was immediately given the range of the pasture with the other geese, where it would graze almost all day, seeming hardly ever satisfied. It was in very poor condition, but after it got in good order it always showed more voracity than the other species. This bird although exceedingly wild at first became within a month as tame as a barnyard fowl, and within two months, with a very little coaxing, came to eat out of my hand with great familiarity. At the same time it was shy of strangers and would not allow them to approach very near. It differed very materially in this respect from the white-fronted variety, which I never could induce to eat from my hand, yet is apparently no wilder than the blue one. It was not gifted with much courage or pugnacity, and I very seldom saw it make an aggressive movement

toward another goose, a duck or a chicken, and it would hardly ever even stand on the defensive. This was not from weakness, as the case with which it would snap a hard grain of corn in two showed that it had abundant strength of jaw, and I believe it could easily whip the white-fronted goose; yet when attacked by the latter (as it frequently was) it always gave way with a pitiful squeal and chatter of reproach which was rather amusing.

This bird was better acquainted and more familiar with myself than with any other member of the household, and almost always greeted my appearance with its shrill cry, and if hungry, would come running to me with wings outspread and follow around at my heels like a dog. That it did not notice others of the family in like manner proves that it had sense enough to distinguish one person from another and was capable of forming attachments. Its intelligence was also shown by the following: While feeding it from my hand one day I inadvertently withheld the food from it for a short time, when becoming impatient it gave me a slight peck on the right knee. Taking advantage of this trifling action to teach it a trick, I immediately held the corn to it, and, after letting it eat a little, I again withdrew it. For a few moments the bird seemed perplexed, then quick as thought, it reached out and bit me severely on the same knee, this time with apparent intelligence, for it then seemed to expect the corn. This was repeated several times, until no doubt was left in my mind that the bird understood that biting me brought the food, and it never forgot the lesson. It was a handsome bird and had many amusing ways. They never bred, nor even laid, although they mated. The white-fronted ones were never observed to. The brant were sent to Central Park more than a year ago and are probably there now.

RUSHVILLE, Ill.

HOW MANY NESTS?

Editor Forest and Stream:

ADDITIONAL NOTES.—A rather singular circumstance has occurred in connection with one of the robin's nests mentioned in "How Many Nests?" since that article was written, and as it may be interesting to some, I give it as it happened. On the morning of Thursday, the 6th of August, a young bird took its flight from the nest nearest the house. I was sitting at the time where I could see it hopping around among the branches before it left the tree and calling for food, while the old birds seemed to give their entire attention to those in the nest. It was very seldom that they appeared to consider it necessary to give this young bird anything, and even when it would flutter up to them and shake its wings and beg, it was not often that its entreaties were answered. Indeed, had I not seen the bird leave the nest that the old ones were feeding, there were times when I would have considered the poor little creature as not belonging to them. At last, after calling and begging for an hour or more, it made an effort to follow one of the parent birds. This took it away from the tree across the road, and I was surprised to see how strong were it wings. But still the calling went on, while the old birds were as devoted as ever to the nest. Twice I saw the young bird return to the place and beg for food, his strength of wing seeming weaker the second time than it did the first time he came. But he occasionally received something, and I could see he was not disowned.

However, in the afternoon I noticed that he remained in one place across the road, calling at times in the most pitiable way. I could always tell when he was fed. He would stop his squalling for a few minutes, and it seemed to me that he was receiving just enough food to keep him alive. And still the parent birds were most attentive to the nest. Then Friday morning came, and almost the first sound that I heard after daylight was the calling of the young bird. This stopped, however, after sunrise, and was only heard at intervals during the day, while the old birds were as devoted as ever to the nest. Only the hen bird came most frequently, leading me to think that the cock had been detailed to wait upon the fledgeling. Meanwhile, I had been expecting to see some more birds leave the nest. But no, nor did I hear a sound from it. And now Saturday morning arrived, when occasionally I would hear the fledged bird call and saw that the parents were still giving most of their attention to the nest. This was the day of General Grant's funeral, and I had to leave home at 9 o'clock and did not return until after 12. Before I entered my gate I heard the fledgeling calling most frantically, and I had hardly taken half a dozen steps toward the piazza, when the hen bird in a very distracted way called and scolded at me as I went toward the nesting tree. I had never seen her so excited and angry, nor would she go away after food until I entered the house. This puzzled me, and I determined to find out, if possible, what was the cause. So taking a paper, I went out on the piazza and pretended to read. I had hardly seated myself there before the bird returned with food in her bill, and began to call and scold again. I pretended to take no notice of her, while at the same time I was watching every movement. Meanwhile the fledgling was calling even louder and more frantically than ever, while not a sound came from the nest.

Every time the old bird returned she would go through the same maneuvers. She would alight on the top of a spruce, scold and then make a dart for the nest. I watched her for a long time, until all at once it dawned upon my mind that there was only one bird, and that the hen attending to the young. I now looked more carefully and sure enough one bird was doing all the waiting. There could be no mistake. She was the one that came and went upon an average of thirteen minutes all the afternoon, and I only saw her visit the fledged bird three times during that period. But now his cries were not so loud and I could see that his strength was failing. He was obliged to confine his flights to a few dead branches where he sat, and those were surrounded by a luxuriant growth of young locust trees. And now Sunday morning came, and again the frantic calls of the young bird are almost the first sounds that I hear. I cannot stand it any longer. I will try and save the poor thing. So I go across the road, the old bird following me and scolding as usual, when out from some grasses by the bank comes my fledgeling, making a vain effort to lift himself from the dust of the road and the dew that bedraggled his feathers. Poor thing, it was very weak now and all it could do was to open its mouth as I place my hand upon it, and I was astonished that the mother bird did not make a greater outcry when I seized her fledgeling. But I took it to the library and I gave it some little pieces of fresh meat. These it swallowed most ravenously. And when it ceased to open its mouth I ceased to feed it. Before church time it seemed quite recovered. So taking a pasteboard box and slitting some bars in it I put the bird in it and I placed the box in the window, where the mother could hear her fledgeling call. When I returned home at noon I found I had made my openings in the box too wide and that not only had the mother bird fed her young one but had succeeded in coaxing it out of the box, and was now attending to its wants on the branch of a tree that grew beneath the window. This was just what I wanted, but on returning from my afternoon duties I heard the bird calling again from the old place across the road. I now prepared another box, a larger one and of wood, in which I thought to confine the bird until the whole nest was fledged. This box was placed on the ground not far from the nesting tree, and beside it I threw down some worms that I had dug. Nor did I have to wait long before I saw the old bird fly down to her young one (as it put its head out between the slats and called) and pick up several of the worms and put them in its mouth. This led me to think that it was only because the mother could not feed so many mouths that it was being allowed to starve. But this was not so as will be seen from the sequel.

On Monday morning my bird was quite smart. It was very evident that it had been feed many times before I saw it, and was now hearty and strong. The old bird made a great time when I went near it now. Any one might have thought that she had given it her undivided attention. But it was not long after breakfast before I heard the bird calling again from the same old quarters among the locust bushes. At first I thought it might be another young one, but no, I went to my box and mine was gone again. The slats were still too far apart. It was after dinner before I went for it. Then it seemed to be calling in the most frantic way. I found it on one of the lower boards on the fence, with its wings hanging down and utterly unable to fly. It was put in the box again, and I had hardly taken my seat in the house before I saw it hopping across the lawn and chirping, with its mouth open, as the mother bird ran before it and tried to coax it to fly up into one of the spruces. I now decided to catch it again and let it go in the field just opposite the nest, where it would not be exposed to persons walking along the road and where boys would not be so likely to trespass. This was nearer the nest than the place I had taken it from so often, and had the advantage of being a foraging ground of the parent bird. Here I heard it call several times, and at last had the satisfaction of seeing its cries attended to again.

On Tuesday morning I found the old bird attending to both nest and fledgeling, and very early heard a young bird chirping in the nest. I watched the nest now very closely, until noon. I was particularly desirous to see how many birds left it. For a past experience had led me to think that the last brood of birds where three nests are raised is smaller than the second, and the second smaller than the first. Thus, if the first nest contain five eggs, the second may have three and the third two. Or, if the first nest have four eggs, then the second two and the last one. I have good reason to think that the second nest mentioned in "How Many Nests" had only one bird in it. But I watched the nest I am speaking of now most carefully. Well, at noon I saw a young bird leave it, and call and move around among the thick branches. And now the old bird seemed even more excited than ever. She never came to feed this young one that she did not stop to scold at me; and she would sometimes remain as much as four minutes watching my motions, while one or the other of her birds called for food. But I was determined I would sit her out and satisfy myself. So I read on for an hour and a half, and before that time had expired the young bird took its flight from the tree. There was but one; when it left the nest was forsaken. The two young birds were taken over among the locust trees, and have now grown so that they can feed themselves. Mornings and evenings I think I can still recognize the voice of my bird as he feeds upon the wild cherries with a great many others that were reared, I take it, in this neighborhood.

What became of the old male bird is a question. And yet I do not know that it is. I was told that several reports of a gun were heard in this vicinity while I was away from home on that Saturday morning. And my conclusion is that in some of his foraging expeditions while providing for the young, a robin fiend shot him. He will not come back another year to gladden this household with his early song.

I have reason to think that many robins in this vicinity have built three times. I saw one in my neighbor's garden on the 15th of August carrying food to the nest, and on the 16th started a young bird with a short tail out of some bushes that grow in the rear of my house.

A second nest of thrushes was fledged (I consider it a second nest) on the 11th, and a second one of catbirds about the same time. The old birds, so far as I can judge, feed the young from a week to a fortnight after they leave the nest. The orioles and some others I had thought give their attention to their brood for perhaps a much longer period. It is only a few days since I saw a full grown young Baltimore oriole following an old male bird (the male without a tail), and begging it for food. But now I hope during the fall and winter to hear occasionally of some one else's experience.

THE FLORIDA WHIP SCORPION.

Editor Forest and Stream:

Your correspondent "R. A. T.," in issue of Sept. 21, points well, and will please accept thanks for correction of my anecdote and for others which I had forgotten.

As to "Nessmuk's" Florida whip scorpion or grampus, I have unearthed hundreds of them; but never heard of their bite being fatal. A neighbor of mine was bitten on the arm some years since by a grampus that had hidden in his coat sleeve as it lay on the ground, but although the arm was swollen and quite numb for a day or two, no permanent harm followed. The poison might possibly be fatal to brutes and not to human beings. The grampus has one habit not mentioned by "Nessmuk." It is that of emitting a most nauseating fetid odor when irritated. At such times it rears its hair-like tail on high, raises itself on its legs, and moves slowly away with stiff-legged dignity, its claws held aloft and well spread ready for attack or defense. "Nessmuk's" "man-eater" or "Florida bedbug" is no doubt of the *Chinch* family and is a veritable pest, like others of Florida. S.

Editor Forest and Stream:

I send you by this mail a dead specimen of the "whip scorpion," "scrauncher" or "deadly grampus." If the post office clerks get away with this one I am afraid the paper will have to scrub along till spring on ordinary bugs.

I roll him up in a Tarpon Springs tract, which tracts are mostly concerning tracts of land reserved for the Northerner who is supposed to stand in urgent need of orange groves.

NESSMUK.

TARPON SPRINGS, Fla., Sept. 19.

PURPLE GRACKLE ABOUT PHILADELPHIA.—One of the correspondents of FOREST AND STREAM has lately written me to know if there is a nesting place of the purple grackle in the vicinity of Philadelphia at this time. Not for fifteen years in my recollection has there been such. Some years since the cedar rows dividing the fields of Dr. Twaddell's farm in West Philadelphia was a breeding place, and hundreds of birds selected the locality for building their nests, but now scarcely one can be seen. In Delaware county, Pa., however, within fifteen miles from Philadelphia, wherever spruce or cedar rows are growing, these birds can be found breeding in great numbers. There was quite a colony of them near the town of Avondale, Delaware county, and also in Heffinger's Woods, near Leiperville, Pa. They begin their migrations south from the 1st of October to the middle of the same month, according to the condition of the season.—HOMO.

DAKOTA BOTANY.—Le Beau, D. T., Aug. 9.—*Editor Forest and Stream:* I have discovered a plant growing wild here in the Missouri River valley, which is a species of the ice plant (*Mesembryanthemum crystallinum*). The simple fact that this plant has been found growing in the open air of this northern climate is of itself a great curiosity, as it is supposed to be only a native of South Africa. I was greatly surprised on my arrival here to find wild many plants and shrubs grown in Eastern gardens, among which are the climbing rose, mountain cap (sometimes called snow or mountain oxalis), cactus, etc. But I am astonished, after living here a year, to find an African plant.—FRANCES JOHNSON.

THE COLORED CROWN OF THE KINGBIRD.—Bethel, Me.—I was much interested in the idea of Dr. Merriam as to the use of the colored patch on the kingbird's head, as described in your issue of Sept. 17. The three-toed woodpecker also has a brilliant yellow spot on his crown, commonly covered with black feathers. I had shot many of these birds before I discovered it, so completely was it hidden. I also had a theory that these hidden patches of beauty on both these and other birds were used to adorn themselves in the mating season, at which time they could uncover their beauty spot to their admiring mates at pleasure.—J. G. R.

Game Bag and Gun.

WITH THE BIRDS AT PINE POINT.

ON Saturday, September 12, I started with gun, baggage and my red Irish setter Prince, for a week's shooting at Pine Point, Maine, having engaged Mr. John Bryant, a well known and successful gunner at that place, to go with me.

We went into camp Saturday afternoon. We had expected a storm Monday, but it did not come, so we had to content ourselves with a warm pleasant day. The morning's shooting amounted to almost nothing, but toward noon the wind shifted to the south, and for about two hours we had good shooting. Our bag for the day consisted of 3 teal, 22 summer yellowlegs, 1 fall snipe, 1 robin snipe, 3 granbirds, 1 brownback and 1 golden plover—32 birds in all. Tuesday we scored three teal, one of which was a green-wing, and 1 summer yellowleg. Wednesday was a very poor day and we were quite discouraged, 2 summer yellowlegs and 2 granbirds being the total bag. Wednesday night was cold and frosty, and we looked for better shooting Thursday. We were rewarded by getting a good bag of 5 teal, 6 golden plover, 1 blackbreast, 1 winter yellowleg, 2 summer yellowlegs, 7 granbirds and 4 snipe—26 birds. We were of course in high spirits and our expectations were at the highest.

Friday found us bright and early at our decoys. Our record for the day, after considerable hard work—and that in my opinion is the only way to get birds—was 4 teal, 5 winter yellowlegs, 2 golden plover and 5 granbirds. Friday night we packed up, leaving just enough things to get breakfast with, as we wanted to get as much shooting as possible before train time. Could we have stayed the day out, I think we would have had better shooting than any previous day. As it was we got 7 teal, and 2 winter yellowlegs, just in time to take the eight o'clock train for Portland.

I never in my life enjoyed a trip so much, and if my setter could speak, he would tell the same story. Our gunning, of course, as in a great many places, is diminishing, but still a score of 91 birds in less than a week will satisfy me. If any of the readers of the FOREST AND STREAM who think of taking a trip this way will write to Mr. Bryant, I can assure them of a good time and some good bags of birds.

H. A. FLETCHER.

PORTLAND, Me., Sept. 23.

THE WISCONSIN LAW.

Editor Forest and Stream:

While the Governor of Wisconsin last winter vetoed our game and fish warden bill, which had passed both branches of the Legislature, yet two of our local shooting clubs on Lake Koshkonong, Wis., namely, the Blackhawk Club and the Koshkonong Place Club, have at their own expense employed two game and fish wardens to patrol said lake to see that the game and fish laws are rigidly enforced this season. The following extracts give the game law as amended last winter:

Section 4965 of Revised Statutes was amended by Chapter 351, approved April 8, 1885, published April 15, 1885, so as to read as follows:

"Any person who shall take, catch, kill, destroy or wound any woodcock, prairie hen, prairie chicken, partridge or ruffed grouse, sharp-tailed grouse or grouse of any other variety, snipe, quail, mallard, wood or teal duck or deer, by the use of any net, snare, trap, gin or gun, * * * kill, destroy or wound any wild duck, brant or goose, by the use of any pivot or swivel gun or any firearm other than a gun habitually used at arm's length and fired or discharged from the shoulder or when raised or held by the hand, or by any float, sneakboat, sail or steamboat, or floating box or similar device, or from any fixed or artificial blind or ambush located in open water outside or beyond the natural cover of reeds, canes or flag, then and there projecting above the surface of the water of any lake, river, bay or inlet, or attempt to do so, * * * * * shall be punished by a fine not exceeding one hundred dollars nor less than five dollars for each offense. One-half of such fine, when collected, shall be paid to the county treasurer and by him paid

into the school fund, the remaining half shall be paid to the informer. Any further the gun or guns, boat or boats, and decoys of any such person guilty of such offense shall be forfeited to the State." Chapter 392, approved April 11, 1885, published April 17, 1885, repeals the private and local laws of 1876 and 1877 applying to Lake Koshkonong as follows: "Chapter 92 of the private and local laws of 1876 entitled 'an act for the preservation of ducks and other wildfowl;' and Chapter 97 of the laws of 1877, entitled 'an act to amend Section 1, Chapter 92 of the laws of 1876, entitled an act for the preservation of ducks and other wildfowl, are hereby repealed." This makes Section 4565 as first above quoted the present law on Lake Koshkonong. Chapter 414, approved April 11, 1885, and published April 16, 1885, prohibits fishing with nets or seines of any kind as follows: "Section 1. It shall be unlawful for any person to take any fish, suckers, minnows and whitefish, excepting in the inland lakes or streams of this State by the use of any net or seine of any kind except as now provided by law for the Fish Commissioner of the State. Section 2. Any person violating the provisions of Section 1 shall be deemed guilty of a misdemeanor, and upon the conviction thereof shall be fined ten dollars for each and every offense, or by imprisonment in the county jail for a term not exceeding thirty days, or by both such fine and imprisonment. Section 3. The provisions of this act, so far as they permit the catching of suckers, whitefish or minnows, shall not apply to Lake Koshkonong or any of the tributary waters thereof within five miles of said lake. Section 4. All acts or parts of acts interfering with the provisions of this act are hereby repealed."

G. W. Esterly.

Whitewater, Wis.

"BOB WHITE" AND "PARTRIDGE."

Editor Forest and Stream:

My friend "Wells" has gotten me into a controversy with "S." on the subject of quail, partridge, Bob White, etc., and has ingloriously retired and left me to fight it out. He ought to come forward and claim paternity of his own offspring, and defend its cognomen. But if I must battle alone in this cause, here goes.

About a dozen years ago some one signing himself "Bob White" wrote an article in one of the literary magazines, I have forgotten which one, suggesting and advocating the name of Bob White for our partridge. That has been a common nickname or pet name for this bird in the South ever since I was old enough to carry game for my older brother. I don't know how much longer. It arose from a fancied resemblance of the cock's call note in the mating season to that combination of syllables. The name "partridge" as the proper designation of the bird, has always prevailed all over the South as far as my knowledge of the subject extends, and I never heard the term "quail" applied to it until after the war, when a large influx of Northern sportsmen brought the name with them. Some Southern sportsmen, rather of the "dude" order, have come to affect that name, but it is generally regarded as an innovation. So much for facts. Now for argument. I have not a copy of Audubon by me, but if my recollection serves, he distinctly dissociates it from the quail family and allies it with that of the partridge. In the North there are several varieties of game birds, having, as I understand, the general characteristics of the partridge, but each having its own specific designation, among which the partridge proper is the least prominent of all. In the South the partridge is by far the most prominent and widely prevailing game bird we have. Indeed, with the exception of a few prairie chickens, in limited localities, he may be said to be the only resident game bird we have, aside from wild turkeys and woodducks, for we do not call doves game birds. Now, considering the premises, that he is about the only native game bird we have, and he is far more numerous in the South than in any other part of the world, as he whistles "Bob White" on every worm fence from Maryland to Texas, I humbly submit that we ought not to be deprived of our long-established, hereditary right to call him "partridge," as did our fathers and fore-fathers.

Now, Mr. "Wells," it is your turn. Coahoma.

Memphis, Tenn., Sept. 21.

DAYS WITH THE SQUIRRELS.

I.—IN AN ARKANSAS SWAMP.

ON Aug. 30 I was invited by members of the Blackfish Hunting and Trolling Club, of Memphis, to join them in a squirrel hunt at their club grounds on Blackfish Lake, in Arkansas. This lake lies three or four miles north of the Memphis & Little Rock Railroad, and about parallel with it, the middle point, where the club house is situated, being opposite the twenty-five-mile post west from Memphis. The lake is eight miles long by three hundred yards wide. Shell Lake, another fine body of water, lies three miles southwest of the club house, to its nearest point. Blackfish has high, steep banks, and deep water, is evidently a former river channel. The banks are high for the swamp, and clothed with heavy timber, hickory, white oak, etc. and cane. Black bass and white perch fishing is very fine in season, but they were not then biting. I partook of a bass from this water last spring, which weighed six pounds two ounces, taken with a spoon troll. The country in the vicinity for many miles is an unbroken forest, teeming with many varieties of game, from squirrels to black bear, and late in the fall and through the winter there are ducks innumerable. Our party was hunting squirrels, no other game being there in season, though young turkeys are very numerous.

We left Memphis, four of us, by the 4:40 A. M. train, crossed the Mississippi on the railroad transfer boat and at 6:30 were deposited in the woods at the twenty-five-mile post. There were half a dozen other members of the club on the train in another party. We soon heard the voice of the Swamp Angel, otherwise Martin Mitchell, coming with wagon and team to convey us to the club house.

The Swamp Angel deserves a passing notice, as he is a local celebrity, and has figured extensively in the Memphis newspapers. He has had several deadly feuds with other swampers, is reputed to have killed a man or two, and has still on hand a feud or two with certain other "angels" in the remote swamps. He is in charge of the club house and property and entertains members at one dollar per day for board and attendance. It was stated in one of the dailies a short time ago that certain timid members of the club were afraid to venture into these woods for fear they might get into a cross fire between the Angel and his assailants. It was accompanied by an assurance from him that they might come without running into any danger. The said Angel has also the reputation of highly coloring his recitals of his own exploits and hairbreadth escapes. I was curious to make his acquaintance. I found him to be accommodating and rather good-natured, much given to talk, and he was a butt for the jokes of the party, notwithstanding the ferocious nature of his talking. I concluded that the tales of his bloody career were much exaggerated, though he has had several shooting scrapes.

We mounted the wagon, ten of us, the Angel driving the two handsome gray mules, property of the club. While on the road the Angel told us that the second night previous a bear had come to the house and captured a 350-pound hog from under the building. He ran out when the uproar occurred, and tried to shoot the bear, a very large one, but had a shell caught in his gun in such a way that he could not use it. The bear carried away the hog, holding it clear of the ground. The next day he found what remained of the hog three miles off. He built a pen trap and placed the remaining portion of the hog in it, and expected to trap the bear. This story was received with incredulity by the party, but three days after he brought to town an enormous bear's paw, quite fresh, also three wild turkeys. His story is that the bear came back and caught another hog, that he crippled it badly with an axe, and it crawled a short distance into the corn, where he found it and shot it next morning. The black bear of the South has none of the pugnacity of his Northern brother, but is always disposed to run away from man rather than fight.

When we arrived at the club houses, there being two substantial and comfortable buildings, built high up from the ground for high water, we found that the Angel had a family —which I had not suspected—a comely dame and three little Angels, pretty children with bright eyes and yellow curls. The madam soon served up a savory and substantial breakfast, and afterward we sallied forth for the squirrels. Captain De Garis, Nick Maletesta's "cub" (a young cadet on vacation), and the writer, constituted our party, the genial "Old Nick" himself concluding to troll for bass.

The extreme dryness of the swamp at this season concentrates most of the squirrels along near the lake, where the cane is very thick and the only available hunting ground is in a wood road running along the lake bank, and an occasional dry bayou channel. So the hunters extended their wanderings for several miles. We had lost the best part of the morning, it being now between 8 and 9 o'clock. It was very warm, and the squirrels were not at all active. A good many were feeding, however, rather quietly, in the thick white oak and tupelo gum trees. I having separated from the others, was alone all day and suffered much from thirst, for these swamps, which have such a vast superabundance of water during the flood season, are extremely dry at the low water period. In fact, a hard rain will leave no visible traces after an hour or two, the water is so rapidly absorbed. The only water which was accessible was in the lake, and that being filled with green vegetable matter is utterly unfit to drink. I am told that Shell Lake is clear and wholesome at all seasons. The inhabitants of the alluvial country rely mainly for drinking water on "drove wells," which consist of an inch and a half pipe driven from twenty to sixty feet into the ground. These afford an abundant supply of water, which, however, is not very palatable to those unaccustomed to it.

About 4 P. M., when I expected to have had my best shooting, a high wind arose and spoiled all further sport. This, combined with thirst and fatigue, drove me back to the club house, some two miles off. Arriving there I got hold of a two gallon demijohn of good Catawba wine, which the sumptuous Nick had provided. This, in conjunction with crushed ice, I found to be about the most palatable allayer of thirst that could be imagined, and my parched mouth and throat and empty stomach received something like a quart of it with great unction.

De Garis and the "cub" had preceded me to the house. De Garis had killed eleven squirrels and the "cub" five I had bagged an even dozen. This was considered very poor sport, though the half dozen other hunters had averaged about ten each, with a leading score of fourteen, making a total for the day of about ninety. Three men came in from that locality a few days after with sixty-seven squirrels and four turkeys. Later in the season, when the leaves have fallen and the air is frosty, the hunting there will be very fine. There is equally good and accessible ground on the Kansas City road, running northwest, and the Mississippi Valley road, running south. There are club grounds established on each of these roads, all easily and quickly reached from Memphis.

After a good rest and a much-relished supper the Angel got out his gray mules and wagon, and we embarked for the railroad to catch the 8:20 train. The swamp was enveloped in Egyptian darkness, and the road narrow, tortuous and full of stumps and large roots, but between the sharp eyes of the Angel and the sagacity of the gray mules, we reached the railroad without accident a few minutes ahead of the train, which, having flagged down, we all boarded; and at 10 o'clock again we landed in Memphis. The next morning I went to my place of business with feet and muscles a little sore from previous confinement to office duties during most of the summer, but much invigorated both in mind and body by the day's outing.

Memphis sportsmen enjoy extraordinary facilities for both hunting and fishing, with excellent grounds in easy reach by several railroads running westward and southward, while all the eastern roads give access to the best kind of partridge grounds. The railroads are very liberal to sportsmen, giving return tickets at two cents per mile for the round trip, that is, one dollar for twenty-five miles and return. One may enjoy a good day's sport with but little cost or trouble, leaving town early in the morning and returning by bed time.

Since writing the above I am informed that the Swamp Angel, who built the club houses on Blackfish Lake, and has not been settled with to his satisfaction by the club, has elevated the "black flag," has overturned the principal building into the lake, and threatens a hot time to any members of the club who present themselves in that vicinity. It is difficult for me to take in this startling news, since it was exactly a week ago that I was over there, and the Angel was then the very pink of courtesy. I am inclined to believe there is much bluster and exaggeration about it.

I wrote the foregoing ten days ago, since which date I have been constantly riding through the counties of Desoto, Tunica and Coahoma, in Mississippi, along the river of that name. Squirrels abound in extraordinary numbers all over the country; all the swamps are alive with them. I found the luxury of young squirrels on almost every table throughout my journey.

I have just read with interest the contribution by "Iron Ramrod," in your last issue. He contrasts the antiquated muzzleloader rifle with the breechloader in squirrel shooting, and certainly strikes a responsive chord, so to speak, in my own bosom. I have never been able to kill small game with any facility with the magazine rifle, though in years gone by, with the muzzleloading, hair-trigger rifle, I could generally hit a squirrel's head.

While in the swamp a few days ago, I took a magazine rifle into the woods. Squirrels were plenty enough, but the woods were rather dark, and whenever I raised the gun to shoot a squirrel I had great difficulty in finding the sights and getting them into line. When this part of the process was accomplished I generally found that the squirrel had changed his position, or did so while I was endeavoring to assign him to his proper position in these arrangements. I did succeed in killing one in four or five shots, and I think the squirrel and myself were equally astonished. I was disposed to attribute the difficulty to my failing powers of vision, but perhaps the trouble was in the rifle's sight instead of my own. There is certainly an existing want of some modern rifle suitable for squirrel shooting. It is absurd to use a gun capable of killing a deer five hundred yards off, to shoot a squirrel twenty-five yards. The little .22 caliber rifles are little better than toys. They soon lead up and then shoot very inaccurately. If facility of loading could be combined with the excellent qualities of the old muzzleloader for small game at short range, the product would be a very valuable weapon. Here is a field for enterprise among gun makers. Coahoma.

Memphis, Tennessee.

WHICH IS THE BEST GUN?

[From an Addendum to Chapter VII. of "Woodcraft."]

WHICH is the best gun, *i. e.*, the most murderous? Because in the present rapid increase of game birds and wild animals, and especially the larger and more dangerous varieties, it is of the highest importance that every sportsman who goes to the woods for a few days' rest and sport should be armed with the most destructive weapon that modern skill could devise. Wherefore we encumber ourselves with magazine rifles and 8-bore shotguns, with a backload of cartridges which we mostly bring back to camp at night; and we tramp around with loads that are mainly useless and always unpleasant, because we wished to be heeled for an emergency, which very seldom or never comes.

Which is the best weapon—the best gun? The answer to that conundrum is very simple. There is no best gun, *per se.*

To quote from myself in Forest and Stream, Nov. 27, 1884: "The best gun for chipmunks or red squirrels may be a light 22-caliber rifle or a .40 caliber light shotgun. But if I had lost a grizzly and were looking for him I would prefer a heavy steel-barreled rifle, carrying a long bullet weighing 2½ ounces, and nearly cylindrical; say one-eighth of an inch narrower at the peak than at the butt, and sharply dished at the peak. Such a bullet is murderous. The gun should be as heavy as I could hold off-hand, and I would load as heavily with powder as I dared. But such a gun for the quiet camper-out and the average sportsman would simply be ridiculous. As well take out a 4-pound cannon."

For the professional duck butcher, a far-killing 4-bore Greener may be the best gun, or better still, a swivel gun, shooting a half pound of coarse shot. And for the market hunters and skin butchers (the back of my hand, the sole of my foot, and an old woodsman's bitterest curse rest on the heads of the entire wolfish tribe) a heavy repeater, a business Sharps, or a Hotchkiss may be the "best gun." For a decent white man, a lover of nature, and a fair gentleman sportsman the "mongrel gun," rifle and shot, will be found satisfactory, sufficiently deadly, and a pleasant, steady, satisfactory weapon to handle. Such guns are made at present, breechloaders, of course, but they all have the barrels side by side, and they are all a trifle clumsy, let alone that they all pull much too hard on the trigger for accurate off-hand rifle practice.

I once had a gun made to order, a short description of which was published in Forest and Stream, Sept. 25, 1884. I quote: "My next gun was made as follows: Rifle and shot, barrels lying vertically, locks, 'over and under,' weight 8½ pounds, shot barrel 14-gauge, rifle 80 round balls to the pound, conical bullet 40 to the pound. It proved the best all-round hunting gun for sporting and general use I have ever owned. Rather heavy for chipmunks, and not powerful enough for grizzlies. But, as I never hunt either, I managed to keep myself pretty well heeled for anything from a squirrel to a deer. Had the gun not gone up in an unlucky fire, it would probably be my favorite to-day."

A gentlemanly writer, "J. J. M.," in Forest and Stream demurred to the size of the bullet as too small. I made a brief explanation, as follows: "'J. J. M.' thinks eighty round balls to the pound rather light, and gives reasons therefor. Let me explain. Say the conical bullet is forty to the pound. Now hollow out the top and bore into it with a large brad-awl, making it something like the modern spatter ball. That is what I did, although I had never heard of spatter or express bullets then. But it was only pleasant pastime to sit in front of a blazing camp-fire during the long November evenings and carefully fit half a dozen bullets with dishing tips; and the bullets were most effective. They threw blood freely from the start, and a deer fairly hit with one seldom got away. I used it in Eaton county, Mich., for an entire season as a deer gun, and it was just as effective as a 12-pound steel barrel carrying forty round balls to the pound, which my partner used. Up to the day before Christmas I had killed sixteen deer and the heavy steel barrel had scored fifteen. Moreover, my deer were killed clean, and I only lost one wounded deer, while my partner lost half a dozen or more with his powerful rifle and large ball. This, however, was rather attributable to our different modes of still-hunting.

It is seldom that two men go in for a partnership hunt so diametrically opposite in all their modes of camping and hunting as Ad. Smith and the writer. He was a powerful, active six-footer, weighing in running order 185 pounds. I was five feet five inches high, weight at that time 115 pounds. He would start out from camp at dawn at a five-mile gait, and arriving on my favorite ground, would hardly move three miles in an all-day hunt. He was constantly jumping deer at pretty long range, and taking chances on stern shots, by which it happened that he had a good many wounded deer to look after, while I crept about silently, or kept still on the runways, and my shots were nearly all tucked snugly in just abaft the foreleg. He made at least four shots to my one, and he did make some remarkable hits at long range—for the woods, while I refused all stern shots at uncertain range, not caring to hit a deer in the hips and chase it all day, because I could mostly find another deer and a better shot with much less trouble. He worked like a beaver. I

took it mighty easy. He could scarcely cook anything eatable, and hated cooking. I was a good camp cook, and liked to practice cookery. He would grill and hang up a deer in five minutes, then dash off after another on the lope. I took an hour to dress a deer, and having saved one, would usually start to hunt back to camp. He had a high reputation as a still-hunter. I had not; but on the day before Christmas I had killed sixteen deer against his fifteen. He got even by going out on Christmas Day while I staid in camp. In fact, he got one ahead of me. Whereat his soul was possessed with a great joy. It would have broken his constitution had he been forced to quit with the Little Yorker one ahead, and I was content. Perhaps it was because we were so opposite that we got along so nicely together. This is digression.

As to the gun question, I have a notion that the coming gun is to be something different from anything yet offered to the sporting public. It will not supersede the double-barrel shotgun with those who prefer pointers, setters and wing-shooting to any other sport. Rather, an all-around gun for general use in outing. Not heavy, weighing from 7½ to 8½ pounds. Breechloader, of course, for your modern sportsman is too far advanced to tolerate a muzzleloader. Rifle and shot. Barrels lying vertically, locks "over and under," rifle barrel on top. The rifle may be .40 or .44-caliber; either is good. The shot barrel 16-gauge or even smaller. The locks, especially the right lock, should go quick, crisp and very light. No man can make fine off-hand shooting at short range with a rifle that draws hard on the trigger, or, what is as bad, creeps. Such a gun should answer all reasonable requirements, while being light, handy, and withal pleasant to use.

I do not like a rifle and shot barrel side by side. If the right hand barrel be the rifle, and the sights are placed between the barrels, the bullet must be on the right side of the sights, and must swerve to the left in order to catch up with the sights. The makers of such guns usually claim that the bullet is intended to come exactly to the bead at 30 yards. If this were precisely so—which it is not—a good shot would miss the head of a grouse at 15 or 18 yards, while at 45 yards the bullet would be past the head and going off into space to the left. The principle is all wrong. Even under the best conditions, where the sights are ranged perfectly on top of the barrel, there is the curve, the trajectory, to reckon for and overcome. And this is enough, without a continual shunting off to one side, which destroys all fine shooting for the rifle.

Let us have the coming gun. Not as a more destructive weapon than any before the public at present, but as a neat, handy, effective tool that a sportsman can learn to love. It will come after a while, when the rage for 10-bore shotguns and magazine rifles has somewhat abated through the scarcity of game and the subsidence of the deer-hog and skin-butcher. It will come in the shape of a light, artistic weapon that any sportsman may be proud to handle. It will not be the best gun for any one special purpose, but, for an all-day hunt in the quiet woods, where it is desirable to be heeled for anything, from a squirrel to a deer, from a quail to a turkey, it is likely to become a favorite with sportsmen as a most satisfactory all-around gun.

There are some valid reasons why such a gun may be the best, under conditions; for instance. Any man who has still-hunted for several seasons has had it happen that a deer came by him at high speed, not hearing or heeding the weak attempts to halt it by bleating, whistling, or any other of the devices known to hunters. Of course, the cool hunter takes chances on a flying shot, and almost equally of course, he misses. I know all about the brag and lies of men who seldom miss a running shot in thick woods. Shrubs, staddles and tree trunks are plentier than deer. And a very small bit of timber will stop or deflect a bullet, let alone that in brushy woods the best shot will miss half the time anyhow, on the merits of aim. But the best point on such chances is that the sharp crack of a rifle is the very noise to stop a flying deer. And here comes in the advantage of the gun I have been trying to describe.

Let us say you are still-hunting in the deep woods, in your moccasins, shod with sheepskin soles, tanned with the wool on, and the wool carefully clipped to a mat ¼ of an inch thick. This is for hunting on leaves. On snow you will wear a pair of lumberman's rubbers, with two or three pairs of heavy woolen socks; and in either case you will make no noise to speak of in slowly picking your way through the forest.

In still-hunting silence is golden. Ergo; hunt still.

Suppose your gun is the improved repeater, and you have crept silently through the deep, dim aisles of the forest for the best part of the day without seeing a flag. At last comes the supreme moment. Your ears catch the soft, velvety thud of a deer's feet, jumping on wet leaves. There she is, a big doe, running at speed and heading directly across your bows. In an instant the rifle is at your face, and you try your most seductive bleat. She does not heed, and you are trying it again, louder this time; but on she comes, and is crossing you within thirty yards when crack goes the rifle and the next instant she comes to a dead stop with head down, ears pricked forward, and her eyes on the spot where that puff of smoke came from.

Now, if you remain motionless as a milestone she will take time to locate the danger either by scent or sight before making her burst for safety. But the slightest noise or the motion of a hand will send her flying.

But you must throw in another cartridge, and down goes the lever, *ker-klut-uk*; back it comes, *ker-klunk*, and the doe is sailing through the woods like a gray ghost, with the nearest tree trunk directly in line with her tail and your front sight. You lost the one chance of the day. A Hotchkiss would not mend matters. A Maynard, Sharps, Ballard or Remington would be nearly as bad. You cannot reload without motion and noise.

Now, supposing you are using the vertical barrels, locks over and under. The mainspring of the under lock is also the guard, and as your first finger rests on the trigger you have only to reach forward with the middle finger and draw the hammer down without taking your eye from the bead. It can be done in one second, and without the least visible motion from the deer's standpoint, because the left hand in front of the hammer effectually hides the slight movement necessary to cock the gun. You can do it without alarming and one such certainty is worth a good deal of pumping the deer that is looking straight at you within less than thirty yards, and shooting. The locks can be made so that both will stand cocked at the same time, and may then be fired one at a time, with the single trigger. But it is better not. Because in that case they draw harder, and what is worse, the second barrel will draw the hardest. Moreover, it is seldom that a still-hunter cares to cock the second barrel until thy first shot is made. And it can be done much more quickle than a person unused to such a gun would be apt to think. As an instance, I once made two shots at a doe on Little Pine Creek that struck her back of the shoulder, and the shots were barely an inch apart, although there scarcely could have been more than a second between the shots. She was running down the bed of the stream, and passing me within twenty-five yards as I made the first shot, and as the first ball cleared the muzzle a wink of the middle finger cocked the under barrel. She made one high convulsive jump, and as her feet came down on the stones I let her have the second shot. She sprang out on the opposite bank, ran about thirty yards, and dropped dead. I gave her the second shot partly because it was such a tempting chance, and partly because I was using a pea ball of 120 to the pound, which a deer would sometimes carry a good way or get away with altogether. It was the quickest, neatest double shot I have ever made with the rifle, and I remember it with more pleasure than I do the lordly old antlered patriarch that I missed with both barrels as he was crossing me at a steady lope about fifteen rods away, on the same hunt. Such lost chances are painful to think of, even at a lapse of twenty years. They do not come back—neither the chances nor the years.

As a special gun for deer hunting both barrels should be rifled, and they should be so matched and put together that either barrel will shoot plum center at 100 feet. At 200 feet the ball from the under barrel will then go a trifle the highest, and at 100 yards it will have gained a rise of some two inches. I used a rifle of that style for several seasons, and it was the best gun for deer I have ever owned. It carried seventy round or thirty six conical bullets to the pound, weighed 9½ pounds, and the bullets came just together at 100 feet. At 150 feet there was no perceptible difference in off-hand shooting, and I missed fewer deer and lost fewer wounded deer than with any gun I have ever carried. I had moulds made to run a shouldered bullet, on the theory that the sharp shoulder would cut harder and throw blood more freely than the ordinary conical bullet; and the theory proved correct. It is the best-shaped bullet for deer or bear I have yet seen. It cuts its full size through skin, meat and bone, but does not fly to fragments on striking a hard substance like the spatter bullet. I think it is the coming bullet.

There is a tide in the affairs of breechloaders and the makers thereof which, taken at the turn, has led some men on to fortune, while some others have got badly broken up. The breechloader has come to stay. Nothing will or can ever supersede the breechloading shotgun for birds, from snipe to swan, though it is likely that time and larger experience will reduce the 4, 8 and 10 bores to 14, 16 and 20, as being lighter, pleasanter and much more artistic.

The modern breechloading rifle, magazine or single shot, is a more important factor in the affairs of nations than is usually supposed. Armed with the Hotchkiss or Remington-Hepburn a regiment can defy a cavalry charge or demolish a brigade armed with the old muzzleloading musket, while it makes a bayonet charge simply ridiculous, and changes entirely the savage front of war.

The coming rifle will be primarily the one that can soonest exterminate our large game, and make the best score at long range. But the game is already so nearly extinct that the skin butchers are quitting the business, complaining that it does not pay. I notice that many of them propose to put in the seasoon in shooting out the stallions from droves of wild horses, with incidental "wolfing," *i. e.*, hunting coyotes for bounty and pelts. I hope they will succeed in "wolfing." Then I hope the Apaches will get in their work, and have equal success in scalping the human coyotes. If after that the Government could manage to wipe out the Apaches, it would increase my faith in the millenium.

Hunting is miniature war. Creedmoor and Wimbledon are simply the preliminaries of the battle line.

The coming rifle is the one that will kill and cripple the greatest number of men in the shortest possible time. This as a military arm.

For general sporting purposes the favorite weapon is likely to be the double barrel I have described. And let me add, it will not always be a breechloader. Rapidity of fire is not so essential to success in sporting as it is deemed. One or two well placed shots will, in most cases, leave the sportsman ample time to reload from the muzzle, and there is no necessity for carrying a backload of shells.

The mechanism of the breechloader necessitates a lot of metal about the breech, making the gun heaviest just where it should be light, and in very cold weather it is most uncomfortable to carry.

It is so handy, however, in loading or cleaning, and can be so rapidly used, that none of the younger sportsmen of the land are likely to give the muzzleloader any serious thought. With them it is obsolete.

For myself, I am rather on the fence. I have both styles, and am heeled for bullet or shot with either. I incline to the breechloader for shot, but rather tie to the old rifle for ball. I can get nearer the center with it in off-hand shooting, and in hunting I can vary the charge according to the game.

And after all, the discussion of the "best gun" is of little account. We have guns enough and deadly enough. It is the game that is lacking. NESSMUK.

IN VIRGINIA HIGHLANDS.

I NEVER see any mention of sora or rail shooting except as detailed by sportsmen who hunt them in tidewater regions. The mode then usually seems to be that the gunner is carried among the reeds and weeds in push boats and thus beats the birds up and kills them. Persons used to that mode of sport, believing also that the rail is not found out of such localities, will with poor grace credit the fact that we frequently, in this far inland section, have an autumnal visit from these little birds. The altitude here is very great, many thousand feet above sea level, it is the very comb of the great water shed, the mountains are high and sharply defined. When the rail sojourn here they are usually found in fields from which the grain has been harvested and which has grown up with rag weed. The largest number I ever saw here was on Aug. 27, 1879, when two friends and myself shot about seventy-five in two or three hours. The rail ordinarily tarry here until the 1st of October; I have seen them later in that month. When they are out of the swamp and grass in meadows they afford pretty sport with dogs. They give out strong scent, and in rag weed fields are not hard to get up.

The sun never shines on a lovelier country than we have here in autumn. It is in verdure a second spring with us. When the sun loses its summer burning power the grass, that has been mown or grazed closely, takes new life. You may now stand upon one of our sharp elevations, and not a bare spot of earth will you see save the roads or freshly-ploughed fields. The meadows, watered by our cool, clear branches, are beautiful with their covering of dark and verdant rich blue grass.

With a friend I went out the other evening to shoot sora. I had one old and one young setter. We put them into the branch, and soon the old fellow, with all his best style, began his low crouching points, the young dog stiffly backing him. We would go to put up the bird, and the old dog would appear worried that he would have to trail the little creeper through the sawgrass, with a repetition of the points. In such places dogs should not be allowed to worry with them. I remember the young dog came to a beautiful stand on one bird, in the old channel of the branch, grown up in sawgrass and weeds. The place was circular, and he roaded the bird entirely around to the branch fifty yards before we got it up. We shot fifteen or twenty that evening. Then went into a field of corn to shoot woodcock. The prettiest work of the evening there was on a woodcock which was flushed and marked down in a spot bare of corn—a small ledge of rocks covered with short grass. We took the dogs to the place and the old dog came to a stand, with that upturned nose you have seen when close on game, and there sat the cock within an inch of the dog's foot, his bill really over the dog's toes, with his weird pop eyes. The old dog at command put him up, and he fell to a snap shot.

Yesterday I was hunting, up a marshy swale, high in the mountain, and a covey of partridges was flushed, when one flew around a point and lit. I took the dogs to water near the spot, and when they were through I sat down on a stump and put the young dog to hunting for the partridge. He was a little too headstrong, so I called him in to chat about it. He reared up, placing his forefeet on my knee, where I sat on the stump. Suddenly I saw his eyes flash up, and he gently slid himself off my knee and bent around the stump in a stiff point. I kicked over some pieces of bark and out came the partridge at the root of the stump—and here the curtain falls. GRAEME.

SOUTHWEST VIRGINIA, Sept. 20.

THE CHOICE OF GUNS.—VI.

IT has already been sufficiently indicated that I am an advocate of the hammerless gun, and if you contemplate buying a gun, and the limit you have fixed will enable you to reach the price of a hammerless, take my advice and get one. There is a good deal of conservatism in sportsmen; they do not readily take up with new things; they are somewhat inclined to old fogyism. This conservatism has, to a greater or less extent, resisted every step in the development of the shotgun to its present stata, and the introduction of the hammerless gun—the greatest of the recent improvements—has not met with the favor of many who use the shotgun. But the hammerless gun has come and it has come to stay, and the gun with external hammers must give place to it just as surely as the flint-lock disappeared before the percussion muzzleloader, the latter before the Lefaucheux pin-fire, and the pin-fire before the center-fire top-snap breechloader. One obstacle to the early introduction of the hammerless gun into general use has been its price. For a long time none could be had below a hundred dollars, and even now there are few made below that price. But the probable increase in number of the manufacturers of the hammerless guns and the application of the principle to a plainer class of guns, will doubtless produce a decline of prices, for there is no reason why the price of the hammerless should much exceed the price of a hammer gun of corresponding grade. Until within the last few months the list price of a plain Harrington & Richardson hammerless was $100; but the Colt Company put a similar gun on the market at the same price, and now the list on the plain Harrington & Richardson is $85. The price of Lefever's plainest gun was $100, and that of Sneider's $130; but the Lefever Arms Company put on the market a plain gun at $75, and Sneider has now reduced his lowest grade to $100.

I was myself one of the many in whose eyes the gun without outside hammers found no favor; but this was because I was unfamiliar with the appearance of the gun, and now that the newness of the sight has passed, the hammerless is far more graceful in outline to my eye than the gun with hammers. My experience was similar when the transition was made from the muzzleloader to the breechloader. I thought a gun without a ramrod had a particularly awkward appearance.

And, without a thorough knowledge of the subject, I was prejudiced against the hammerless gun, because I assumed it was more complicated, no more convenient, and less safe than the gun with hammers. Like many others, I did not even care to give it a trial. This prejudice was, however, removed by enlightenment; and observation and experience have shown me (as it will show you sooner or later, my brother) that the hammerless gun is not only less complicated than the gun with hammers, but far safer. And when you have fairly considered its simplicity, and, consequently, its durability, its safety, its convenience, and the superior facility with which it can be used on sudden and unexpected call, you will at once see the points of its superiority over the hammer gun. For wing-shooting there is no comparison between them; a man with a hammerless will get many shots which a man with a hammer gun will lose, and in quick shooting I am confident that nine men out of ten will do better work with the hammerless than with the hammer gun. After using several hammerless guns of the best English makes and several American hammerless guns, I could not be induced to return to the gun with hammers, nor be induced to take an English hammerless when I could get one of either of several American makers.

The Harrington & Richardson hammerless gun is made under the Anson & Deeley patent. As already remarked, the list price of the lowest grade is $85, of the next grade $100, and so on up to, I believe, $300. The lowest grade is really a "fine gun," very neatly but very plainly finished, entirely without engraving, but with good laminated barrels, fairly good stock, pistol-grip, checkered, rubber butt-plate, and good mountings. In my judgment the $85 grade, or the $100 grade, is the gun to buy, for the additional cost of the higher grades is not justified by the superiority of material or workmanship. And it is true as a rule of all machine-made and most hand-made guns, that after reaching the price of a sound but plain gun, of good material, the improvement in quality does not keep pace with the increase of price of higher grades.

The Anson & Deeley is a very simple and strong lock, one of the simplest and strongest of all the hammerless locks. It consists of but four pieces, namely, the dog, or cocking lever, the mainspring, the tumbler, and the sear, and these are all

in the body of the action. It has no outside parts to collect dirt and moisture, and it is seldom necessary to go into the lock or take it to pieces. But, it must be said here, that when the necessity for cleaning the lock does occur, the average sportsman will probably find it a difficult job to perform, and herein lies a grave fault of the Anson & Deeley lock.

The lifting-cams, or dogs, one for each lock, are hung in the fore-end of the frame, each by a pin passing through its center. One arm of the lever thus formed extends into the metal of the fore-end of the gun, and the other acts upon the tumbler from the under side. When the gun is open and the barrels are depressed, the tumbler is carried back by the action of the cocking lever, compressing the mainspring as it goes, until it is caught by the sear, the nose of which engages in the bent of the tumbler; the gun is then at full cock. The striker is an extension of the tumbler, and reaches the primer through an aperture in the breech. The opening of the gun cocks it, and when loaded it must always be carried at full cock, for the reason than when the tumblers are down their points project beyond the face of the standing breech. There is nothing to arrest the striker or to interpose between it and the primer in case the sear should break or jar out of the notch in the tumbler. There is a device for locking the triggers, and thus decreasing the probability of the accidental fall of the tumblers, but nothing to catch them if they should fall. This device for bolting the triggers acts automatically, and the act of opening the gun locks the triggers, so that they cannot be accidentally drawn, nor the gun be fired in the legitimate way, until the thumb-piece, which is located on the back strap, is pushed forward and the triggers thereby released. The thumb-piece is not countersunk in the Harrington & Richardson gun and the forward motion unlocks while the backward motion locks the trigger.

The cocking of the gun leaves a hole in the breech through which gas from the primers, moisture and fouling find ready access to the lock work. Various remedies have been proposed and tried for this evil; but none have been found to obviate the difficulty, nor will any be found so long as the Anson & Deeley lock remains what it distinctively is—a lock with tumbler and striker in one piece. Some persons will tell you that fouling does not enter the lock through this aperture, and I have even read in print that water poured over the face of the breech would not go in at these holes! It needs no argument to prove that fouling can enter, will enter and does enter. I am sure I have no prejudice against the Anson & Deeley lock; a majority of the hammerless guns I have owned have been guns made under the Anson & Deeley patent. While my experience has taught me the merits of the lock, it has also taught me its demerits, and although the latter have been often pointed out, it is my duty to call attention to the bad as well as the good points. But this matter of fouling has been very much exaggerated by opponents of the Anson & Deeley system, and as much underestimated by its advocates. The former would lead you to think the locks will get foul after a day's use, and the latter that they will not foul at all. My experience is that, with reasonable care, the locks will hardly get so foul in a season's use as to absolutely demand cleaning.

Theoretically, the Harrington & Richardson gun, with its Anson & Deeley lock, is not safe; for, as has been seen, a perfect system not only provides against the accidental firing of the gun from pulling the trigger, but provides means of intercepting the tumblers if thrown by other causes, or in some way makes the accidental firing practically impossible. But practically, I believe it is safer than any gun with outside hammers. The actual danger of jarring off is not very great; such a thing may possibly occur, but its occurrence is not at all probable. As already intimated, I have myself owned and used four hammerless guns made under the Anson & Deeley patent, and have shot in company with others that have used them, and have yet to see a single case of jarring off. I am aware that this is no reply to the argument that the gun may jar off. It is not intended as a reply; I admit the full force of the argument, but it is evidence at least that this jarring off is not of frequent occurrence.

While the extension of the top rib on the Harrington & Richardson is of the doll's-head shape, and a poor contrivance, it is a long way superior to none at all. The gun has no hinge-check, which is necessary to the durability of any gun. It is true much of the weight of a barrel-cocking hammerless gun is taken up in compressing the mainspring to cock the gun; but it is frequently necessary to open the gun when the locks are both at full cock, and, consequently, when none of the pressure is expended in compressing the springs. And for the very reason that the gun is a barrel-cocker, the gun is frequently opened with a jerk, causing a great strain to the hinge and fore-end. So I regard a hinge-check as a much-needed improvement on the Harrington & Richardson hammerless.

But, notwithstanding the defects I have pointed out, I am willing to go on record as saying that the Harrington & Richardson is, in my judgment, one of the best and most convenient, durable and reliable guns in the world for the money. I have never seen a gun of this make that was a poor shooter, and it is decidedly less clumsy in appearance than any other gun made under the Anson & Deeley patent with which I am acquainted.

The Harrington & Richardson is made in 10 and 12 gauge, the lightest weight being 7½ pounds. The standard length and drop of stock is 14x3 inches.

The new Colt hammerless is open to the principal objections that have been urged against the Harrington & Richardson; the triggers only are bolted, the extension rib is bad, the tumbler and striker are in one piece, requiring an aperture through the face of the breech which is open when the gun is loaded; the locks cannot be put at rest when there are cartridges in the gun, and the locks are not detachable, as in the hammer gun, but are imbedded in the frame. Moreover, the lock is decidedly less simple and is certainly no stronger, if so strong, as the Anson & Deeley. The Colt lock was intended as an improvement on the Anson & Deeley, and it is claimed by the manufacturers, and by many advocates of the Colt gun, to be an improvement; but, everything considered, I do not so regard it. The principal difference between the Colt lock and the Anson & Deeley consists in the arrangement of the parts of the lock. The Colt is a barrel-cocker, employing "cocking-pins" to effect the cocking; but both motions of the barrels—first, throwing them back, and, second, bringing them back—are utilized to effect the cocking. The second motion increases the tension of the mainspring and makes the forces required to open and close the gun more nearly equal. This is an improvement in the lock, and is the principal one.

The Colt Patent Fire Arms Manufacturing Company long had this gun in preparation, and doubtless expected sportsmen to find in it advantages over any other hammerless gun. Its use, so far as my observation extends, has not, up to the present time, become very general, but I risk nothing in saying that the well-earned reputation of this company for turning out sound and reliable weapons will not suffer in this, their most recent production. There is, in my judgment, little room for choice between the Harrington & Richardson and the Colt hammerless; it is a matter of individual preference; both are good guns, and either is well worth the price at which it is sold.

The Colt is made in 10 and 12-gauge, and I believe the lightest gun that has been put upon the market is about eight pounds. It is made in two grades, viz., $100 and $150, and these correspond with similar priced grades of the Harrington & Richardson.

The Pittsburgh Fire Arms Company sell a hammerless gun marked with their corporate name. It is not an American made gun, but is made, as I am informed, in Birmingham. Although sold at a higher price, it is certainly not superior to the Colt or the Harrington & Richardson, and in my judgment is not equal to either of these. For reason stated in previous articles, it is unnecessary for me to describe this gun further than to say that it is made under the Anson & Deeley patent and has all the faults of that system.

The last hammerless guns which I shall describe are those made by C. M. Sneider, of Baltimore, Md., and the Lefever Arms Company, of Syracuse, N. Y., guns which seem to me to be superior to any others, whether made in this country or abroad. No other gun possesses so many meritorious features as the Sneider and the Lefever possess. This or that gun may possess this or that meritorious feature, but for every valuable feature you may show me in any foreign gun of any make whatsoever, I think I can show you a corresponding feature in the Sneider and Lefever, and when you have finished pointing out the valuable features of your foreign favorite, the good points of these two American guns will only be half enumerated.

The Sneider hammerless is made to order in the various gauges and weights at prices ranging from $100 to $300, according to the quality of material and finish. It is in many respects different from any other hammerless made. Its breech mechanism is very strong and durable; the points of locking are as far from the hinge-joint as they can be placed on this gun with its length of frame, and the frame, while shorter than that of the Lefever, is longer than that of most other hammerless guns; the top action employed on this gun is so arranged as to be self-closing; the locking bolts are held back until the gun is closed, and the gun may be used, but not so conveniently, if the spring which throws the bolts home should be broken.

The Sneider has two rotating grips, each provided with means for taking up wear. The top grip locks into a lug brazed between the barrels at their breech end and fitting into the solid metal of the breech. This presses the breech end of the barrels downward and against the face of the breech, and prevents the barrels and breech springing apart. The bottom grip locks into a lug placed at the extreme breech end of the barrels. The extension of the top rib (or rather the top lug) has great bearing surface and is excellently designed. The action is exceedingly strong, and inasmuch as the grips are held back until the gun is closed, the wear is reduced to the minimum, but for taking up the wear each grip is supplied with a nut, and by tightening these nuts the wear may be taken up and the grips kept in closest contact with the lugs into which they respectively lock.

The gun has an excellent hinge-check which slips into the frame and is operated like the bolt which is used to hold the barrels to the stock of the muzzleloader. The forward lug on which the gun turns on the hinge-pin, or roll, has in its rear a shoulder which comes in contact with the check and stops the barrels when the gun is thrown open, thus relieving the hinge-joint of strain.

The Sneider is a barrel-cocker. When the gun is opened to load, a pushing lever in the head of the frame is forced by a cone-shaped surface in the fore-end against the hammer-carrier, pushing it backward against the hammer and bringing it to a full cock, where it is held by the interlocking of the notch of the hammer-carrier with the sear. By pulling the trigger, the sear is pressed upward, thereby releasing the hammer-carrier, which is driven forward by the force of the mainspring, taking with it the hammer and exploding the cartridge. The interlocking of the hammer-carrier and sear is positive, and there is little danger of the gun "jarring off" even if unprovided with any safety device; but the hammer-carrier has an extra notch, into which the hook of the sear would engage if it should accidentally jar off a full cock. The gun is also provided with a safty catch which locks both sears and triggers. The button or thumbpiece is placed in the end of the lever that opens the gun, and to lock the gun it must be pressed forward, and there is no danger of the gun being accidentally unlocked. This safety works independently, but it may be had to operate automatically. The latter is, however, objectionable in this gun, inasmuch as the motion is reversed, and after unlocking and firing the gun, the button must be pushed forward before the lever can be operated and the gun opened, thus rendering it far less convenient than the independent safety. The Sneider has spiral mainsprings, coiled around the hammer-carrier, and the maker of this gun guarantees that these "spiral mainsprings will not set one-eighth of an inch in the life-time of a lock." A device is provided for adjusting the tension of the mainspring, which consists of a nut, by the tightening of which the spring may be compressed. This device is of considerable value, the only objection which I have to it being that which I have to Sneider's provisions for taking up wear, viz., inconvenience of use by inexperienced persons. If his devices for taking up wear and for increasing the tension of the mainspring were more simple and could be more readily utilized by the sportsman, I would like them better.

The gun has fixed firing pins to exclude the gas, and is also provided with gas chambers and vents to carry off such gas as passes the firing pins. These gas chambers and vents I regard, however, as practically of little value. The locks are simple and seem to be safe and strong, and are detachable like the locks of a hammer gun, so that they may be readily removed and cleaned.

Taken altogether, the Sneider is a first-rate gun; its principles are sound and it is well made, safe, convenient, durable and symmetrical. Until considerable improvements have been made in the hammerless system, a man might go further and fare worse by taking a gun different from the Sneider. I do not consider it the best hammerless that is made, but I do think it is next to the best and a close competitor for the first place. I think it is better than any foreign gun, and it would be the best in the world were it not for the fact that another American maker produces a better one.

Perhaps a history of the improvements that have been made in the hammerless gun manufactured by the Lefever Arms Company (successors to D. M. Lefever), would show more clearly than could be shown in any other way the various stages through which the hammerless gun has passed until it has reached that degree of perfection presented in the Lefever as now made. This maker has taken step after step, and now offers to American sportsmen the most perfect weapon to be had in the world. His gun always had features which strongly recommended it, and these have been continually improved upon. Until recently, however, the Lefever was cocked by an outside lever, and could not fairly be considered a hammerless gun in the strict sense; for the term implies that no extra motion shall be used to cock the gun, and it not only excludes the old Lefever with outside cocking lever, but all guns in which the cocking is effected by any extra motion whatever, whether the lever be placed on the side, the bottom, or the top of the gun. But since the Lefever has been made a barrel-cocker, and thus its objectionable feature removed, it seems to me to stand at the head of hammerless guns, and therefore, at the head of sporting firearms.

The breech-mechanism of the Lefever is without a superior—and this is faint praise. This gun has a powerful extension of the top rib, dovetailed between the barrels, with a neck and a square shouldered bearing on each side of the neck ¼ inch in thickness and ¾ inch in depth. This extension fits and fastens into a recess in the solid breech which has the same amount of opposing surface against which the square shoulders bear and rest. There is but one bolt, and it locks into the solid steel extension at the rear, four inches from the hinge-joint, thus giving a longer leverage than in any other gun and reducing the strain to the minimum. The bolt is made compensating so that all the wear may be instantly taken up by simply turning a screw, the point of which rests on top of the bolt.

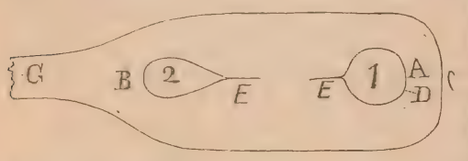
The hinge-joint consists of a ball and socket—the strongest joint known to mechanics. The ball screws into the head of the frame so as to make a perfect compensation, and, as with the bolt, all wear can be taken up by simply turning a screw. The socket is in the lug (the gun has only one lug), and the pressure of the ball into this socket keeps the gun tight. This lug is split, and lateral wear of the lug may be taken up by turning in a long tapering screw with which the lug is provided. The fore-end is also made compensating, and if wear occurs there the turning of a screw takes it up. The gun has the Nichols hinge-check—the best made—and when it is thrown open, an extension, or shoulder, on the rear of the lug engages with the check and prevents strain. The gun is a "top-action," but it is not operated with the ordinary top lever. Instead of that it has a thumb-piece on the back-strap, which I have found more convenient. Pressing forward this thumb-piece withdraws the bolt, where it is held by a trip until the gun is closed. If the spring that throws the locking-bolt home should be broken the gun may be used, and the only inconvenience incurred would be the pulling back of the thumb-piece to carry the locking-bolt into place.

Thus it will be seen that the action is not only the strongest, but wear is reduced to the minimum. More precautions are taken than on any other gun to be found in the world to make it last and remain serviceable. And when wear does occur, the simplest and most effective means are provided for taking it up, means which the sportsman may himself utilize without the aid of any tool but the screw driver. The action and its compensating features seem to me to place it ahead of any other gun; but its lock is in no respect inferior to that of any other hammerless.

The Lefever lock is very simple and strong. As made until recently, it was cocked by means of a straight rod (one for each lock, of course,) extending from the fore-end to a point on the hammer ⅛ inch above the pivot on which the hammer swings. The friction of the inclined point of this rod with a similar inclined surface of the fore-end was found to make light guns cock harder than was desirable, and so the point of the rod that extended into the fore-end was cut off, and cocking levers inserted in the head of the frame similar to those used in the Sneider gun, and the Lefever now cocks very easily. The firing pins are separate from the hammer and are springless. The cock notch is in the rear part of the hammer, and being one and seven eighths inches from the pivot, the trigger pull may be made very light without danger of jarring off. The mainspring is of the ordinary V shape. Each lock plate is provided with a set-screw bearing on the sear, by means of which the trigger pull may be changed at will without taking off or tinkering with the locks. The lock plates are of the bar lock style and may be readily removed. The gun is provided with a safety locking both sears and triggers, and each lock has an indicator which projects when the lock is at full cock, thus showing at a glance or a touch whether the locks are cocked or not. The safety indicator, as the gun is now made, is placed on the back strap and operates automatically, but, if desired, the gun will be made with the indicator in the rear of the trigger guard, so that, when the gun is in position to fire, the pressure of the middle finger against the indicator will release the triggers. The gun may be taken apart and put together with the hammers down.

It is hardly necessary for me to say that I think the Lefever lock better than any other hammerless lock made, and that, as a whole, the gun has no equal. As before remarked, the Sneider comes next in my judgment, and I place it second because I regard the action of the Lefever, its lock and compensating features, superior. In point of material, workmanship, symmetry, beauty of design and perfection of balance, it has no equal among American guns, and, taken as a whole, it has no superior in the world. I do not say that there are not foreign guns of finer finish; and if fine finish were all, a foreign gun might be found to surpass the Lefever. What I say is that, taken as a whole, its principles of construction, as well as its workmanship and material being considered, the Lefever stands at the head. Where durability and safety, and convenience and strength and shooting powers are thought to be things of value, the Lefever will be esteemed, for no gun with which I am acquainted surpasses it in these attributes; and its material, workmanship, beauty, symmetry and balance are equal to anything American and to anything foreign to be had at near the price of the Lefever. I am proud of the achievements of American gunmakers in general and of those of D. M. Lefever in particular.

The Lefever gun is made in various gauges and of various weights, at prices ranging from $75 to $300. AH-PE.



TRY LIGHTER LOADS for game. They will not pound your shoulder; you can shoot with more pleasure, and the work will be just as effective.

A GUN SLING FOR THE SADDLE.

Editor Forest and Stream:

There are doubtless many who like myself find enjoyment in hunting in the saddle, and have experienced the difficulty of carrying the gun even with the horse walking, but when the gait is increased to a trot or a lope, how the gun does thump on one's shoulders! If carried in the hollow of the arm it must be held with one hand, and this prevents the free use of the other in reining, or if carried under one arm (as when afoot and in passing through a crowded street) it hammers away on the knee-cap until in desperation it is placed across the saddle in front of the rider, where one hand must hold it in place and try at the same time to prevent its chafing the rider, the saddle and itself.

For the benefit of those sportsmen on horseback, I wish to call their attention to a simple device which I use for holding a gun. About three years ago while hunting in company with a Spaniard we had occasion to ride some twenty miles in the saddle, part of the way over level ground, where the speed of our horses made the carrying of a ten-pound rifle most annoying. Soon after starting, Manuel drew from one of his pockets a heavy piece of harness leather, shaped as shown in the following diagram:

Passing the opening No. 1 over the pommel of the saddle, he held the end G in his left hand, laid the gun barrel across the sling, muzzle to the left, with his right; carried the end G forward over the barrel and looped the hole No. 2 over the pommel, and pushing his rifle further through until it stopped at the lever, the gun was fast. When he wanted to use the weapon, the right hand withdrew the gun partly out, and the left hand threw off the end G. With a short barrel the gun can be easily withdrawn without unlooping G.

The "life size" pattern which I inclose is taken from the sling which I have used more than two years. The width of Manuel's sling was 3½ inches, but I find 5½ inches gives a better bearing for a gun.

My sling is made for a double barrel shotgun, and yet answers for a rifle, if one hand is used to steady it when loping.

The important measurement is from A to B, which for a shotgun is about ten inches. I suppose a rifle sling would need to be one or two inches less. Make it of thick, pliable harness leather, which may be given a fancy finish by stamping. If you cut one of 3½ inches wide, make AD ¾ inches, and the other end in proportion. If 5½ inches wide make AC 1¾ inches. If the openings 1 and 2 (especially 2) will not readily pass over the pommel, make a cut of half an inch or more at the bottom of each as shown by the dotted lines EE. The holes should be about the size of the neck of the pommel, two inches in my sling.

Understand that the gun does not pass through either 1 or 2, but rests in the space between them. When carrying a magazine rifle with cartridges in the magazine I keep the gun horizontal, with one hand resting on the stock. If carrying a shotgun, and you get off to walk, leading the horse, it is well to tie a pair of saddle strings over the barrels. The weight of a rifle barrel will keep the muzzle down, with the gun at an angle of about 45°. I have had a gun fall out but once, and that was a shotgun. My horse stepped into a badger hole full of water and threw me, and in plunging to regain his feet the muzzle was thrown up and this allowed the gun to slip from the sling.

The device may be familiar to many, but it was a revelation to me when I saw the use for which it was intended. Many persons to whom I have given patterns and explained its use express themselves in highest praise of its convenience.

I have seen a long leather holster used for carrying a carbine in the saddle. It was attached to one side of the saddle in front and held the carbine in a perpendicular position, with the butt-plate a foot above the pommel. It did not appear to me as if the gun could be quickly withdrawn, and it certainly was more cumbersome than the sling I have described. W. E. B.

Oakland, Cal.

A FLOCK OF DUCKS ON RYE POND.

Editor Forest and Stream:

Jack and I were awakened from a sound sleep by Uncle John, who informed us that our breakfast was ready and that we must turn out "spry, lively," if we were "going up to the pond after those ducks that morning." Uncle John is an old gentleman who has passed the allotted three score and ten, but is almost as straight and active as a man of thirty. He is a good shot and a great lover of field sports. Many a story has he related to us about his experience in years gone by, in moose and deer hunting in Canada and Northern New York, when with the old-fashioned flintlock muzzle-loader and globe bullet, snowshoes, etc., he has supplied the larder with meat.

Long before daylight old Billy was harnessed to the express wagon and we were on the road to Rye Pond. Uncle John was armed with a double-barreled muzzleloading shotgun that had "seen service for forty years," he told us, and he had never known it to fail him: so if we found the ducks he wanted to "show us that there was some virtue in the old gun as well as our new-fangled breechloaders." He used as much powder as he thought suitable for it, and the same rule applied to his method of measuring the charge of BB shot. His proportions of powder and lead, he informed us, was "about a bushel of powder to three pecks of shot." We arrived at the pond about daybreak, and it was agreed that Uncle John was to go up to the feeding ground on one side of the narrow pond and do his best at crawling upon them, while Jack and I were to go further up and pay our compliments to them as they flew past.

With a field glass we discovered that the ducks were there, as had been predicted, and we each started for our separate posts. Jack and I soon arrived at a good location, where we found some good natural blinds in the form of some young cedar trees. We waited until our patience was nearly exhausted, for we could see the ducks very plainly from the blind about a hundred yards down the pond. However, there is an end to all waiting, and presently there was a flash, a crash and a roar, quickly followed by another that seemed to shake the earth, and as it echoed and reëchoed between the hills and mountains we realized that Uncle John had "got in his work;" and as we saw the ducks coming for us head on, we hugged the ground as close as possible. We were intending to wait until they had passed us before we delivered our fire, but when fifty yards from us, and coming straight for us, Jack exclaimed, "Great Scott, how they are climbing! up guards and at them."

As Jack jumped to his feet the birds sheered off sharply to the right hand, and as Jack afterward expressed it "they climbed a little more than straight up." There were five of them that had survived the terrible noise of Uncle John's muzzleloader, and Jack brought down two with the first barrel and made a clean miss with the second. Now comes the time if ever to test the shooting qualities of the choke-bored ten-gauge, as well as the shooting of the man behind it. Three large black ducks sixty yards away, and climbing for all they are worth. There is one fifteen feet ahead of the other two, which are close together. The gun is carfully held a little ahead of the leader, the trigger is pulled and down come the two rear ones. In sheer desperation I try to get some kind of a sight away ahead and I believe that the gun went off on its own account (whether accidentally or intentionally I am unable to say), but at any rate the duck came down, down, and struck the water with a splash.

"Well," exclaimed Jack, "there is one thing certain, and that is that flock of ducks are all here just the same as before we fired into them, an occurrence which I never before witnessed."

We soon retrieve our birds, and just as we are about to start down to where Uncle J. is, the old muzzleloader roars again and a cripple is stopped in his endeavors to get away. We soon hail the old man and inquire what he has been about. "Well," replied he, "when this old gun goes off she goes for game, and the first barrel stopped four and when they arose from the water I gave them the second and two more came down, but one of them I had to use that last charge on." We were fortunate to find an old boat with which we retrieved the ducks, and as we made our way back to the team we felt that there is something to live for in this world besides the almighty dollar and that there is something in outdoor sports and recreation that prevents a man from ever growing old. For here is Uncle John as full of joy over our success as a boy of sixteen. May he never grow old.

On the way home Uncle J. suggested that "we cut across the fields with our guns and perhaps we could get some shooting." We were going up hill in an old road, the use of which has long been discontinued for public travel, when Jack suddenly wheeled around, and discharging both barrels in quick succession, succeeded in bringing down a wild pigeon at long range, the first that I have seen for several years. When I was a boy (which I do not care to say was how many years ago) wild pigeons were very plenty, and about the last of August we always began to hunt for them wherever we could find wild cherry trees or buckwheat fields, and we could generally kill all that we wished to compound our pot-pies with, but they are a thing of the past here in New England, and it is seldom that I see one or hear of their being shot.

We arrived at the house before noon, pretty well tired out, but our appetites were as sharp as a schoolboy's, and the way that we disposed of broiled grouse, potatoes, johnny cakes and fresh milk was a caution to dyspeptics. After dinner the shotguns were cleaned and packed in their cases, for we have only one more day, and the rifles are to be used, the result of which I will tell you in another letter.

Iron Ramrod.

Somerville, Mass.

Canada and Vermont.—Highgate, Vt., Sept. 23.—Since the commencement of the open season for fowl shooting the writer has rambled with Greener and Irish setter over a portion of the Provinces of Quebec and Eastern Ontario, as well as through the northwestern part of my own State, and can report woodcock, ruffed grouse and plover as being plenty, and native-bred duck numerous, gray squirrels scarce, coons and foxes fairly plenty. Snipe very scarce; in fact as far as our marshes here go, none. The continued high water here last spring prevented them from nesting here. So there are no natives, and it is too early for flight birds unless the present cold storm which has covered our hills with snow brings them. A large number of duck bred in our marshes during the past summer, but they were during the first few days of the open season subjected to such a heavy fusilade from the breechloaders that they left for quieter climes, and the B. L.'s will remain idle until the late duck arrive. It is not the sportsman who drives our native birds away so early in the season, but it is a gang of fellows who are out, it would seem, for the sole purpose of burning powder. If a duck comes in sight they pump cartridges into their guns and blaze away as fast as possible until the bird disappears from view; they kill no game but drive it away. We are greatly troubled here with this kind of a nuisance; more so, I believe, than in other localities, unless it is in the vicinity of large cities; and this evil is increasing rapidly. Who can devise a remedy for it?—Stanstead.

Three Loons at Two Rifle Shots.—*Editor Forest and Stream:* A little incident occurred on Massapequa Lake a few days since which is really entitled to a public notice. Mr. Wm. Robison, of the New York Stock Exchange, killed with his repeating rifle three helldivers in two shots. Of all the birds that swim, helldivers are probably the most difficult to shoot on the water, as they swim with their backs level with the surface, and nothing exposed but a slim neck and small head. The first shot was at a single diver about fifty yards, putting a bullet through the neck. The second was at two birds nearly one hundred yards distant, the bullet passing through the necks of both, and of course both were instantly killed. A shot so remarkable almost challenges belief, but having seen the birds and knowing the facts I can attest the truth of the above statement.—W. F. I. (South Oyster Bay, L. I., Sept. 24).

Cahoots.—I see the word cahoots has called out some correspondents, with more of less of witticism and criticism. It is a good, strong American word. True, it may be applied to a partnership of thieves, as may any word that implies partnership. But it will apply as well to bank presidents as to bank robbers, and it stands for a little more than partnership with hunters and woodsmen. It means equality and fraternity. An equal sharing of pains and pleasures, profits and losses, and that each stand by the other in all dangers and difficulties. In short, it means cahoots.—Nessmuk.

"Woodcraft" Outdone.—*Editor Forest and Stream:* Does not the wise author of "Woodcraft" recommend to black-fly-pestered humanity to swab on the insect repellent and abstain from ablutions until safely out of the woods? Is "Nessmuk" a Miri or an Abor? This is what those primitive folks do when they go hunting: "I will now tell you a funny custom, and a very dirty custom, among the hill tribes about here, viz., Miris and Abors. When they go on an expedition of this sort, and they do not know how it will turn out, life or death, they cannot wash their faces or hands—in fact, they must not touch water, except for cooking and drinking—until such expedition be over; in other words, until they return. If they do, the expedition will come to grief, they will come to harm, they will not be able to perform what they went to do, and all sorts of things will happen. You can imagine these poor ignorant people's consternation to see Needham and I having a jolly good bathe and putting the stopper on all that by shaving. This nearly drove them wild with fright, and we could not get them steady until we had used very forcible language." Did the "Woodcraft" man go to the hills of Western India for his anti-fresh-water fancy?—Meat-Hawk.

A Massachusetts Bear Hunt.—Worthington, Mass., Sept. 28.—*Editor Forest and Stream:* Sunday, the 20th, was a day of great excitement in town. As W. Hayden was on his way to church, he saw a bear cross the road near the center of the town. The news spread, and after an hour two dogs, one belonging to Mr. F. O. Beach, the other a young hound belonging to Mr. A. C. Stevens, were put on the track, but showed much fear, and it was some time before they could be made to follow. At last the bear was started, and after a run of three miles the dogs came up with him, but were no match for him. As the men came up he ran back toward the center, but there were so many men out he was soon headed off. One man fired at him twice, but did not stop him. Soon he came upon a boy, who shot at him about twenty feet away, and after two shots and the use of a club by a man he was at last killed. This is the first bear that has been killed in this town for more than seventy years. It is thought to be one of three seen west of here some weeks ago. It was a yearling and weighed ninety pounds. The skin has been mounted by C. Bates and will be placed in the public library in this town.—Fox.

Philadelphia Notes.—The rail season thus far has been a very unsatisfactory one, and but five birds have been killed. When good tides occurred the rail had not arrived, and since their coming there has not been water enough to allow pushing to where the birds keep. I have no doubt there are the usual number of rail on the grounds, but it will take a storm tide to reach them. Reed birds have about all gone but the crippled ones. Snipe are dropping in and teal ducks are becoming plentiful. I hear from the Lehigh Valley that woodcock have begun to arrive, and those new comers from northerly sections joining the birds that have bred in the valley make the prospect of sport good at any time now. A few flocks of creakers, jack snipe they call them here, occupy the mud flats of the Delaware at low tide, and are in good condition; but hard to approach. Some little yellowlegs are with these flocks. Although somewhat early, some black ducks and teal have reached Tuckerton and Barnegat Bay, N. J. They are protected (so called) by the law for a little while yet in those waters, but are regularly gunned for as soon as they show themselves.—Homo.

Washington's Testimony.—Among James Parton's extracts from Washington's diary I found the following: "Went hunting after breakfast and found a fox at Muddy Hole, and killed her after a chase of better than two hours, and after treeing her twice, the last which time she tell dead out of the tree, after being there several minutes apparently well." That settles it. George Washington, although a Virginian, "could not tell a lie" (Moncure Conway to the contrary notwithstanding) about so serious a matter as to foxes climbing trees.—J. L. Davison (Lockport, N. Y., Sept. 22). Tell "Skeptic" foxes do climb trees, at least certain trees on certain occasions. Early in the morning, one day last winter, my boys discovered a red fox in an apple tree in my orchard, eating frozen apples. The tree was a little slanting but he was well up in the top.—J. G. R. (Bethel, Me.).

They Tramp Hard but Get no Birds.—Springfield, Mass., Sept. 28.—*Editor Forest and Stream:* Messrs. Bradford, Colburn and S. T. Hammond, of this city, have been out three successive Saturdays tramping the grouse covers. They have worked faithfully, worked hark, worked persistently; have put in all their hunting sense, have banged away singly and all together; have gone out each succeeding week with renewed determination, and have halted only for a hurried lunch at noonday, yet not a feather have they scored. They claim that the birds have all been educated up to the fourth notch, so to speak; and this excuse, though pretty lame, is perhaps the right one. Messrs. Colburn and Bradford are tired, but Mr. Hammond says he will score a grouse if it takes all season.—Santiago.

The Kind of a Gun he is.—A correspondent of the Florence, Wis., *Mining News*, who evidently has some sort of a grievance against one of his neighbors, says of him: "He did not say how much time to give the homesteaders to skin out, but they had better not wait for any ceremonies as he claims to be a higher gun in authority than President Cleveland, but what kind of a gun is not mentioned. I believe he is too poorly constructed to be called a cannon and the material is too soft for a musket, he has neither lock, stock nor barrel, there is not sufficient material about him to make a ramrod, nor a cartridge, nor even a wad. He is not a percussion cap, nor a revolver, and I cannot see that he has any claims to anything higher than a small pop-gun made from dogwood."

Leavenworth, Kan., Sept. 25.—Prairie-chicken shooting is very poor this year. I think it is because cold and wet weather in the spring prevented the eggs from hatching. Teal ducks are plenty in the lakes in the river bottoms. In company with several others made a bag of 42 the other day; but going over a few days after only got six wood duck. The flight is very irregular. Hearing so much about wild rice, I would like to know something about it. What depth of water does it require, and does it grow well in Kansas? Quail promise to be quite plenty, and our sportsmen are anxiously awaiting the time when the law will permit them to hunt, Oct. 1.—Nimrod, Jr.

PENNSYLVANIA GAME.—Athens, Pa., Sept. 21.—Squirrels are very scarce here this fall. Quail hatched well; several coveys can be found within a mile of town. Ruffed grouse are plentier this fall than they have been for several years, but some pot-hunters have already been shooting the young, and no one seems willing to be witnesses against them. I heard of one case where quail were killed a month ago. I did not know such men were loose around here. The gun club are now looking up such parties and will make it unpleasant for them if detected. The gray rabbit is so thick as to be a nuisance, and farmers are killing them off to save their fruit.—PARK.

WIRE CARTRIDGES.—St. Cunegonde, Montreal.—I own a light gun, 12-gauge, not choked, which I prefer to any other for snipe shooting, my favorite sport. I have been in the habit of carrying a few of Ely's wire cartridges loaded with one ounce No. 4 chilled English shot, and three drams Curtis & Harvey. With these I frequently bring larger birds to bag and at longer ranges than I find practicable with ordinary cartridges. My gunsmith here tells me that using these wire cartridges will ruin my gun in time and urges me to discontinue their use, but I am loath to stop them. Can any of your readers give me points? Will they injure the barrels? —N.

Sea and River Fishing.

THE COMING TOURNAMENT.

A MEETING of the Committee of Arrangements was held in Mr. Blackford's laboratory on Tuesday, Sept. 29. On account of the absence of Judge McGown, Mr. Endicott took the chair. In consequence of the absence of so many members in the country at present, it was decided to postpone the date of the tournament to Wednesday, Oct. 21, and condense the programme so that it can be finished in one day. It was moved that only one amateur class in single-handed fly-casting, one in expert, one in salmon, one in heavy bass casting and one in minnow-casting for black bass be held, five in all.

Mr. Blackford moved that a sufficient sum be appropriated to purchase gold medals for first prizes in all classes. Letters were read from prominent dealers in fishing tackle offering many handsome prizes.

The Committee on Grounds reported that the Park Commissioners have granted the use of Harlem Mere for the purposes of the tournament.

The Committee on Rules reported that the following changes have been made: In minnow casting for black bass the contestants will be allowed to cast either under or overhand, as they choose, instead of confining them to the underhand mode of last year. In heavy bass casting the lane was abolished. In single-handed fly-casting the casts for delicacy and accuracy shall be made at the same time, and these points will be left to the judges. As the dinner of the Ichthyophagous Club occurs on the evening of the tournament the annual dinner of the Association will be omitted.

The following are the amended rules for 1885:

Rule 1. All persons competing for prizes shall pay an entrance fee in each contest as follows: Members, $2; non-members, $5.

Rule 2. No one shall be permitted to enter an amateur contest who has ever fished for a living; who has ever been a guide, or has been engaged in either the manufacture or sale of fishing tackle. The judges in the different classes shall appoint a member to see that the tackle is at all times in accordance with the rules and requirements of the Association during the contests. The judges in any particular class, on appeal, shall have power to decide in all matters relating to entries, and their decision shall be final.

Rule 3. No trout rod shall exceed 11 feet 6 inches in length, and it shall be used with a single hand.

Rule 4. In single-handed fly-casting any style of reel or line will be allowed, but a leader or casting line of single gut of not less than eight feet in length, to which three flies, one stretcher and two droppers, shall be attached.

Rule 5. No allowance of distance shall be made for difference in length of rods.

Rule 6. Persons entering these contests shall draw lots to determine the order in which they will cast and will be ready to cast when called by the judges.

Rule 7. Each contestant will be allowed five minutes to cast for distance and will then stand aside until called in his turn to cast for delicacy and accuracy, when he will be allowed five minutes for this purpose.

Rule 8. The distance shall be measured by a line with marked buoys stretched on the water; said line to be measured and verified by the judges at least once each day of the casting. A mark shall be made from the stand from which the buoy line shall be measured, and the caster may stand with his toes touching this mark, but may not advance beyond it. Should he step back of it, unless directed so to do by the judges, the loss in distance shall be his.

Rule 9. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important. A contestant may claim time for repairs, which shall be allowed by the judges, or the judges may order the next on the list to cast while repairs are made, in their discretion.

Rule 10. In the absence of an appointed judge the committee will fill the vacancy.

Rule 11. Salmon Fly-Casting.—The foregoing rules shall govern, except that the rods shall not exceed eighteen feet in length, and may be used with both hands, and that only one fly will be required.

Rule 12. Black Bass Casting.—All general rules which do not conflict with the following special rules shall govern. No rod shall be less than 8 nor more than 10 feet, nor less than 7 nor more than 10 ounces. Any black bass multiplying reel may be used; but clicks, drags, or any device to control the rendering of the line, except the thumb, will not be allowed. Lines shall not be of less caliber than No. 6 (letter H) braided silk, or No. 1 seagrass, or corresponding sizes of other material. The weight of the sinker shall be one-half-ounce, the same to be furnished by the committee. In casting but a single hand shall be used. Each contestant shall be allowed five casts, the longest to count, and then will be allowed five minutes to cast for style and accuracy. The scale shall be the same as in fly-casting, viz: Distance, the longest cast in feet; style and accuracy, 25 points each.

Rule 13. Heavy Bass Casting.—Rods shall not exceed 9 feet in length; any reel may be used, but the line shall be of linen not less than No. 9. The casts shall be made with sinkers weighing 2½ ounces. (These will be furnished by the committee.) Each contestant will be allowed five casts. His casts shall be measured, added and divided by five, and the result shall constitute the score.

BASS SIZES AND WEIGHTS.

Editor Forest and Stream:

Last spring there was some controversy in your columns regarding the weight of a ten-inch black bass. Below I give the weight of a few small bass that I caught in the Missisquoi River in this town:

June 15	11⅛in. 11 oz.	July 3	10½in. 7½oz.
June 16	10 in. 8 oz.	July 6	11¾in. 12 oz.
June 17	11⅛in. 9 oz.	July 15	11½in. 9 oz.
June 19	10½in. 10 oz.	July 18	14 in. 20 oz.
June 25	13½in. 19 oz.		

Please let us hear from the other gentlemen who were interested in this subject. STANSTEAD.

THE ICHTHYOPHAGOUS CLUB.

A MEETING of the committee was held at the office of Mr. E. G. Blackford, on Tuesday, Sept. 29. There were present Mr. John Foord, President; Mr. Blackford, Head Caterer; Mr. C. M. Miller, Prime Taster; Mr. Fred Mather, Poet Laureate, and Mr. Barnet Phillips, Naturalist.

The Head Caterer presented an invitation from Messrs. Weatherby & Fuller, of the Buckingham Hotel, asking the honor of entertaining the club. This was accepted and the date was fixed for Wednesday evening, Oct. 21, at 6:30.

Mr. Francis Endicott was added to the committee and delegated to provide the necessary quantity of sand fleas for a bisque. Mr. Blackford suggested that the club experiment with starfish. Mr. Mather was ordered to furnish mantis shrimps, horsefeet, and sea spiders.

Mr. Phillips proposed a tea of sea-weed and agreed to provide the material. Mr. Foord promised a baby alligator and Mr. Miller suggested that porpoise liver might be acceptable. Then with mournful glances at the tank in which the electric eel killed the hellbenders and then died from the exertion, the committee adjourned. Tickets can be obtained at Mr. Blackford's, price five dollars.

STRENGTH OF HOOKS.

Editor Forest and Stream:

Through the courtesy of Mr. Mather I have received samples of spratt hooks, manufactured by Samuel Allcock & Co, of Redditch, Eng. They are size No. 5 as nearly as I can judge, and I have compared them with Harrison's No. 4 sprout in the following tests. Each hook was fastened in a vise, three-eighths of an inch of the end of the shank being between the jaws. Pressure was applied to the hook by means of a spring scale, coupled to the hook with a small cast iron ring, the inside surface of which offered a practically flat surface for the point of the hook to rest against. Five hooks of each kind were selected indiscriminately. In the first test, pressure was applied up to five pounds, in the second six. The following table shows the breaking strain of those which were broken:

Makers.	Pounds Pressure.					Pounds Pressure.				
Allcock	5	5	5	4½*	5	6	6	6	—	5½*
Harrison	3½*	3¾*	5	4½*	4*	—	—	6	—	—

*Broke off under the beard.

Of those still unbroken one of each kind was tested up to seven pounds, at which point the Allcock hook straightened out to such an extent that it slipped out of the coupling ring and sprung back in such shape that it would still hold a fish under ordinary circumstances. At seven pounds the Harrison hook slipped out of the ring and broke into pieces, and the only part I could find was the end of the shank between the jaws of the vise. The Harrison hooks being made of heavier wire should have withstood the harder strain; the opposite, however, was the case.

While on this subject I will state that I bought last season of a large tackle dealer in New York half a dozen each of trout and lake flies, that were rated as highest quality; and with what I should call fair ordinary usage the most of them were either broken off under the beards or the beards were broken off. Several of my angling friends have complained of the same trouble, and as the hooks were bought of different dealers, I incline to the belief that a really first-class hook is the exception and not the rule. I inclose the hooks and fragments which remained after the tests. You will note that the three Allcock hooks are still fit to catch fish.

E. A. LEOPOLD.

NORRISTOWN, Pa., Sept. 16.

FLY-CASTING FOR BLACK BASS.

SOME weeks ago, while at Rawley Springs, Va., I had the pleasure of a trip to Pendleton county, West Virginia, along with my friend, Benjamin Berry, of Baltimore, who is one of the most skilled fly-fishermen of the day. We went to fish the South Fork of the South Branch of the Potomac for bass; and enjoyed a lovely drive over the mountains and four days' fine sport on the stream. The water was low and extremely clear, and the fish were taking no notice of any sort of bait, but we found them rising readily to the fly and caught as many as we cared to. In that condition of the water bass will, I think, always be found to take the fly much better than the bait.

I agree with Dr. Henshall and so does Mr. Berry, who has devoted himself to trout exclusively for many years, that the future "old reliable" of the game fishes of the United States is the black bass. In the South Branch we caught exclusively the small-mouth variety. It is by some said that both the large and small-mouthed sort are found in the Potomac. I believe they are wrong. I have fished from Long Bridge to the fountain head of the great river and have never yet taken a large-mouthed bass in the Potomac or any of its tributaries. It is my opinion that a small-mouth black bass of a pound and a half to two and a half weight is as gamy a fish as exists. The bass will rise but once to the fly, rarely indeed a second time, whereas the trout will usually rise a second and even a third time if not struck pretty hard by the hook. Moreover, if the bass fly be but slightly meager in its dress, you are very likely not to get the fish well enough hooked to hold him. My experience teaches me that a small hook well covered is much better than a large meagerly-dressed fly. A stone-colored or light brown wing over a green body perhaps topped with yellow, is about the right color, such as the Seth Green or Ferguson. A stone wing over a red body does very well; but if there are any fall fish about, and they abound in the South Fork, they seem to be so thoroughly infatuated with the red that you will have to catch all of them out of a pool before you get at the bass. Of course, all fly-casters know that it is pretty much of an effort to cast three large heavily feathered flies with a delicate rod. I often discard the traditional whip and use only one fly. My experience is that 95 per cent. of the bass are hooked on the stretcher at any rate, the droppers are of no use.

Bass fishers know that you must make a good long cast to get at bass in clear water. Fly-casting for bass is the analogue of still-hunting deer. I advise the use of a light trout rod with a long leader and one moderate-sized, stout-bodied and ample-winged fly. I don't like hackles for bass. If the water is smooth and glassy, don't cast in that place until the breeze riffles the surface; it will be "no good."

In wading, discard all boots and waterproofs. Get a pair of hob-nailed, broad-bottomed brogans, fitting comfortably over wool socks, and a rather close-fitting pair of blue cotton pants, and a short-tailed gray flannel shirt, no coat, but a short jacket of canvas, and take the water waist deep without hesitation. Keep wet while you are fishing and dry yourself as soon as you are done. This beats all the gum boots and water-proof breeches out of sight. Some say fish up stream, some say fish down. My rule is to take the pool so as to keep the deep water where the fish lie on my left hand, whether in so doing I must begin at the top or bottom of the pool.

There is one art in getting bass to rise to the fly, that is to say, don't scarce the fish by plunging and slashing around; be deliberate, keep out of sight, and mind what you are about. If you are looking at the clouds, or scratching your head, or changing your quid when the fish rises you are certain not to get him. Any good fly-rod will do. One of the best I have tried I made myself about fifteen years ago, middle joint and tip, hornbeam, butt red cedar. I am just finishing a very beautiful rod of Osage orange, or so-called bois d'arc. I think it will perform well. This wood is one of the most beautiful when polished, and makes a bow three times as good as the best lancewood. Split bamboo will do when one can't do better. An ash rod with lancewood tip is good. Hornbeam is the best, I have tried all kinds.

M. G. ELLZEY, M. D.

THE STRIPED BASS LAW.

THE following from the Brooklyn *Eagle* will be of interest to our striped bass fishermen. We have referred to this subject before, and in our editorial columns will be found reference to it again. The *Eagle* says:

The Anglers' Association of the St. Lawrence, of which Mr. John Flannegan, editor of the Utica *Observer*, was president, caused to be introduced into the last Legislature an amendment to the game laws passed in 1879. In the amendment was the clause that "no person shall expose for sale or have in his possession, after the same has been killed, any black bass, Oswego bass, striped bass or muscalonge, save only from the twentieth day of May to the first day of January." This amendment was passed by the Legislature May 9, and soon after received the Governor's signature. It was then transmitted to the State Fish Commissioners—Robert B. Roosevelt, of New York; Richard U. Sherman, of New Hartford; Eugene G. Blackford, of Brooklyn; and William M. Bowman, of Rochester, for enforcement.

There come to the New York markets (from which all the Brooklyn markets are supplied) two kinds of striped bass—the fresh-water fish and the salt-water fish. The former is found in lakes in the northwestern part of the State, and very rarely gets as far south as the New York market. But of the salt-water bass during the months of February and March, between one and five tons arrive each day from South Carolina, which is the principal place of supply. After the season for other fish has closed and during the Lenten season, the salt-water striped bass is about the only fish worth much that the dealers have to offer. By the wording of the amendment, however, the importation or sale of this fish was prohibited except from May 20 to Jan. 1. Commissioner Blackford said to an *Eagle* reporter: "I saw that the enforcement of this amendment would work a great injury to the fish dealers' interests in this State, to the extent of between $200,000 and $300,000 a year, as near as I could estimate, and I at once called a meeting of the Fish Mongers' Association here in New York, in order to get the general sentiment. They all looked upon the matter as I had, and believed that the change must have been brought about by somebody having malicious intent, or who was wholly ignorant of the laws governing fisheries. I also wrote to my colleagues and at the same time tried to find out who instigated the change. I found that it had been passed at the wish of the Anglers' Association of the St. Lawrence, a pleasure club. I received letters from the other Commissioners, who had come to the same conclusion as myself on the subject, that is, that this Anglers' Association, with an eye to the protection of fish in the lakes and other waters of this State, had ignorantly or carelessly given such wording to the measure that a literal reading of it would not only have bearing upon the striped bass in the waters within the State, but also govern striped bass indigenous to waters outside of the State. I wrote to the Anglers' Association to ascertain their intention, and received the following reply from the secretary:

ALBANY, July 2, 1883.

Eugene G. Blackford, New York State Fish Commissioner:

DEAR SIR—The striped bass referred to in the law means the fresh-water striped bass and no other. This fish has what may be called lateral stripes, which run around the body, and is entirely different from the others. The question was raised while the bill was before the Senate and it was distinctly understood that it was the fresh-water fish, and nothing else, which was intended by the law.

* * * * * *

In the game law which has been in force since 1879 striped bass has been constantly mentioned in connection with the other fresh-water game fish. Under the old law it was illegal to have it in possession. We have never had any doubts as to the meaning of the old law, that it was illegal to have it in possession during the closed season, but in amending the law on some other points we merely made the law more clear, and in doing so mentioned precisely the same fish that were mentioned in the old law.

I sincerely regret that it is causing you and other honorable dealers any trouble or worry, but you will see that there is no reason for it, and if there was our association cannot be held responsible, for as to this part of the new law it was the old one re-enacted. Yours very truly,

W. W. BYINGTON.

"By this," continued Commissioner Blackford, "it was clear that the law did not intend that the importation of salt-water

striped bass should be in any way interfered with, but only that the catching or exposing for sale of fresh-water striped bass should be prohibited between the twentieth day of May and the first day of the following January, and acting upon this knowledge we commissioners so read the law and have so enforced it, feeling confident that should a case concerning this matter be carried to court the interpretation would not be the letter of the law, but the intention of the law makers. It would have done an immense damage to this market if the salt-water bass had been excluded, for we would not only have missed the fish here, but have seen them placed on the Philadelphia and Baltimore markets. As for the fresh-water striped bass, probably not so many come to the New York market during the whole year as come in one day in the season of the Southern salt-water bass. At the next sitting of the Legislature the Fish Commissioners will try and have this difficulty cleared up. As to the remark in the foregoing letter, that after all the Anglers' Association had in this amendment but reiterated the old law, though that might not have been questioned, let me say that this is not true. The only statement there is a prohibition of the catching, selling or exposing for sale of a striped bass weighing less than half a pound.

"We have also had some difficulty with regard to brook trout. Hitherto the closed season has been from the first day of September to the first day of May, thus restricting the time of fishing one month more than under the old law. But this is not all. From this restriction both Queens and Suffolk counties have immunity, and though a man may not find a brook trout in a New York or Brooklyn market during the month of April he may go into Queen or Suffolk counties and eat all he wants. This law is in plain black and white and we have to enforce it, though it will probably cost the New York market alone $25,000. The month of April has been our great month for brook trout, and more business was done than at any other time. Such a law must be detrimental to fish dealing interests all over the State. The Fish Commissioners are against this amendment also, and we will endeavor to have it abolished and the old time law reinstated.

"With the exception of these two points everything seems to be working well within the jurisdiction of the State Fish Commissioners. The fish hatching station at Cold Spring, L. I., where Mr. Fred Mather is in charge, is turning out very satisfactorily. Between eight and nine millions of young fish were hatched and sent out to all points of the State last year. The varieties included salmon, land-locked salmon, brook trout, shad and frost fish. Work on the same line will not only be pushed next year, but a new feature will be introduced, that is, the hatching of cod's eggs. The only place where this has been done successfully has been at the United States Fish Commissioners' Station at Wood's Holl, Massachusetts, where the result was very gratifying. We have tried the experiment at Cold Spring, but failed, owing to causes which can doubtless be obviated this time. The eggs before were not fresh, having been carried about a long time before they were sent to the hatchery. A sloop will be specially chartered for this trial, and sent out about November, when the fish are likely to be in prime condition. The boat will start at Sandy Hook and run east along the south side of Long Island. When the eggs are procured they will be quickly transported to the station, and put immediately under treatment. As each cod yields several millions of eggs, it will not require the spawn of a great many fish to make the trial."

The Striped Basses.—Hon. E. D. Potter gave a lecture on these fishes before the Toledo Fishing Club. We extract the following: "The fishes embraced in this family—*Family labracidæ*—(the bass) are very numerous, but as few of them inhabit our Western waters, I will briefly notice a few with which I am acquainted. First—*Roccus lineatus* (striped bass or rock fish) is a marine fish entering rivers and bays on the Atlantic coast. He may be known by his silvery hue and six to eight dark, longitudinal bands along the sides. They are taken with seines in great abundance in the Potomac in the spring of the year. During the summer and fall they are taken with hook and line, baited with herring or other small fishes, and will not refuse a crawfish, lobster or frog. They are vigorous biters, and show all the game an angler may desire. They were formerly abundant at the falls of the Potomac above Georgetown, D. C., where their average weight was about three or four pounds, sometimes running as high as twenty-five pounds. Mr. Webster, Mr. Crampton, British Minister; and Baron Stoeckle, Russian Minister; often resorted hither for recreation. The last time I visited this place the party consisted of Messrs. Justice Nelson and Grier, of the Supreme Court, and Gov. Seymour of New York. We took an early start, Dexter, of the National Hotel, Washington, furnishing the supplies. Justice Grier was an ardent fisherman, Justice Nelson and Gov. Seymour preferred the shade surrounding a beautiful spring of water, on the Virginia side of the Potomac, where our headquarters had been established. I cannot brag much on our success in fishing. I remember I hooked a very large bass that took a shear and entered the rapids, carrying away upward of fifty yards of valuable line, which I have every reason to believe he or she (as the case may be) carried to the ocean in a hurry, for the fish was going at a very rapid gait in that direction at last accounts. Second—*Roccus chrysops*, striped lake bass, or white bass, silvery, with half a dozen dark longitudinal stripes. Morone, white bass—1st, *Morone americana*, white perch, faintly striped, found along the Atlantic coast in abundance; 2d, *Morone interrupta*, short striped bass, silvery with interrupted dark stripes, found in the Mississippi and southward. They are best taken with small minnows, but will accommodate the worm fishermen. They seldom weigh one pound."

Rules for the Tournament.—Since you have published that the committees for the coming casting tournament would be ready to receive suggestions, etc., allow me to offer the following: Why not make the minnow casting for black bass as near akin to actual fishing as is practicable, the same as is done in the fly-casting competitions? One thing is casting a sinker hanging within one or two inches of the end of the rod, another casting the same accompanied by leaders and hooks and as often used hung so that it cannot be reeled up closer than three or four feet from the tip end of the rod. I for one, not only would like this change made, but also the one suggested by Prof. Mayer in regard to substituting a wooden minnow for the ½oz. lead, and for that matter, why not a live minnow? Kindly accept this as an open letter to the proper committee, and if acceptable give it room in your columns, that others may be encouraged in expressing their opinions.—Brooklynite.

Remarkable Catches.—A writer in *Land and Water* tells the following: An angler was telling me the other day that he caught a good pike by whipping a pool with a dead sparrow affixed to a flight of hooks. I could not say him nay, for had he told that his bait had been a mousetrap, or the sole of an old boot, I should have concluded that it was just within the bounds of possibility where such a voracious rascal as *Esox lucius* was concerned. An Irishman once told me that he and a friend had been spinning a famous lake in his native country where the pike ran very large indeed, and that quite at the close of the day the bait ran out. The friend who was with him, a certain Lord Buzzy Parker—(I have looked, by the bye, through Debrett, and found no trace of the family)—saw a very heavy pike strike among some weeds, and then, lo! there was not a solitary bait left in the can. "Bedad, I have it," cries my Lord Buzzy, and he suddenly whipped off his little brown scratch wig," said Fitzgerald, "rowled it round a flight of books, and wid two brass buttons off his waistcoat for the eyes, and a bit of rope for a tail, he made a water rat with it. At the very first cast Buzzy had him, and after the divel's own fight he pulled him ashore, and that pike weighed noienty-six pounds—he did, by my soul, and faith, I had a greatcoat made out uv his skin."

Greenwood Lake.—This famous spot for bass fishing still maintains the leading attractions for the lovers of black bass. Mr. H. Folsom has just returned from a day's fishing there, and in about five hours' time caught seventeen black bass, weighing a trifle over 37 pounds, the largest of which turned the scale at 6¼ pounds, being the largest bass taken in that lake this year. Mr. Folsom also carried off the prize last year by taking one of 7¾ pounds. The Fuller House has been opened this year at the lower end of the lake, being right in the center of the best fishing and directly opposite where the above fish were caught. To reach it, stop at Cooper Station, Greenwood Lake, N. J.

Claimed in Canada.—"Spalding's hammered trolling spoon" is advertised by a Brooklyn man in Forest and Stream as "something new for anglers," and it is announced that a patent is applied for. The bait in question may be "something new" in the metropolis of the United States, but it is nothing new in what is understood to be the backwoods of Canada. Mr. DeLany has made spoon baits identically the same in Orillia for some thirteen years, and first put them on the market at Cobourg four years before that time. Thousands of them have been sold by Mr. DeLany to Americans, many of whom must read Forest and Stream.—*Orillia (Ont.) Packet.*

Fish Killed by Lighting.—A gentleman living at Caldwell, Tex., had an iron pipe leading from a spring into a pond. This was recently struck by lightning and every living thing in the pond was killed. After the storm he found black bass, perch, catfish, gars, minnows and frogs dead all all over the pond. He immediately went to Austin and procured a stock of carp from Mr. Lubbock and has planted them with faith in the adage that lightning never strikes twice in the same place.

Bass in the Susquehanna.—Athens, Pa., Sept. 21.—Bass fishing here has been poor for the last month, as the heavy rains have raised the Susquehanna River and kept it muddy; but now it is clear, and the fishermen are making up lost time by catching a great many. Most of these are small and should be thrown back, some not six inches long are carried home. This spoils good bass fishing and should be stopped.—Park.

Bass about Philadelphia.—The coming month of October is the season *par excellence* around Philadelphia for bass fishing, and more fish will be taken from the Upper Schuylkill in the next four weeks than in the whole summer and spring. Minnows after all seem to be the best bait.—Homo.

Fishculture.

FISH COMMISSIONERS.

Forest and Stream presents its annual list of the Commissioners of Fish and Fisheries of the different Provinces, States and Territories of North America. The list has been revised and corrected to October, 1885:

Dominion of Canada—
[We cannot learn that any appointment has been made to the office vacated by Mr. W. F. Whitcher two years ago.]

Province of New Brunswick—
W. H. Venning, Inspector of Fisheries, St. John.

Province of Nova Scotia—
W. H. Rogers, Inspector, Amherst.

Province of Prince Edward's Island—
J. H. Duvar, Inspector, Alberton.

Province of British Columbia—
A. C. Anderson, Victoria.

The United States—
Prof. Spencer F. Baird, Washington, D. C.

Alabama—
Col. D. R. Hundley, Huntsville.
Hon. Charles S. G. Doster, Prattville.

Arizona—
J. J. Gosper, Prescott.
Richard Rule, Tombstone.
J. H. Taggart, Business Manager, Yuma.

Arkansas—
James H. Hornibrook, Little Rock.
H. H. Rottaken, Little Rock.

California—
R. H. Buckingham, President, Washington.
A. B. Dibble, Secretary and Treasurer, Grass Valley.
J. D. Redding, San Francisco.

Colorado—
John Pierce, Denver.

Connecticut—
Dr. Wm. M. Hudson, Hartford.
Robert G. Pike, Middletown.
James A. Bill, Lyme.

Delaware—
Enoch Moore, Wilmington. (Term expires April 23, 1887.)

Georgia—
Hon. J. T. Henderson, Commissioner of Agriculture, Atlanta.
Dr. H. H. Cary, Supt. of Fisheries, LaGrange.
(Under the laws of the State these two constitute the Board of Fish Commissioners.)

Illinois—
N. K. Fairbank, President, Chicago.
S. P. Bartlett, Secretary, Quincy.
Maj. Geo. Brenning, Centralia.

Indiana—
Enos B. Reed, Indianapolis. (Term expires in 1887.)

Iowa—
A. W. Aldrich, Anamosa.
A. A. Mosher, Spirit Lake.

Kansas—
S. Fee, Wamego.

Kentucky—
Wm. Griffith, President, Louisville.
P. H. Darby, Princeton.
John B. Walker, Madison.
Hon. C. J. Walton, Munfordville.
Hon. John A. Steele, Versailles.
W. C. Price, Danville.
Dr. W. Van Antwerp, Mt. Sterling.
Hon. J. M. Chambers, Independence, Kenton Co.
A. H. Goble, Catlettsburg.
J. H. Mallory, Bowling Green.

Maine—
E. M. Stilwell, Bangor, } Commissioners of Fish
Henry O. Stanley, Dixfield, } and Game.
B. W. Counce, Thomaston, Commissioner of Sea and Shore Fisheries.

Maryland—
G. W. Delawder, Oakland.
Dr. E. W. Humphries, Salisbury.

Massachusetts—
E. A. Brackett, Winchester.
F. W. Putnam, Cambridge.
E. H. Lathrop, Springfield.

Michigan—
Dr. J. C. Parker, Grand Rapids.
John H. Bissell, Detroit.
Herschel Whitaker, Detroit.
(W. D. Marks, Superintendent, Paris.)
(A. J. Kellogg, Secretary, Detroit.)

Minnesota—
1st District—Daniel Cameron, La Crescent.
2d District—Wm. M. Sweney, M. D., Red Wing.
3d District - Robt. Ormsby Sweeny, President, St. Paul.
(S. S. Watkins, Superintendent, Red Wing).

Missouri—
J. G. W. Steedman, 2803 Pine street, St. Louis.
John Reid, Lexington.
Vacancy.

Nebraska—
W. L. May, Fremont.
R. R. Livingston, Plattsmouth.
B. E. B. Kennedy, Omaha.

Nevada—
Hon. Hubb G. Parker, Carson City.

New Hampshire—
George W. Riddle, Manchester.
Luther Hayes, Milton.
E. B. Hodge, Plymouth.
(E. B. Hodge, Superintendent.)

New Jersey—
Richard S. Jenkins, Camden.
William Wright, Newark.
F. M. Ward, Newton.

New York—
Hon. R. Barnwell Roosevelt, President, 17 Nassau street, New York.
Gen. Richard U. Sherman, Secretary, New Hartford, Oneida County.
Eugene G. Blackford, 809 Bedford avenue, Brooklyn.
William H. Bowman, Rochester.
(Superintendents: Seth Green, Rochester; Fred Mather, Cold Spring Harbor; Monroe A. Green, Mumford, Monroe county; F. A. Walters, Bloomingdale, Essex county.)

North Carolina—
M. McGehee, Raleigh.
Logan Terrell, Assistant, Raleigh.

Ohio—
Col. L. A. Harris, President, Cincinnati.
George Daniels, Sandusky.
James Dority, Toledo.
(Henry Douglass, Supt., Sandusky.)

Pennsylvania—
John Gay, President, Greensburg.
H. H. Derr, Secretary, Wilkesbarre.
Arthur Maginnis, Swift Water, Monroe county.
A. M. Spangler, Corresponding Secretary, Philadelphia.
Aug. Duncan, Treasurer, Chambersburg.
Charles Porter, Corry.

Rhode Island—
John H. Barden, Rockland.
Henry T. Root, Providence.
Col. Amos Sherman, Woonsocket.

South Carolina—
Hon. A. P. Butler, Columbia, Commissioner of Agriculture.
C. J. Huske, Columbia, Superintendent of Fisheries.
(These two constitute the Fish Commission.)

Tennessee—
W. W. McDowell, Memphis.
H. H. Sneed, Chattanooga.
Edward D. Hicks, Nashville.

Vermont—
Hiram A. Cutting, Lunenburgh.
Herbert Brainerd, St. Albans.

Virginia—
Col. Marshall McDonald, Berryville.

West Virginia—
C. S. White, President, Romney.
N. M. Lowry, Secretary, Hinton.
F. J. Baxter, Treasurer, Braxton Court House.
(Terms expire June 1, 1889).

Wisconsin—
The Governor, *ex officio*.
Philo Dunning, President, Madison.
C. L. Valentine, Secretary and Treasurer, Janesville.
J. V. Jones, Oshkosh.
A. V. H. Carpenter, Milwaukee.
Mark Douglass, Melrose.
C. Hutchinson, Beetown.
(James Nevin, Superintendent, Madison.)

Wyoming Territory—
Dr. M. C. Barkwell, Chairman, Cheyenne.
Otto Gramm, Secretary, Laramie.
N. L. Andrews, Buffalo, Johnson county.
E. W. Bennett, Warm Springs, Carbon county.
P. J. Downs, Evanston, Uinta county.
T. W. Quinn, Lander, Sweetwater county.

SUCCESSFUL OYSTER CULTURE.

This summer, by direction of Mr. E. G. Blackford, member of the Board of Fish Commissioners of Fisheries of New York, and in special charge of the Oyster Investigation, I began some experiments in the artificial propagation of oysters at the hatchery under my charge at Cold Spring Harbor, L. I. The trial was made under two different conditions and was successful in each.

One experiment was made in a wooden tank 12 feet long, 6 feet wide and 3 feet deep. This was of two-inch pine plank coated with coal-tar and supplied with sea water through

hree half-inch rubber tubes from a reservoir upon the hill where it is pumped by a hot-air engine. The bottom of the tank was covered with shells and gravel, and shells were suspended on strings across the tank. On the latter there was no "set," but on the shells and gravel on the bottom many were caught. The temperature in the tank ranged from July 8 to Aug. 31, from 69 to 73 degrees Fahr., standing most of the time about 71 degrees. The density of the water being from 1.017 to 1.020, and standing steadily at the latter figure from July 18 to the close of the season named. At that time, Sept. 1, it was necessary to remove the pipes, clean and tar them for the coming work with cod eggs, and the young oysters were removed to the great pond mentioned below. They were then one fourth of an inch in diameter.

The other trial was made in our large salt-water pond which has a flood-gate to hold the water at low tide, and from which we pump. This pond is some 280 feet long, 125 feet wide, and about 4 feet deep. Ten bushels of scallop (*Pecten*) shells were spread on the bottom and hung on strings. The swimming spat was put in at the flood-gate while the tide was flowing in and thus scattered over the pond. On Sept. 19 the pond was drawn down and a splendid set was visible, both on the bottom shells and also on those suspended. On the latter there was a set as high as three feet from the bottom, but the lower ones showed more specimens. The following is from the journal kept by my foreman, Mr. F. A. Walters:

July 1—Received first lot of oysters, opened one bushel, found 17 ripe females and 1 ripe male; took spawn from these. After 9 hours, as there was no sign of life, considered not good.

July 4—From ⅓ bushel, 9 females, 3 males, melt not active, no sign of life after 10 hours.

July 5—From ⅓ bushel, 11 females, 1 male. Three hours after taking spawn young were swimming, put in tank.

July 9—Put in tank 3 pans of spawn.

July 10—From 200 oysters 175 were ripe females, 18 not spawning and 7 partly ripe males; had to lose all.

July 11—From 80 oysters 60 ripe females, 4 unripe males, and 16 not spawning.

July 14—Cleaned tank.

July 16—Ground gate of salt pond had to be taken out owing to a leak, poor tides followed, pond did not fill for five days, could not pump and consequently no circulation in tank for that time.

July 20—Opened 70 oysters, found 20 ripe males, 30 females and 20 not spawning. Took two pans of spawn at 10:20 A. M., swimming at 2 P. M., put in salt pond.

July 22—Put spawn from 200 in salt pond.

July 26—Cleaned tank, could find no set.

July 28—Put in pond 4 pans of spawn in good order.

July 31—Put in tank 4 pans of spawn, the best lot taken.

August 11—Cleaned tank, and put in spawn from 1 bushel oysters.

August 20—Discovered set in tank.

September 8—Cleaned tank, found a number of shells and about a peck of gravel with sets on, but all dead. There were no sets on the hanging shells; the reason for this, I think, is owing to lack of current, which should be quite strong, there is more danger of getting too little than too much. Lowered salt pond.

Sept. 19—Found a good set, the hanging shells had sets 3 feet from the bottom, but the shells on the bottom did the best.

FRED MATHER.

NEW YORK FISH COMMISSION.—The new hatchery in the Adirondack region is nearly completed and will be ready for work this fall. It is situated on the outlet of Little Clear Pond, between the Upper Saranac and Upper St. Regis lakes, on the road from Bloomingdale to the Prospect House. Mr. F. A. Walters, for some years an employee of the Cold Spring Harbor hatchery, has been placed in charge of the work. It is expected to work with the eggs of trout, lake trout and frost fish.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 29, 30 and Oct. 1, 2.—Third Annual Dog Show of the Southern Ohio Fair Association. H. Anderson, Secretary, Dayton, O.

Oct. 6, 7, 8 and 9.—Second Annual Dog Show of the Philadelphia Kennel Club, in conjunction with the Pennsylvania State Agricultural Society. E. Comfort, Secretary, Philadelphia, Pa.

Oct. 6, 7, 8 and 9.—Fourth Annual Dog Show of the Danbury Agricultural Society. S. E. Hawley, Secretary, Danbury, Conn.

Oct. 7, 8 and 9.—Dog Show of the York County Agricultural Society. Entries close Sept. 28. A. C. Krueger, Superintendent, Wrightsville, Pa.

Oct. 8 and 9.—Second Annual Dog Show of the Stafford Agricultural Society. R. S. Hicks, Secretary, Stafford Springs, Conn.

FIELD TRIALS.

Nov. 9.—Second Annual Field Trials of the Fisher's Island Club, for members only. Max Wenzel, Secretary, Hoboken, N. J.

Nov. 9.—First Annual Trials of the Western Field Trials Association, at Abilene, Kan. Entries close Oct. 15. A. A. Whipple, Secretary, Kansas City, Mo.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

November.—Fourth Annual Trials of the Robins Island Club, Robins Island, L. I., for members only. Wm. H. Force, Secretary.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2704.**

FIELD DOGS AND FIELD TRIAL DOGS.

Editor Forest and Stream:

I do not wish those who compliment me by glancing over this article to suppose that I wish to make myself intrusive, to claim any original thought as far as the arguments in this article are concerned, or to think that I wish to place myself upon a pinnacle of authority regarding either field dogs or field trial dogs. The object which prompts me to take up my pen is not one of interference, not prompted by any spirit of rivalry, but upon the other hand, is put forward with the sincere hope that it may possibly be appreciated by at least a few sportsmen, if not by the vast majority of dog breeders throughout the length and breadth of our country.

Before entering directly upon the theme of this article, I do not think it out of place to briefly comment upon the utter uselessness of attempting to justly decide field trials, or rather the field qualities of contesting dogs, before at least partially revolutionizing the questionable system of scoring which is in vogue to-day. The fact that dogs, as with other living creatures, do not behave equally upon different days, of course cannot at all interfere with their judging. It is the merit of the dog as he behaves while being judged that can alone convince a judge of his worth, but to set a dog down in the field as I have seen judges order, and in the short space of one half hour decide justly as to his field qualities is beyond the power of the most astute men associations can appoint as their judges. Like men, dogs are characterized by temperaments, which rule their existence, characterizing them in their kennels or at their work. They are constituted of a harmoniously working organic system, one system predominating in one dog, while another will in another dog, thus stamping them with their various differences, so that we actually see in our domestic friends a proportionate variation as their qualities or characteristics may differ.

One dog enters the field in that sedate manner which age has awarded him, and which caution has prompted him to assume. He fortunately finds at once his covey of birds, does his work among them and under the gun without apparent fault, and is awarded meritoriously over his antagonist, who in the vigor and impulsiveness of a stronger physical constitution acts more rashly. The former dog may have completed his day's work; he did it well, but there was very little of it, while the latter dog actually requires two or three hours, work to relieve him of his surplus energy, and then only is he in a condition to act as well as the former dog ever did. The former dog may be of the proper species but, that does not say that he is a field dog. The latter dog as a field dog in every sense of the word, may be his superior from all points of view, except for the first few moments of their run, when we can or must excuse surplus energy, for it is a condition over which we have or he has no immediate control. No dog's field qualities can be judged under short or stinted time.

Are the scoring points in field trials of the National American Kennel Club, strictly speaking, just from all points of view? Inaugurating field trials for the express purpose of advancing the standard of field dogs, should "style" enter into their work as a meritorious quality? Does the dude who travels in our own midst bear a strong reputation for his work? Some of our most thorough workmen who stand before their respective benches, are the least stylish of their fellow men; the greatest thinkers that this world has ever produced and whose work she has profited by were notoriously plain, silent, unpretentious, progressive men. Style is the result of an emotion—variety cloaked in a more or less brilliant garb. The other and only necessary elements of a field dog may be found absent in many stylish ones. I hope that none of you will smile at the likeness which I attempt to draw of the emotions of two animals, a man and a dog; that emotion vanity, resulting in style, will be found a remarkable trait of local rivalry so far down in the scale of animal life as in many species of fowl and variety of birds.

Those scoring points "pace" and "ranging" may be much simplified, "quartering" and "retrieving" consolidated under the head of "advantages." "False pointing" in young unbroken or partially broken dogs for very obvious reasons is an advantage.

I must profess myself incapable of proposing a scoring table which would be practically perfect in the hand of any one judge, to say nothing of different appointees, unless perhaps it consists alone of "physical qualities" and "acquired habits." I have seen dogs who were largely hunted upon wild birds in the fall, voluntarily acquire the habit of "heading them off" and "flushing them toward the gun;" for example, after pointing a covey of running birds, and after leading you to where he stood, he would leave his point, "head them off" and stop the running covey, a trait which in a field dog is invaluable and yet one which one cannot easily train him to adopt. Such a trait in a field dog should receive higher credit than their natural staunchness, for it exhibits an amount of intelligence and train of reason in them very pleasant for us to contemplate. I do think that the dog breeders, who have hitherto proven themselves so loyal to their pursuit in life, should meet and by their united efforts reassert their supremacy to this existing and very apparent inefficiency in the manner of scoring at trials.

Before briefly discussing field trials, allow me to attempt to criticise the qualities of field dogs. Of show dogs, so far as the hunter is concerned, I care nothing and consequently entirely overlook them. Let us inquire into the essential elements of the various dogs which will answer our purposes in the field. The pointer and the setter—two species closely allied from a natural standpoint—compose the true field dogs of the sportsman. They must be possessed of certain characteristics necessary to our wants, strongly affectionate, yet not of a fawning disposition, still obedient and submissive to their masters' will, with nervous energy enough to render his senses keen, and prompt a fully developed muscular system to that energy necessary for him to accomplish his work, are the primary requisites necessary to all hunters, whether pointer or setter. If a breeder overlook the primary essentials necessary in the breeding of field dogs, while aiming at the development of a peculiarity, any one can most readily see the natural consequence. Is it toward such a standard that our breeders are unanimously aiming? I think not, for I find many of them endeavoring more ardently to secure the trophies and honors of field trial tests rather than breed actually good field dogs. What then are these so-called field trial dogs? They are dogs bred for that purpose, and entries which actually stand a greater chance of winning under such a test than does a field dog. Small in limb, with a proportionately undeveloped muscular system, comparatively of small size, with the physical appearance of hereditary inaptitude. They are dogs which are physically incapable of withstanding hard work, and consequently lack the first and gravest quality necessary to a field dog, stamina. Upon the other hand, to at least partially offset this condition, we find dogs with tremendously developed nervous systems, bright, intelligent, acute dogs, bearing unexampled noses; in other words, dogs which have been bred "to nose" at the expense of their physical conditions, and as a result, dogs inferior in finding birds, yet promptitude itself in pointing them when found.

Had I to choose between a dog with an inferior nose, and one with an inferior physical constitution, each dog's other qualities except the ones named being good, for a field dog I would be obliged to choose the former, for I would then be in possession of a dog who would at least show me that birds were somewhere in my district of the country, notwithstanding his blunders after having found them. When one hunts, whether it be for pleasure or for a living, he can always more easily procure his birds after he knows their whereabouts, than he can primarily find them. Had I to choose under such circumstances, I would want a dog who would occasionally raise a feather before the gun, not one that I would have to find birds for in order to witness him point them, no matter how gracefully he could accomplish the feat. I make these remarks simply that I may demonstrate that the "staying" qualities or "stamina" in a field dog is really of more vital importance than is his sense of smell; and now I shall endeavor to prove that the dog who is bred "to nose" at the expense of his remaining economy actually "loses his nose," and under hard work it early becomes inferior to that of his brother who possesses a perfect system.

Unless great care and unlimited study is indulged in by those breeding dogs according to a very simple natural law, breeders will find themselves, by methodical selection, unconsciously breeding their dogs toward the development of some particular and peculiar advantage, and doing so at the expense of some other system of the dog. For example, dogs are now being unconsciously bred "to nose" at the expense of their general economy. That organ of the nervous system hereditarily and also most cultivated which predominates in these dogs are the olfactory bulbs of their nose. They receive the greatest blood supply and in their developed condition naturally support the greatest circulation of blood. Now, the moment that a dog increases the number of heart beats and otherwise excites the circulation by muscular exertion, that moment do the other organs of his body also receive a greater blood supply. The tension of the circulation is heightened and the capillaries become less capable of resisting its force. The dog "loses his nose," as the experienced sportsman says; it becomes congested with the quickened circulation and the dog finds himself less capable of appreciating scents wafted to his nostrils. He begins to flush birds and his attitude of very apparent surprise when they raise from his immediate neighborhood is ample evidence that he had no indication of their presence. Now, the greater the proportional size of a dog's olfactory organs, as compared with the remainder of his economy, the greater must proportionately be the congestion to which they are subject under the above circumstances; and, again, with a given amount of work the faster must be the blood circulation and supply proportionately as the dog is inferior constitutionally, and consequently the greater must be the congestion of his nose from this latter cause. Just upon the same principle which requires a great brain-worker to be supported by a strong constitution, in order for him to withstand for any length of time the wear of his work without rest, so exactly does a dog necessarily require a strong physical system in order to undergo his work and fortify his nose against congestion.

Those dogs so carefully bred, as above stated, for field trial purposes, must again be more liable to succumb from the effects of disease; with the heightened development of the nervous apparatus (throughout the entire scale of animal life) does disease assume a more complicated type, and with a degenerative, or rather retrograded condition of the physical economy, these diseases must assume a proportionately more grave aspect.

Thus we have field dogs and field trial dogs, each, although of the same species, differing from the other as black differs from white. Let the dog breeders of our land once attempt to act otherwise; let them attempt to bury rivalry, and some individual among them of a less mental caliber than the others will steal the prizes and the honors which they seek. They cannot afford to do it so long as the present system of marking remains in vogue at field trials, and consequently they will go on breeding toward the advantage "of nose," until they finally find themselves in possession of a sort of "poodle" whose "nose" will surprise the huntsmen of the past, and whose field qualities will be next to useless.

UU.

MILWAUKEE DOG SHOW.

MILWAUKEE, Wis., Sept. 25.—*Editor Forest and Stream:* The dog show has been all the success that the Milwaukeeans anticipated. It has paid expenses, and more, too. Our mutual friend, Jno. D. Olcott, has managed the show to the decided satisfaction of all. The quality of the dogs was good. The judging gave satisfaction. Following are the awards in full:

AWARDS.

MASTIFFS.—1st, Chas. F. Winkler's Sandy; 2d, Mrs. A. J. Richter's Dash McD. Very high com., Coughcura Medicine Co.'s Ilford Cromwell II. *Bitches:* 1st, Mrs. A. J. Richter's Renee; 2d, Coughcura Medicine Co.'s Dolly Vardee II.

ST. BERNARDS.—ROUGH-COATED—1st, Coughcura Medicine Co.'s Otto II.; 2d, Lewis Bohme's Young Kaiser. Very high com., Mohawk Kennels' Tell. *Bitches:* 1st, Mohawk Kennels' Noma; 2d, Mrs. Geo. H. Hill's Abbess II. *Puppies:* 1st, Mohawk Kennels' Jumbo.

NEWFOUNDLANDS.—1st, S. S. McCuen's Miro; 2d, Carl Thomas's Baron. Very high com., C. Salcner's Jumbo.

GREYHOUNDS.—1st, Geo. S. Parvin's Major.

DEERHOUNDS.—*Dogs:* 1st, J. C. Hooker's Trump. *Bitches:* 1st, J. C. Hooker's Juno.

GREAT DANES.—1st, August Trinkle's Brock; 2d, Paul Merker's Pluto. High com., O. J. Hansen's Pluto, F. E. Weeks' Solo III., Albert Blatz's Cæsar and Paul Merker's Flora.

ENGLISH SETTERS.—1st, C. T. Bradley's Dash; 2d, Coleman's London. Very high com., A. K. Delaney's Dan D. and Frank Whitten's Hero. High com., Geo. H. Hill's Don Gladstone. *Bitches:* 1st, Mrs. W. A. Collins's Pickles; 2d, Geo. A. Hill's Clara F. Very high com., D. Stone's Lady Pearl. Com., Geo. H. Hill's Minetta.—*PUPPIES—Bitches:* 1st, Frank Whitten's Mabel.

GORDON SETTERS.—1st, W. A. Van Brunt's Moss; 2d, withheld.

IRISH SETTERS.—EXTRA CHAMPION—J. A. J. Sprague's Brush.—OPEN—*Dogs:* 1st, W. A. Collins's Kaiser; 2d, B. E. Sivyer's Bob. Very high com., L. Weil's Sport. Com., ——'s Hector. *Bitches:* 1st, J. A. J. Sprague's Lorraine; 2d, P. Thomas's Gypsey. Very high com., H. Schuber 's Weil's. High com., L. Weil's Cora. Com., W. A. Collins's Zulu. *Puppies:* 1st, F. B. Rice's Larry Thorn. Very high com., F. F. Merrill's Rowena.

POINTERS.—CHAMPION—*Bitch:* B. F. Seitner's Lady Croxteth.—OPEN—*Dogs:* 1st and 2d, B. F. Seitner's Rapp and Tippecanoe. High com., F. B. Rice's Royal Croxteth. *Bitches:* Badger State Kennels' Birdie; 2d, B. F. Seitner's Lass. *Puppies:* 1st and 2d, Badger State Kennels' Lady Snow and Commodore.

IRISH WATER SPANIELS.—CHAMPION—A. J. Cooper's Storm.—OPEN—*Dogs:* 1st, W. H. Roe's Mack. *Bitches:* 1st, Frank Whittin's Gipsey; 2d, D. Corcoran's Catch Fly.

CHESAPEAKE BAY DOGS.—1st, Geo. W. Kierstead's Nan.

FIELD SPANIELS.—1st, J. A. Roche's Fan II.

COCKER SPANIELS.—*Dogs:* 1st, 2d and very high com., Hornell Spaniel Club's Hornell Silk, Hornell Jack and Little Van. *Bitches:* 1st and 2d, Hornell Spaniel Club's Hornell Flora and Hornell Bell. Very high com., —— Rose

BEAGLES.—1st and 2d, Chas. Swein's Minnie and Marjory. Very high com., Wm. Swain's Blossom and Violet II.

DACHSHUNDE.—*Dogs:* 1st, Wm. Loeffler's Waldmann II.; 2d, J. Van DeWefen's Bergmann. Very high com., Geo. Poppert's Goethe. *Bitches:* 1st, Geo. Poppert's Juliette; 2d, Mohawk Kennels' Waldine III. Very high com., O'Hearn & Sanglaub's Flory.

FOX-TERRIERS.—*Dogs:* 1st, J. W. Munson's Gorse. *Bitches:* 1st and 2d, J. W. Munson's Venom III. and Orange Girl.

COLLIES.—CHAMPION—J. A. Long's Rob Roy.—OPEN—*Dogs:* 1st., J. A. Long's Clifton Hero; 2d., V. S. Kennedy's Prince Charles. *Bitches:* 1st, withheld; 2d J. Kidston's Prep. *Puppies:* 1st, Bruce.

BULLDOGS.—Prizes withheld.

BULL-TERRIERS.—1st, C. E. Feller's Joker; 2d, H. Russell's Lill. Very high com., J. Callahan's Jumbo.

BLACK AND TAN TERRIERS.—1st, Henry Muss's Lady; 2d, W. C. Kneeslor's Venus. Very high com., S. J. Caro's Topsey.

SCOTCH TERRIERS.—*Dogs:* 1st, John H. Naylor's Whinstone; 2d, A. Blatz's Scoppie. *Bitches:* 1st and 2d, John H. Naylor's Rosie and Scotland Yet.

DANDIE DINMONTS.—*Dogs:* 1st, Mrs. J. H. Naylor's Bonnie Briton. *Bitches:* 1st, Mrs. J. H. Naylor's Pansy.

PUGS—CHAMPION—*Dog:* Mrs. Geo. H. Hill's Joe. *Bitch:* Mohawk Kennels' Judy III.—OPEN—*Dogs:* 1st, Mrs. C. S. Cumming's Colonel; 2d, Mrs. Edward Bradley's Bijou. Very high com., Miss Lizzie Plankinton's Fred. *Bitches:* 1st, Miss Lizzie Plankinton's Punch; 2d, Mrs. C. S. Cumming's Durkey. High com., H. Oelrich's Miss Georgie D.

SKYE TERRIERS.—Prizes withheld.

TOY TERRIERS.—1st, H. Oelrich's Prince; 2d, S. J. Caro's Topsy. High com., G. A. Oberman's Nellie and Louis P. Best's Puppy.

ITALIAN GREYHOUNDS.—1st, H. Giles's Lillie.

TOY SPANIELS.—1st, R. W. Holmes's Milwaukee Charlie; 2d, Julia M. Stevens's Mary Anderson.

FOXHOUNDS.—*Dogs:* 1st, W. A. Van Brunt's Driver; 2d, J. M. Shaffer's Music. *Bitches:* 1st, J. H. Naylor's Lady Stewart; 2d, H. E. Cook's Spotty. Very high com., J. M. Shaffer's Lead.

MISCELLANEOUS.—1st, W. H. Thurston's Mack. Very high com., J. E. McLaughlin's Dick and A. M. Grau's Gipsey.

SPECIAL PRIZES.

Best mastiff, C. F. Winkler's Sandy.
Best St. Bernard, Coughcura Medicine Co.'s Otto II.
Best Newfoundland, S. S. McCuen's Miro. Best Newfoundland owned in Milwaukee, C. Thomas's Baron.
Best greyhound, G. S. Parvin's Major.
Best deerhound, J. C. Hooker's Trump.
Best Great Dane, A. Trinkle's Brock.
Best English setter (two), Mrs. W. A. Collins's Pickles. Best English setter puppy, Frank Whittin's Mabel.
Best Gordon setter, W. A. Van Brunt's Mop.
Best Irish setter, J. A. J. Sprague's Brush. Best dog in open class,

W. A. Collins's Kaiser; best bitch, J. A. J. Sprague's Lorraine; best puppy, Mrs. F. B. Rice's Lairy Thorn.

Best pointer, B. F. Seitner's Rapp; best bitch with two of her progeny, B. F. Seitner's Lass with Rapp and Lilly Bang; best kennel, B. F. Seitner; best bitch owned in Wisconsin, Badger State Kennels' Lady Snow; best dog owned in Milwaukee, F. B. Rice's Royal Croxteth; best puppy, Badger State Kennels' Lady Snow.

Best Irish water spaniel dog, A. J. Cooper's Storm; best bitch, F. Whittin's Gipsey.

Best Chesapeake Bay, Geo. W. Kierstead's Nan.

Best field spaniel, J. A. Roche's Fan II.

Best kennel cocker spaniels, Hornell Spaniel Club; best cocker spaniel, Hornell Spaniel Club's Hornell Silk.

Best beagle, Chas. Swein's Mimic.

Best fox-terrier, J. W. Munson's Venom III.; best kennel, J. W. Munson.

Best dachshund, Wm. Loeffler's Waldman II.

Best collie, J. A. Long's Clifton Hero; best pair in best condition, B. F. Lewis; best puppy, T. C. Swan's Bruce.

Best bull-terrier, C. E. Feller's Joker; best in Milwaukee, H. Russell's Lil.

Best black and tan terrier (two), Henry Muss's Lady.

Best Scotch terrier, J. H. Naylor's Whinstone; best pair, J. H. Naylor's Whinstone and Rosie.

Best Dandie Dinmont, Mrs. J. H. Naylor's Pansy; best pair, Mrs. J. H. Naylor's Pansy and Bonnie Briton.

Best pug, Mrs. Geo. H. Hill's Joe; best kennel, Mrs. C. S. Cumming best pair, Miss Lizzie Plankinton's Punch and Fred.

Best toy terrier, H. Oelrich's Prince.

Best King Charles spaniel dog, R. W. Holmes's Milwaukee Charlie; best bitch, Julia M. Stevens's Mary Anderson.

Best in miscellaneous class, W. H. Thurston's Mack.

Best foxhound, John H. Naylor's Lady Stewart.

Best sporting, Mrs. W. A. Collins's Pickles.

Best non-sporting, Mrs. Geo. H. Hill's Joe.

THE KENNEL HOSPITAL.

DISEASES OF THE SKIN.

THE skin, like all other organs of the body, is liable to injury and disease. Being a complex structure, not a homogeneous layer of tissue, the changes caused in it by disease are very variable, and are recognized by considerable diversities in the symptoms developed. The skin consists of two layers—the outer merely a tough, insensible protective covering; the inner, or true skin, a delicate, sensitive layer, supplied with a perfect network of blood-vessels and nerves. The skin of the dog is studded all over with little pits or follicles from which the hairs are produced. Besides these it contains numerous glands, some of which are perspiratory and some sebacious. The latter secrete an oily material which serves to keep the skin supple and the hair bright, while the former excrete a watery fluid and some of the effete products of the body. It is well known how causes acting directly upon the skin—such for instance, as heat and cold—may affect some of the internal organs. It is equally evident how certain morbid conditions of the internal organs, or of the blood, react prejudicially upon the skin. As the result of disease of liver we have jaundice and the yellow staining of the skin. In distemper the specific poison in the blood gives rise to an eruption on the integument. We have, then, in considering diseases of the skin, to take into consideration its close sympathy with the internal organs and the general health of the body. We have to remember the various distinct structures forming an integral part of the skin, and we must be acquainted with the different kinds of external agents which irritate or otherwise affect it. It is a vascular organ, and therefore liable to disturbances of its circulatory system; it is a sensitive organ, and therefore liable to disturbances of its nervous system. It possesses special functions of excretion and secretion, all or some of which may become interfered with by disease of the organ, while, on the other hand, these functions may, being themselves primarily altered from within, give rise to disease of the skin.

The symptoms of skin disease are many. They differ in their form, arrangement, and position according to the causes giving rise to them, and they are modified in appearance by condition external to the animal. There are certain primary changes in the skin as a result of disease which it is necessary to recognize. These are—redness, stains, pimples, vesicles, pustules, and scales. Redness is simply due to congestion of the blood vessels of the skin, but this may be induced by many different causes. Locally it may result from irritant application, and then we find it circumscribed. As a rule general redness of the skin may be looked upon as evidence of disease due to internal causes, but there is one common condition in which general redness exists as the result of simple external irritation. I refer to that induced by washing with strong alkaline soaps, the ill effects being apparent in white-haired dogs. Redness differs in shade on different parts of the skin, being increased by rubbing and scratching or by the chafing which takes place where folds of skin are in apposition during movement, as seen in the bend of joints, and still more markedly inside the elbows and thighs. Redness may be the only symptom evident, but usually we shall, on careful examination, find other changes which assist us in discovering the cause and determining its significance. Stains are not so important a symptom in the dog, covered as it is by a hairy coating, as in man. Freckles and congenital marks seen in the human object are matters of small importance to the student of skin disease in the dog, but we have other stains which are worth notice. We have accidental stains from dyes and chemicals, and wilful stains caused by the same agents, to disguise or alter the appearance of the animal for show purposes. The detection of these is very difficult at times, but none are permanent, and all can be removed by proper bleaching agents. As the result of injury we have cicatrices of different colors on the skin, and we sometimes find discoloration, of skin and hair as the result of disease — dark shades due to ringworm, and a rusty color from an attack of eczema. In one disease there is a progressive spread of dark discoloration as the result of the growth of a vegetable parasite. The increase and spread of discoloration should be accepted as evidence of parasitic infection. Pimples are small, red, conical eminences, and may result from various causes. When they surround a hair—or, in other words, when a hair passes through them—some special affection of a hair sheath or follicle is suggested. When they arise between the hairs we look for some source of irritation, and frequently find it in the presence of animal parasites. In the absence of parasites, we conclude the pimples are simply due to congestion of the papillæ of the skin, most likely of constitutional origin. Vesicles differ from pimples in not being solid, but containing a clear fluid. They exist in the early stages of skin disease, marked by wet patches or blotches, but are seldom seen, as the scratching accompanying the early stages ruptures them, and allows their contents to escape. Pustules differ from vesicles in containing matter or pus instead of a clear fluid. A pustule, before it arrives at its full development, passes through all the stages of pimple, vesicle and pustule, and we usually find all three, or perhaps it would be more correct to say that if we find pustules fully developed we shall find in the same region others less mature. We have a good instance of pustules in the white-topped eruption of distemper, and I think in only one other disease do we find them in any numbers, viz., follicular mange. Scales are the whitey-gray flakes thrown off by the outer layer of the skin. They are only signs of disease when noticeable in excessive quantity. Any disease which causes congestion of the skin is followed by excessive formation and throwing off of cuticular scales. In such cases it is a result of disease, and ceases with the exciting cause. There are, however, cases in which it exists as the only signs of disease, a condition most often observed in fat puppies. In addition to these primary signs of skin disease, there are other changes of a secondary nature which arise from the continuance or alteration of them. The dog, scratching, ruptures vesicles and pustules, causing their contents to escape and collect on the hair and skin. Pimples, and even sound skin, are made to bleed, and these fluids drying, form crusts or scabs, which are evident in nearly every case, accompanied by much itching. Ulcers seldom appear on the skin of the dog, but in follicular mange they are very diagnostic. They appear as small depressions, having clear cut edges and a fresh raw surface at the bottom. They result from the death of the portion of skin whose site they occupy, and in the case I have mentioned are due to a number of pustules isolating a small portion of the integument. When they heal they form scars which, though small, are permanent, and never again covered by hair. Thickening of skin is not necessarily a sign of long-continued disease. It may appear very rapidly, but is then accompanied by heat and tenderness. It is due to exudation of fluid into the congested skin. In a favorable case this exudation is absorbed, but as the result of continued congestion, or repeated attacks, the fluid may become organized, causing a callous or hard thickening of a more or less permanent nature. Such thickenings are hard, usually dry, and the skin loses a great deal of its sensibility. Along the back, on the elbows, and points of the hocks, are the positions most commonly affected. The tender thickenings, due to recent exudation, are mostly found in the skin of the ears. The dog's skin being covered with hair, many of these changes are not detected until they have been in existence for some time, and often not until they have become much modified. The animal's coat being one of its chief beauties, naturally attracts attention, and thus, quickly suffering from any disease of the skin, it affords a valuable index to the state of that organ. Even before the skin itself shows any special change, the hairy coat may indicate an unhealthy condition. It loses its crispness and brightness, becomes dull, dry, and rusty-looking. It is more easily removed from its sheath. Rapid loss of hair accompanies most skin diseases. In some it is general, in other local, and, roughly speaking, we find that these conditions are indicative of the nature of the disease—general loss of hair being due to constitutional forms, local to parasitic. The effect of loss of hair on the system should be borne in mind. In cold weather the loss of the protective covering may be so great as to cause the death of a dog not otherwise assisted in retaining the heat of the body. The causes of skin disease are many. First, I must mention hereditary tendency. This, of course, applies only to diseases arising from internal causes, chief of which is eczema. In no breed is this hereditary tendency so evident as in St. Bernards and bloodhounds, some strains being never free. Internal disease of liver and stomach is often the cause of irritation of skin, and should always be looked for previous to adopting a course of treatment. Intestinal worms are also a cause, and it is no uncommon event to find a hitherto intractable affection of the skin cease after the expulsion of a tapeworm. Dietetic errors are the most common of all causes, but the use of animal food is not the great evil. Restriction to one article of diet, especially if that be largely farinaceous, is the greatest error. I am bound to add that if a dog be doing daily hard work he seems capable of remaining healthy, so far as the skin is concerned, on any kind of dietary. Poisons in the blood give rise to disease of the skin. We have before referred to the eruption due to the specific distemper poison. Mineral poisons may also cause irritation. Arsenic has a decided effect on the skin and sometimes a most injurious one. But there are poisons of quite a different kind that most frequently injure the skin. Every one who knows anything of the animal body knows that there is a constant waste going on within, and that the materials resulting from the waste tissues must be regularly removed. Some are removed by the kidneys and bowels, some by the lungs and skin. The retention of these materials in the blood causes disease, it may be of the whole body, but most likely of those organs whose duty it is to effect their removal. Want of exercise leads to inactivity of the excreting organs. Add to this dietetic errors of quantity and quality, and we have the causes of more than half the skin diseases of the dog. There are external causes also. Some few may be classified as chemical and mechanical, but the most prevalent are of a parasitic nature. In addition to fleas, lice, and ticks we have three forms of microscopical animals, and two or three forms of fungi which set up definite diseases in the skin of the dog. Each of these will require separate consideration. Before rashly treating a case of skin disease, or what is vaguely called mange, it is necessary to form a correct diagnosis. To do this is far from easy. It may be guessed at, but to be known requires a history of the case, how long it has existed, if it has altered in character, if any other dogs in contact with it have been affected similary, what is the general health of the dog, how it has been fed, etc. We should also take into consideration the effect of any treatment which may have been adopted, the surrounding conditions, the modifications which may have resulted from scratching, from wearing clothing, or a collar, and from any circumstances which may have influenced the dog. Finally, in all cases where a positive diagnosis is urgent, resort should be had to the direct evidence afforded by a microscopic examination of the scurf, crusts, hairs, or secretions of a diseased skin. Of course well-defined cases are diagnosed by a practiced eye without much assistance and with little hesitation, but there are cases which the most experienced can only postively identify after a microscopical examination.—*W. Hunting, F.R.C.V.S., in Land and Water.*

FRAUDULENT PEDIGREES.—Rosendale, Wis., Sept. 21. —*Editor Forest and Stream:* I notice in your issue of Sept. 17, a communication dated Sept. 7, from Mr. C. E. Lewis, of Collingwood, Ontario, Can., in regard to the pointer bitch Fancy and her fraudulent pedigree. I cannot see how Mr. Lewis can justify himself in the sale of said bitch to Mr. Percival, as on July 23, 1885, I received a letter dated at Suspension Bridge, N. Y., from Mr. Lewis, asking for the pedigree of said bitch. I answered July 27, informing him said pedigree was fraudulent—or words to that effect. How ingenious his article, as he says: "Now that I come to think the matter over, it strikes me that I remember seeing something in FOREST AND STREAM about a fraudulent pedigree in which Mr. Miller was interested; but in buying the bitch I never gave the matter a thought, as I considered Mr. Miller a gentleman. Now can it be possible that Mr. Dilley is mistaken a little in this matter? As I understand it, Mr. Coster bred and raised the Croxteth ex Royal Fan litter." I wish to state that Mr. Lewis in his understanding of that, is as badly off, as his memory is treacherous. Mr. W. A. Coster did not breed nor raise that litter, and only had what I shipped to him (a dog, Pride of the Neversink) and a bitch, Cara C., of which Mr. Coster writes, as published by you July 17, 1884, and as it looks to me, how can Mr. Lewis and Mr. Miller justify? The thought "it's just possible that Mr. Dilley might be mistaken," will not do, until he explains his letter of July 23, 1885 (away). There are some things that as strongly resemble as this bitch Fancy does Croxteth. Will you ask Mr. Lewis to explain?—S. B. DILLEY.

THE PITTSBURGH DOG SHOW.—*Editor Forest and Stream:* The dog show advertised by the Western Pennsylvania Poultry Society, has been indefinitely postponed owing to a lack of entries. It is not pleasant to make such a confession, but it is better than having exhibitors send their dogs to a beggarly array of almost empty benches, and it is best to be frank about it.—WM. WADE, Secretary pro tem, (Pittsburgh Sept. 22, 1885). [The above was received too late for insertion last week.]

COMPLETE THE RECORDS.—Owners of registered dogs are urged to send in to the *American Kennel Register* notices of all prizes won by each animal since the registry was made, with all other pertinent facts. The records should be completed as early as possible.

EXHIBITORS of registered dogs should not fail to send to the *American Kennel Register* prompt notification of all prize winnings.

BRETON TRADING.—An amusing characteristic of the Breton peasant is related in an article describing Point Aven, a quaint little town of Northern France, which appears in *Outing* for October. We sometimes hear of Yankee farmers driving "hard bargains," but the peasant farmers of Brittany usually indulge in a war of words over so small a matter as the sale of a cow that would seem to indicate imminent bloodshed. After putting the cow through her paces, after the manner of a horse, a dicussion arises as to price, and for quite a while they wrangle over a few cents, neither party being willing to give in. The writer says that at times they waxed so hot that blows were expected, though none were given. At last the would-be purchaser started to walk off in apparent great anger, but he was called back by the owner, who met him with outstretched hand. This denoted that he had given in. A kiss on both cheeks closed the bargain, and the money was handed over. Now what in the world they not have done if instead of a cow it had been a dog?

DEATH OF DOCTOR DUER.—Dr. W. A. Strother, of Lynchburg, Va., has met with the misfortune of losing by death his valuable English setter dog Doctor Duer. He was by Gladstone and out of Frost (Leicester—Victress). He was a capital performer in the field, and did some grand work at the Eastern Field Trials last year. Dr. Strother has our sympathy; we well know how hard it is to obtain so good a dog as Doctor Duer.

THE EASTERN FIELD TRIALS.—The letter from Mr. Coster in our issue last week, stating that the entries for the Eastern Field Trials would close Nov. 15 was received before the meeting of the club was held, and should have read Oct. 15. This letter was marked to be left out after receiving the one giving the time as Nov. 1, but somehow it was overlooked. The date of closing entries in the All-Aged stake will be Nov. 1.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

JIM, Fort Bowie.—What is good for ticks in a dog's ear? My dog is bothered a great deal by them; I think one ear is festered a little. I have used sweet oil, but that does not give him any relief. Ans. your dog probably has canker. For this the bromo-chloral and laudanum mixture is the best. The proportions are one dram of each to the ounce of water. Drop into the ears three or four times. You do not give us enough particulars.

A. C. G., Poughkeepsie, N. Y.—A setter dog, three years old, has tape worm. The dog seems to feel all right except that he is quite thin, and has had about six feet of the worm drawn from him. Ans. You must diet your dog on milk only for three days, giving as little as possible. On the second day of the fast give a teaspoonful of fluid extract of filix mas or male fern, or ten drops of oil of worm seed on sugar. Repeat this dose after two hours, and at evening give a tablespoonful of castor oil or syrup of buckthorn and repeat this unless the bowels run very freely. Report result.

KENNEL NOTES.

KENNEL NOTE BLANKS.

For the convenience of breeders we have prepared a series of blanks for "Names Claimed," "Whelps," "Bred" and "Sales." We request that all Kennel Notes be sent to us on these blanks, which will be forwarded to any address on receipt of stamped and directed envelope. Send for a set of them.

NAMES CLAIMED.

Bedouin and Lelda. By Arthur E. Rendle, New York, for black cocker spaniel dog and bitch, whelped Sept. 15, 1885, by his Brahmin out of Gladys (Black Prince—Princess).

Bruce. By George Burston, Alpena, Mich., for black and white English setter dog, whelped May 15, 1885, by Lexington (Nixey—Princess Louise) out of Kelp (A.K.R. 110).

Birdie Cohen. By W. A. Wheatley, Memphis, Tenn., for Gordon setter bitch, whelped August, 1885, by Harry (Malcolm—June) out of Gypsy (Malcolm—Dream IV.).

Brock. By D. A. Goodwin, Jr., Newburyport, Mass., for blue belton English setter dog, whelped May 3, 1885, by champion Plantagenet out of Matchless (Roderick II.—Jessie).

Princess Novel. By D. A. Goodwin, Jr., Newburyport, Mass., for blue belton English setter bitch, whelped May 10, 1885, by Count Bondhu (Gus Bondhu—Countess Mollie) out of Nelly B. (Pollux—Elsa).

Dash Starlight. By Chas. York, Bangor, Me., for black, white and tan English setter dog, whelped June 29, 1885, by Rex (Dashing Dan—Daisy Starlight) out of Lady Bright (Rink II.—Aida).

Meteor's Maid. By R. Robinson, Indianapolis, Ind., for liver and white pointer bitch, whelped March 31, 1885, by Meteor out of Dee.

Plantagenet, Jr. By D. A. Goodwin, Jr., Newburyport, Mass., for black, white and tan English setter dog, whelped May 3, 1885, by champion Plantagenet out of Matchless (Roderick II.—Jessie).

BRED.

Belle—Chief. J. A. Temple's (Toronto, Ont.) red Irish setter bitch Belle to Max Wenzel's Chief (A.K.R. 231), Aug. 5.

Forest Dora—Plantagenet. G. E. Osborn's (Birmingham, Conn.) English setter bitch Forest Dora (A.K.R 500) to Blackstone Kennels' champion Plantagenet, Sept. 18.

Virginia—Fritz. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Virginia (A.K.R. 1357) to his Fritz (A.K.R. 1351), Sept. 13.

Nora—Turk. H. Clay Glover's (New York) black and tan setter bitch Nora (Sport—Clara) to his champion Turk (A.K.R. 717), Sept. 25.

Charlotta—Brahmin. Arthur E. Rendle's (New York) cocker spaniel bitch Charlotta (Black Charley—Frolic) to his Brahmin, Aug. 18.

Frolic—Brahmin. Arthur E. Rendle's (New York) cocker spaniel bitch Frolic (Rex—Nellie) to his Brahmin, Sept. 4.

Ruth—Glen Rock. E. W. Jester's (St. George's, Del.) English setter bitch Ruth (Prince—Ruby) to his Glen Rock (A.K.R. 1616), Sept. 23.

Rose—The Earl. Geo. E. Vaughn's (New Haven, Conn.) bull-terrier bitch Rose to the Royal Bull-Terrier Kennels' The Earl (Marquis—Lady), July 5.

Kitty—The Earl. Geo. E. Vaughn's (New Haven, Conn.) bull-terrier bitch Kitty to the Royal Bull-Terrier Kennels' The Earl (Marquis—Lady), Sept. 17.

White Rose—The Earl. Royal Bull-Terrier Kennels' (New Haven, Conn.) bull-terrier bitch White Rose to their The Earl (Marquis—Lady), Sept. 6.

WHELPS.

Jessie Winfield. Geo. H. Hill's English setter bitch Jessie Winfield (Gladstone—Bessie A.), Sept. 19, seven (five dogs), by Count Noble.

SALES.

Bruce. Black and white English setter dog, whelped May 15, 1885 (Lexington—Kelp), by Detroit Kennel Club, Detroit, Mich., to George Burston, Alpena, Mich.

Sirus—Daisy II. whelp. Liver and white pointer bitch, age not given, by Detroit Kennel Club, Detroit, Mich., to Dr. A. G. Aldrich, Anoka, Minn.

Grand Duke. White, black and tan beagle dog, whelped Dec. 13, 1881 (Prince—Flora), by Elmer E. Shaner, Pittsburgh, Pa., to Charles Richardson, Allegheny, Pa.

Wedgewood. White, black and tan beagle dog, whelped March 13, 1884 (Bradlaugh—Belle), by Elmer E. Shaner, Pittsburgh, Pa., to Chas. Richardson, Allegheny, Pa.

Blue Cap. White, black and tan imported beagle dog, age not given (Leader—Music), by Elmer E. Shaner, Pittsburgh, Pa., to Chas. Richardson, Allegheny, Pa.

Lill II. White, black and tan beagle bitch, 4yrs. old (Boxer II—Lil), by Elmer E. Shaner, Pittsburgh, Pa., to Chas. Richardson, Allegheny, Pa.

Belle. White, black and tan beagle bitch, whelped May 26, 1880 (Rattler—Lucy), by Elmer E. Shaner, Pittsburgh, Pa., to Chas. Richardson, Allegheny, Pa.

Dandy, Beauty, Jumbo and Trial. White, black and tan beagles, whelped April 16, 1885 (Bannerman—Lill II.), by Elmer E. Shaner, Pittsburgh, Pa., to Chas. Richardson, Allegheny, Pa.

Burt. White, black and tan beagle dog, whelped April 6, 1885 (Bradlaugh—Belle), by Elmer E. Shaner, Pittsburgh, Pa., to Charles Richardson, Allegheny, Pa.

Rox. White, black and tan beagle dog, whelped April 6, 1885 (Bannerman—Lill II.), by Elmer E. Shaner, Pittsburgh, Pa., to John Sheridan, same place.

Belle. White, black and tan beagle dog, whelped Nov. 10, 1884 (Bradlaugh—Belle), by Elmer E. Shaner, Pittsburgh, Pa., to F. Lanjinger, McKees Rocks, Pa.

Leader. White, black and tan beagle dog, whelped April 22, 188 (Racket—Tough), by Elmer E. Shaner, Pittsburgh, Pa., to J. S. Rugn, Salina, Pa.

Rifle and Trap Shooting.

FIXTURES.

Oct. 20.—First Georgia State Fair Tournament, under auspices of the National Gun Association, Judge M. R. Freeman, Manager, Macon, Ga. Beginning Oct. 20.

THE N. R. A. MEETING.

THE Creedmoor meeting of 1885 has come and gone. It was not a success in some respects, in others it was. The Directors offered a liberal prize list, but the riflemen and especially the civilian shots did not respond as they should have done, and some of the matches went almost by default. It was more distinctly a military meeting. The regulars came down by orders, and gave the range its old-time picturesque look; but if the report of the Fort Niagara range be true, it is probably the last time that the camp of the regulars will grace the Creedmoor Range. The week was a cold one, not at all inviting for spectators to the range, and in consequence the shooters had the ground largely to themselves. Supt. Brower had prepared everything about the range for a lively week of hard work, but found little occasion for calling out his full working force. There were a few protests, but the meeting passed off as a whole in capital form under the management of Gen. Chas. F. Robbins as executive officer.

The details of the shooting in the several matches are given below:

No. 1. Directors' Match.—200yds., open only to directors of the N. R. A.; rounds, 5; position, standing; any military rifle, including specials.

J S Shepherd	35554—22	James Duane	43444—19
Maj Geo Shorkley	54344—20	J F Ackerman	34304—14
W W DeForest	44344—19	G W Wingate	04440—12

No. 2. Judd Match.—Open to all comers, any military rifle, including specials; 200yds., standing; rounds, 7; the aggregate of two scores to count for the first five prizes:

H R Anderson	4454455—31	5455555—34—65

THE TRAJECTORY TEST.

Editor Forest and Stream:

I beg to differ with the views of your correspondent "S." He says, "No man can invariably take the same sight by simply resting the muzzle that can be had when the gun is in a vise, and absolute certainty is what we want."

Is it possible he does not know that in shooting through screens absolute certainty is of no consequence whatever? Major Merrill will tell him he is wrong on that point. The Major speaks of "machine rest" as being used in his tests, but he does not say the gun was screwed in a vise. But I claim that better shooting can be done with a muzzle rest than from a vise, "S." misquotes me as saying that the trigger-pull affects trajectory. On the contrary, I said plainly that it affects accuracy.

I presume that your tests are intended to show what hunting rifles will do when used as such, but some of your correspondents are only interested in knowing what they will do under totally different conditions. The results of the two tests would be entirely dissimilar. Are we to understand that "S," carries a vise with him when he goes hunting?

I do not care which wins, but am only interested in knowing that the test will be conclusive. "S." is evidently befogged. The muzzle-loader advocates will undoubtedly attend the test in force, armed with mountain howitzers. In Major Merrill's carefully written article he very carefully omits to tell the weight of the rifle used. Was it twenty or thirty pounds? The shooting was nothing to brag about.

There is one point on which "S." and I agree exactly. He says, "You will find obsolete men who will take pride in muzzleloaders for years to come." Just so; that is the only kind that takes pride in them now. W. I. C.

HARMLESS GUNS.—In the August issue of the U. S. Consular Reports N. P. Tisdel, agent to the States of the Congo Association, gives an interesting narrative of his travels in the valley of the Congo. He speaks of the many isolated tribes, and says: "These tribes often go to war with each other upon the most trifling pretext, and, notwithstanding they are all armed with guns, it is a rare thing that a native is killed by this weapon. They seem to have little or no idea how to use the gun successfully, and a complete victory consists in the burning of villages, the capture of prisoners, and their execution by the knife, spear or fire afterward, or their sale into slavery. It is a remarkable fact that while guns and powder are plenty, lead is almost unknown to the natives, the coast traders having so far kept it from them. They therefore use small pebbles and baked clay balls instead of bullets, though very recently they have taken to cutting brass rods into slugs, and naturally the gun will soon become a dangerous weapon in their hands. Since the advent of the white man with his repeating rifle, the up country kings are commencing to demand that they be supplied with percussion guns. Up to the present time the gun has been used only to make a noise with. With it they profess to frighten away bad spirits; to bring health to the sick; to assist the spirit of a departed friend; to celebrate events of joy or sorrow; in fact the gun is used for everything but for war purposes or the killing of game."

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NATIONAL GUN ASSOCIATION.

To the Members of the National Gun Association and all Sportsmen:

In assuming the duties of my new position I hope to have the faithful co operation of every lover of field sports, and the earnest support of every one who has a desire to see the fish and game of our country protected from the terrible destruction that is fast depleting our forest and streams, and who wish to encourage the gentlemanly sport of skill with gun and trap. The perfection to which manufacturers have brought the various flying targets is most wonderful, and affords an excellent substitute for the natural bird, and its cheapness, cleanliness and convenience brings it within the range of all classes to enjoy this finest of all sport, and perfect themselves in wing-shooting, without the necesity of days lost from business to frequently find the game or sport not worth the trouble and expense.

Now that no one can charge that any particular interest is to be subserved in the management of the Association, I hope that all true sportsmen will join its ranks and help forward the good cause, and that every member be represented in person or by proxy at our next annual meeting at Macon, Ga., in 1886. I would call the attention of members to the fact that a large number of them are in arrears for past dues, and ask that they send in the amount as early as possible.

Address Matt R. Freeman, V. P. and Gen. Manager.
Macon, Ga.

A TAIL FOR NOBODY'S KITE.—Speaking of a recent trap-shooting match, the *Breeder and Sportsman* sensibly remarks: "The published statements that the contestants shot for $250 a side in addition were all untrue, and were added by interested persons in the hope of drawing a large attendance and resulting profit. It is a question whether all this issuing of posters giving false conditions and information about strictly amateur shooting matches is not calculated rather to keep people away than to draw them. At all events, it is disagreeable to the shooters to be placarded like circus attractions."

PERRY HAS OUT-STARKED STARK, now who will out-Perry Perry?

WALLINGFORD, Conn., Sept. 23.—Fourth State shoot for prizes and sweepstakes. Following are the scores at 25 clay-pigeons: V. A. Blakeslee 19, A. B. Pixley 14, H. Nichols 10, C. Beers 12, T. Platt 12, G. A. Saunders 17, C. H. Sterry 17, E. A. Birdsey 14, F. P. Clark 16, R. Penn 9, F. Brown 18, M. Bull 12, F. C. Barlram 11, A. Ives 16, C. Bristol 11, A. Trager 14, N. H. Ames 9, J. F. Ives 13, C. W. Viberts 18, H. A. Sanford 14, A. J. Goodrich 14, L. Widman 13, N. D. Folsom 16, A. Strong 8, J. B. Brogden 15, G. Minor 22, G. T. Ferris 10, A. H. Merriman 13, P. Downs 16, E. A. Folsom 13, J. Melrose 15, J. Cook 11, M. Cook 13, C. Higby 12, W. Johnson 8, C. Hill 12, J. H. Ames 9, C. Longden 9. Next shoot will be held at Bridgeport, Conn., on Oct. 28.

POUGHKEEPSIE, Sept. 26.—Shoot for the gold medal presented by the Wappinger's Falls and Poughkeepsie gun clubs, same as before 10 single rotary balls, 18yds., 5 pairs doubles, straightaway 15yds.:

	S.	D.		S.	D.
J Kunkel	3	4— 7	G A Talmage	6	2— 8
H Meyers	5	4— 9	J A Jameson	8	5—13
M Condit	2	4— 6	O Thorne	2	6— 8
O Anderson	5	6—11	Wm Baxter	3	5— 8
J M Godinez	8	7—15	C Clapp	7	7—14
M Jones	9	5—14	J Clear	4	8—12

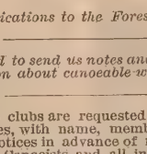
The last shoot for the medal took place Sept. 24:

O Thorn	6	7—13	G A Talmage 6	7—13
J M Godinez	7	9—16	M Jones 8	6—14

As this was the second time Godinez had won it, it now becomes his property. The competition for this medal has been quite close as follows: First by E. Decker, score 15; second by M. Condit, score 17; third, J. M. Godinez, score 15; fourth, J. M. Godinez, score 16.

THE CHAMBERLIN CONTEST.—Cleveland, O., Sept. 21.—The contest for the Chamberlin Cartridge Co.'s prizes, ($2,000) closed Aug. 31, 1885. J. R. Stice, Jacksonville, Ill., with a score of 99, wins first prize, ($750) without a tie; W. S. Bell, Pittsburgh, Pa., and R. E. Sheldon, Cleveland, O, with a score of 98 each, are in a tie for second money ($500); Andy Meaders, Nashville, Tenn., J. A. Prechtel, Cleveland, O., and C. F. Wheal, Cleveland, O., with a score of 96 each, are in a tie for third money ($300); F. M. Eames, Bay Ridge, L. I., with a score of 95, wins fourth money ($200) without a tie; "McDuff," Cincinnati, O., W. R. Huntington, of Cleveland, O., and H. H. Fleischer, Rochester, N. Y., with a score of 94 each are in a tie for fifth money ($150); Benj. Teiple, Covington, Ky., Wm. Wagnor, Washington, D. C., and John A. Bell, Putnam, Pa., are in tie for sixth money ($100). The ties will be shot off at Cleveland, O., commencing Tuesday, Oct. 6, and the prizes will be paid at the conclusion of the tie shooting. The Cleveland Gun Club have arranged a tournament with $655 guaranteed cash prizes, Oct 7 and 8.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*



National Gun Association Tournaments.—Special Notice.—Members desirous of organizing tournaments in their vicinity, under the auspices of the Association, are requested to notify the undersigned. All the expenses of the same will be paid by us. Make your arrangements for 1886. We propose to establish a circuit of tournaments annually. Claim your dates now.—Matt R. Freeman, Vice-President and General Manager, Macon, Ga. Send 10 cents for hand book containing rules, constitution, etc. "Fairly started and its future depends entirely upon the manner in which the sportsmen throughout the country respond."—C. M. Stark, April 18, 1885.—*Adv.*

Canoeing.

Address all communications to the Forest and Stream Publishing Co.

Canoeists *are invited to send us notes and full reports of cruises, club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

SECRETARY—Dr. C. A. Neide, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present names to the the executive committee. Money should be sent by *registered letter* or money order.

SMALL CRUISING YACHTS VS. CANOES.

Editor Forest and Stream:

"Deja's" answer to my criticism of his design is very funny, it only needs the accompaniment of bad spelling to equal Josh Billings or Little Freddy and his slate; but without dealing with his witticisms, I will try and sift from a good deal of irrelevant matter in his letter some points bearing on the question in dispute. The Rob Roy canoe was not, as "Deja" states, "outbuilt and superseded twenty years ago." On the contrary, Macgregor's first canoe was built in 1865, exactly twenty years ago; for ten years it was more widely known and used than any other type of canoe, and even yet boats of this class, 14ft.×26 and 28in., and Rob Roy, American Traveling, Stella Maris, are sold and used in considerable numbers. It would seem that in spite of the number he has sailed, "Deja" is as ignorant of their history and qualities as his former letter proved him to be in regard to the Shadow model. I wonder whether "Deja" has ever seen a real canoe, certainly he must know very little about one when he brings forward in proof of his assertion that a canoe cannot readily be carried an instance of a man who could not carry an Irene through underbrush. Of course he could not; the Irene model is a centerboard sailboat, ranging in size from 16 to 18ft.×4ft. or more beam and weighing at least 200 pounds. A canoe, I can inform him, is a boat 15ft. long and 28 to 30in. wide, weighing 90 pounds if for sailing, and not over 40 to 50 if for such work as his friend essayed, hunting or cruising in the woods.

His assertion that the round-up of the bow and stern makes it as easy to land from his boat as from a canoe is disproved at once by a look at the design. The boat draws 21in., and must have that depth of water within less than 6ft. of the shore or her crew cannot land dry shod. A canoe draws usually 6 to 7in. On a shelving beach she can be driven up easily or pushed off, unless there are rocks and stones; and most canoeists are expert enough to land or to board their boats by a spring from or to the deck, aided by the paddle. If "Deja" were to cruise on the Hudson, the Sound, or any of the waters about New York, he would find as a rule gently shelving beaches, over which his boat could not get within 10ft. of the shore, while a canoe could float so close as to land her crew easily. His statement that a canoe usually requires the paddle to help her in tacking is simply untrue, as every canoeist knows. The earlier canoes with their primitive rigs were uncertain in stays, but any fairly fitted canoe to-day will go about as surely and quickly as any boat of her proportionate length. As to the question of speed, no doubt there are plenty of canoeists who will give "Deja" an opportunity to prove his claims for his boat. In the meantime let us hear from him just what canoes he has beaten. Canoeists as a rule are pretty well acquainted with each other throughout the country. If "Deja" will name the boats and men that he has outsailed we can soon judge of his boat's qualities.

It really seems a waste of time to answer the last paragraph of his letter, but some who are not canoeists may read his statements and be misled by them. Much of the canoeing that is done to-day in all our large cities consists of short sails or paddles in the evenings after business, and a weekly outing each Saturday night. The canoeist, whether in Albany, Hartford, Springfield, Boston, New York, Pittsburgh, Toronto or scores of other places, finds his chief pleasure in starting off as early on Saturday afternoon as work will let him, alone, in pairs, or in parties of half a dozen. With a day's store of food, a canoe tent, blankets, an air bed, a total weight of perhaps 200lbs. for boat and cargo, he is off a few miles, sailing if possible, if not cheerfully knocking off three or four miles per hour with his paddle, a grateful rest after a week's work, until some favorite spot is reached for a camp. The canoe is hauled up, a fire lit and supper cooked, his tent is pitched over the canoe, air bed or cork mattress spread and soon he is doing just what "Deja" says is impossible, sleeping comfortably in a canoe.

He has the power of going where he pleases, at will, while "Deja," starting with him, and finding no wind, would have stored his boat where best he could, to be at the mercy of boys and stragglers, and found his way home by rail to wait until the wind blew at a time when he was at leisure. Next day the canoeist is up early, his tent and bed are packed, his canoe afloat, and he is off for the entire day, with no other restraint than the absolute one of being back in time for work next morning. He sails or paddles, as the weather or fancy dictate, and in good season starts for home with the knowledge that even a flat calm and a foul tide mean only a little extra work and an hour's delay in the evening, and by 9 or 10 P. M. he is once more in shore rig with his boat safely housed. Had he followed "Deja's" plan he would often be deprived of his boat in the evenings for a week or two, while the boat itself would in all probability suffer some damage in strange bands. This is the kind of work done by seventy-five per cent. of American canoeists to day, and their boats must be and are adapted to it.

I own "Deja" has the advantage of me in two or three respects. I don't know it all, I have not tried and experimented with all models of boats, and I have never designed nor built a perfect boat; but I do claim to know what a canoe is, and perhaps I have butchered enough good wood in building imperfect canoes to have earned the right to criticise "Deja's" model and also his construction.

In behalf of the great majority of canoes, I can say confidently that for such small boats they are unsurpassed for speed, ability and seaworthiness, and that the faults they have are due not to model nor lines, but to their size; it is impossible to get a small boat to do all that a larger one will do, but at the same time it is their small size and lightness that fits them so well for the required purpose. Enlarged they would make very fast and good boats, though as they would then be too big to paddle, the relative beam would naturally be increased. Out of the same despised Rob Roy, in fact, has grown the Mersey canoe yawl, a perfect lifeboat, safe, fast and weatherly; canoe-shaped, but wider, 14×3½ft., 16×4 and 18×5ft. These boats have the double ends and the flat floor and midship section of any good cruising canoe.

Can "Deja" tell us why wave lines or any concavity are necessary in a boat of any sort? There was a time when the wave-line theory was believed in and wave lines considered by many as indispensable; but surely no one still entertains the idea that such curves as he shows have any place in a boat unless his object was to secure a maximum of wetted surface with a minimum of displacement, in which case I have nothing to say. His construction would be heavier and not as strong as the old lapstreak canoe. The planking, ⅛in., is entirely too light, the steel ribs must either be very heavy, or if of light band steel they will soon corrode in places, especially in salt water; yellow pine is about as heavy for spars and decks as any wood he can find. Perhaps "Deja" will give us further details, size and spacing of frames, thickness of deck and weight of entire boat, from which we can form a better opinion of its construction. Rob Roy.

Editor Forest and Stream:

It is surprising that any sensible canoeist will take the trouble to reply to the vaporings of your correspondent "Deja." All his writings bear the stamp of ignorance, as witness the size of plank—1in. wide by ⅛in. thick—he specifies for his Jullanar. Also his statement that yellow pine is lighter than spruce. Also his rules for spars and sails, by which he would have us hoist upward of 500sq. ft. of canvas on a mast 2½ft. high. Then by his own confession he is such a lubber that he cannot get a canoe to come about without the use of a paddle.

But "Seneca" is a very different sort of man, and there is considerable hope for him, as he has discovered that the sneakbox is capable of improvement. Then he limits the absolute perfection of his craft to open water cruising, a thing which I know nothing about, so will not attempt to dispute. But I don't see how he will get a low bow which will not pound, and yet when run ashore will be "a foot or more on solid ground." (By the way, if "Seneca" had stood in front of the Delaney farmhouse gate about meal time any day of the past week and observed one hungry skipper after another come gliding in, run square ashore, and then without so much as dropping the sail, place one foot on deck forward and spring lightly out upon the dry sand, he would hardly have stated that "you have to step in the water to get to dry land from the well.")

He says his boat's lines are shaped to make her a better sailer than the sneakbox. Now, living inland as I do, I confess my knowledge of the box is limited, embracing only the two by Rushton at the '84 and '85 meets, and one owned by a member of our own club, which is a genuine Barnegat; but if these three are any criterion I must say his lines must be very different to obtain any speed as compared with a canoe, which will both outpoint and outfoot the box to windward, in rough or smooth water, and also beat her comfortably running free. As to dryness and comfort, I will not venture to say anything, for I have not fully succeeded in picturing to myself that "washboard," and of course can form no idea of its effect in practice.

On the whole I shall still class myself with "Dot's" "thousand or two," still stick to the craft which has served me so well in the past, and make no preparations for next season's aquatic enjoyment further than a fresh coat of varnish to the old Katrina.

Editor Forest and Stream:

Your reasonable correspondent, "Seneca," is a man after my own heart. His deductions are logical and I would like to make his acquaintance. He seems to be of an investigating turn, like myself.

The main reason I have in opening this matter is to get the views of experienced gentlemen to the end that, before building a racing boat on the lines given, I can introduce such improvements as this comparison of notes will suggest. The cruiser is very fast, but of course, may be beaten, as others have been, by longer water lines and larger spreads of canvas. I think "Seneca's" boat must be too heavy, otherwise I like her for the use designed. Nevertheless a

centerboard is not to my mind, and the additional grip of a kee makes me feel as though I had something under me that can be relied on in cases of sudden emergency.

I regret exceedingly having offended the intense modesty of "Dot." He seems to have it bad, besides there is something the matter with his memory. If he will look at my letter again he will see that the rule reads "immersed midship section" It is the safe old rule on which the finest clipper ships ever launched were sparred and canvassed. Red Jacket, Flying Cloud, Sovereign of the Seas, and others stand as unapproachable among the white wings as does the Stiletto among steamers. "Dot" is very modest, too, in rousing out his jaw tackle for a thousand or two canoeists. Perhaps a few of the latter will pipe up in their own behalf and let him have a little time to read up on politeness.

I shall be glad to afford any gentleman a suitable opportunity for testing the relative speed of my boat; but for reasons which FOREST AND STREAM will furnish on suitable application I cannot accept any challenges this season. My name and address can be learned by any respectable person who may wish it, providing he sends his own to the paper for me. I will endeavor to answer all letters and treat correspondents with the utmost courtesy. But after a man writes himself down an ass he need not expect very profound civility from me. I ignore mules and let them bray themselves tired. If "Dot" has had his "pins knocked out from under him," why does he not "set 'em up in the other alley" himself, and get out of the ring? He evidently does not belong there any more than he would off soundings. His bone is not in his teeth; it is down his throat. He will pick me up, will he? Not if I know it. I do not like the cut of his jib. If he had turned turtle in a mill race, as my working boat did, he and his matchless canoe would have been in Davy Jones' locker, and then what would the two thousand canoeists he mentions have done for a secretary? Upon reflecting I find that perfection is only comparative in my case, but absolutely without a rival in his. The only difficulty is it has a variety of aspects. DEJA.

Editor Forest and Stream:

Abuse will mend no one's temper or settle so vexed a question as that raised by "Deja." As I, however, believe that canoes are all that he claims them not to be, I hereby challenge him to a match race, believing that to be the most satisfactory way to show the superiority claimed by each side. I propose a minimum course of five miles, time limit of two hours for that distance, the loser to subscribe $25 to a cup, which I understand is to be offered for an international trophy on the occasion of Mr. Baden-Powell's proposed visit to the meet next summer. GUENN.

Editor Forest and Stream:
